FIRST

REPORT

FROM THE

COMMITTEE

OF

PUBLIC ACCOUNTS;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND APPENDIX.

Ordered, by The House of Commons, *to be Printed,*
22 *June* 1870.

301.

Monday, 28*th March* 1870.

PUBLIC ACCOUNTS.—Standing Order of the House [3rd April 1862] relative to the Committee of Public Accounts read, and amended, by leaving out the word "Nine" and inserting the word "Eleven," instead thereof—(Mr. *Stansfeld*).

Committee of Public Accounts nominated:—

Mr. Stansfeld.
Mr. Pollard-Urquhart.
Mr. Sclater-Booth.
Lord Frederick Cavendish.
Mr. Seely.
Mr. Liddell.
Mr. Algernon Egerton.
Mr. William Fowler.
Mr. Goldney.
Mr. Candlish.
Mr. Ward Hunt.

Wednesday, 22*nd June* 1870.

Ordered, THAT the Committee have power to report their Observations, together with the Minutes of Evidence taken before them, from time to time to The House.

REPORT - - - - - - - - - - - - p. iii
PROCEEDINGS OF THE COMMITTEE - - - - - p. viii
MINUTES OF EVIDENCE - - - - - - - - p. 1
APPENDIX - - - - - - - - - - - - p. 117

FIRST REPORT.

THE COMMITTEE of PUBLIC ACCOUNTS have made Progress in the Matters to them referred, and have agreed to the following FIRST REPORT:

1. YOUR Committee, having concluded the examination of the Appropriation Accounts of the sums granted by Parliament for the Civil Services and the Revenue Departments, for the year ending 31st March 1869, together with the Reports of the Comptroller and Auditor General thereon, are enabled to state, that in the case of every grant for such services an Appropriation Account has been rendered and reported upon; the account of Vote 31, Class I., which had through apparently unavoidable circumstances been sent in too late to be reported upon in the regular course, having since been made the subject of a Report.

2. The year 1868-69 being the first year in which the requirements of "The Exchequer and Audit Departments Act, 1866," have in this respect been entirely complied with, may be considered as marking the commencement of a new era in our financial history.

3. Your Committee, having had under consideration the form of accounts prescribed by the Treasury, are of opinion that the terms "Savings," and "Deficiencies," standing respectively at the head of the 4th and 5th columns of the account, are liable to be misunderstood, and that more appropriate phraseology may be employed in other parts of such form, and they recommend that the form of account given in the schedule which has been prepared at their instance be adopted in future.

4. They observe, that in several instances sums have been brought to charge in the year under consideration which should legitimately have come in course of payment during the preceding year; as, for example, in the following accounts, viz.:

Class I - - - -	Vote 9.
Class II - - - -	„ 10.
	„ 14.
	„ 40.
Class III - - - -	„ 20.
	„ 23.
Class IV - - - -	„ 3.

and they hope that, the attention of the departments having been drawn to the matter, these irregularities will be avoided in future.

5. The accounts rendered by the "accountants" of the Grants have, for the most part, been of a satisfactory character, but this observation does not apply to the account of Vote 24, Class III., and Vote 9, Class IV. With regard to the first, they view favourably a suggestion that has been made, that in order to insure proper accountability, the accountant should be an officer more or less under the control of the Treasury; with regard to the second, they attribute the irregularities complained of partly to carelessness in past years, and partly to misapprehensions as to the mode in which the classification of the expenditure should have been made, and they trust that pains will be taken in future accounts to render the officer of the department less liable to stricture in this respect.

CLASS I.

6. VOTE 3.—The Comptroller and Auditor General reports, that a sum of 289*l.* 16*s.* 2*d.*, paid out of Civil Contingencies, should have been a charge against the Vote.

In this view your Committee concur; but the circumstances were rendered exceptional by reason of the transfer of administration to the Treasury, which prevented the Foreigh Office from being able properly to "account," and this was, in their judgment, some justification to the Treasury in departing from what was strictly the proper course.

7. VOTE 21.—In this case there was an expenditure on a work at a place not named in the estimate; but it is covered by the terms of the Appropriation Act.

Your Committee, however, think that in all such cases the special reason for executing such a work in the financial year should be explained in a note to the account.

8. VOTE 23.—A question arises upon the Report of the Comptroller and Auditor General whether a sum of 5,803 *l.* 14 *s.* 5 *d.*, introduced into the account of the Inland Revenue Vote, is not properly chargeable to this Vote. Your Committee consider that, under all the circumstances, it must be left as a charge upon the Inland Revenue Vote; but they are strongly of opinion that in no case should there be any occasion for doubt as to the vote against which a payment should be chargeable. It would appear desirable that in future the Office of Works should undertake the administration of the whole expenditure of this character; but if this could not be effected without much inconvenience, the terms of each vote ought to be so definite as to preclude all future confusion; and if these suggestions are adopted, the principle contended for by the Comptroller and Auditor General will be in future carried out.

9. An arrangement has been made under which Extra Receipts under this Class will for the future be paid over quarterly.

CLASS II.

10. VOTE 2.—A very important question arises upon the Report on this account. If the receipt of the Secretary of State or other Minister, for Secret Service Money is to be considered as final payment—and this the permanent Under Secretary of State for Foreign Affairs represents to be the law according to the opinion of the law officers—then no account will be rendered of the total disbursements within any one year, and no surrender to the Exchequer of the balance at the end of thefi nancial year of any monies which have come into the hands of the Minister, will ever be made, but the balances, if any, will be accumulated from year to year. This appears to your Committee to be contrary to the spirit of the Exchequer and Audit Departments Act, 1866. The question is wholly apart from that which has been mixed up with it in the discussion, namely, how far vouchers in support of the details of the charge ought to be required.

11. VOTE 31 —Your Committee have ascertained that "Extra Receipts" in this case are accounted for and surrendered monthly, and that the discrepancy noticed in the Report of the Comptroller and Auditor General arises from the fact that the March receipts were not paid over till April, which, under the system, must always happen.

CLASS III.

12. VOTE 10.—The account of this Vote is not wholly satisfactory. This arises mainly from the fact that the Parliamentary Estimates were based upon Estimates transmitted from the Colonies; but the latter had been framed in forms which are now obsolete, and it was impossible to state precisely the amounts belonging to several of the Sub-heads of the new form of Parliamentary Estimates. For the other causes your Committee refer to the evidence given upon the subject.

13. VOTE 21.—

13. Vote 21.—There appears to be some difficulty in the Admiralty furnishing the vouchers in support of the charges mentioned in the fifth paragraph of the Comptroller and Auditor General's Report by reason of their being mixed up with other matters in their books. It has been suggested that certified extracts from the Admiralty vouchers should be furnished to the accounting department and produced to the Audit Office, in support of the charge. Your Committee do not say that under no circumstances such certified extracts should be accepted, but they think that the Admiralty may be able to suggest some other mode of meeting the difficulty without having recourse to what appears to them rather a questionable expedient.

CLASS IV.

14. Vote 10.—Your Committee are of opinion that the Comptroller and Auditor General was entirely right in reporting upon the charge made against the grant for the University of London in respect of the expenses of the Vice Chancellor as returning officer in relation to two elections for the University, such not being "a purpose for which such grant was intended to provide;" but inasmuch as the expenditure is covered by the Appropriation Act they are unable to say that there is any technical incorrectness in charging the expenditure against the Vote

14. Vote 14.—In the second paragraph of the Comptroller and Auditor General's Report, he adverts to the fact that the classification of the expenditure under Sub-head I. is not according to the 13 detailed heads. It does not appear to your Committee that the accountant was bound to render his account under more than the principal sub-heads mentioned in the Estimate; but the object of the Comptroller and Auditor General, which is in their judgment a proper one, would be attained if the Treasury were to require that more principal sub-heads should be shown upon the Estimate; there would then be consequentially a greater sub-division in the account.

CLASS V.

16. Vote 5.—There appears to have been great irregularity with regard to the expenditure mentioned in paragraph 3 of the Report of the Comptroller and Auditor General; but the circumstances were very exceptional, and as the Consulate has been abolished, there is no possibility of such irregularity occurring again.

17. Vote 6.—With regard to the sum of 431 *l.* 7 *s.* 10 *d.*, observed upon in paragraph 3 of the Report of the Comptroller and Auditor General, your Committee are of opinion that it is properly chargeable to the Vote. They wish it, however, to be understood that it is in their judgment the duty of that officer whenever, as in this case, he considers that any money has been applied to any purpose other than that for which the grant of Parliament was intended to provide, specially to report thereupon, availing himself, in his discretion, of any information given in the Estimate upon which the Vote has been taken.

18. Vote 10.—Your Committee are of opinion that the expenditure of the sum of 162 *l.* 15 *s.* 4 *d.*, mentioned in the note to the account ought to have been shown in the account.

CLASSES VI. and VII.

19. No observation arises upon these accounts.

REVENUE DEPARTMENTS.

Customs.

20. Your Committee approve of the suggestion of the Comptroller and Auditor General contained in paragraph 3 of his Report, that the mode of recording extra receipts in the accounts of the three Revenue Departments should be uniform.

Inland Revenue.

21. Your Committee refer to their observations on Class I, Vote 23.

Post Office.

22. They understand that the recommendation of this Committee, made in their Third Report of last Session, and named in the second paragraph of the Report of the Comptroller and Auditor General, has been accepted by the Department for future guidance.

Post Office Packet Service.

23. No observation arises upon this account.

General Observations.

24. Your Committee have ascertained that the errors in the several accounts adverted to by the Comptroller and Auditor General in his Reports, have been, for the most part, adjusted, or are in course of adjustment, and particularly that the surrenders to the Exchequer mentioned as due in relation to

Vote 22 - - - - -	Class I.
„ 9 - - - - - -	„ IV.
„ 2 - - - - - -	„ VI.

have since been made.

25. They find that there was expended upon the Civil Services for the year ending 31 March 1869, 344,826 *l.* 6 *s.* 1½ *d.* less than was voted, and upon the Revenue Departments 47,946 *l.* 18 *s.* 3½ *d.* less than was voted. It must be borne in mind, however, with reference to this statement, that these figures do not necessarily imply saving to that amount, as in every year some services, which have been estimated for, being postponed, or not completed within the year, fall to be provided for, wholly or in part, in subsequent estimates.

26. In concluding this Report, Your Committee desire to advert to the fact that, under the provisions of the Exchequer and Audit Departments Act, 1866, the Reports of the Comptroller and Auditor General are submitted to the House through the medium of the Treasury. They are of opinion that this officer would have a higher and more independent position in the eye of the several Departments of the State, if his Reports were presented by him directly to the House. From the same point of view they are inclined to regret the decision of the Treasury, which transpired in the course of their inquiry, that in future the account of the Vote for the Exchequer and Audit Department shall be rendered by the Treasury. It is no doubt contrary to the spirit of the Exchequer and Audit Act that any officer should audit his own account; and while they do not dissent from the view of the Treasury that the secretary of the office must be considered as not wholly independent of his chief, even in rendering the account, they are of opinion that the right remedy will be, whenever occasion requires the amendment of the Act, to provide that some independent person shall be associated with the Comptroller and Auditor General in auditing the account of this particular Vote.

SCHEDULE.

(TITLE OF VOTE).

ACCOUNT of the Sum Expended compared with the Sum Granted for in the Year ended 31st March 186 , showing the Surplus or Deficit upon each Sub-head of the Vote.

PROCEEDINGS OF THE COMMITTEE.

Friday, 8th April 1870.

MEMBERS PRESENT:

Mr. Stansfeld.	Mr. Pollard-Urquhart.
Mr. Seely.	Mr. Goldney.
Lord F. Cavendish.	Mr. Sclater-Booth.

The Right Hon. *George Ward Hunt* was called to the Chair.

[Adjourned till Wednesday, 27th April, at One o'clock.

Wednesday, 27th April 1870.

MEMBERS PRESENT:

Mr. POLLARD-URQUHART in the Chair.

Mr. Liddell.	Mr. Sclater-Booth.
Mr. Candlish.	Mr. Fowler.
Mr. Stansfeld.	Mr. Seely.
Lord F. Cavendish.	

In the absence of Mr. *Hunt*, Mr. *Pollard-Urquhart* was called to the Chair.

The Committee deliberated upon Class I. of the Civil Service Appropriation Accounts for 1868-9.

[Adjourned till Wednesday next, at One o'clock.

Wednesday, 4th May 1870.

MEMBERS PRESENT:

Mr. HUNT in the Chair.

Mr. Candlish.	Mr. Seely.
Mr. Pollard-Urquhart.	Mr. F. Cavendish.
Mr. Stansfeld.	Mr. Egerton.
Mr. Fowler.	Mr. Sclater-Booth.

The Committee further considered Class I. of the Civil Service Appropriation Accounts for 1868-9.

Mr. *Foster*, Mr. *Russell*, Mr. *Anderson*, Mr. *Cole*, and Mr. *Ryan* were severally examined.

[Adjourned till Wednesday next, at One o'clock.

Wednesday, 11*th May* 1870.

MEMBERS PRESENT:

Mr. HUNT in the Chair.

Mr. Pollard-Urquhart.	Lord F. Cavendish.
Mr. Sclater-Booth.	Mr. Egerton.
Mr. Stansfeld.	Mr. Seely.
Mr. Goldney.	

Mr. *Griffiths*, Mr. *M. H. Foster*, Mr. *Russell*, Mr. *Hawker*, Mr. *Edwards*, Mr. *Bathurst*, and Sir *William Dunbar*, were severally examined.

Resolved, That the Comptroller and Auditor General be requested to furnish a Report on Vote 31, Class I., of the Appropriation Accounts, of Sums granted for Civil Services and Revenue Departments, for the year ended 31st March 1869.

The Committee further considered the Civil Service Appropriation Accounts.

[Adjourned to Wednesday next, at Twelve o'clock.

Wednesday, 18*th May* 1870.

MEMBERS PRESENT:

Mr. HUNT in the Chair.

Mr. Stansfeld.	Mr. Sclater-Booth.
Mr. Fowler.	Mr. Pollard-Urquhart.
Lord F. Cavendish.	Mr. Goldney.
Mr. Seely.	Mr. Candlish.
Mr. Liddell.	

The Committee considered Classes II. and III. of the Appropriation Accounts.

In Class II., Votes 2, 10, 17, 18, were *postponed.*

In Class III., Votes 23, 24, 34, were *postponed.*

Sir *W. Dunbar*, Mr. *W. G. Anderson*, Mr. *Foster*, Mr. *Vine*, Mr. *Blackwood*, Mr. *Ryan*, and Mr. *Whiffin*, were severally examined.

[Adjourned to Wednesday next, at Twelve o'clock.

Wednesday, 25*th May* 1870.

MEMBERS PRESENT:

Mr. HUNT in the Chair.

Mr. Liddell.	Mr. Candlish.
Mr. Seeley.	Lord F. Cavendish.
Mr. Stansfeld.	Mr. Sclater-Booth.
Mr. Pollard-Urquhart.	

The Committee considered the subject of Secret Service Money.

Mr. *Hammond*, Sir *W. Dunbar*, and Mr. *Foster* were severally examined.

Mr. *Pigott* examined as to the Report of the Comptroller and Auditor General upon the Court of Chancery, Ireland.

[Adjourned till Friday next, at Two o'clock.

Friday, 27th May 1870.

MEMBERS PRESENT:

Mr. HUNT in the Chair.

Mr. Liddell.	Mr. Seely.
Mr. Pollard-Urquhart.	Lord F. Cavendish.
Mr. Candlish.	Mr. Stansfeld.

The Committee considered Class IV.

The Right Hon. *James Stansfeld* (a Member of the Committee), Mr. *H. Cole*, Mr. *Foster*, Mr. *Ryan*, Mr. *Blackwood*, and Sir *W. Dunbar*, were severally examined.

[Adjourned till Wednesday, 15th June, at Twelve o'clock.

Wednesday, 15th June 1870.

MEMBERS PRESENT:

Mr. HUNT in the Chair.

Mr. Seely.	Mr. Fowler.
Lord F. Cavendish.	Mr. Egerton.
Mr. Stansfeld.	Mr. Sclater-Booth.
Mr. Liddell.	Mr. Candlish.
Mr. Pollard-Urquhart.	

The Committee considered Classes V., VI., VII., of Civil Service Appropriation Accounts; also those of the Revenue Departments, and of the Post Office Packet Service.

Sir *W. Dunbar*, Mr. *Foster*, Mr. *Anderson*, Mr. *Vine*, Mr. *Ryan*, Mr. *Blackwood*, Mr. *Lewis*, Mr. *Alston*, Mr. *Dicks*, Mr. *Gripper*, and Mr. *Chetwynd*, were severally examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 17th June 1870.

MEMBERS PRESENT:

Mr. HUNT in the Chair.

Mr. Seely.	Mr. Liddell.
Mr. Pollard-Urquhart.	Mr. Sclater-Booth.
Mr. Candlish.	Mr. Egerton.
Lord F. Cavendish.	

The Committee considered the Army Appropriation Accounts, and Savings and Deficiencies.

Mr. *Whiffin*, Mr. *Bathurst*, Mr. *Foster*, Mr. *Hanby*, and Mr. *Turner*, were severally examined.

[Adjourned till Wednesday, 22nd June, at Twelve o'clock.

Wednesday, 22nd June 1870.

MEMBERS PRESENT:

Mr. HUNT in the Chair.

Mr. Seely.	Mr. Egerton.
Lord F. Cavendish.	Mr. Stansfeld.
Mr. Pollard-Urquhart.	Mr. Sclater-Booth.
Mr. Liddell.	Mr. Candlish.

DRAFT REPORT proposed by the Chairman read the first time, as follows:—

"1. Your Committee having concluded the examination of the Appropriation Accounts of the sums granted by Parliament for the Civil Services and the Revenue Departments, for the year ending 31st March 1869, together with the reports of the Comptroller and Auditor General thereon, are enabled to state, that in the case of every grant for such services an Appropriation Account has been rendered, and, with the exception of Vote 31, Class I., reported upon.

"2. The year 1868–69 being the first year in which the requirements of 'The Exchequer and Audit Departments Act, 1866,' have in this respect been entirely complied with, may be considered as marking the commencement of a new era in our financial history.

"3. Your Committee, having had under consideration the form of accounts prescribed by the Treasury, are of opinion that the terms 'Savings' and 'Deficiencies,' standing at the head of the 4th and 5th columns of the account respectively, are calculated to mislead, and that more appropriate phraseology may he employed in other parts of such form, and they recommend that the form of account given in the schedule which has been prepared at their instance be adopted in future.

"4. They observe, that in several instances sums have been brought to charge in the year under consideration which should legitimately have come in course of payment during the preceding year; as, for example, in the following accounts, viz.:

"Class I. - - - -	Vote 9.
"Class II. - - - -	„ 10.
	„ 14.
	„ 40.
"Class III. - - - -	„ 20.
	„ 23.
"Class IV. - - - -	„ 3.

and they hope that now that the attention of the departments in which this has taken place has been drawn to the matter, these irregularities will be avoided in future.

"5. The accounts rendered by the 'accountants' of the Grants have, for the most part, been of a satisfactory character; but this observation does not apply to the account of Vote 24, Class III., and Vote 9, Class IV. With regard to the first, they would observe that, with a view to insure proper accountability, it is worth considering whether the accountant should not be an officer more or less under the control of the Treasury; with regard to the second, they attribute the irregularities complained of partly to the carelessness in past years, and partly to misapprehensions as to mode in which the classification of the expenditure should have been made, and they trust that pains will be taken in future accounts to render the officers of the department less liable to stricture.

"CLASS I.

"6. VOTE 3.—The Comptroller and Auditor General reports, that a sum of 289 *l.* 16 *s.* 2 *d.*, paid out of Civil Contingencies, should have been a charge against the Vote.

"In this view the Committee concur; but the circumstances were rendered exceptional by reason of the transfer of administration to the Treasury, which prevented the Foreign Office from being able properly to 'account,' and this was, in their judgment, some justification to the Treasury in departing from what was strictly the proper course.

"7. VOTE 21.—In this case there was an expenditure on a work at a place not named in the estimate; but it is covered by the terms of the Appropriation Act.

"The Committee, however, think that in all such cases the special reason for executing such a work in the financial year should be explained in a note to the account.

"7*a*. VOTE 23.—A question arises upon the Report of the Comptroller and Auditor General whether a sum of 5,803 *l*. 14 *s*. 5 *d*., introduced into the account of the Inland Revenue Vote, is not properly chargeable to this Vote. Your Committee consider that, under all the circumstances, it must be left as a charge upon the Inland Revenue Vote, but that the contention of the Comptroller and Auditor General is in principle correct; and they are strongly of opinion that in no case should there be left any occasion for doubt as to the vote against which a payment should be chargeable. It would appear desirable that in future the Office of Works should undertake the administration of the whole expenditure of this character; but if this could be effected without much inconvenience, the terms of each vote ought to be so defined as to preclude all future confusion.

"8. An arrangement has been made under which Extra Receipts under this Class will for the future be paid over quarterly.

"CLASS II.

"9. VOTE 2.—A very important question arises upon the Report on this account. If the receipt of the Secretary of State for Secret Service Money is to be considered as final payment, and this the Under Secretary of State represents to be the law according to the opinion of the law officers, then no account will be rendered of the total of disbursements within any one year, and no surrender to the Exchequer of the balance at the end of the financial year of any moneys which have come into the hands of the Secretary of State will ever be made, but the balances, if any, will be accumulated from year to year. This appears to your Committee to be contrary to the spirit of the Exchequer and Audit Departments Act, 1866. The question is wholly apart from that which has been mixed up with it in the discussion, namely, how far vouchers in support of the details of the charge ought to be required.

"10. VOTE 31.—Your Committee have ascertained that 'Extra Receipts' in this case are accounted for and surrendered monthly, and that the discrepancy noticed in the Report of the Comptroller and Auditor General arises from the fact that the March receipts were not paid over till April, which, under the system, must always happen.

"CLASS III.

"11 VOTE 10.—

"12. VOTE 21.—There appears to be some difficulty in the Admiralty furnishing the vouchers in support of the charges mentioned in the fifth paragraph of the Comptroller and Auditor General's Report by reason of their being mixed up with other matters in their books. It has been suggested that certified extracts from the Admiralty vouchers should be furnished to the accounting department and produced to the Audit Office, in support of the charge. Your Committee do not say that under no circumstances such certified extracts should be accepted, but they think that the Admiralty may be able to suggest some other mode of meeting the difficulty without having recourse to what appears to the Committee rather a questionable expedient.

"CLASS IV.

"13. VOTE 10.—The Committee are of opinion that the Comptroller and Auditor General was acting right in reporting upon the charge made against the grant for the expenses of the Vice Chancellor as returning officer in relation to two elections for the University, it being his opinion that such was not 'a purpose for which such grant was intended to provide;' but inasmuch as the expenditure is covered by the Appropriation Act they are unable to say that there is any technical incorrectness in charging the expenditure against the vote.

"14. VOTE 14.—In the second paragraph of the Comptroller and Auditor General's Report, he adverts to the fact that the classification of the expenditure under Sub-head I. is not according to the 13 detailed heads. It does not appear to your Committee that the accountant was bound to render his account under more than the principal sub-heads mentioned in the Estimate; but the object of the Comptrollor and Auditor General, which is in their judgment a proper one, would be attained by the Treasury requiring that more principal sub-heads should be shown upon the Estimate; there would then be consequently a greater sub-division in the account.

"CLASS V.

"15. VOTE 5.—There appears to have been some irregularity with regard to this expenditure, mentioned in paragraph 3 of the Report; but the circumstances were very exceptional, and as the Consulate has been abolished, there is no possibility of such irregularity occurring again.

"16. VOTE 6.—With regard to the sum of 431*l.* 7*s.* 10*d.*, observed upon in paragraph 3 of the Report of the Comptroller and Auditor General, your Committee are of opinion that it is properly chargeable to the Vote. They wish it, however, to be understood that it is in their judgment the duty of that officer whenever, as in this case, he considers that any money has been applied to any purpose other than that for which the grant of Parliament was intended to provide specially to report thereupon, and that he is entitled to gather the intention of Parliament from any information given in the Estimate upon which the Vote has been taken.

"17. VOTE 10.—Your Committee are of opinion that the expenditure of the sum of 162*l.* 15*s.* 4*d.*, mentioned in the note to the account, ought to have been shown in the account.

"18. No observation arises upon Classes VI. and VII.

"REVENUE DEPARTMENTS.

"CUSTOMS.

"19. Your Committee approve of the suggestion of the Comptroller and Auditor General contained in paragraph 3 of his Report.

"INLAND REVENUE.

"20. Your Committee refer to their observations on Class I., Vote 23.

"POST OFFICE.

"21. They understand that the recommendation of this Committee, made in their Third Report of last Session, and named in the second paragraph of the Report of the Comptroller and Auditor General, has been accepted by the Department for future guidance.

"POST OFFICE PACKET SERVICE.

"22. No observation arises upon this account.

"GENERAL OBSERVATIONS.

"23. Your Committee have ascertained that the errors in the several accounts adverted to by the Comptroller and Auditor General in his Reports, have been, for the most part, adjusted, or are in course of adjustment, and particularly that the surrender to the Exchequer mentioned as those in relation to

Vote 22 - - - - - - - -	Class I.
„ 9 - - - - - - - -	„ IV.
„ 2 - - - - - - - -	„ VI.

have since been made.

"24. It is satisfactory to find that there was expended upon the Civil Services for the year ending 31 March 1869, 344,826*l.* 6*s.* 1½*d.* less than was voted, and upon the Revenue Departments 47,946*l.* 18*s.* 3½*d.* less than was voted.

"25. Your Committee cannot conclude this Report without adverting to the channel through which the Report of the Comptroller and Auditor General are submitted to the House under the provisions of the Act, namely, through the medium of the Treasury. They are of opinion that this officer would have a higher and more independent position in the eye of the several Departments of the State, if his Reports were presented by him directly to the House; and from the same point of view they are inclined to regret the decision of the Treasury, that in future the account of the Vote for the Exchequer and Audit Department shall be rendered by the Treasury. This having transpired in the course of their inquiry, it is no doubt contrary to the spirit of the Exchequer and Audit Act that any officer should audit his own account; and the view of the Treasury may be correct that the secretary of the office must be considered as not wholly independent of his chief, even in rendering the account, but they are of opinion that the right remedy will be, whenever occasions require the amendment of the Act, to provide that some independent person shall be associated with the Comptroller and Auditor General in auditing the account of this particular Vote."

Question, That the Report be now read a second time, and considered, paragraph by paragraph,—put and *agreed to*.

Paragraphs 1 to 10, amended and *agreed to*.

New paragraph 12 inserted.

Paragraph 13 *agreed to*.

Paragraph 14.—Amendment proposed, to leave out from the word "provide" to the end of the paragraph—(Mr. *Liddell*).—Question put, That the word "but" stand part of the paragraph. The Committee divided:—

Ayes, 4.	Noes, 2.
Lord F. Cavendish.	Mr. Seely.
Mr. Pollard-Urquhart.	Mr. Liddell.
Mr. Egerton.	
Mr. Sclater-Booth.	

Amendments made. Paragraph, as amended, *agreed to*.

Paragraphs 15 to 26, amended and *agreed to*.

Question, That this Report, as amended, be the Report of the Committee to the House,—put and *agreed to*.

Ordered, To Report, together with Minutes of Evidence.

[Adjourned till Wednesday, 6 July, at Twelve o'clock.

MINUTES OF EVIDENCE.

MINUTES OF EVIDENCE.

Wednesday, 4th May 1870.

MEMBERS PRESENT:

Mr. Candlish.
Lord Frederick Cavendish.
Mr. Algernon Egerton.
Mr. William Fowler.
Mr. Hunt.
Mr. Pollard-Urquhart.
Mr. Sclater-Booth.
Mr. Seely.
Mr. Stansfeld.

THE RIGHT HONOURABLE GEORGE WARD HUNT, IN THE CHAIR.

Mr. MORGAN HUGH FOSTER, C.B., and Mr. GEORGE RUSSELL, called in; and Examined.

Mr. *Foster.*
Mr. *Russell.*
4 May 1870.

1. *Chairman* (to Mr. *Foster*).] WITH regard to Vote 1, I believe the first question that the Committee wish to ask you is, as to the blending of the Accounts C. and D. "Consular Buildings, China," and "Consular Buildings, Japan." There is a note signed by you which says "that the distinct votes, China and Japan, have been blended together, as it has not been found practicable to record the expenditure separately." Does that necessity arise solely from the stores having been purchased in England for both services, and no separate account kept, or is there any other reason why the accounts have not been separated?—It is entirely a matter of stores, and I believe the only question which now remains open is with respect to a sum of about 25 *l.* chargeable for certain Queen's arms which were sent out, and it was not possible to say exactly in what consulate they would be used; but I think the separation will be complete for the future.

2. Mr. *Stansfeld* (to Mr. *Russell*).] There are stores purchased in England for the use of the consulates in China and Japan; can you inform the Committee by whom those stores are purchased in England?—These stores were not bought by the Department of Works at all.

3. *Chairman* (to Mr. *Foster*).] Major Crossman had charge of the expenditure in China and Japan, had he not?—Major Crossman has charge of the expenditure in China.

4. And in Japan, also, had he not?—Yes.

5. (To Mr. *Russell.*) Do you know whether it was left to him to order all the stores for these services from England?—I apprehend that at this time, as far as I am concerned, we had nothing whatever to do with the matter in our department; it did not come within the province of the Office of Works in any way.

6. (To Mr. *Foster.*) Can you find out for us how the stores were ordered?—The impression seems to be that Major Crossman orders them himself.

7. Then would he draw upon the Treasury for them?—Yes, he would draw upon the Treasury for them.

8. Major Crossman is in England, is he not?—Yes, but he is not in London.

9. Then leaving that part of the question for the present, it appears that the saving on these votes arises, according to the explanation, "from the progress made in the erection of the various consular buildings having been less than was anticipated when the Estimates were presented to Parliament." That is a matter that very often happens; but I believe an honourable Member wishes to raise the question as to whether it should be denominated a "saving"; whether there should not be any distinction between a real saving, that is, a service costing less than was anticipated, and a case where the service has merely not been performed; do you think that it would be possible to give it a different denomination, so as to distinguish the case of the expenditure being less than the Estimate by reason of the work not having been performed, from the case of the expenditure having been less than the estimate because the service had been performed more cheaply than was anticipated?—I think it would be extremely difficult to make such a separation in the accounts; I do not see any other way of doing it than by keeping a duplicate set of every account, one to show the actual expenditure, and the other merely for the purpose of a comparison with the estimated expenditure; it would add extremely to the labour of keeping the accounts.

10. You would want an analysis of the expenditure presented to the Accounting Department, I suppose?—Yes. For every charge that was recorded in the account one would be obliged to keep a comparison of what the estimate of that charge had been, and that in the greatest detail.

11. Mr. *Candlish.*] Assuming that to be correct,

LIST OF WITNESSES.

MINUTES OF EVIDENCE.

Wednesday, 4th May 1870.

MEMBERS PRESENT:

Mr. Candlish.	Mr. Pollard-Urquhart.
Lord Frederick Cavendish.	Mr. Sclater-Booth.
Mr. Algernon Egerton.	Mr. Seely.
Mr. William Fowler.	Mr. Stansfeld.
Mr. Hunt.	

THE RIGHT HONOURABLE GEORGE WARD HUNT, IN THE CHAIR.

Mr. MORGAN HUGH FOSTER, C.B., and Mr. GEORGE RUSSELL, called in; and Examined.

1. *Chairman* (to Mr. *Foster*).] WITH regard to Vote 1, I believe the first question that the Committee wish to ask you is, as to the blending of the Accounts C. and D. "Consular Buildings, China," and "Consular Buildings, Japan." There is a note signed by you which says "that the distinct votes, China and Japan, have been blended together, as it has not been found practicable to record the expenditure separately." Does that necessity arise solely from the stores having been purchased in England for both services, and no separate account kept, or is there any other reason why the accounts have not been separated?—It is entirely a matter of stores, and I believe the only question which now remains open is with respect to a sum of about 25 *l.* chargeable for certain Queen's arms which were sent out, and it was not possible to say exactly in what consulate they would be used; but I think the separation will be complete for the future.

2. Mr. *Stansfeld* (to Mr. *Russell*).] There are stores purchased in England for the use of the consulates in China and Japan; can you inform the Committee by whom those stores are purchased in England?—These stores were not bought by the Department of Works at all.

3. *Chairman* (to Mr. *Foster*).] Major Crossman had charge of the expenditure in China and Japan, had he not?—Major Crossman has charge of the expenditure in China.

4. And in Japan, also, had he not?—Yes.

5. (To Mr. *Russell*.) Do you know whether it was left to him to order all the stores for these services from England?—I apprehend that at this time, as far as I am concerned, we had nothing whatever to do with the matter in our department; it did not come within the province of the Office of Works in any way.

6. (To Mr. *Foster*.) Can you find out for us how the stores were ordered?—The impression seems to be that Major Crossman orders them himself.

7. Then would he draw upon the Treasury for them?—Yes, he would draw upon the Treasury for them.

8. Major Crossman is in England, is he not?—Yes, but he is not in London.

9. Then leaving that part of the question for the present, it appears that the saving on these votes arises, according to the explanation, "from the progress made in the erection of the various consular buildings having been less than was anticipated when the Estimates were presented to Parliament." That is a matter that very often happens; but I believe an honourable Member wishes to raise the question as to whether it should be denominated a "saving"; whether there should not be any distinction between a real saving, that is, a service costing less than was anticipated, and a case where the service has merely not been performed; do you think that it would be possible to give it a different denomination, so as to distinguish the case of the expenditure being less than the Estimate by reason of the work not having been performed, from the case of the expenditure having been less than the estimate because the service had been performed more cheaply than was anticipated?—I think it would be extremely difficult to make such a separation in the accounts; I do not see any other way of doing it than by keeping a duplicate set of every account, one to show the actual expenditure, and the other merely for the purpose of a comparison with the estimated expenditure; it would add extremely to the labour of keeping the accounts.

10. You would want an analysis of the expenditure presented to the Accounting Department, I suppose?—Yes. For every charge that was recorded in the account one would be obliged to keep a comparison of what the estimate of that charge had been, and that in the greatest detail.

11. Mr. *Candlish*.] Assuming that to be correct,

Mr. *Foster.* Mr. *Russell.* 4 May 1870.

rect, it occurred to me that the words used at the head of these sub-columns, "Savings" and "Deficiencies," did not exactly convey the fact; and, indeed, that they were rather calculated to mislead. For instance, you see a sum of 22,893 *l.* under the head of Savings in China and Japan, on page 4, which you have before you, I presume?—Yes.

12. That is, in point of fact, not a saving; it is a postponed expenditure?—Yes, I think it is open to that remark.

13. And in Sub-Votes C. D. you say "there is a considerable saving on both these votes," which I apprehend is scarcely what you wished to convey; you did not mean that there was a general saving, I apprehend, but that the money was kept in hand for the present?—Yes; I think it is open to the remark you make; but those are terms that have been used for so many years that I think nearly everybody comprehends what they mean. A certain sum is granted by Parliament, and a less sum is spent, and the difference is called a "saving." If we were to adopt what I believe has been suggested, and to say "the net balance to be surrendered," omitting the words "savings" and "deficiencies," we should also have to use the words "net balance to be voted." When a vote is overdrawn it appears to me that to say "a net balance to be voted" might be also a little delusive.

14. Will you refer to page 50. Do you see in the heading there "More than voted," and "Less than voted"?—Yes, I think in an abstract like this, that is a very good way of putting it; but when you come to say that a net balance is to be surrendered, or that a net balance is to be voted, it appears to me that the words "savings" and "deficiencies" point out more clearly on which side the balance is.

15. Mr. *Fowler.*] Is not that pointed out by the question, whether it is to be surrendered or voted, that shows on which side the balance is?—Yes, I think it would do well enough.

16. There is no magic in the word "saving"?—No.

17. *Chairman.*] In some cases the saving arises from the fact that the bill has not been paid, and in that case, the word "saving" would be clearly misapplied. When the service had been performed, but owing to the account not having been sent in, or for some other cause, it was not paid, that could not be called a "saving"?—I think it is quite open to that remark.

18. Mr. *Fowler.*] Will you state what difficulty there would be in adopting the words used at page 50 in every vote?—None whatever; the only little objection I have is that, when you come to show the balance to be surrendered, or the balance to be voted, it appears to me that although those words would be sufficient, the words "savings" and "deficiencies" point out more strongly on which side the balance is.

Mr. William George Anderson, called in; and Examined.

Mr. *Anderson.*

19. *Chairman.*] Do you think that the word "saving" is the proper term to apply to these cases where frequently the fact is that a service has not been performed, and there has been less expenditure because the service has been deferred, or would lead to any inconvenience if the term was changed?—The term "saving" certainly indicates, so far as the comparison of two sums is concerned, that so much of the vote remains; but in a great many cases, especially in this Vote 1, it is not an actual saving; but it means that the expenditure has been postponed. In some cases there is a vote taken, and no expenditure whatever incurred; therefore it is not right to say that it is a saving upon the grant; it is merely a grant the expenditure of which has been postponed.

20. Mr. *Stansfeld.*] These accounts are accounts of the expenditure of cash?—Yes.

21. Am I not right in saying that there is nothing positively inaccurate in speaking of a saving in a cash account, even though it might not mean an ultimate saving upon the expenditure, which sooner or later will have to be incurred?—No, it is not inaccurate, but the term may mislead; it may lead people to suppose that it is a saving upon the expenditure incurred for a particular vote; but when no expenditure has been incurred in the year, because it has been postponed, and no cash has been issued from the Exchequer, it is not strictly correct to say that the sum unexpended is a saving.

22. Therefore, if I understand your evidence rightly, you say that although there is nothing from an accountant's point of view inaccurate in the expression in a cash account, still probably there would be no difficulty in substituting other phrases which could not mislead?—The words might run thus: "Grant unexpended," or "Expenditure in excess of Grant," that would be an accurate expression.

23. Have you the Appropriation Account before you?—Yes.

24. Will you turn to page 50, that is the report of your department, the Report of the Comptroller and Auditor General?—Yes.

25. I find there that after the columns "Grant" and "Expenditure," you put "Expended," "More than voted," and "Less than voted." Would not those words "More than voted," and "Less than voted," be preferable if we were to substitute them for "Savings" and "Deficiencies" in each vote?—Yes; I think these terms are correct.

26. Take page 4, Vote 1, "Net Saving to be surrendered." Supposing instead of those words "Net Saving" we were to say either "Net Sum" or "Net Balance to be surrendered"?—You might say "Net Vote unexpended to be surrendered;" it is a vote unexpended or unissued.

27. It is a portion of the vote which is unexpended?—Yes; it is the balance of a Parliamentary credit at the Exchequer to be cancelled.

28. Do you not think that "sum" or "balance" or "amount" is a better word; it is a sum and it is a balance?—There is no objection to that; you might say "Net sum unexpended to be surrendered."

29. Mr. *Fowler.*] But the words "to be surrendered" imply unexpended?—Yes.

30. Mr. *Stansfeld.*] Are we not right in this view that if we say the "net sum" or the "net balance" "to be surrendered" or "to be voted," the words "to be surrendered" or "to be voted" will explain completely whether there has been a saving or whether there has been a deficiency?—Precisely.

31. Mr. *Pollard-Urquhart* (to Mr. *Foster*).] Would

Mr. *Foster.*
Mr. *Russell.*
Mr. *Anderson.*

4 May 1870.

Would it be possible to make three columns for the expenditure, as compared with the grant upon the Appropriation Account, headed for instance, "postponed," "saving" and "deficiency;" and if so, do you think it would be advisable?—I think it would be difficult to state how much relates to postponement; you could not tell how much the expenditure that was thrown over would be.

32. *Chairman.*] You would have to require your department, in that case, to go into all the details of the estimate for each item of service?—Yes, I do not think it could be done in our department.

33. Mr. *Stansfeld* (to Mr. *Russell*).] With special reference to Vote 1, am I not right in saying that in many cases it would be impossible to fill up that third column. Supposing that we have a total estimate for a given work, and that we take a vote for a certain portion of the total estimate in one year, and that we spend less owing to our doing less work than we expected to do, would it not be impossible as a matter of accurate account very often to say precisely how far we had got in a partially completed contract, and therefore how much of that difference was mere postponement?—It would be impossible to do so in many cases.

34. *Chairman.*] There might be a payment to a contractor on account?—Yes.

35. In that case you could not say how much work that represented?—Just so.

36. Mr. *Stansfeld.*] In your opinion would not that be importing into a cash account the subject matter of an expense account?—Yes.

37. Is it not impracticable to combine a cash account and an expense account in one account of a vote?—Yes.

38. Mr. *Pollard-Urquhart.*] Supposing there is a sum of 8,000 *l.* to be expended on the purchase of a house which is unexpended, would it not be possible to make a column distinguishing that from an ordinary saving?—I apprehend that that would create a confusion in the accounts; it might be done.

39. *Chairman* (to Mr. *Foster*).] Do you think that the terms might stand thus: "Expenditure compared with Grant," "Less" or "More," instead of "Net Saving to be surrendered," "Net Surplus to be surrendered," or "Net Deficit to be voted," as the case may be, and that the words "Surplus" and "Deficit" should be substituted for "Saving" and "Excess" in the explanations. Do you think that that would be a proper way of stating it?—I think that that would be an improvement, and would fully explain the facts.

40. Then will you be good enough at a future meeting of the Committee to hand in a form applicable to each state of account, the surplus and the deficit, for our consideration, based upon that plan?—I will.

41. The order of the votes in the account does not follow the order in the Estimates, does it?—There is a slight difference in this respect. One vote was put in the Estimates which was afterwards struck out, and in the Appropriation Accounts the subsequent votes were moved up a number, so that they are all one in advance of the Estimates after Vote 19.

On Vote 3.

42. The vote with regard to this Tehran Mission House is one which is not very likely to occur often in the Estimates, I suppose. We may consider it as rather an exceptional vote, may we not?—It is now combined with another vote.

43. Therefore we need not trouble ourselves as to its position with regard to the order of the votes in future?—No; with regard to the order of the votes I may explain that in the Estimates for 1867-68 there was a vote for the Natural History Museum, which was Vote No. 19, that vote was not taken; and in the Appropriation Accounts all the other votes were moved up one, instead of retaining the same numbers as in the Estimates.

44. Mr. *Stansfeld.*] Otherwise the accounts follow the order of the votes in the Estimates?—Yes.

45. Is this, in your view, the most advisable order for these accounts?—The order that was adopted in these Estimates for 1868-69 was adopted under great pressure in the preparation of the Estimates, and, I think, under a little misapprehension; it was desirable to show the Votes under the Accounting Departments, and a separate index was given to show that, but the same order was, under a misapprehension, adopted in the original index.

46. You are speaking now of the Estimates?—Yes; it was clearly an inconvenient arrangement, and in the later Estimates the classification of the Votes in the several classes has been put upon a particular principle; the order is not always the same, but each class has been arranged according to the principle which seemed most applicable to it; if you wish I will explain what rule was followed in each class.

47. Mr. *Sclater-Booth.*] Upon this particular point the objection was taken that the vote for the Tehran Mission House came between two English votes; that is to say, you had first a foreign vote for China and Japan; then a home vote for the Metropolitan Fire Brigade, then a vote for the Tehran Mission House, then an English vote for Harbours of Refuge, and then you go abroad again in Vote 5 for "Lighthouses Abroad"?—That was merely because the order being taken according to the Accounting Department, all Votes in Class I., under the Treasury were taken first; next, those under the Foreign Office, and next those under the Board of Trade; but that is clearly not a convenient arrangement. In Class I. the plan adopted now is first to take all the Royal Parks and Public Buildings; second, Public Offices; third, Educational Buildings; fourth, New Buildings; fifth, Harbours, and sixth, Sundries; and a similar arrangement has been followed in the case of each vote. I may add, that as far as possible, England, Ireland, and Scotland have been taken separately.

48. Mr. *Stansfeld.*] Whatever the order may be in the Estimates, in future, as now, the Accounts will follow the Estimates?—The Accounts will follow exactly the order of the Estimates.

49. Mr. *Pollard-Urquhart.*] So they do in this case?—Yes.

50. *Chairman.*] Would it not be better, where there was a vote in the Estimates which was not taken, that the number should be preserved, and a blank left, so that the number of the vote in the Estimates, and the number in the Appropriation Account should correspond?—I think it would clearly be better to do that.

Mr. *Foster.*
Mr. *Russell.*
Mr. *Anderson.*

4 May 1870.

51. Are you now able to give us any further information about the purchase of stores for China and Japan?—

On Vote I.

It appears that the plan followed is, for Major Crossman to address himself to the Treasury, requesting certain stores to be sent to him, and the Treasury employ the Prisons Department, who are in the habit of sending out stores for convicts, and other services abroad, to supply these stores.

52. There was a requisition in this case from Major Crossman, I suppose?—Yes.

53. And that was executed by the Convict Department?—Yes.

54. I suppose you can give the Committee no further information as to where they were consigned to?—No, that I cannot tell.

55. Mr. *Candlish.*] The explanation you give as to how stores were supplied to China, does not appear to me to explain the difficulty of separating the China account from the Japan account?—I think the explanation would be this: the only discrepancy that seems to have occurred in the accounts was a sum of about 25 *l.*, expended for Queen's arms, which are put over the Consulates, and I presume that Major Crossman, in asking for a certain number of those Queen's arms, did not specify how many he would require (perhaps he did not know how many he would require) for one set of Consulates separate from the other.

56. Mr. *Stansfeld.*] In future those accounts of the expenditure will be severed?—For the future arrangements are made so that there will be no difficulty in that respect.

57. Mr. *Candlish.*] In this particular case would it not have been better to have severed them as far as you could, and to have explained it by a note where you could not sever it?—The Treasury would have no knowledge at all as to where they would be required; of course to have written out to China and inquired would have caused delay.

On Vote 3.

Mr. James Henry Cole, called in; and Examined.

Mr. *Cole.*

58. *Chairman.*] Can you give us information with regard to the Tehran Mission House; there was a sum taken for the purchase of the site, and it is still in hand, I believe?—The site was not purchased until after the financial year was over.

59. It will have to be re-voted this year then?—That sum was re-voted in 1869–70.

60. Mr. *Pollard-Urquhart.*] Was that sum of 8,000 *l.* taken merely for the purchase of a site, or for anything else for which money might be wanted in connection with the Tehran Mission House?—It was supposed that it would about cover the cost of the title.

61. Mr. *Sclater-Booth.*] Was it appropriated specially to the purchase of the site, so that these sums of 200 *l.* or 300 *l.* could not be charged to it according to the rules of the Treasury?—I cannot say.

62. Mr. *Stansfeld.*] There are some incidental expenses referred to in the communications between the Audit Office and the Foreign Office, connected with the erection of a mission house at Tehran, which were paid out of Civil Contingencies, and not out of the grant for the site. The question of the honourable Member was, whether the grant of 8,000 *l.* was so explicitly for the site that you could not charge those smaller sums against it, or what other reason there was for charging these smaller sums to the Civil Contingencies, and not to the item of 8,000 *l.* for the site?—My impression is that the 8,000 *l.* was taken merely for the site, that being the estimate for that object, and that no further expenditure was supposed to be likely to be incurred during that year.

63. (To Mr. *Foster.*) If you turn to the Estimates for 1868-69 you will find that the total estimate for the purchase of ground, and for the erection of a new house for Her Majesty's Mission at Tehran is 20,000 *l.*; the vote required for 1868-69, is 8,000 *l.* and the further estimate for completing the work is 12,000 *l.*; that is called the "Tehran Mission House" Vote; if we turn to the Appropriation Account we find that vote of 8,000 *l.* is dealt with as if it was a vote for the purchase of the site, and not for the building of the house. Is it within your knowledge, as a matter of fact, that the estimate of 8,000 *l.* was intended to be exclusively for the purchase of the site?—I am not aware that it was; I think we must be bound by the wording of the estimate.

64. That is another question; can you answer the question I have just put?—I would rather you would ask Mr. Cole.

65. (To Mr. *Cole.*) Is it within your knowlege that the 8,000 *l.* was intended to be appropriated exclusively to the purchase of the site?—I should say so.

66. In other words, when this estimate was taken, the Treasury had reason to expect that 8,000 *l.* would be required, and would be expended in the year for the purchase of that site?—Yes.

67. When therefore certain other contingent expenses were debited to the Civil Contingencies, and not to this vote, was not that because the Treasury assumed that the 8,000 *l.* would all be required for the site, and might have been already expended for the site?—Certainly.

68. Mr. *Sclater-Booth* (to Mr. *Foster*).] Is it not in accordance with practice that when you have a vote taken in the Estimates on account of a service, all payments on account of that service should be debited to the vote. Was not that the case that was argued before this Committee last year with respect to the vote for the Nelson Column?—Yes, I think the ground that might be taken according to the view which has just been expressed would be, that it was supposed that the vote had been expended.

69. Mr. *Stansfeld.*] I want to ascertain the fact first, before we go into the question, as to whether it was correct or not. If you turn to page 7 of the Appropriation Accounts, referring to Vote No. 3, you will find a letter from Mr. Hamilton, and I observe that in that letter he gives the explanation which I have elicited from Mr. Cole. In reply to a letter from the Audit Office he states that these smaller payments "were advanced from the Civil Contingencies Fund by my Lords' directions, in anticipation of a vote for Tehran Mission House for 1869–70; since

since it was considered that the Vote for 1868-69 would no more than suffice to meet the expenditure which was being incurred for purchase of site"?—Yes.

70. Therefore that, correctly or incorrectly, was the ground upon which the Treasury charged these expenses to contingencies?—Yes, so it appears.

Mr. *Foster.*
Mr. *Russell.*
Mr. *Anderson.*

4 May 1870.

Mr. Charles Lister Ryan, called in; and Examined.

Mr. *Ryan.*

71. *Chairman.*] The objection taken by the Audit Office was, that it appears that final payments have been made from Civil Contingencies, which payments the Comptroller and Auditor General considers should have been charged to and included in the Account of the "Tehran Mission House, for the year 1868-69." Do you still hold that opinion?—Yes. We were of opinion that those items were properly chargeable against that vote, and that therefore they should have been charged against it, and we believed that the Treasury were aware at the time that this last letter was written that the sum of 8,000 *l.* had not been expended on the site.

72. In the Account here I find "Tehran Mission House (site for)." Do you remember what the words of the Appropriation Act are in reference to it; do you know whether they followed the Vote of the House or not?—I have no doubt they did; the Civil Service Votes are scheduled in the Appropriation Act.

73. Then you think that these small sums ought to have been charged to that vote?—We thought so. (Mr. *Foster.*) There are other grounds also why those sums were chargeable to 1869-70.

74-5. Mr. *Stansfeld.*] If, in your opinion, the Treasury took a correct course in this case, will you state to the Committee the grounds upon which you have come to that conclusion?—I think the course the Treasury took could be justified in this way. The Vote for 1868-69 was entirely under the Foreign Office, whereas the Vote for 1869-70 was placed under the control of the Treasury; and the officer, Mr. Pulman, who has been sent out to superintend the works at Tehran, was appointed by the Treasury and was a Treasury officer. The intention was that he should superintend, on behalf of the Treasury, the expenditure of the vote which was under the control of the Treasury. Therefore, I think there was good ground for charging the salary and the travelling expenses of Mr. Pulman in going out to Tehran to the vote which would be under the control of the Treasury, and that, consequently, it was proper to charge the expenditure to Civil Contingencies, until the Treasury Vote was taken.

76. *Chairman.*] You mean that the Foreign Office, under whom the Tehran Mission House Vote was placed, could not account for Mr. Pulman's expenditure?—Yes; the Foreign Office had nothing to do with Mr. Pulman; he was a Treasury officer sent out by the Treasury.

77. And the Foreign Office, having to account for Vote 3, these expenses could not rightly be charged against that vote?—It appears to me that that is the case.

78. (To Mr. *Ryan.*) What do you say to that?—I should not take the same view; I think if Parliament granted the money, the expenditure ought to have been charged against the vote without reference to the Accounting Department.

79. Mr. *Selater-Booth* (to Mr. *Foster*).] As a rule, I suppose the Treasury would admit that when there is such a heading as "Tehran Mission House," as a matter of course, all the payments due to that service should be debited against it?—Yes, except under particular circumstances; I think in this case, that the Treasury having specially sent its own officer, and having the Civil Contingencies Fund out of which to meet the expenses, fairly charged it against the Civil Contingencies; but then, when they had the power of repaying the Civil Contingencies out of a special vote of their own, they did right to charge their vote with it and repay the Civil Contingencies. It is a very common thing to charge a sum at the date of payment to Civil Contingencies, and to repay Civil Contingencies after a vote has been granted.

80. Ultimately, will this vote bear the charge which is now borne by the Civil Contingencies?—Yes, it has been borne by the Tehran Mission House Vote for the year 1869-70; but you will observe that the payment out of the vote did not take place until repayment was made to the Civil Contingencies Fund, therefore the date of payment was 1869-70; on that account I think it was right to charge this amount against the Vote for 1869-70.

81. Mr. *Pollard-Urquhart.*] As I understand you, you would not have thought this course desirable if there had not been a sort of change of duties between the Treasury and the Foreign Office?—I think if it had been clear that we had a vote which was intended not only for the site but for buildings, the Treasury, instead of charging the expenditure to the Civil Contingencies, might have charged it to the vote, but the payment really did not take place and become chargeable against the vote until payment was made out of the vote to the Civil Contingencies Fund; therefore, I say it properly falls upon the year 1869-70.

82. Mr. *Stansfeld.*] The payment out of the Civil Contingencies was merely an advance?—Yes.

83. So that the Vote for the Tehran Mission House was ultimately charged with these expenses, but not until the following year?—Not until the year in which the payment was made out of the vote.

84. Mr. *Pollard-Urquhart.*] But if Mr. Pulman had been sent by the Foreign Office, and not by the Treasury, you would not have thought this course advisable; in your opinion that makes all the difference, as I understand you?—If the Foreign Office had sent out Mr. Pulman I suppose they might have charged his expenses against the vote which was under their control.

85. And therefore, in similar cases where, however, all the expenditure has been incurred by the same department, you do not think that that would be a precedent which it would be desirable to follow?—I should feel inclined under the peculiar circumstances of the case to follow the same practice.

86. Mr. *Stansfeld.*] Under similar circumstances?—Yes.

87. Mr. *Pollard-Urquhart.*] If all the expenditure had been incurred by the same department, should

Mr. *Foster.*
Mr. *Russell.*
Mr. *Anderson.*
Mr. *Ryan.*

4 May 1870.

should you feel disposed to do so?—I should take into consideration the circumstances of the vote. If I had considered that the sum voted for the site had all been expended in Persia, I should have recommended its all being charged to Civil Contingencies until we knew whether it was all expended or not.

88. *Chairman.*] It is quite clear, from the Appropriation Act, that it might have been charged against the vote unless there was good reason to the contrary, because the words of the Act are very general?—I have not the words of the Act before me. What I have been saying is independent of that.

89. Lord *Frederick Cavendish* (to Mr. *Ryan*).] Is the objection of the Audit Office removed by the explanation Mr. Foster has given?—I think not. The main objection that Department felt was, that this account shows an unexpended balance of 8,000 *l.*, whereas there had been expenditure incurred which we thought ought to have been charged against the 8,000 *l.*, making it appear that less had been spent than really had been the case.

90. And that objection has been in no degree removed by the explanation given by the Treasury?—No; I think that the fact as to the control of Mr. Pulman in no degree removes that objection.

On Vote 5—Lighthouses Abroad.

91. Mr. *Pollard-Urquhart* (to Mr. *Foster*).] We observe that a very large sum was expended for works at Sombrero, which was not sanctioned by Parliament, or included in the Estimates, amounting to 1,408 *l.*; can you give any explanation of that very large expenditure being made without its being sanctioned by a Vote of Parliament?—The Vote of Parliament is for "Lighthouses Abroad," and that is the only limitation of the Appropriation Act. The sub-division of the vote is for information, but it does not bind the Treasury to expend the exact sums upon the special lighthouses mentioned there. It is impossible to say exactly where repairs may be wanted, and the Treasury have the power of authorising expenditure which is not in the detail of the estimate. It was found expedient to expend money at Sombrero and Castle Island; consequently, the Treasury authorised the Accounting Department to expend it, and accordingly those two sub-heads appear in the account.

92. Mr. *Stansfeld.*] There is an explanatory note, I think, to that Vote, giving the reason?—Yes.

93. *Chairman.*] It was the case, was it not, that there had been a previous Vote taken for Sombrero and Castle Island?—There had been a previous vote, and this is a balance of expenditure which fell into this financial year, but which it was anticipated would have fallen into the previous financial year.

94. Mr. *Pollard-Urquhart.*] It is perhaps one of those little irregularities of account which are almost unavoidable in a transition from one system to another?—No; it may always arise under any system that the works are not completed so rapidly as it was expected they would be, and the payments instead of falling into one year fall into the following year.

95. Would not it have been more regular if the balance had been surrendered at the end of the previous year, and re-voted?—No; as the expenditure falls into the year 1868-69, it is correctly charged upon the vote which Parliament had granted for Lighthouses Abroad in that year.

96. Did you not say that a sum had been specially voted to meet the expenditure on the Sombrero Lighthouse in 1867-68?—It had been included in the amount voted for lighthouses abroad in 1867-68.

97. But it was not brought to account in that year?—There was a portion of the expenditure which had been provided for in the year 1867-68 which was not paid in 1867-68.

98. Would not the more regular course have been that the surplus arising from that expenditure should have been surrendered, and that the further sum required in the following year should have been re-voted?—That is practically the case; the surplus upon the Vote for 1867-68, if there was any, was surrendered, and the expenditure which fell accidentally into the year 1868-69 was met out of the money voted for 1868-69.

99. *Chairman.*] Was the fact this, that from the want of sufficiently rapid communication between the persons charged with the execution of the works at Sombrero and the Board of Trade, the Board of Trade were under the impression that the works were completed, and that the money taken in the previous year would be required to pay for the works so completed, but it turned out that the works were not completed, and more money was wanted to pay for them in the following year?—Yes.

100. Mr. *Stansfeld.*] Is it not, particularly in the case of works at such a distance from this country, clearly impossible to know with certainty the expenditure to the end of the financial year, when your Estimates for the following financial year are, practically speaking, completed two months before the end of the financial year?—That is quite clear.

101. Mr. *Egerton.*] As I understand it, no specific sum is voted for any particular lighthouse, but the Treasury has the power to employ the money that is voted by Parliament upon any lighthouse upon which it may be desirable to expend money?—That is the rule; the Vote of Parliament is for the main item at the head of the vote, and the subsidiary division of that money is under the control of the Treasury.

102. Therefore there is no question of surrendering into the Treasury the deficiency that may have arisen from the non-completion of the works at Sombrero, but the money surrendered by the Treasury would arise from the items of the Vote?—Yes.

103. Mr. *Pollard-Urquhart.*] I suppose the same reasons apply to the expenditure of 622 *l.* 15 *s.* 3 *d.*, in the last item for Dellamara?—The same reasons would apply to that case.

104. (To Mr. *Foster.*) Was any money voted for the lighthouse at Dellamara in the previous year, 1867-68, do you know?—I do not know; a storm may arise and injury may be done to a lighthouse not named in the detail of the Estimate, which of course it will be necessary to repair.

On Vote 9.

105. Mr. *Pollard-Urquhart* (to Mr. *Russell*).] Will you explain why a large excess has occurred on the police for Royal Parks, under Sub-head D.?—There was a large addition made to

to the police force in consequence of a transfer of duties; Hyde Park, having been previously watched by park constables, was given over to the Metropolitan Police, and 10 extra police constables were employed on that duty.

106. Mr. *Sclater-Booth*.] Was not that known when the Estimates were framed?—No, it was not when the Estimates were framed.

107. Was it not known that the parks were to be handed over to the Metropolitan Police?—This increase arose from a suggestion of the Commissioner of Police; he found, when he came to work the system, that the number of men was not sufficient for the purpose.

108. I apprehend that the real fact was that he found he had not estimated sufficiently for the cost arising from the transfer?—Yes.

109. He knew perfectly well that he was going to have charge of the parks?—Yes; but he did not know the extent of the work that would have to be performed.

110. Mr. *Pollard-Urquhart*.] There is a second note which says that the excess is attributable to payments properly chargeable to the Vote for 1867-68 having, through the insufficiency of the Vote, come in course of payment after the 31st March 1868; was not that known at the time the Estimates were prepared?—No; as far as my memory serves me, the bill was something like 2,700*l*. to the Commissioners of Police, for the police watching the park; the whole of that was occasioned by the increase to the staff which was rendered necessary when they undertook the service.

111. *Chairman*.] When you say that "through the insufficiency of the vote" this sum came in course of payment in the following year, you mean that it was due, but that there was not money for it?—There was not money for it.

112. Mr. *Stansfeld*.] The real question raised at the last meeting of the Committee was this. Explanation No. 2 is to this effect, that certain payments properly chargeable to 1867-8, came in course of payment in 1868-9, because of the insufficiency of the Vote for 1867-8, but if you look at the top of this vote you will find it stated that "the unexpended balance shown on the account of the Vote 'Royal Parks,' for the year ended 31st March 1868, has been surrendered," therefore, that vote was not insufficient?—The balance surrendered amounted to 523*l*., and the charge we had to meet was 2,700*l*.; there is considerable difficulty about these Park Votes, inasmuch as a great portion of the expenditure is in the hands of sub-accountants, and it is impossible to know what the balance on the vote is, until the accounts of the sub-accountants have been rendered after the close of the financial year, and examined.

113. *Chairman*.] That will account for a sum of money being surrendered?—I give that explanation as showing that we cannot tell what our balance will be.

114. But that does not meet the point, of why the payment was postponed; this payment ought to have been charged against the Vote for 1867-8?—The balance on that year was only 500*l*.

115. Mr. *Stansfeld*.] But you did not know the balance at that time?—No, not exactly.

116. Why did you not make the charge then?—We knew we had run our vote pretty short, and we suspected that there was no balance at all.

117. Were those accounts sent in, and if you had a sufficient balance, could you practically have paid them within the year?—Yes.

118. (To Mr. *Foster*.) Then I apprehend our criticism upon this note must be that this explanation is not quite accurate, as I understand the matter?—It is an accurate explanation; but what has been done is wrong in principle.

119. *Chairman*.] It ought to have been charged as a deficit upon the account of last year's vote?—It ought to have been paid, and charged against that year's vote.

120. Mr. *Stansfeld* (to Mr. *Russell*).] The first question is, ought it to have been paid; did you get the accounts in in time to pay them?—Yes; I apprehend that we had these accounts, certainly.

121. The reason you did not pay them was because you apprehended a deficiency?—Yes.

122. Mr. *Sclater-Booth*.] That is to say, you apprehended a deficiency upon the whole vote?—Yes; upon the whole vote for the parks. We apprehended that if these accounts were paid, there would be a deficiency upon the whole vote.

123. *Chairman* (to Mr. *Foster*).] How could the Works Department have paid this amount?—They should have made the payment; they should first have reported it to the Treasury for authority to pay a sum in excess of the vote.

124. Then it would have come in course of payment in the year, being voted as an excess?—Yes; the money would have been advanced out of the Civil Contingencies Fund to meet the excess, until the Excess Vote was taken.

125. Mr. *Candlish*.] I think there is another irregularity. I understand the fact to be that embarrassment results in balancing these accounts from the difficulty you have in getting the accounts from the spending agencies, whoever they are?—Yes, sometimes.

126. *Chairman*.] Supposing the department had applied to the Treasury for authority to pay this money, out of what vote should it have come?—We should have advanced the amount deficient on the vote out of the Civil Contingencies Fund.

127. And then the expenditure should have been charged against the vote as an excess?—Yes.

128. And a vote should have been taken afterwards for that excess?—An excess vote would have been taken later.

129. In case the Civil Contingencies Fund did not suffice, I suppose the vote would have been paid out of the General Fund at the disposal of the department for other votes?—We should have had to pay it out of other balances.

130. Trusting to Parliament to vote the money?—Yes.

131. Mr. *Pollard-Urquhart*.] When a deficiency arises upon any particular vote, is the excess required taken out of the Civil Contingencies Fund before it is voted by Parliament as an excess?—The rule is, that the excess of expenditure would be advanced out of the Civil Contingencies Fund, and an excess vote would be subsequently taken, and the Civil Contingencies Fund would be repaid the amount it had advanced.

132. Mr. *Stansfeld*.] In other words, an excess vote is always for past expenditure already incurred?—Yes.

133. *Chairman*.] And supposing that the Civil Contingencies Fund is exhausted, and the Treasury authorise a payment out of the general balance in the Exchequer, they run the risk of Parliament not afterwards sanctioning it by an excess vote?—That is the case.

Mr. *Foster.*
Mr. *Russell.*
Mr. *Anderson.*
Mr. *Ryan.*

4 May 1870.

134. In fact it is done upon the responsibility of the Treasury?—Yes, upon the Treasury responsibility.

135. Mr. *Pollard-Urquhart.*] Is not that the case to a certain extent even when it passes through the Civil Contingencies Fund to begin with?—That is what the Civil Contingencies Fund is for.

136. *Chairman.*] The Civil Contingencies Fund is placed at the disposal of the Treasury by Parliament in order to meet unforeseen expenditure?—Yes, that is the object of the Fund; a sum paid under the authority of the Treasury, directly out of the Civil Contingencies Fund, would not appear in the Appropriation Account as a charge against the vote until the Excess Vote was taken.

137. Mr. *Pollard-Urquhart.*] Then how would it have appeared in the Appropriation Account?—The expenditure would not have appeared in the Appropriation Account at all, and I think that that is a point which requires consideration. My own view is, that it is far better to authorise the Treasury to sanction an excess of a vote rather than to charge it upon the Civil Contingencies Fund, because under the former system the Appropriation Account would not show that the expenditure had been exceeded; it is concealed, you may say, in the Civil Contingencies Fund, whereas, if the Treasury had authority to sanction an excess of expenditure, it would appear in the Cash Account and upon the Appropriation Account as an excess of expenditure.

138. Mr. *Sclater-Booth.*] That would be in analogy with the power the Treasury has of sanctioning excesses upon the the Army and Navy Votes?—Yes.

139. And it would have this advantage, that the voting of excesses by the House would be uniform as between the three branches of the public service?—Yes.

140. *Chairman.*] Then supposing that a vote has been exceeded, in no case would that excess appear upon the Appropriation Account?—Not if it has been charged directly upon the Civil Contingencies Fund.

141. But supposing the Civil Contingencies Fund has not been able to meet it?—Then it must be left as an excess of expenditure upon the vote, and would appear in the Appropriation Account as exceeding the vote.

On Vote 11.

142. Mr. *Stansfeld.*] If you will turn to page 21 you will see that there is a deficiency to be voted on Vote 11 of 321 *l.* 6 *s.* 4 *d.*?—Yes.

143. *Chairman.*] In that case that was not provided for out of the Civil Contingencies?—Not directly, but as an advance.

144. Mr. *Stansfeld.*] Then upon these Appropriation Accounts, which we have before us, whenever we find a "deficiency to be voted," it means that more than the grant has been expended, and charged directly against the vote?—Yes.

145. And in none of those cases has the excess come out of the Civil Contingencies?—Not directly. In most cases the plan now pursued is to make an advance from Civil Contingencies to the credit of the vote, so as to show the total expenditure upon the vote.

146. *Chairman.*] So that, even when the Treasury had authorised an advance from the Civil Contingencies, the expenditure would be shown against the vote?—Yes.

147. The vote being augmented by the advance from the Civil Contingencies Fund?—Yes, practically.

148. Should that appear in the Appropriation Account?—The advance from the Civil Contingencies would not appear in the Appropriation Account.

149. Mr. *Sclater-Booth.*] It would appear as an excess upon the vote?—Yes.

150. *Chairman.*] But when the Civil Contingencies Fund sufficed to cover it, and an advance from the Civil Contingencies Fund had been authorised by the Treasury, there would be no need to take a vote for the excesses?—Yes, there would; we should recoup the Civil Contingencies Fund out of the Excess Vote.

151. Mr. *Seely.*] It is simply this, that the Treasury lend the department so much money to get it back when Parliament votes it?—Yes.

152. *Chairman.*] Then we may say that in any case the expenditure would have appeared against the vote?—In almost all cases. There are cases where expenditure is met out of the Civil Contingencies Fund, and not charged against the vote till a subsequent year.

153. That is where there is no vote applicable to a service, and the Treasury has sanctioned an advance out of the Civil Contingencies Fund, then it could not appear against any vote; but where there is a vote applicable to the service, if that vote has been exceeded, and the money has been advanced from the Civil Contingencies Fund, then the excess would appear as an excess upon the vote, would it not?—Yes, as a general rule.

154. Mr. *Stansfeld.*] We wish to know positively, whether every case of a deficiency upon a vote appears upon these Appropriation Accounts with the exact amount of the deficiency; can you say that it does so?—It does generally, but I should not like to say that there was no exception.

155. (To Mr. *Ryan.*) Can you answer the question I have just put to Mr. Foster?—Yes, certainly; the excess will always be shown against the vote; any advances out of the Civil Contingencies Fund which ultimately remain as charges upon the Civil Contingencies are for services not provided for in the votes.

156. We may rely upon these Appropriation Accounts, which have undergone your revision, as showing every deficiency which has occurred upon every vote?—Yes.

157. Mr. *Sclater-Booth.*] The deficiency appears upon the face of the Appropriation Account, whether it has been met out of the Civil Contingencies Fund or not?—Yes; whether the cash has been advanced from the Civil Contingencies or not.

158. *Chairman* (to Mr. *Foster*).] The system of Civil Contingencies Fund was meant, was it not, as a restriction upon the power of the Treasury with regard to authorising excesses?—Yes, and to meet unforeseen charges not falling within the terms of any vote.

159. The intention of it was, that that power should be exercised within certain limits?—Yes.

160. Then if you give the Treasury power to sanction excesses without reference to any limit, would not that, practically, enable the Treasury to evade the Appropriation Act?—I think you might impose a limit, but you need not compel the double process to be gone through of transferring money from the Civil Contingencies Fund, and

Mr. *Foster.*
Mr. *Russell.*
Mr. *Anderson.*
Mr. *Ryan.*

4 May 1870.

and retransferring it again to that Fund when an excess vote is granted by Parliament.

161. Does not the power of the Treasury to sanction a transfer from one vote to another in the case of the Army and Navy, occasion very great laxity of practice in those departments?—I think that is chiefly because the Treasury has not sufficient control over those departments, whereas it has full control, or much fuller control, over the Civil Departments.

162. Is it not the case that sums of a very large amount indeed are transferred from the account of one vote to the account of another in the case of the Navy?—No doubt that takes place in the Army and Navy Votes.

163. And it receives the sanction of the Treasury, so that money voted for one purpose to a very large amount, is expended for another purpose?—Yes, I think that is the case with respect to the votes of those two departments.

164. Do you not think that if the same principle were applied to the Votes of the Civil Service, the same laxity would arise?—I think the control of the Treasury over the Civil Departments is so much greater than the control of the Treasury over the Army and Navy Departments, that that danger would not arise.

165. Mr. *Sclater-Booth.*] Besides, as a matter of fact, you frequently find it necessary to recoup the Civil Contingencies Fund on account, do you not?—Yes; that has been necessary.

166. That is to say, before you recoup the Civil Contingencies Fund in a regular way you find it necessary to replenish that fund on account?—We take votes on account in order to replenish the Civil Contingencies Fund.

167. Therefore, under the present arrangement, it is impossible to limit the power of the Treasury to a fixed sum?—We have the power of replenishing the Civil Contingencies Fund, when necessary, in the way you refer to.

168. *Chairman.*] At the same time it does impose a certain check upon the Treasury?—I think the check is extremely small, and it complicates the accounts by transfers and retransfers to such an extent that it becomes almost a formal matter. Month by month the Paymaster General reports that certain excesses have taken place upon votes, and requests a transfer from the Civil Contingencies Fund to meet them. The expenditure has already taken place, and the transfer must be made.

169. (To Mr. *Ryan.*) Have you considered this point at all?—No, I am not prepared to express an opinion upon it.

170. (To Mr. *Anderson.*) What is your opinion upon the question as to whether the Treasury should have power to authorise excesses without reference to the Civil Contingencies Fund, in the case of the Civil Service Votes?—Formerly before the creation of the Civil Contingencies Fund, there was an annual vote taken for Civil Contingencies, generally amounting to 100,000*l.*, without any specification of the manner in which it was to be applied. It was in the nature of a vote of credit for services which could not be foreseen. This annual vote was not intended to be used for the purpose of paying excesses upon the ordinary grants of Parliament. I believe the suggestion to discontinue the annual vote, and to create a permanent fund, was made by me in my evidence before the Public Accounts Committee of 1861; the Committee thought that it would be very desirable to get rid of that annual vote, and to grant a fixed sum as a fund from which to defray certain expenditure which it was impossible to foresee, and that a grant of 120,000*l.* would be sufficient for that purpose; but I do not remember that it was intended to meet the excesses upon all the votes for the Civil Service, because it appears to be insufficient for that purpose. If the Committee will look at Vote 5, under letter H., on page 10, they will find in the expenditure for lighthouses, two items, for which no vote whatever was taken. In that case the Treasury authorised the money to be paid, not out of the Civil Contingencies Fund, but out of the savings on other items of that vote. I think that was right.

171. That was justified by the terms of the Appropriation Act, was it not?—I do not think that this was contrary to the spirit of the Appropriation Act, although there was no special provision for the work in the Estimate.

172. There was a provision made for "Lighthouses Abroad" generally?—There was a provision made for "Lighthouses Abroad," as there is in this case a provision for "Royal Parks;" the cases are similar in that respect; it is an excess of payment under one sub-head provided for by surpluses under other sub-heads.

173. There is this difference, that as regards the lighthouses there was a vote to pay for it, only the item had not been mentioned in the Estimate, but in the case of the parks the item had been mentioned in the Estimates, but there was not money to cover the expenditure?—I cannot say that; on Vote 9, in the account before the Committee, not only has the sum for the police been paid out of the vote, but there was a surplus besides.

174. On the contrary, it appears that in the case of the parks there was a deficiency in 1867-68?—I have not got that account before me, therefore I cannot say how that may be.

175. It appears, by a note to Vote 9, that there was a deficiency on that vote; but in the case of Vote 5 for 1868-69, there was no deficiency in the Estimate, only the money was applied to more purposes than were mentioned in the Estimate?—Not having the accounts before me, I cannot say.

176. What do you say to giving power to the Treasury to allow an excess of expenditure without reference to the Civil Contingencies Fund?—I think the proper rule to lay down would be that all expenditure should appear against the vote to which the service relates; and that the Civil Contingencies Fund should only be used for urgent but unforeseen expenditure; I believe that that was the original intention of that vote.

177. Apart from that, would you give to the Treasury the power to sanction an increase of expenditure under the head of any vote, if a saving could be effected under the head of any other vote?—That has never been done with regard to the Civil Service Votes.

178. It is done with regard to the Army and Navy Votes?—Yes, it is necessary with regard to the Army and Navy, where the expenditure is incurred all over the world, and where it is impossible to foresee in many cases large items of expenditure, which are of a very uncertain character and liable to great fluctuations. It is necessary that some such power should be exercised in the case of these great departments. But the Committee will find this subject fully discussed in the evidence given by Mr. Gladstone,

Mr. *Foster.*
Mr. *Russell.*
Mr. *Anderson.*
4 May 1870.

Sir George Lewis, and others, before the Public Accounts Committee in 1862. (*See* the Appendix to the 3rd Report of the Committee.)

179. What do you think of the policy of extending that power to the Civil Services?—I see no necessity for extending it to the Civil Services, because they are differently circumstanced. They are nearly all conducted at home, and they are more under the control of the different departments than the varying expenditure in the Naval and Military Services is, and, moreover, the expenditure is known sufficiently early to enable the departments to apply to Parliament for a vote for it.

180. And supposing any unforeseen necessity arises for further expenditure, there is a power of presenting a Supplementary Estimate?—That power exists for all the Services, but with regard to the excess on the Army and Navy Votes, that frequently occurs in consequence of an expenditure incurred abroad, which it is impossible to foresee, and the knowledge of which you do not acquire in time to go to Parliament for more money.

181. Is it the case that abuses sometimes arise in consequence of there being that power in the case of the Army and Navy Votes?—I do not recollect any abuses. There may be large excesses sometimes, but generally they are sufficiently justified, as far as my experience goes.

182. Mr. *Egerton* (to Mr. *Foster*).] I did not gather from Mr. Anderson that he had paid much attention to your point, that it makes no difference as regards the responsibility of the department whether the excess is dealt with as at present or in the way you propose?—I do not think that it either increases the responsibility or diminishes it.

183. Mr. *Seely*.] Supposing the Treasury were not provided with the power of meeting any excess of expenditure, say by the Department of Woods and Forests, out of the Civil Contingencies Fund, and the creditors of that department wanted their money, how would they be paid?—Of course the Chief Commissioner would have incurred the expenditure upon his own responsibility, and if the Treasury had no power of authorising an excess, I suppose the creditor would step in and put in an execution.

184. Mr. *Pollard-Urquhart* (to Mr. *Anderson*).] What is your opinion with regard to the point adverted to by Mr. Foster just now, as to those excesses which, if I understand it rightly, are paid first out of the Civil Contingencies, and afterwards out of money re-voted by Parliament; do you approve of their being first paid out of Civil Contingencies Fund, or do you think they had better be paid out of the Exchequer at first, without coming out of the Civil Contingencies Fund at all?—I have already explained that I think the Civil Contingencies Fund was intended to meet unforeseen expenditure.

185. *Chairman*.] What you said, I think, was this; you thought that the Civil Contingencies Fund ought not to be looked to at all with regard to excesses upon votes, and that it should only be looked to with regard to unforeseen services?—I think that it should only be looked to for unforeseen services during such period as the departments cannot go to Parliament to obtain the necessary votes for them.

186. And that no excesses upon votes should come out of it?—Yes; except those I have already adverted to.

187. What do you think ought to be done in case there is an excess upon a vote; ought there to be a Supplementary Estimate at once presented to Parliament, if Parliament is sitting, or ought the Treasury to have power to authorise the payment?—I think the Treasury should have full power to authorise savings within the vote to be so applied.

188. Supposing there is an excess upon the whole vote?—The expenditure upon these Home Votes is known long before it comes forward for payment; it is authorised by the department through which the expenditure is incurred, and when the authority is given it is known to the department that that expenditure will come forward; that is the time to make provision for it; not when the bill comes in; if they authorise the performance of a work, they know that they should make provision for it.

189. Mr. *Stansfeld*.] How should they make provision for it?—They should make provision for it by applying to Parliament for the money; if it is a work of very urgent necessity and Parliament is not sitting, of course they must come then upon the Civil Contingencies Fund; but I do not know that, with rare exceptions, there are works of that indispensable necessity arising in the Civil Departments which occur in the Army and Navy.

190. Supposing Parliament were not sitting, what would be done?—If the work were an indispensable work, you would then defray the expense of it out of the Civil Contingencies Fund; you must have recourse to that, if you have no vote that you can go to.

191. I thought I understood you to object to the meeting of these excesses out of the Civil Contingencies Fund?—I think you ought not to do so, but if a necessity arises which you cannot possibly overcome, you must pay it out of something, and you have nothing else that you can pay it out of, and therefore you must go to the Civil Contingencies Fund; but those cases are very few.

192. Then, if I now correctly apprehend your meaning, you think that the number of cases in which the Treasury is in the habit of sanctioning excesses might be reduced; but that wherever that sanction is given, the excess ought to be met out of the Civil Contingencies Fund?—No; I think, in the first place, that an excess should not be authorised if it goes beyond the provision made by Parliament for the service; I think that as a rule a department has no right to incur expenditure which has not been sanctioned by Parliament; and that being the rule we have only to deal with exceptions, and those exceptions must be cases of extreme urgency where any postponement would be extremely detrimental to the public service.

193. Suppose one of those cases to occur, do you think that it would be better that the department on Treasury sanction should simply create an excess upon the vote by charging the vote directly with the extra payment, or that the department should be enabled to meet it by an advance from the Civil Contingencies?—The vote should bear the expense so far as it is sufficient for that purpose; if there is an excess beyond the total vote, you have no other fund to go to but the Civil Contingencies; therefore necessity becomes the law in that case.

194. Is that quite so; do not cases occur in which a vote is positively exceeded; cases in which

which nothing remains to the credit of the vote, and the vote is overdrawn?—There are many cases in these accounts where the vote is overdrawn; take for example, printing and stationery; there 13,794 *l.* were paid in excess of the grant.

195. The question appears at this moment to be rather this: we will assume that a case has arisen in which the Treasury ought to sanction an excess upon a given vote of Parliament, and the question is merely as to the method of meeting that excess expenditure; as I understand Mr. Foster's suggestion, he thinks that it would be better for the Treasury simply to sanction that excess, and for the vote to be overdrawn, than to go through the form of replenishing the vote to that amount by a draft upon the Civil Contingencies; do you agree with that view of Mr. Foster's?—Overdrawing a vote means the misappropriation of another vote in order to provide the funds; therefore I think it would be better in that case not to do that, but to borrow from the Civil Contingencies Fund. But I beg again to refer the Committee to the evidence on this subject before the Committee of 1862, in which the question was discussed with reference to the Army and Navy Services.

196. *Chairman* (to Mr. *Foster*).] But the fact that the Treasury has no such power obliges the Government to present a Supplementary Estimate, in case they have exceeded their expenditure where the Civil Contingencies Fund is not sufficient to cover the amount, or to run a very serious risk by taking upon themselves the responsibility of sanctioning expenditure beyond the amount authorised by Parliament?—Yes; but then there are many cases where a supplementary vote could not be obtained in time; take, for instance, the vote for police in counties and boroughs, it is quite out of the control of the Treasury to say what the exact expenditure for that purpose shall be. The estimate is made as nearly as possible according to the information the Treasury has at the beginning of the year. These accounts come in after November, and they are being examined up to the beginning of March; they are very large accounts, and whatever they come to, the Treasury is bound to pay a quarter of the charge. At the end of March, on the completion of the accounts, it is found that the police charge in counties and boroughs has been largely increased, and as is the case in this year's accounts, the expenditure is 30,000 *l.* in excess of the vote.

197. You could make a clear distinction between that class of cases, could you not, where the Treasury have no option, and where it is not a matter of discretion but a matter of account?—There would be a great many exceptions to any rule that might be laid down. In many cases the expenditure is going on abroad, and is met by bills drawn upon the Treasury, which have to be accepted, and have to be paid. It would not do to refuse the payment of a bill for 10,000 *l.* drawn by Major Crossman, in China, because the vote had been exceeded; and the same thing applies to much other expenditure, on account of convicts, for instance, or Colonial expenditure.

198. Supposing your suggestion were adopted, it would be easy to limit it to a certain class of cases?—I think limits might be placed, not only to the class of cases but to the amount.

199. Mr. *Sclater-Booth.*] You said that before, I think?—Yes.

200. Lord *Frederick Cavendish.*] If that suggestion was adopted, Parliament would never vote the money at all, would it?—Parliament would vote the excess in one case just as in the other. The only difference is, that you would save the two intermediate steps of the money being taken out of the Civil Contingencies Fund to be placed to the credit of the vote, and then, after the excess vote has been granted by Parliament, that money being replaced to the Civil Contingencies Fund. You would save those two processes, the use of which I do not see, except as a control upon the Treasury; and that control could, in my opinion, be exercised in a more simple manner.

201. *Chairman.*] What control would there be upon the Treasury, further than the apprehension of Parliament taking a rather serious view of what the Treasury might have done?—I think you might lay down a rule that the Treasury should not be authorised to sanction any excess beyond a certain per-centage of the vote; say 10 per cent.

202. Would it not be found, if that were the case, that the departments would always go up to the maximum, trusting to the Treasury to sanction it?—I think the Treasury sets itself against any excess of the vote as much as it can, wherever it is possible to resist expenditure.

203. Is it not the case in the Army and Navy, with regard to the Navy particularly, that the Admiralty exceed the expenditure sanctioned by Parliament on one vote, trusting to the Treasury to allow them to transfer the amount from another vote, although there is no real occasion for them to do it?—Upon the same plea, I think, they are quite ready to exceed their total vote.

204. That is because they have calculated, and they think that they have a saving upon one vote, and accordingly they ask for authority for overspending upon another vote, and then it turns out that they have not the saving upon the first vote which they had expected, and the consequence is that they go beyond the aggregate vote; that is how it happens, is it not?—Yes; that is generally the course they take; but I think the comparison with the Army and Navy hardly applies to the Civil Service, because the Treasury have a much greater power of control over the Civil Service.

205. Does not that arise from the fact that the Civil Departments have not the same power given them by Parliament to transfer money from one vote to another?—I think not; I think the Treasury, in all cases where they think expenditure is for the good of the public service, have authorised it, even where it has been in excess of the vote.

206. Mr. *Sclater-Booth.*] If no such power was admitted, would it not be a necessary consequence that all the departments would overestimate?—I think that would be very much the case.

207. Mr. *Candlish.*] Would not this margin of 10 per cent. that you suggest be a sort of standing invitation to all the departments to exceed their votes to that extent?—I am not prepared to say that that would be the best check to place upon the power of the Treasury; but I think that the power the Treasury now exercises is much the same in the one case as it would be in the other, and that the double process of transfer and retransfer might be saved by making the alteration.

208. Mr. *Sclater-Booth.*] I wish to put one question to you with respect to the arrangements

Mr. *Foster.*
Mr. *Russell.*
Mr. *Anderson.*

4 May 1870.

of this Committee; as the matter now stands, it is considered necessary by the Treasury that the excesses upon the Civil Service Estimates shall be voted by Parliament within the financial year, before the 31st March, whereas the accounts have not been investigated by this Committee until a later period of the Session; if instead of an actual vote by the House being necessary the Treasury had the power, I do not say of transferring from one vote to another, but of authorising the payment from the balances in the Paymaster General's hands to meet the excesses in question, in that case a vote of the House might be taken in the month of June or July, as is done in the case of the Army and Navy, the words of which run, I think, "that the Treasury having authorised these appropriations the House do concur," or "do assent to," or "do sanction the appropriation authorised by the Treasury"?—I think there would be a very great advantage in that, inasmuch as it would give full time to the Committee to investigate the matter, and ask questions upon it before the House voted the money; now we have to press the House to vote the money in order to replenish the Civil Contingencies Fund.

209. Mr. *Stansfeld.*] Do I understand you rightly, as saying that the reason for taking Excess Votes before the end of the financial year, if possible, is to replenish the Civil Contingencies Fund?—I think that is the main advantage; it has been the practice, and one does not like to depart from a practice that has always been pursued.

210. But if you over-drew these various accounts, instead of feeding them from the Civil Contingencies Fund, you would have to replenish them in just the same way?—No; we should meet them out of balances upon other funds until Parliament voted the excesses.

211. Would there be no inconvenience with reference to the closing of the accounts during the financial year, in postponing your excess votes in that way?—None whatever; the Appropriation Account shows what the excess is, and it remains until it is voted.

212. Mr. *Pollard-Urquhart.*] Do you happen to know whether the expenses incurred in consequence of the salary and travelling expenses of Mr. Pulman on Vote 3, which were paid in the first instance out of the Civil Contingencies Fund, were amongst the excesses voted by Parliament this year?—No, they would not become excesses; they fell under the vote for last year, in which there was sufficient money to meet that expenditure; they fell under the vote for 1869-70.

213. Mr. *Sclater-Booth.*] That expenditure was voted as an excess, and appeared in the Civil Contingencies Vote a year ago, did it not?—No; it was charged as a payment out of the vote for 1869-70.

214. It was repaid to the Civil Contingencies Fund, from which it had been previously advanced, was it not?—When it was charged against the vote for 1869-70 it was repaid to the Civil Contingencies.

215. Therefore, I say, it appeared in the Civil Contingencies Vote, not of this year, but of last March twelvemonths?—Yes.

216. Mr. *Pollard-Urquhart.*] Why should a different course have been followed with regard to that small excess from that which is followed with regard to other excesses, which you tell us are all defrayed in the first instance out of the Civil Contingencies Fund?—On the ground I stated, namely, that it was thought that Mr. Pulman being sent out as a Treasury officer to deal with a Treasury Vote, that expenditure would fairly fall against the Treasury Vote when it was granted.

217. Mr. *Candlish* (to Mr. *Russell*).] We have it in evidence that the Accounts of the Royal Parks and Pleasure Gardens are embarrassed by the failure of the subordinates to render their accounts in due time, and that irregularity results from it. Can you give the Committee any further explanation upon that point?—I think I have been misunderstood. What I was said was this. Inasmuch as a considerable portion of the expenditure upon the Royal Parks is in the hands of sub-accountants, it is impossible to determine our balance until after the close of the financial year, when the sub-accountants' accounts have been rendered and examined. I only made that observation with reference to our ignorance of the amount of the balance available at the close of the financial year.

218. Can you make any suggestion as to an arrangement by which the incident you reported to us could be avoided, namely, that you surrendered 500 *l.* odd when you were 2,700 *l.* in debt?—No; I am not prepared to make any suggestion.

219. *Chairman.*] You asked the persons to whom the money was payable to forbear claiming it until you had money to pay them with, did you?—No. The Police Account was sent into us for payment, and knowing that we had been spending the whole of our vote under this particular head, we knew that we had no money available for the purpose of paying the Police Account, and therefore we were obliged to carry it forward to the next year.

220. Mr. *Candlish.*] Whilst doing that you carried forward 500 *l.* which was unexpended?—Yes; that was made up partly of a sum of 400 *l.*, which was a deposit of money made by a contractor as security for certain works which he executed, therefore, it was not available for the purpose, but we might otherwise have availed ourselves of the 500 *l.* in payment of the 2,700 *l.* or whatever the extra sum might be. I wish the Committee to understand that what I said was not meant as a reflection upon the sub-accountants at all, but only to show that until we had got their accounts in and examined them we could not tell what the balance was.

221. There is no avoidable delay then resulting in any embarrassment to you?—No, it merely occurs in the case of the parks where there are the tradesmen's bills to be got in and examined.

222. Mr. *Pollard-Urquhart* (to Mr. *Russell*).] There is a small excess upon the grant for the British Embassy House at Paris, part of which arose from payment of 75 guineas to Her Majesty's Consul in Paris for services rendered to the Department of Works, for which no provision was made; should you not call it irregular to make a payment to a gentleman for which no provision was made by Parliament and which was without any sanction whatever?—The Consul at Paris has been in the habit of undertaking gratuitously, so to speak, for our office (it not being his own proper business) the payment of tradesmen's bills; that is to say, he draws upon the Paymaster General for the payment of those bills, and the account goes to the Department of Works; there has been much correspondence about these bills. It has been the practice for some

some years past to give him a fee of about 25 *l.* a-year, and that payment was made in 1859—1863, and again in 1868 for this service. It was considered that our clerk of the works was not a sufficiently responsible person to undertake this duty and the consul was asked to do it, but it is apart from his regular duties.

223. *Chairman.*] That was sanctioned by the Treasury?—Yes.

224. Mr. *Pollard-Urquhart.*] If it had been the custom of the department to give the consul a fee for these services rendered by him, might it not have seen estimated for?—Yes, I think it might.

225. Do you not think it should have been estimated for?—Yes, I think it would be desirable.

226. Lord *Frederick Cavendish.*] This was a fee for three years as I understand it?—Yes, this was for about three years. One can hardly say exactly what the amount is each year, but it is on the average about 25 *l.* a year.

227. Mr. *Candlish.*] Inasmuch as the payment was not urgent, might it not have been deferred until the following year, and then set out in the Estimates?—I suppose it might if necessary, but the amount was so small that it was perhaps hardly a case for that.

228. Mr. *Pollard-Urquhart.*] Would it not have been better to have said that the consul was entitled to a gratuity, and to have estimated for it in the following year if you expected to have to pay the gratuity, and you thought that the time had come when it might be fairly given to him; would it not have been better to have deferred the payment of it until the money had been voted by Parliament?—I do not think that the amount made it necessary that it should be postponed. The amount was a trifling one, and it had been the practice always to give it to him.

On Vote 21.

229. *Chairman.*] Had there been any previous estimate for Inverness in Vote 21?—No; I think that was the first estimate for Inverness.

230. Mr. *Stansfeld.*] There are certain savings, and the explanatory note says, "These savings arise generally from the full amount of the moiety due from this department on account of the respective court-houses not having been claimed by the Commissioners of Supply during the financial year." I think the Committee desire to have from you some explanation, if you can give any, of why the county surveyors do not send, or did not, in this instance, send in their claims within the financial year?—These sheriff court-houses in Scotland are vested in the Commissioners of Supply of the county under the 23 & 24 Vict. c. 79, and the clerks of supply are the officers who are entrusted with the duty of sending in those claims; they are not officers under our control and the service was new to them, and we had some difficulty at first in getting them to send in their accounts, but I think it will not occur again.

231. *Chairman.*] The same question arises about Inverness as arises about Dellamara, that a new item arises which was not in the estimate?—Yes.

232. Mr. *Pollard-Urquhart* (to Mr. *Anderson*).] Was your attention directed to the expenditure upon the Inverness court-house, which was not voted in the first instance by Parliament in Vote 21?—Yes.

233. Do you think that irregular?—I think not; Parliament in voting the total sum for these court-houses does not actually tie the Treasury down to these specific court-houses, and these specific sums; but the names of places in the Estimate are merely a general explanation of the manner in which they intend to appropriate it; there were funds upon the vote for the purpose of the works at Inverness, so that I think it was a justifiable course on the part of the Treasury to use these monies for that purpose, which the vote was intended to provide for though Inverness itself was not specially mentioned.

234. *Chairman* (to Mr. *Russell*).] Can you say whether there was any contract made in the year to which the vote applies?—A contract was made in the year to which the vote applies, but it was not made until it was too late in the year to make provision for it in the Estimates.

235. Mr. *Egerton.*] Do you know whether it was an erection of a court-house or an improvement?—No; my memory does not serve me as to that. I am right in saying that it was not foreseen at the time the estimate was framed; it was reported to the Treasury afterwards.

236. Mr. *Stansfeld* (to Mr. *Foster*).] Will you turn to page 32; you will find there an expenditure of 919 *l.* 17 *s.* 6 *d.* upon the court-house at Inverness, which did not appear upon the Estimate itself; I am right, am I not, in saying that application must have been made to the Treasury for that expenditure?—Yes, quite right.

Wednesday, 11*th May* 1870.

MEMBERS PRESENT:

Mr. Candlish.
Lord Frederick Cavendish.
Mr. Algernon Egerton.
Mr. Goldney.
Mr. Ward Hunt.
Mr. Pollard-Urquhart.
Mr. Sclater-Booth.
Mr. Seely.
Mr. Stansfeld.

THE RIGHT HONOURABLE GEORGE WARD HUNT, IN THE CHAIR.

MR. MORGAN HUGH FOSTER, C.B., and MR. VINCENT GRIFFITHS, called in; and Examined.

ON VOTE 22.

Mr. *Foster.*
Mr. *Griffiths.*
11 May 1870.

237. *Chairman* (to Mr. *Griffiths*).] WE see that there was an excess of expenditure over the grant by 3,802 *l.* 17 *s.* 3 *d.*, and there is an explanation given in a memorandum drawn up by you to the effect that "this excess has been occasioned by the Treasury having, since the vote was taken, authorised the giving contributions in respect of the expenditure, for the relief of the poor of the parishes of Plumpstead and Charlton;" was that in accordance with the practice at other places before this year?—Yes, it was in consequence of a new union being formed in 1868, called the Woolwich union, in which Plumstead and Charlton were placed; when they became parts of the Woolwich union, the property belonging to the Government in the Woolwich union was more than one-sixth of the rest, and then they became entitled under the Treasury rules to a contribution which they were not entitled to when they were in a union (Lewisham) which contained less Government property.

238. That was according to the rule upon which those Government contributions had been given before?—Yes.

239. The next explanation is, "and by the conversion also since the vote was taken of a large number of payments of rates into contributions by way of bounty;" how is it that the contribution by way of bounty exceeds the amount of the rates?—It does not exceed it, in point of fact, but, having been converted from a rate into a contribution, the contribution is brought upon the Contribution Vote, and therefore causes an excess upon the Contribution Vote; the sum voted for rates remains unexpended; the contribution is in fact less than the sum voted, but it is charged to a different vote.

240. What vote is it charged to?—It is paid when it is a contribution out of the Contribution Vote. It was paid, when it was supposed to be a rate, out of the Estimates of the various departments; the Army, the Navy, the Convict Prisons, the Customs, the Post Office, &c. If you will allow me to give you one instance, I think that will explain the change better than any other explanation. I will take the first that comes to hand, that under the Admiralty Office, in the Navy Votes, for example.

241. I understand that the change is not as regards the amount, but the change is by way of a transfer from the Votes in the Army and Navy Estimates to this Vote?—Quite so. There is a sum voted of 2,600 *l.* under "Admiralty Office," for rent, rates, and taxes upon the Admiralty Office, a great part being for rates and taxes. When inquiry came to be made into the subject it was found that this diversity of practice existed; that the sum paid for the Somerset House part of the Admiralty, was paid as a contribution, and was charged upon the Contribution Vote, but the sum paid for Whitehall was paid under quite a different character; it was treated as a rate and as a tax, and charged to the Admiralty Office Vote. Therefore, expenditure perfectly agreeing in character assumed in the Estimates different characters. And, in addition to that, it was found on inquiry that these expenditures were to some extent fictitious expenditures, and greatly in excess of what they ought correctly to be. If you will allow me just to follow out the instance I began with, it will give you a better idea of what was done than a general explanation. The sum voted there was 2,600 *l.* I made an inquiry into that case, and the facts were reported, which resulted in it appearing that the premises at Whitehall, which are occupied, with a trifling exception, purely as offices, were rated to the local rates at upwards of 5,000 *l.*; they were rated to land tax at over 3,000 *l.*; to the inhabited house duty at over 3,000 *l.*, and to property tax at over 3,500 *l.* All these payments of rates and taxes out of the Navy Votes were resting upon no legal authority whatever, and the taxes were improper payments; and, in consequence of the inquiry which was then made, these latter ceased; so that instead of requiring now 2,600 *l.*, perhaps about 1,500 *l.* will meet all that is proper to be paid. All the rest was, more or less, a fiction; a payment purporting to be a payment resting upon a legal claim, but not so resting in reality. As regards inhabited house duty and property tax, the Government were paying money out of one pocket into another, and paying clerks and collectors for doing the business, as well as encumbering the Estimates with a fictitious expenditure which swelled them improperly.

improperly. That explanation will apply to the whole of the Estimates.

242. Mr. *Sclater-Booth.*] You mean to say that you have been extending the legal claim of Government property to exemption from rates?—We have been inquiring into it, and putting it upon its right footing.

243. That is to say, you have been claiming exemption which had not previously been claimed?—It had not previously been claimed as regards that particular property, but the exemption had been allowed and never questioned as regards property standing in precisely the same category. What we did, however, was guarded by this limitation, that the exemption was never claimed to the prejudice of the parish. As regards taxes, it put a stop to the payment of everything like a Government tax, which was a useless proceeding.

244. The payment was not at all useless to the parish, surely?—It was withdrawn as a rate, there being no legal ground for the claim, but the parish received, by way of indemnity, an equivalent sum as bounty.

245. Was it precisely an equivalent sum; I thought you said it was only a moiety?—I said that the total sum paid had been largely diminished, because all the Government taxes had been rejected.

246. *Chairman.*] You eliminated that part of the charge which had reference to the Imperial taxation?—Yes.

247. And you kept that part of the charge which had reference to local taxation?—Yes.

248. But you converted the local charge into a payment by way of bounty instead of a payment by way of rate?—Yes, just so. Following out the idea you just now suggested, I would observe that when the payments are made by way of bounty, the matter is so much more in the hands of the Treasury that they are able to prevent an improper increase of the item. When it was left, as it used to be, to the departments to pay the claim as a rate, there was no one to check the claims satisfactorily, and in fact it was found that a great excess of charge by that means fell upon the departments.

249. Mr. *Sclater-Booth.*] If you are paying these particular parishes in the shape of bounty, the exact sum that you previously paid under the form of rates, you are paying them at a higher ratio than you are paying upon the other Government property which never paid the full rate, are you not?—Yes.

250. How can you justify that?—On the ground of its being a recent and indisputable loss. Where contributions are given on a lesser basis, it is because the parishes have not for a long period, perhaps never at any time, received any benefit from such property, such as some of the property at Woolwich, Greenwich, and Portsmouth, which was in the hands of the Crown before Queen Elizabeth's statute was passed, so that the parish never received any benefit from it. When the Treasury were endeavouring to do rough justice to the parishes in these cases, they did not feel it right to give a sum equivalent to what the rates would have amounted to; but when they were withdrawing anything which the parish had long enjoyed, they gave an equivalent, endeavouring by that means to preserve the *status quo.*

251. Mr. *Stansfeld.*] You mean an equivalent not only to the poor rate, but to all the rates of every description?—Yes, of every description; the exact sum, in fact, which the property previously yielded to the parish.

252. *Chairman.*] Does the amount vary from year to year?—It only varies to the extent of the rate in the pound; the assessment is not varied.

253. Will the contribution by way of bounty, in lieu of a payment by way of rate, vary according to the rate in the pound levied by the parish?—Yes, but there will be no increase of the rateable value. It is following the precedent of the Defence Act and other Acts.

254. Mr. *Pollard-Urquhart.*] Am I correct in understanding you, that you have this year for the first time eliminated sundry rates or taxes which were formerly paid to the Government?—The process had begun shortly before, but it did not get into work till the year to which this account relates.

255. In the year 1868-9?—Yes; that was when it began to get fairly into work.

256. There were sundry payments that used formerly to be made by you, and charged against this vote, which are not charged in this account; is that what I am to understand?—No, it is not quite so. The payments formerly were made by the departments of the Admiralty and the War Office, and so on, and they ceased to be made by those departments immediately upon their being converted into contributions, and then they were paid out of the Contribution Vote; that is the explanation of the increased charge on this vote. As regards the payment in respect of the property in the Woolwich Union, that was in consequence of a fresh parochial arrangement.

257. The Poor Law Board formed a new union?—Yes.

258. Mr. *Sclater-Booth.*] How long had those rates been paid without question?—From the very earliest times, I suppose.

259. And the parish authorities have consented to receive a bounty instead of the immemorial payment?—Yes; being perfectly aware that they have no ground upon which to insist upon the claim. The Navy Estimates, and those of other departments, still contain in nearly every case items for rates. It was attempted, at one time, to bring all those items together into one vote, so as to show the total expenditure for rates, but that has never been carried out, and the total expenditure for rates, which is greatly in excess of what is supposed, has consequently never been shown in one place.

260. Mr. *Stansfeld.*] Is it not the case that previously to the conversion of this rate payable on the Admiralty buildings at Whitehall out of the Admiralty Office Vote into a contribution, in lieu of rates payable out of the Rates Vote, there were, and there still are, many cases in which the contributions were made out of the Admiralty Vote for Admiralty property in lieu of rates?—Yes.

261. Therefore the present arrangement is not thoroughly logical and complete; in some cases, and, probably, from year to year, in more cases, rates are converted into contributions, and then the contributions are charged upon this vote, while the rates remaining payable in that sense are charged against the votes of the departments which have to pay them; that is so, is it not?—Yes.

Mr. *Foster.*
Mr. *Griffiths.*

11 May 1870.

262. Do you happen to have by you, or can you give us the figures of the amounts which are paid by the various departments for rates out of their own votes?—I have not. I have the Estimates here, which show they amount to very considerable sums. Perhaps the Committee will allow me to state them, very roughly indeed, as somewhere about 30,000 *l.* or 40,000 *l.* The Works pay about 14,000 *l.* a year; the Admiralty pay 4,000 *l.* or 5,000 *l.* a year. The War Department, whose property has been carefully examined (the question was taken up first with reference to that department), have had all the charges not resting on legal authority eliminated from their Estimates, and nothing now remains upon the Army Votes but the charges levied under the Defence Act of 1860 and some one or two other similar Acts of an older date. It was a principle, which it was hoped would have been generally adopted, that the Estimates of the Departments should provide for everything to which they were legally liable, and that everything that was paid by way of grace and bounty should be collected into one page, and brought into one vote, so as to show the total contributions for rates made by the Government.

263. There are still payments made nominally as rates by the Admiralty, for which they are not legally liable, are there not?—Yes; the sum is very large; it is the whole of the sum I mentioned, namely, 4,000 *l.* or 5,000 *l.*; it has been lessened very considerably, but it is still a very large amount.

264. (To Mr. *Foster.*) I think you have heard it just now remarked, that there is one disadvantage attendant upon the existence of this vote, that you do not see charged against the various departments the rates, or the contributions in lieu of rates, with which they ought, practically speaking, to be debited, if we wish to know their cost to the country; that is so, is it not?—Yes.

265. On the other hand, am I not correct in saying that the advantage which it was proposed to accomplish by bringing these contributions all under one vote, paying them out of one vote, and administering them under one department, was to obtain something like simplicity, uniformity, and economy of management, and that that object has been very much attained?—I think that the system of combining all the charges of a similar kind in one vote, undoubtedly leads to economy and superior control, and that, so far as it has gone, it has tended to that result in a very marked manner; but in the year 1869–70, the system was altered, and all the contributions on account of the Civil Departments were thrown back upon the Departmental Estimates, so that now the officer under the Treasury is examining and passing charges which will be paid and accounted for by departments that are not immediately under the control of the Treasury. At present, I believe, the estimates for rates on Government property contain no contributions except for Army and Navy Services; therefore the system, which I think would have worked extremely well, of combining all charges for rates under one vote has been abrogated, and I fear that this change will weaken the control over this expenditure.

266. *Chairman.*] Then what is the arrangement now in force?—The arrangement now in force is, that there is a vote, under the Civil Service Estimates, which contains charges for no other service except the Army and Navy. This seems to me to be a very undesirable anomaly.

267. What do you suggest as the right arrangement; do you suggest that this vote should be taken in the Army and Navy Estimates?—No. As the Public Works Department has charge of the supply of all coals, and conducts that service with economy; and as many other charges of a similar kind, such as stationery, are all under one vote, so I think it would in the same way be economical that there should be one vote for all rates, or contributions in lieu of rates, on Government property, and that it should be under the control of one department, who should apply the same rules and the same supervision to the rates, to whatever service or to whatever property they might relate.

268. Mr. *Stansfeld.*] Would you say that that should be so, if the question were as to the payment of rates to which the departments were found to be legally liable; or does your suggestion refer simply to the payment of contributions, that is to say, voluntary payments in lieu of rates?—I should be disposed to extend it to the utmost; I would place all rates or contributions in lieu of rates under one vote.

269. *Chairman.*] Do you think that that vote ought to be placed under the Civil Service Estimates?—Yes; I think the attempt to make each vote show the cost of the service is futile.

270. It might be shown, might it not, in the summary of the Army and Navy Estimates that such and such a sum, though taken upon the Civil Service Estimates, was properly chargeable to the Army and Navy Services?—I think that might easily be done by an explanatory statement.

271. Mr. *Goldney.*] It might be classified in this very statement that we have here, might it not?—Yes.

272. So that it might be apparent to anyone reading the Estimates what proportion of this sum was for Civil Service Department and what for the Army and Navy?—Yes.

273. And there might be a cross entry in the Army and Navy Estimates of a similar kind?—I would not enter it in the body of the Estimates; I would add it as an explanatory statement.

274. You would not put it down as an actual charge on the Army or the Navy Estimates?—No.

275. But you would give an explanatory statement here on the Civil Service Estimates, and a similar explanatory statement on the Army and Navy Estimates?—Yes; they should not affect the accounts, nor the control of the expenditure.

276. *Chairman.*] You would show it just as when a service is performed by the Admiralty authorities for the Army, that appears in an explanatory statement, so that the nett expenditure for the Navy is shown after deducting that service performed for the Army?—Yes.

277. In like manner with regard to this expenditure, a statement might appear on the Army and Navy Estimates that there ought to be added to the Army or Navy charge such and such a sum which is taken upon the Civil Service Vote?—Yes, I think that could be done; as regards the control of the expenditure, I think it is much better to have it under one vote, and to have it in the charge of one department.

278. Mr. *Stansfeld.*] Is it within your knowledge that the question of arriving at one principle in dealing with these payments, either rates or contributions in lieu of rates, has been under discussion in the Treasury of late?—It has not come

come to my knowledge since the late Secretary to the Treasury left.

279. Mr. *Sclater-Booth.*] I understand you to say, what is perfectly obvious, that it is futile to expect to get a complete separation of the charges applicable to the different services, unless you go into much greater detail even than this, because the Furniture Vote, for instance, the amount which is taken for the furniture of the public offices, and the Stationery Vote, will all have to be divided in the same manner if you want to show the charges of the Army, the Navy, and the Civil Services separately?—You would have to go into the greatest detail, and I believe that no amount of care would bring out the result correctly.

280. Mr. *Goldney* (to Mr. *Griffiths*).] With regard to the principle upon which the contributions were made; as I understood it from you, it was this: that on all new acquisitions of property from a certain date, you made a contribution in lieu of rates; but that on property which had been in the possession of the Crown for a long time, you did not make a contribution at all, because you thought the parish was not detrimented; that is the principle, is it not?—Yes; a contribution is made in every case where the acquisition of the property is recent; as regards the old property, a contribution is not given unless it bears a substantial proportion to the rest of the property in the parish.

281. Mr. *Pollard-Urquhart.*] Does this excess of 3,802 *l.* exceed the sum formerly paid by the Army and Navy Departments?—No, it is much less. The change has been in all cases attended with a saving.

282. *Chairman.*] But I understand that that is not a saving upon the rates, but a saving upon the vote, because the Imperial taxation is no longer paid?—It is a saving also upon the rates, because the superiority of the supervision prevents an improper increase in the charge. I saw a case the other day in which some property consisting of a flag-staff, boat-house, &c., had long been taxed at 64 *l.*; it was worth about 20 *l.*, it being no one's interest to watch over such a matter, and it not being within the range of Army and Navy officers' knowledge and duties, they are not able to check such irregularities, and the charge grows improperly.

283. Lord *Frederick Cavendish.*] It is stated at the head of this account, that "the unexpended balance of the Vote, 'Rates for Government Property,' for the year ended 31st March 1868, is still in the hands of the Commissioners of Works and Public Buildings;" how is it that that balance was not surrendered to the Exchequer?—This was the first year in which the account was intrusted to the charge of the Office of Works, and their want of familiarity with the account led to questions between them and the auditors, which kept the account open for a considerable time.

284. *Chairman.*] Has the sum been surrendered since?—It was surrendered on the 26th March, when they paid over 4,984 *l.*

285. On the 26th of March last?—Yes. The sum of 4,984 *l.* which they paid over, you will observe, exceeded the excess upon the subsequent year's vote, so that the two years' votes more than covered the two years' expenditure.

286. Mr. *Goldney.*] Does any officer take special charge of this rating in the same way as it is done in the case of the railway companies, or not?—I believe I am the only officer to whom such questions are referred; but at the present time the questions coming up for consideration are, in the majority of cases, not questions of rating so much as questions relative to the giving contributions by way of bounty; for, speaking generally, Government property is not rateable.

287. Then you are the officer for that special subject if any one applies to the Treasury about it?—Yes; my title is that of Inspector of Rates.

On Vote 23.

Mr. George Russell, called in; and further Examined.

288. *Chairman.*] With regard to the excess on the Vote for Maintenance and Repairs, the first explanation of this excess of 12,851 *l.* is, that it arises from "Large structural alterations at the Circulation Department of the General Post Office, for which 3,000 *l.* was voted in 1867-8, not having been commenced in sufficient time to admit of their being paid for out of the vote for that year:" and there is a second explanation, "Numerous alterations and re-arrangements, at the request of the Postmaster General, to meet the growing requirements of the Postal Service at the London District Post Offices, and Foreign Office of the General Office, for which no provision was made;" the Committee wish for an explanation why this excess of 3,000 *l.* was not estimated for; you will observe that the first explanation only accounts for 3,000 *l.* out of 12,000 *l.*?—This was the first year in which my department had charge of this vote, and the Estimate does not seem to have been framed sufficiently for the purpose. Apparently, the Postmaster General did not foresee what he required for those expenses, and I am afraid that that is very likely to happen very often with regard to Post Office buildings. So many of those works crop up in the course of the year, not having been foreseen, that we shall always have much difficulty in sufficiently providing for them.

289. Mr. *Stansfeld.*] Your remark would apply to the second explanation of the excess?—Yes, it applies to the explanation with regard to the growing requirements of the postal service.

290. If you had 3,000 *l.* voted in 1867-8, which was not spent, the question is, why, not having been spent, it was estimated for in 1868-9?—I am not in a position to tell you. We took the vote for the first time that year, and we only took the sums that were estimated for by the Postmaster General.

291. May we not very fairly assume (your memory does not enable you to say positively, but is it not likely) that the explanation would be this, that the estimate is sent in just before the end of the natural year for the financial year, which is to commence three months later, and that you can then only estimate and calculate, and you do not then know to a certainty how much you may be able to spend before the commencement of the new financial year?—Yes, that may

Mr. *Foster.*
Mr. *Russell.*

11 May 1870.

may very fairly be assumed. That remark would especially apply to estimates for buildings.

292. *Chairman.*] But it does not apply to Post Office buildings more than to any other building?—No.

293. Mr. *Goldney.*] All the estimates for the Post Office are estimates in detail, I think?—Yes, the estimates are made out in detail for each building.

294. I mean as regards the Post Office at Chichester, for example, or any other place, a certain sum is specified?—Yes; the detail is, however, only submitted in the case of new buildings.

Sir WILLIAM DUNBAR, Bart., called in; and Examined.

Sir *W. Dunbar.*

295. *Chairman.*] WITH respect to the excess on Vote 23, have you anything to add to what you have said in your Report at paragraph 20, printed at pages 291 and 292 of the Appropriation Accounts?—No; the Report contains all that I have to say upon this subject.

296. Mr. *Stansfeld* (to Mr. *Foster*).] You have the correspondence before you, and you have heard Sir William Dunbar does not wish to add anything to what is contained in his Report?—Yes.

297. Will you state the view which the Treasury took upon this subject, and which was expressed in the letters attached to the account?—I think the explanation is simply this, that the Treasury hold that the department which carries out the work should pay for it and account for it. The Inland Revenue Department has officers in all parts of England, Ireland, and Scotland; it is inconvenient for the Office of Works to conduct the repairs of those buildings, spread as they are all over the country. In London, and at certain other places, the Office of Works can very conveniently carry them out, and wherever the Office of Works can carry out repairs or works, it is much better to place them under their charge; consequently, the Treasury placed upon the Office of Works Vote a sum for the repairs of those buildings connected with the Inland Revenue, which it could conveniently superintend; but, as all over the country there are many offices connected with the Excise that the Board of Works cannot superintend, it is the best arrangement to throw the responsibility of the duty of accounting for the charges of repairs to those offices upon the Inland Revenue Department. Consequently, according to the view of the Treasury, there ought also to be a sum taken in the Inland Revenue Estimate to meet those repairs which could not be superintended by the Office of Works. By a misunderstanding in the preparation of the Estimates, knowing that 3,000 *l.* had been placed upon the Estimates of the Office of Works to meet repairs, the amount of 3,000 *l.*, which happened, merely accidentally, to be the same as in the Office of Works Estimate, was inadvertently struck out of the Inland Revenue Estimates. Thus, there was no amount taken on the Inland Revenue Office Vote to meet the repairs of their offices spread over the country. Under the power which the Treasury possesses of authorising expenditure, if it is within the meaning of the Vote, we authorised the re-insertion of the 3,000 *l.* which had been struck out of the Inland Revenue Vote, and allowed it to be spent by the Inland Revenue Department on buildings which the Office of Works could not well superintend.

298. *Chairman.*] I understand that, as an administrative question, you think it better that the Inland Revenue Department should order and supervise the repairs of certain Inland Revenue buildings without the intervention of the Office of Works?—That is necessary under the present arrangements.

299. That is a distinct question from that which we have before us. The question is, if that is done, should not there be a distinct vote for the purpose?—I think that there should be a distinct sub-head in the Inland Revenue Estimates.

300. And should you not have words of exclusion in the Vote which we have now under discussion, so as to show that a certain portion of these repairs should fall upon the Inland Revenue Vote, and not upon the Board of Works Vote?—I think it ought to have been more clearly stated; indeed, that appears from the fact that a misunderstanding has arisen.

301. We are not now upon the question of who ought to have charge of the expenditure, and account for the expenditure, but the question is upon the votes as granted by Parliament and appropriated under the Appropriation Act, which vote this expenditure is chargeable to for that particular year; will you turn to the Appropriation Act and show us how under the terms of the Vote for the Inland Revenue Department that expenditure is properly chargeable upon the Vote for the Inland Revenue?—I have not the Appropriation Act with me, but it appropriates a certain sum for the service of the Inland Revenue.

302. Mr. *Stansfeld.*] Our view on the one hand was that it would be incorrect to charge the Board of Works Vote with an expenditure incurred and superintended by the Inland Revenue itself, and for which the Board of Works had not provided, and that on the other hand, the Treasury having sanctioned that expenditure by the Inland Revenue Board, for which by omission no vote had been taken, it was quite in accordance with the usual practice to authorise the Inland Revenue to meet it out of savings on other sub-heads?—I have no doubt whatever that that is a correct view.

303. *Chairman.*] The question is whether that is in accordance with the terms of the Exchequer and Audit Act?—I have not a copy of that Act here, but I have no doubt that it is.

304. Mr. *Goldney.*] In the letter of the 6th November 1868, at page 293, the Inland Revenue Board say, "We find, however, that this sum, which has been omitted from the Inland Revenue Vote, has been added to that of the Department of Works; this transfer having been made without any communication with us;" you observe that they call it a "transfer"?—That was the misunderstanding, it was treated as a transfer, whereas it was not a transfer at all; that is how the misunderstanding arose.

305. *Chairman.*] The terms of Vote 23, "Post Office and Inland Revenue Buildings," would naturally suggest that all expenses on account of Inland Revenue buildings should be paid out of that vote, would they not?—I think that as that vote

vote is under the control of the Office of Works it would follow that expenditure which that office cannot control is not included.

306. The terms of that vote imply that the expenses of all Post Office and Inland Revenue buildings should be paid out of that vote; if you want to exclude any building expenditure you ought to exclude it in terms, ought you not?—I think it would be better to exclude it in terms, but I still do not think that the contrary inference would follow from its not having been so excluded; for instance, in the Army Vote you would see an item for rates, that would not mean all rates, it would mean rates which are under the control of the department controlling that vote.

307. Mr. *Stansfeld.*] In the year in which, as you told us, the vote of 3,000 *l.* for Inland Revenue buildings in the Inland Revenue Vote was omitted, was any vote taken for maintenance and repairs of Post Office buildings in the Post Office Vote?—No, I think not.

308. Mr. *Goldney.*] What I understand is this; it may be either wrong or right: this 3,000 *l.* was contained originally in the Inland Revenue Estimate, but was transferred from that to the Office of Works Estimate?—No, it was in error understood to have been a transfer.

309. Was it a transfer or not?—No.

310. It was not contained in the original Estimate?—It was contained in the original Estimate of the Inland Revenue Department, but it was not in the Estimate as passed by the House of Commons.

311. Having been there originally, what was done?—£. 3,000 had been inserted in the Office of Works Vote for Inland Revenue buildings under the control of the Office of Works, and this induced the officer who had charge of the Estimates, in error, to suppose that it was a transfer, and he struck it out of the Inland Revenue Vote.

312. It was not a transfer?—It was not a transfer.

313. It was originally in both Estimates?—Yes.

314. Mr. *Sclater-Booth.*] And it ought to have been in both?—Yes.

315. Mr. *Goldney.*] Therefore it was not, in fact, a transfer, as stated in the Inland Revenue Department's letter of the 6th of November, but it was only supposed to have been a transfer, and, therefore, was struck out of the Inland Revenue Estimate, where it ought to have remained?—Yes; I think if the two amounts had not happened accidentally to be the same, namely, 3,000 *l.*, that mistake would not have occurred.

316. *Chairman.*] The fact is this: the terms of Vote 23 embrace an expenditure which was sought to be paid out of the incidental expenses of the Inland Revenue Vote?—Not out of the incidental expenses; out of a sub-head for repairs.

317. According to the Report of the Inland Revenue Board they say this: "Under these circumstances we have no alternative but to ask your Lordships to give us authority to claim the amounts that may be disbursed during the present year for 'Maintenance of, and Repairs to Buildings, out of the Vote for Inland Revenue Services, as Incidental Expenses?'"—But that was not done. We sanctioned the re-insertion of the sub-head which had been struck out.

318. For the future?—No, in that year's account.

319. The case is this, that in the account there appears a sub-head which did not appear in the Estimate?—Exactly.

320. And under that sub-head you sanctioned their claiming the expenses of the maintenance and repairs of buildings which they had superintended?—Which they had superintended, and the expenditure for which they had controlled.

321. Mr. *Sclater-Booth.*] All that seems to be necessary is, that Vote 23 should be stated a little more fully, so as to show that the expenditure therein sanctioned is expenditure in certain localities where the Office of Works has authority?—Yes, exactly; it ought to be more distinct.

332. Mr. *Goldney.*] The Inland Revenue Department, in their letter of the 6th November 1868, say that they have had no intimation at all of the transfer?—That was because it was a mistake altogether.

323. Mr. *Stansfeld.*] There will be no difficulty in future in taking care that the heading of Vote 23 shall draw attention to the fact that it does not necessarily include all the maintenance and repair of Inland Revenue buildings?—It would be perfectly simple to do so.

324. *Chairman.*] But then you must also add something to the Vote of the Inland Revenue Department, to show that there are some expenses for buildings connected with that department which do not come under that vote?—It should be explained in both cases.

325. Then would come the question, how would the Exchequer and Audit Department know what expenses came against one vote, and what against the other?—I think it would be quite simple in the Vote for the Office of Works Department, to state those localities where that department superintends the expenditure; they would be only London, Edinburgh, Glasgow, and Dublin, I think.

326. Mr. *Stansfeld.*] No difficulty could arise. The Audit Office will have to audit certain accounts of the Board of Works for Inland Revenue buildings, and it will also have to audit certain accounts of the Inland Revenue Department for other buildings; but the accounts of the one department will be charged against the one vote, and the accounts of the other department will be charged against the other vote?—Whichever department spends the money will include the charge in the account against its vote.

327. Therefore there can be no confusion?—I think not.

328. *Chairman.*] Have you got the Treasury letter to the Inland Revenue Department with regard to what they were to account for. Treasury letters were sent to all the departments, stating what office was to account for what expenditure?—I have not got it, but it would not have gone into the sub-heads of the votes. It only mentioned the votes which they were to account for, it did not recapitulate any sub-heads.

329. But it was a new thing to take the Inland Revenue buildings upon the Office of Works Estimates, was it not?—My impression is that the Office of Works have in former years charged in their accounts for works done for the Inland Revenue, but I could not speak positively upon that point.

330. (To Mr. *Russell.*) Have the Office of Works, before the year 1868–9, charged in their accounts for the maintenance or repairs of Inland Revenue buildings?—No, this was the first time.

Mr. *Foster.*
Mr. *Russell.*
Sir *W. Dunbar.*
11 May 1870.

This expenditure, as I explained in a note at the foot of this account, was incurred on account of works done in rooms occupied by the Inland Revenue Department in post offices under the charge of the Office of Works. The Inland Revenue Department occupies in Edinburgh, in Glasgow, and in one or two other places, rooms in the post office. Our officers keep those post offices in repair and maintain them, and therefore we also keep in repair the Inland Revenue rooms so occupied, and this expenditure was incurred on that account.

331. Do you mean the expenditure represented by the figures 5,803 *l.* 14 *s.* 5 *d.*?—No, the expenditure represented by the figures 1,350 *l.* 13 *s.* 3 *d.* under the head of expenditure, at page 36 of the Appropriation Accounts.

332. When did your office first take charge of these post offices and Inland Revenue buildings?—We took charge of the post office buildings in the year referred to in these accounts, 1868–9.

333. And when that duty was thrown upon your office, you were instructed by the Treasury to account for that expenditure?—Yes.

334. (To Mr. *Foster.*) Then I want to have the letter produced that was written to the Commissioners of Inland Revenue, directing the charge to be made; I suppose that when the transfer was made to the Office of Works, there would be a letter to the Commissioners of Inland Revenue directing a charge to be made, and stating what the Office of Works would have to undertake which had formerly been under the charge of the Inland Revenue Board; that would be so, would it not?—I could not state positively; it may have been settled personally.

335. Mr. *Egerton* (to Mr. *Russell*).] Is there any letter at the Board of Works on the subject?—No; I think not.

336. *Chairman.*] What I want to know is, whether the Treasury Minute which sanctions this transfer, left anything to be done in connection with buildings by the Inland Revenue Board; if it did, it would be a ground of justification for the Treasury in sanctioning this payment to be made out of their vote. It does not affect the question whether it was right under the Appropriation Act, but it would justify the Treasury in allowing the expenditure to them, so far as the Treasury were concerned, irrespective of the terms of the Act. But if the Treasury took everything away from the Inland Revenue Department and threw it upon the Office of Works, then there seems to be no justification to the Treasury for allowing the Office of Works to claim any expenditure under their vote at all?—I think there may have been a communication by letter, but it may have been settled by discussing the matter personally.

337. Surely it would have been impossible, would it not, at the Treasury, that the controul of those buildings should be taken from the Inland Revenue and given to the Office of Works, without its being formally sanctioned by a Minute?—The insertion of the vote in the Estimate, and the passing of the Estimate, is a Treasury sanction, but I can ascertain whether there was a letter written or not.

Mr. Francis Alfred Hawker, called in; and Examined.

Mr. *Hawker.*

338. *Chairman.*] You are an inspector in the Audit Office, are you not?—I am.

339. What have you to say with regard to these two accounts?—Expenditure of a precisely similar nature has been paid out of the Inland Revenue Vote, and by the Board of Works.

340. When you say, of "an exactly similar nature," do you mean for the same buildings?—Yes, for the same buildings, in some cases.

341. Or do you mean similar expenditure, but for different buildings?—In one or two cases it has been expenditure for the same building, but generally of the same nature, for different buildings. It has been incurred by both departments in Edinburgh.

342. Can you give us an instance in which there has been an expenditure incurred by both departments upon the same building?—I have no recollection of an instance at this moment.

343. (To Mr. *Foster.*) Taking the facts as they have been given to us, that there has been similar expenditure in Edinburgh incurred by the two departments, that would be clearly wrong, would it not?—I think that it would be a bad arrangement. It is possible that the larger works have been placed in the hands of the Office of Works, but some minor works, which they did not think it worth while applying to the Board of Works to take in hand, may have been carried out under the superintendence of the chief officer of the Revenue Department.

344. If that were the case, supposing there were two votes applicable to expenditure on such buildings, the Audit Office could not possibly separate the charges and decide what was applicable to one vote and what to the other, could they?—The means which they would have of deciding what expenditure fell to the Board of Works and what to the Inland Revenue Department, would be by allowing the charge to the Department that did the work, paid for it, and produced the voucher.

345. Mr. *Stansfeld.*] With reference to the suggestion of a possible confusion of accounts, am I not right in saying that there is no possibility of confusion; that the accounts which are to be audited are the accounts of actual expenditure by each department for actual work performed by each?—Yes.

346. Therefore, there is no possibility of the same charge being made twice over?—No.

347. *Chairman.*] Supposing a charge for a coat of paint for so many superficial feet appears in both accounts; how is the Audit Office to know whether both the charges represent the same superficial feet, or two sets of superficial feet?—Both departments would not pay for the same work, but I think it is quite clear that it would be more satisfactory to confine the work in one locality to one office or the other, and I have no doubt that that will be done; it was only at starting that there has been a want of a clear separation between them.

348. Is it not the fact that in cases where the departments have been in the habit of erecting their own buildings, and repairing their own buildings, they do not quite like leaving their repairs to be done by the Office of Works, but they like to do the work themselves in their own way?—I think it is quite possible that that may be

be the case, but I do not think it could lead to an error of account without fraud; but I think the system might open the way to an unlikely source of fraud, and I see no reason why the Inland Revenue Department should not be forbidden to make any repairs, or to do any work of this kind in those towns where there is an Office of Works officer available.

349. And there ought to be such a division and such a separation by the terms under which the vote was taken, as to enable the Comptroller and Auditor General to know against which vote to charge that expenditure?—I think so; one locality ought not to combine charges of the same nature against two different departments.

350. Mr. *Stansfeld.*] All that is possible appears to me to be this, that work might, by possibility, be done twice over; that the Board of Works might execute some work of maintenance or repair, and that the Inland Revenue Department being unconscious, or choosing to forget that they had done that, might do it themselves, so that you might have a double work performed, and a consequent waste of public money. That I conceive to be possible, though I do not imagine it to be very probable; but is it possible that there should be a double payment for a single work, because that was the question I understood to be raised?—I think it would be quite impossible, without the connivance of the tradesman and the heads of the establishments concerned.

351. *Chairman.*] I will put a case to you: supposing the Office of Works had fitted up a room with open shelves, and when the officers of the Inland Revenue or the Post Office came into it they did not like the open shelves, and sent in a person and said to him, "Take down those open shelves and put up cupboards." Under the present system, would not it be quite possible, without any fraud, but simply from a divergence of view between the Office of Works and the Department actually using the buildings, that such a case should occur?—It is possible that work might be done twice over improperly. The control over the expenditure would not be so good as if it were included in one vote, under the control of one department.

352. If one department is charged with the work, and another department may make variations and alterations in that work, may you not have an expenditure twice over, not exactly for the same purpose, but for a mere variation?—I think that system would weaken the control over expenditure.

353. Mr. *Goldney.*] Supposing one department built some additional rooms and charged them as additional buildings, and the other department were not satisfied with them, and built other additional rooms, how is the auditor to distinguish between the two, the head under which the expenditure comes being the same, namely, "Additional rooms"?—The auditor, in such a case, might not be able to distinguish between them; but that would be a question of incurring expenditure, the control over which does not fall upon the Audit Office at all.

354. Mr. *Stansfeld.*] In fact, that is not the business of the Audit Board?—No, it is not their duty to check the expenditure incurred by a department, provided it is within the vote. It would be a misappropriation of funds by the department, but it would not come under the control of the Comptroller and Auditor General.

355. Mr. *Pollard-Urquhart.*] Would not a fraudulent tradesman under the present system have a better chance of escaping detection if he sent in his bill twice, when the service is under two different departments, than if it were all under one department?—Such a fraud could only take place with the connivance of the heads of the departments.

356. Mr. *Stansfeld.*] Must not each of the departments to whom, by hypothesis, that double and fraudulent account is sent in, have its own records of the authorisation or non-authorisation of that expenditure?—Certainly.

357. Therefore those accounts could not be twice paid without fraud on the part of the heads of the departments?—Certainly not; and if there was only one department concerned in such a case, that one department could commit the fraud just as easily as if there were two departments. The head of one department could pass a payment twice over and conceal the fact that it was for the same work. If there is fraud the question whether there is one or two departments does not affect it.

358. Therefore, practically, there is no difficulty in keeping the accounts distinct; there could be no possible complication of accounts; but the real question is, whether it is not advisable that a distinct line should be drawn between the expenditure to be undertaken by one department and that to be undertaken by the other?—Quite so.

359. *Chairman.*] Supposing that there are two votes, under either of which expenditure might be claimed; supposing that the Board of Works put into a room chairs such as that which I am now sitting on, and the Inland Revenue Department ordered arm-chairs instead, under which vote would the expenditure be put in each case; would the Audit Office be able to distinguish between them?—The department paying the expenditure would charge it in its account.

360. But then under which vote would it be placed; would it be left to the option of the office incurring the expenditure to decide which vote it should be charged against?—No.

361. Mr. *Stansfeld.*] A department cannot charge expenditure except to its own account, can it?—As between two different departments, the department that pays must charge it to its own vote; it cannot charge it to the vote of the other department.

362. You say that if expenditure was incurred by one department, that expenditure should be charged against the vote taken by that department?—Yes.

363. And the auditor would be justified in accepting the accounts with regard to that department on seeing the vouchers?—Yes.

364. *Chairman.*] Let us take the case of two chairs, an ordinary chair and an arm-chair; suppose the one has been ordered by the Inland Revenue Board and the other by the Board of Works, and then suppose the plain chair ordered by the Board of Works is taken away by a tradesman by the orders of the Inland Revenue Department, who were not satisfied with the plain chair, and said, "Take it away, and substitute an arm-chair," the tradesman would allow so much out of the bill for the arm-chair in consideration of the chair he took back. To what vote is that expenditure to be charged?—A chair is always retained as the property of the department which supplies it. The Office of Works, I

Mr. *Foster.*
Mr. *Russell.*
Sir *W. Dunbar.*
Mr. *Hawker.*

11 May 1870.

apprehend, keeps its eye pretty closely upon the furniture it supplies.

365. Mr. *Candlish.*] Why might not the account for it be charged to both departments?—Because the officer who orders it belongs to the department which has charge of the vote.

366. Might there not be an account paid by both departments without any collusion?—No, certainly not.

367. Will you explain how that would come about?—The Office of Works employs its own tradespeople, and the Inland Revenue Department would not pay a bill of a tradesperson whom it had not employed.

368. *Chairman* (to Mr. *Russell*).] Do you wish to make any remark upon the evidence which you have just heard?—All I wish to remark is, that those chairs, once bought by the Office of Works officer, could not be removed; they would remain the property of the Office of Works, and we should not allow them to be removed, or exchanged, or tampered with in any way.

369. I will suppose that the Office of Works have, in an upstairs room in the post-office in Edinburgh, a common chair which is replaced by an arm-chair; that would not come to your knowledge, would it?—I think it would; I do not think that such a transaction is possible without our knowledge, and I hope it would not be possible, because, if that was possible, another transaction on a much larger scale would be possible in other places; I do not believe that it is possible.

370. Mr. *Pollard-Urquhart* (to Mr. *Foster*).] If one department ordered six arm-chairs and another department ordered six ordinary chairs, such as we are sitting on, supposing they were all ordered from the same tradesman, might not the tradesman, if he were inclined to cheat, send in a bill for the whole dozen of chairs to each department?—He might send it in, but it would not be paid.

371. Would he not have a better chance of escaping detection if there were two departments ordering chairs than if there were only one?—No, he would have no chance in either case.

372. Mr. *Goldney* (to Mr. *Hawker*).] Do you concur in the opinion which Mr. Foster has just expressed?—No, I think there would be a possibility of some furniture being paid for twice over if a vote was taken by both departments for the same service. In fact, we found that payments had been made to the same contractor by both departments, and they were so similar that we were obliged to compare both bills to see whether the same charges had been made in both accounts or not.

373. Mr. *Stansfeld.*] What was the result of your comparison?—We have not discovered any error.

374. Then, on what grounds do you state to the Committee that that double payment would be perfectly easy?—I said there would be a possibility of a double payment, because the two departments would not know what charges had been made against one vote and what against the other. The Board of Works do not refer to the account of the Inland Revenue in order to see what charges have been made against that vote, nor do the Inland Revenue refer to the vote of the Office of Works to see what charges have been made against it.

375. How can it be necessary that a double reference should be made if a charge is made against a vote to which it was applicable. When I am called upon to pay a bill, all that I want to know is whether I have ordered the articles for which the charge is made, and whether I have had them; am I not able to check an account which is sent in to me in that way?—Certainly.

376. Then, if I go to the other department, is not that other department equally able to check the accounts sent in against it?—Yes.

377. Then in what way can I, or the other department, be made to pay for what we have not ordered and received?—There is no proof that the tradesman is not making the same charge against the two departments. Supposing, for instance, that a tradesman sent in a bill for a dozen chairs to the Board of Works, on his charging that expense to the Board of Works they would charge it against their vote, while he might at the same time charge the expense of the chairs to the Inland Revenue Department.

378. You mean the same chairs?—Yes; and the Inland Revenue Department would charge it against their vote. As the Board of Works would not see the bill that was sent to the Inland Revenue, and the Inland Revenue would not see the bill that was sent to the Board of Works, there is no reason why the same expense should not be charged against both votes.

379. (To Mr. *Russell.*) I do not see that that follows in the slightest degree. The Board of Works would not pay for those chairs without first having ordered them, and, secondly, having received them; is not that so?—The tradesman's bill against the Office of Works would be signed by the officer who ordered the articles.

380. And that bill would not be paid without the receipt for the goods?—Not without our being aware that the things had been delivered to his order.

381. On the other hand, the Inland Revenue would act in the same way; they would require proof that the goods had been ordered, and that they had been received?—I presume so.

382. *Chairman.*] You say that if other chairs were substituted for some which you had ordered you would find it out?—Perhaps we had better not discuss the question of furniture, for we do not supply furniture to those buildings. All we have to do with is the repairs.

383. Suppose your office orders a room to be papered with paper at 1 *d.* a yard, and that it is done to your satisfaction, and you give the proper authority for the payment, and that is passed by the Audit Office. Then in comes the Inland Revenue Department, and they say, "We do not like this paper, we must have a better paper than this;" and they send an order to a tradesman to put up paper at 2 *d.* a yard. In that case might there not be a double expenditure for papering the same room, the one ordered by the one department, and the other by the other?—Yes, there might.

384. You say that no check could be placed upon that double expenditure?—That might take place.

385. Then, with regard to the audit, I want to know how the Comptroller and Auditor General is to know what vote to charge the papering of the room against?—I apprehend that he would charge the second expenditure against the vote of the department whose officer certified the payment of it.

386. Then

386. Then it would come to this, that he would charge the two paperings of the room to two different votes?—Yes.

387. Mr. *Stansfeld.*] If that room had, very wastefully and improperly, been papered twice with public money, once by one department, and another time by the other department, the expense would be correctly charged to both departments, and correctly audited?—Yes.

388. *Chairman* (to Mr. *Foster*).] Would that be the proper course to be pursued in the matter, because the House of Commons ought to know when it is voting money away under two different votes for the same kind of expenditure, that it allows of the possibility of the same thing being paid for out of two different votes?—As a matter of account, there is no difficulty about it whatever. As a matter of control of expenditure, I think there is no question that it is much better not to have that mixture.

389. Mr. *Stansfeld* (to Mr. *Hawker*).] You have stated to the Committee that it is easy that a double and a fraudulent payment should be made; I apprehend that you have not established that?—I said that there was a very good chance of a double payment in cases such as I instanced.

390. Mr. *Candlish.*] With regard to this very papering of the room, would it not be possible for a contractor or a tradesman to get an order for the papering of the room from both departments without the one knowing what the other had done?—Certainly.

391. And to present his account to both?—Yes, certainly.

392. There need be no collusion between the two departments in that case?—No.

393. The fraud would be the tradesman's?—Yes.

394. The account would be certified and paid?—Yes.

395. Mr. *Stansfeld.*] Could those accounts be paid simply upon an order without evidence of the order having been carried out?—I do not know what the operation is on the part of the Board of Works, as to whether they inquire that the work which they have ordered has been executed; at all events, if an order were given to paper a room by the Board of Inland Revenue, and also by the Board of Works, both departments might see that the order had been executed, and both departments might be charged with the expenditure.

396. Then, after all your experience as an inspector in the Audit Office, you do not at this moment know whether a department, which orders a service, satisfies itself that the service has been performed before it pays the account; is that your evidence?—Yes, as regards the accounts of the Board of Works; I may mention that I am not the inspector in charge of the accounts of that department.

397. *Chairman.*] The case you put was this, was it not, that supposing a room wanted papering, and supposing that two departments could give orders with respect to the repairs of that building, they might both order the papering of that room?—Yes.

398. And then two accounts might be sent in, though only one paper was put on the walls of the room?—Yes.

399. Each department might give an order for papering when there was an absence of paper, and afterwards each department might be satisfied that there had been a paper put upon the walls, and each department might be satisfied with the correctness of the account?—Yes.

400. In that case the paperhanger might claim for the papering twice over?—Yes.

401. (To Mr. *Foster.*) Have you any further observation to make upon this point?—I think it must be remarked that the Office of Works never steps in and papers a room without an application from the head of the office concerned; and in order to commit such a fraud as is suggested, the head of the office must give two separate orders for the same thing, which is not at all likely to occur.

402. We are, of course, supposing things which are very unlikely to occur; we are testing the system by an extreme case?—The head of the department could not give a double order without fraud.

403. Mr. *Goldney* (to Mr. *Hawker*).] Have you anything to do with inspecting the accounts of the Science and Art Department?—No.

404. What inspector inspects their accounts?—Mr. Llewellyn.

405. Mr. *Pollard-Urquhart.*] Would it not require more care and accuracy on the part of each department to prevent imposition in the case supposed, than if the work could only be done by one department?—Yes. (Mr. *Foster.*) I believe as a matter of account that that would not be so at all, but as a matter of control of expenditure it would be so, decidedly.

406. *Chairman.*] As a matter of account you would have to define what was to come under one vote, and what under another, in order to allow the Comptroller and Auditor General to exercise his control with regard to the vote under which the expenditure had been charged?—He would be solely guided by the department spending the money.

407. (To Sir *Wm. Dunbar.*) Have you anything to say upon this point?—I have stated in the course of this report that a vote taken for similar or like expenditure ought, in my judgment, to be placed under the custody of a single department, in order to obviate possible mistakes, or even frauds, being practised where two departments are concerned in the administration of, it may be said, one and the same vote or votes for like purposes; but I was further going to observe in regard to the remarks that I have made in reference to the expenditure of the Inland Revenue Board for public buildings, that those observations arose out of, and were based upon, the correspondence which took place between my department and the departments concerned; now it appears that when reference was made to the Inland Revenue Office for an explanation of the circumstances under which a sum of 5,087 *l.* was spent by them, the answer was, that it had been spent under the authority of the Treasury; but along with that answer they sent us a Minute of the Inland Revenue Board, in which they explained that the sum intended to be included in the Inland Revenue Vote had been transferred, as I understood, for the first time, to a totally different vote, to the vote of the Commissioners for Works. I find further, that in the answer which the Treasury gives to the Inland Revenue Minute, it does not at all demur to that statement. On the contrary, the Treasury appears to admit that a transfer was made from the one vote to the other, and in consequence of that

Mr. *Russell*.
Sir *W. Dunbar*.

11 May 1870.

statement, first, on the part of the Inland Revenue Board, and secondly, upon the admission of the Treasury itself, in their answer to the Inland Revenue Department, I was naturally brought to the conclusion that the 3,000 *l.* which was originally intended to be included in the Inland Revenue Vote, had, by the authority of the Treasury, been transferred to the Vote of the Commissioners for Works. I felt, therefore, that I had no alternative but to make the observations which I did. If no provision had been made in either vote, and the Inland Revenue Office had been in the habit of making these repairs from year to year, then, as a matter of course, it would have occurred to me, without reference to that department, that there might have been an omission, and, under any circumstances, I should have said that the Treasury had the power of making a sub-head, and of charging against that sub-head expenditure which the Inland Revenue had been in the practice of so charging in previous years. It came clearly, I should have thought, more or less within the meaning of the vote, if it was an omission; but if I have made any observations here which I ought not to have made, the misconception has arisen from the correspondence.

408. Mr. *Stansfeld*.] I do not think it occurs to any one's mind that the Comptroller and Auditor General has made any observations that he ought not to have made?—I based my remarks entirely upon the correspondence, because the two letters to which I referred seemed to admit the fact that it was a transfer and not an omission.

409. *Chairman* (to Mr. *Foster*).] But then, a very important question arises upon this, whether the Treasury had any power of sanctioning a charge against a vote for any expenditure if the Appropriation Act would not cover it. It has not yet been proved to my satisfaction that the Appropriation Act would allow this expenditure to be charged against the Inland Revenue Vote?—I do not think the Appropriation Act would be likely to go further than the terms of the Estimate, which would cover such expenditure.

410. Mr. *Stansfeld* (to Sir *William Dunbar*).] As far as the Appropriation Act is concerned, would it cover this expenditure which the Treasury sanctioned out of the Inland Revenue Vote?—I think that we have been in the habit of admitting a right on the part of the Treasury to put in an additional sub-head, provided the expenditure comes within the meaning of the vote.

411–12. The terms of the Appropriation Act, with reference to the Inland Revenue Vote, are very wide, are they not?—Yes, they are very wide; they include the whole vote. (Mr. *Foster*.)—I think, probably, the Appropriation Act, if it goes so far, would quote the words used in the Estimate, which are, "To defray the Expenses of Inland Revenue and Post Office Buildings."

413. *Chairman*.] Then comes the question, if you have a vote which is taken in terms for "Post Office and Inland Revenue buildings," would not that exclude from the general vote for the purposes of the Inland Revenue that expenditure which has reference to buildings?—I think, seeing that that vote is placed under the control of the Office of Works, which cannot control the expenditure charged against the Inland Revenue Vote, it is manifest that it was not intended to include expenditure which the Office of Works could not control.

414–15. As a Parliamentary question the House of Commons is told, that there is wanted for Post Office and Inland Revenue Buildings 89,470 *l.*, and it has no information with regard to there being any other requirements for additional buildings. Then we are told, that now there is a certain portion of expenditure in connection with buildings which is not comprised in this Vote 23, for which that sum which I have mentioned is taken, but that it must come out of another vote wherein no mention is made of such requirements at all. Then the question is, whether Parliament votes that money with a full knowledge of the circumstances?—It has so far a knowledge of the circumstances that it knows that it is for expenditure incurred by the Office of Works. I admit that it is very defective information, and that it ought to be more distinct, but I think the mere fact of its being shown upon the estimate that it was expended under the Office of Works does explain to Parliament in a defective manner that it is only for the expenditure of that department, and not for expenditure incurred necessarily by the Inland Revenue Department. (Sir *William Dunbar*.)—With regard to the question which was put to me by the Secretary to the Treasury, perhaps the Committee will allow me to read what are my views with reference to that particular case. In communicating with the departments we have laid down these rules: "The view which the Comptroller and Auditor General entertains of the duty incumbent upon him under the Exchequer and Audit Departments Act is—First, that if a charge is made by an accounting department against a vote, of such a nature as not to fall within the intention of the vote, or of any sub-head under which the vote is directed to be accounted for, then that the sum must, under the 27th section of the Act 29 & 30 Vict. c. 39, be reported to Parliament as not properly chargeable to the vote. In such a case it appears to him that the amount should be voted in order to authorise the expenditure."

416. What are you reading from?—I am reading from instructions which I have laid down.

417. Are they instructions to your officers?—No, not to my officers, but to the departments. In communication with the departments we have laid down certain rules, and upon these rules the departments are now acting. In fact, a question was put by the Colonial Office as to how we should deal with payments under a variety of circumstances, and we have laid down these as the regulations which should guide the departments in dealing with such payments. I have read No. 1; No. 2 is, "That if the sum charged is clearly within the meaning of the vote, but the distinct definitions or limitations of the sub-heads do not admit of its falling within any one of them, an additional sub-head should be inserted in the Appropriation Account, under which the sum should be charged." That is a power that we think the Treasury may fairly be allowed to exercise. "In this case the circumstance would be alluded to in the report on the account, but the Comptroller and Auditor General would not consider it his duty to report such a payment as not properly chargeable to a vote. Thirdly, in the case of a payment which, though covered by a sub-head, is not detailed in the information contained in the third part of the Estimate, the Comptroller and Auditor General considers that, whether

whether it will be his duty to notice it, or not, must depend upon the degree of precision in, and the nature of, the details so given." So that under regulation No. 2, if the sum charged is clearly within the meaning of the vote, but the distinct definitions or limitations of the sub-heads do not admit of its falling within any one of them, and it is, therefore, charged to a new sub-head, it will be noticed by the Comptroller and Auditor General as a new sub-head, but he would not consider it his duty under such circumstances, if it fairly fell within the vote, to report that the payment was not properly chargeable to the vote. Applying that principle to this case, and supposing that a vote had not been taken, which I understand to be the fact (from the correspondence it appeared to have been a transfer), in that case, of course, I should have admitted it as a sub-head, and considered the expenditure as properly chargeable against the vote.

418. Mr. *Stansfeld.*] Then, understanding now that provision was not made in Vote 23 for those services which were debited to a new sub-head in that Inland Revenue Vote, are you of opinion that they were correctly debited?—I think they were correctly debited, under such circumstances; I should have noticed it in the Report, but I should not have thought it my duty, according to the regulations just quoted, to have pronounced it a payment not properly chargeable against the vote.

419. *Chairman.*] Do I understand that, with the explanations now given, you would debit this payment against the Inland Revenue Vote?—Supposing that a vote had not been taken for what we might consider the same service.

420. If there had been no Vote 23 for Post Office and Inland Revenue buildings, then you would have admitted this charge against the Vote for the Inland Revenue Department?—Yes.

421. But there being such a vote, do you think that it excludes the propriety of charging it against the Inland Revenue Vote?—Yes, especially in view of the circumstances that the Inland Revenue Office did itself look upon that 3,000 *l* as having been a transfer, and the Treasury, in their answer to the Inland Revenue Office, seem to admit it.

422. Mr. *Stansfeld.*] Whatever may have been the impression produced upon your mind by that correspondence at the time it took place, am I not correct in understanding you in this way, that if the services in question which have been charged against a new sub-head in the Inland Revenue Vote were not provided for actually in the Board of Works Estimate, and we know that they were not carried out under the supervision of the Office of Works, you would then say that they would not be correctly charged against the Office of Works Vote, and that they would be correctly charged against the Inland Revenue Vote?—If they were clearly separate and distinct services, of course I should hold that this expenditure was correctly chargeable against the Inland Revenue Vote; but, from the information obtained in the course of the inquiry, it would appear that the expenditure was of a similar kind; in short, similar expenditure was charged against both votes.

423. It was expenditure of a similar nature, because it came under the head of "Maintenance and Repairs;" but we will assume that the maintenance and repairs had been partly executed upon the Inland Revenue buildings by the Inland Revenue Board and partly by the Board of Works; you would not propose that works executed by the Inland Revenue Board, upon their order and under their supervision, should be charged against the Office of Works, Vote 23?—No; I should have considered that for two separate services the vote had been taken for the special work with which they were severally entrusted by each department.

424. With reference to this particular expenditure charged against the Inland Revenue Vote, you would not propose to charge it against Vote 23, would you?—I have so proposed to charge it.

425. I understood you just now to say that you would not charge expenditure incurred by the Inland Revenue Board against a vote for which the Board of Works was responsible?—No, not if it was a distinct and separate service; I draw the distinction there. It would appear from the correspondence that this vote was taken for the Inland Revenue, and was transferred to the Commissioners of Works for the discharge of duties precisely similar to those which were discharged by the Inland Revenue Department; and on that account I thought that the moneys disbursed by the Inland Revenue Department ought to be charged against the vote granted by Parliament for that one purpose. But if you put the question to me, whether if they were distinct services I should do so, I say as distinctly that for distinct services, the Inland Revenue doing one kind of service, and the Commissioners of Works doing another kind of service, I should admit the expenditure against both votes.

426. The service might of course, as in this case it was, be distinct and yet similar, if I apprehend you rightly; if the services were distinct but similar, you would not think that arrangement an advisable one; you would suggest that it would be better that similar services should not be performed by different departments?—No, that is not my suggestion; my suggestion, which you will find in my Report, is this: where similar expenditure has to be incurred, the safe thing is to entrust the expenditure of that money under one vote to one department.

427. You make that as a suggestion?—Yes.

428. But take the facts as they are; there are expenditures for services distinct but similar, which, as a matter of fact, have been incurred by two separate departments; in that case you would not charge them against one vote, would you?—No; as I said before, if they were proved to be distinct services, as a matter of course I should charge the expenditure against the two separate votes.

429. You have heard the evidence of Mr. Foster upon this subject?—Yes, I have.

430. Especially as to the error in not taking the 3,000 *l.* in the Inland Revenue Vote?—Yes.

431. Having heard that error stated, you would not now, if I interpret you rightly, propose to charge that expenditure against Vote 23?—If it was distinctly an omission on the one hand and a distinctly different service on the other, then of course I should not persist in the objection which I have taken, but I say that my objection

Mr. *Foster*, Mr. *Russell*. Sir *W. Dunbar*.

11 May 1870.

is founded on the correspondence; I drew my inferences from the correspondence.

432. I am not raising the slightest objection to your letter, which was written upon the information before you at the time, but if I understand Mr. Foster's evidence rightly, it would meet your views?—Mr. Foster's evidence would meet my view, and I believe Mr. Foster and I are agreed upon another point, namely, that it would be better that a vote of this nature should be administered by one department.—(Mr. *Foster*.) As far as the work can be done by one department, I do not think it would be desirable to place the expenditure upon offices all over the country which cannot be controlled by the Office of Works under the Office of Works—(Sir *William Dunbar*.) What I understand is that in Mr. Foster's opinion, the work may be made so distinct, that no confusion could arise as to the expenditure between the two Departments—(Mr. *Foster*.) Quite so.

433. *Chairman* (to Mr. *Foster*).] Will you produce at our next meeting the Treasury Minute which sanctioned the distribution of the work between the Inland Revenue Department and the Board of Works?—I will look for it, and obtain it if there is one.

On Vote 28.

434. The Comptroller and Auditor General's Report states that the sanction of the Treasury for the excess on this vote has not been produced to the Audit Office; has it been produced yet?—It has been produced since; I can give the dates if you wish; the Treasury, on the 28th of December 1869, wrote upon the subject to the Commissioners of Public Works.

435. We need not go into this matter in detail if you can state that it was produced since?—It was sent up apparently without any delay whatever.

On Vote 29.

436. *Chairman* (to Mr. *Foster*).] I believe that for some years past a vote has appeared in the Estimates for the Queen's University Buildings in Ireland, is not that so?—Yes.

437. And at present no decision has been come to with regard to the building, and the vote has not been drawn?—I believe so.

438. Mr. *Stansfeld*.] There is an explanation to that effect, I think, under the Account at page 46?—Yes.

Mr. George M. Edwards, called in; and Examined.

On Vote 31.

Mr. *Edwards*.

439. Mr. *Stansfeld*.] What is your Department?—I am in the Department of the Accountant General of the Navy.

440. *Chairman*.] The Report of the Comptroller and Auditor General says that no Appropriation Account has been received of the Portland Harbour Vote: what have you to say upon that subject?—At the date at which that Report was written it had not been received by the Comproller and Auditor General; but since then it has been forwarded to him.

441. Why was it not forwarded in due time?—It contains a portion of the expenditure controlled by the Admiralty, and the whole of the Navy Appropriation Account, and the Statement of Savings and Deficiencies for the year 1868-9, were not rendered by the date prescribed by the Exchequer and Audit Act; the reasons for their not having been so rendered have been fully explained to the Treasury in obedience to their request. If the Committee desire to be informed what the explanation was, I cannot perhaps do better than read a portion of the letter written by the Admiralty to the Treasury, containing that explanation; but I may point out that inasmuch as the Comptroller and Auditor General has called attention to the delay in rendering the Appropriation Account of Navy Services, which of course embraces a far larger mass of expenditure than this, the Committee may think that the explanation should be deferred until that subject is under consideration, inasmuch as the Admiralty are desirous of getting the time extended which they have for preparing these accounts, and they wish to have the question submitted to the consideration of this Committee.

442. Mr. *Candlish*.] What difficulty is there in the way of keeping this Portland Harbour expenditure separate from the ordinary naval expenditure, this being, so to speak, a Civil Service Vote, a distinct vote in itself?—There is no difficulty in keeping it separate.

443. Would there be any difficulty in rendering the Appropriation Account of it at the same time as the Civil Service Appropriation Accounts are rendered?—No.

444. Mr. *Stansfeld*.] Is not the difficulty under the Act, that the Act calls upon the Admiralty to send in one Appropriation Account, of which this is a part?—This is rendered as a separate account from the Naval Account; but the difficulty was, that the Admiralty were not prepared at the prescribed date to render any account, either the Navy Accounts or the Portland Harbour Account.

445. Mr. *Candlish*.] Do you render only one Appropriation Account under the Act?—No; this is not rendered as a part of the Naval Appropriation Account at all.

446. What is the difficulty of rendering this account in time to appear with the other Civil Service Appropriation Accounts, as it comes among the Civil Service Estimates?—There would be no difficulty usually; the circumstances which led to its not being rendered in time, in the present instance, were exceptional.

447. What were they?—The change of office from the Admiralty at Somerset House to the Admiralty at Whitehall, which led to a great interruption of public business, together with the recurrence of that which has been in past years found very detrimental to rendering the accounts in time. In this year, therefore, the difficulties in the way of preparing the account culminated. The Deputy Accountant General of the Navy gave evidence before this Committee

Committee last Session upon this subject. The ordinary difficulties, coupled this year with the interruption of public business consequent upon removing the Admiralty from Somerset House to Spring Gardens, made it necessary that such a very large mass of business should be completed in a very short time, that it was found impossible to fulfil the requirements in that respect.

448. According to the letter of the Audit Office of the 22nd of December last, there seems to have been irregularity with regard to the Portland Harbour Account, that the "Expenditure appears to have been made out of advances from naval funds, and none of the expenditure has been charged against the Vote of 8,500 *l.*;" will you explain that?—That was an inter-departmental question. As a matter of convenience, the Paymaster General's Department temporarily met the expenditure on Portland Harbour out of such money as he had in his hands for the naval balance. The Vote for Portland Harbour is placed in the hands of the Admiralty early in the year, but at that date no transfer of money was placed in the hands of the Paymaster General to compensate for what he had advanced out of the funds in his hands under the Admiralty votes, but the transfer was shortly afterwards made.

449. This delay in transmitting the Appropriation Accounts relating to Portland Harbour for the year 1868-9, at the same time as the other Civil Service Appropriation Accounts, will not occur again?—No.

450. *Chairman* (to Sir *William Dunbar*).] What do you propose to make your practice when an Appropriation Account is not sent in at the time prescribed by the Exchequer and Audit Act, but subsequently rendered; do you propose to make a supplementary report?—No, I believe that this is the first occasion on which there has been an omission of this nature; I did not think it proper to make a supplementary report upon it. I hold that the Comptroller and Auditor General exists for the purposes of Parliament, and that he is the last man in the world who should disobey or disregard the regulations laid down by Parliament for the conduct of his duties. I hold that he does not exist for the uses of the departments simply; and if I had laid down the principle that an account might, in disregard of the Act of Parliament, be sent in at any moment that the department might think fit, the result, I fear, would have been that the example set in this case would have become one of great extension, or might have been liable to become so, and I think it very necessary that that should be guarded against. Upon a request of the Committee I will, of course, send in my report upon this account.

Mr. *Foster.*
Mr. *Russell.*
Sir *W. Dunbar.*
Mr. *Edwards.*
11 May 1870.

451. Are there any other cases of an omission except this?—This is the only case in which I have not reported, but the whole of the Admiralty Accounts were not sent in in time. I ought to state, however, with regard to the Admiralty Account, that although it was not sent in within the period prescribed by the Act of Parliament, it was sent in in sufficient time to enable me to make a report upon it within the prescribed period.

452. And you have reported upon it?—I have reported upon the Admiralty Account.

453. Then this is the only vote which you have not reported upon?—Yes.

454. Mr. *Stansfeld.*] I think I understood you to say that you would send in a report upon it if the Committee requested you to do so, but of course we cannot go beyond the Act?—The Act lays it down in very distinct terms, that the Appropriation Accounts are to be sent in at a certain time. Of course I cannot report merely at the bidding of a department; if I were to adopt that as the rule, I am afraid it would be attended with very great inconvenience.

455. The question is whether the Committee ought to make a request to you to report upon the account, or whether it should be the House of Commons?—If the Committee should make such a request, of course I should consider it my duty to bow to the decision of the Committee as representing the House of Commons. I would venture to remind the Committee that there is a very vast amount of work to be done in a very short space of time, and that any delays on the part of the departments would necessarily throw the whole of the Exchequer and Audit Department out of gear, and make it impossible for us to perform the duties assigned to us by Parliament.

On the VOTE for "Advances for New Courts of Justice and Offices."

456. *Chairman* (to Mr. *Russell*).] Why is this vote not numbered?—It is not comprised in any Class of the Civil Service Estimates.

457. If it is not comprised in the Civil Service Estimates, why is it interpolated there; it ought to be a separate account outside the Classes, ought it not?—I believe it is explained lower down on the same page.

Mr. HENRY THOMAS DUNDAS BATHURST, called in; and Examined.

458. *Chairman.*] I SEE that the Comptroller and Auditor General says, "This account is not comprised in any Class of the Civil Service Estimates. The Appropriation Account is, however, submitted with those in Class I., for the reason stated in my report of the 13th of January 1868, on the Appropriation Account of this Class"; do you remember what that reason is?—This being an account rendered by the Commissioner of Her Majesty's Works, and the service being of the same nature as those comprised in Class I., it was included in the Report upon the Office of Works Account.

459. (To Sir *William Dunbar.*) But it was an advance and not an absolute grant; do you not think that it ought to stand by itself, and not to come in Class I.?—I should think it had better stand by itself.

Mr. *Bathurst.*

460. Mr. *Pollard-Urquhart* (to Mr. *Bathurst*).] Is it an advance?—Yes; to be repaid in the manner prescribed by the Act 28 & 29 Vict. c. 48. (Mr. *Foster.*) The sum has all been repaid by the Court of Chancery with the exception of a mere trifle.

461. Mr. *Candlish.*] Is not the repayment a miscellaneous receipt?—No.

462. *Chairman.*]

Mr. *Foster.*
Mr. *Russell.*
Sir *W. Dunbar.*
Mr. *Bathurst*

11 May 1870.

462. *Chairman.*] It is provided for by the Act of Parliament?—Yes.

463. Mr. *Pollard-Urquhart.*] Then with regard to the extra receipts of the Office of Works, it appears that out of 24,746 *l.* 18 *s.* 6 *d.* only 8,500 *l.* have been paid into the Exchequer; why has not the whole sum been paid in?—It has been the practice of the Office of Works to pay those extra receipts over to the Exchequer twice a year; they accumulate to a certain amount, and they have been in the habit in one part of the year of paying a sum on account to the Exchequer, and when the accounts are completed they pay over the balance. The Treasury has lately written to the Office of Works, and proposed that they should change their practice and pay over quarterly.

464. Will those extra receipts be paid over quarterly for the future?—They will.

465. I suppose that will prevent these large balances accumulating?—Yes.

466. (To Sir *William Dunbar.*) Do you think that the arrangement of the balances being paid quarterly will be satisfactory?—Yes, I think quarterly payments would be sufficient.

467. *Chairman* (to Mr. *Russell*).] Have you any observation to make upon the subject of these extra receipts?—It has been our practice to retain the extra receipts until after the report of the Comptroller and Auditor General has been received. The printed Appropriation Accounts for 1868–69 did not reach our department till after 1868–69, consequently the balance was not paid over until this year; it has now been paid.

468. (To Mr. *Foster.*) A question was raised at our last meeting about the form of the account with respect to the nomenclature, and you were requested to prepare a form of account; have you done so?—Yes; I have it here. (*The same was handed in.*)

Wednesday, 18*th May* 1870.

MEMBERS PRESENT:

Mr. Candlish.	Mr. Liddell.
Lord Frederick Cavendish.	Mr. Pollard-Urquhart.
Mr. William Fowler.	Mr. Sclater-Booth.
Mr. Goldney.	Mr. Seely.
Mr. Ward Hunt.	Mr. Stansfeld.

THE RIGHT HONOURABLE GEORGE WARD HUNT, IN THE CHAIR.

Sir WILLIAM DUNBAR, Bart, Mr. WILLIAM GEORGE ANDERSON, Mr. MORGAN HUGH FOSTER, C.B., Mr. CHARLES LISTER RYAN, Mr. CHARLES VINE, Mr. HENRY W. S. WHIFFIN, called in; and Examined.

ON VOTE 21, CLASS 3.

Government Prisons, England, and Transportation.

469. *Chairman* (to Mr. *Whiffin*).] THERE is a paragraph in the Report of the Comptroller and Auditor General to the following effect: "Upon the grant for this service I have to observe that under sub-head A., Salaries, is included a sum of 40 *l.*, being the proportion of the salary of Captain Stopford at the rate of 300 *l.* per annum properly chargeable to the Vote for Army Services the amount having been provided for in the Army Estimates: in reply to an inquiry from this Department, the accountants state that it has not been recovered from the War Department; the expenditure under this sub-head should therefore be diminished by that sum, making the amount 6,522 *l.* 6 *s.* 2 *d.* instead of 6,562 *l.* 6 *s.* 2 *d.*; as shown in this Account:" what have you to say upon that?—There was a sum of 300 *l.* provided in the Army Estimates for 1868-69, for the pay of the Inspector of Military Prisons, Captain Ducane; he received payment at that rate up to the 11th of February 1869 only; so that as far as the Army Fund is concerned there is a saving of 41 *l.* upon that Vote.

470. Upon the Army Vote?—Yes, under the Army Vote. Had an application been made from the Home Office for that balance, I have no doubt that that sum would have been paid over to the Home Office. We have no knowledge of any payment to Captain Stopford, the amount paid to him to the 31st of March having been paid out of the Civil Votes.

471. To which Vote do you say that this 40 *l.* ought to be charged?—I think it is correctly charged to the Civil Votes; but, on the other hand, had the Home Office made an application to the War Department to recoup the Home Office the 40 *l.*, I have no doubt that that application would have been entertained, seeing that a sum of 300 *l.* was provided in the Army Estimates for the pay of the Inspector of Military Prisons for the year ended the 31st of March 1869.

472. Captain Stopford is in the office of the Inspector of Military Prisons?—He is. We have made no payment to him.

473. Then did Captain Stopford succeed Captain Ducane?—Captain Stopford had a new appointment, and his salary, as I understand, was raised, beginning from the 1st of April 1869, from 500 *l.* to 800 *l.* a year.

Sir *W. Dunbar.*
Mr. *Anderson.*
Mr. *Foster.*
Mr. *Ryan.*
Mr. *Vine.*
Mr. *Whiffin.*

11 May 1870.

474. By whom was it raised?—By the Home Office; and provision is made in the Civil Service Estimates for the 800 *l.* for the year 1869-70. Our payments to Captain Ducane ceased on the 11th of February 1869, provision having been made for the 300 *l.* a year down to the 31st of March 1869.

475. (To Mr. *Ryan.*) After that explanation, have you, on the part of the Audit Office, anything to observe upon it?—No.

476. (To Mr. *Whiffin.*) Supposing an application for the 40 *l.* had been made to the War Office by the Home Office, you think that the money would have been paid to the Home Office?—Yes.

477. In that case it would have been charged to the Army Vote?—In that case it would have been charged to the Army Vote, against the sum provided in the Estimates for that service. (Sir *William Dunbar.*) That would appear to be an admission of the correctness of the observation in my Report.

478. (To Mr. *Foster.*) Have you any observations to make upon this point?—I think the state of the case is, a sum of 300 *l.* a year was voted on the Army Estimates for the pay of Captain Ducane, whose appointment was abolished, and Captain Stopford received a civil appointment of 800 *l.* a year. It appears to me that it would have been quite incorrect for the War Office to pay over 40 *l.* voted for Captain Ducane's military pay to meet the civil salary of Captain Stopford.

479. Your view is this; that if the War Office had been applied to by the Home Office for that 40 *l.*, they ought to have refused it?—Yes, Captain Stopford's salary was a civil salary.

480. (To Mr. *Whiffin.*) What have you to say to that?—Captain Stopford performed the duties which had been previously performed by Captain Ducane, and in consequence, as I understand, of his undertaking those duties, his salary was increased from 500 *l.* to 800 *l.* a year.

481. Was the whole of his salary then charged upon

Sir *W. Dunbar.*
Mr. *Anderson.*
Mr. *Foster.*
Mr. *Ryan.*
Mr. *Vine.*
Mr. *Whiffin.*

18 May 1870.

upon the Civil Vote?—The whole of his salary was charged upon the Civil Vote.

482. Was the salary fixed by the Secretary of State for the Home Department?—I believe so; no provision is made for the pay of Captain Stopford on the Army Votes.

483. Then if that is so, if an application had been made by the Home Office for that 40*l.*, why ought you to have paid it to them?—Because it might have been assumed that Captain Stopford had undertaken the duties which Captain Ducane had previously been paid for discharging; but full particulars would have been called for had any claim been made on behalf of Captain Stopford.

484. Mr. *Stansfeld* (to Mr. *Foster*).] If I understand you rightly, upon the appointment of Captain Stopford, the whole of his remuneration was provided for out of the Civil Votes?—It was entirely provided for in the Civil Votes, and therefore, according to the War Office view, it would have been provided for twice over, so far as the 40 *l* is concerned.

485. *Chairman.*] At our last meeting you stated that you would try and find a Treasury Minute, stating what part of the expenditure on the repairs and maintenance of Inland Revenue Buildings was to be administered by the Inland Revenue Department, and what part by the Office of Works; have you done so?—Yes; I have here a copy of the minute, and I should wish to draw the attention of the Committee to the wording of it.

486. What is the date of it?—It is dated the 22nd of November 1867.

487. Will you read it?—"My Lords have before them the Estimates for the Departments of the Inland Revenue and the Post Office for 1867–68; in these Estimates a certain sum is annually inserted on account of buildings and repairs, but it appears that the works are executed under the direction of the First Commissioner of Works, who practically controls the expenditure, and recovers the amount from the departments in question. My Lords consider that all the expenditure attendant upon all buildings and repairs which either have been hitherto, or which can conveniently for the future be, executed for the departments of the Post Office and the Inland Revenue by the Board of Works should be estimated and accounted for by the First Commissioner. Write accordingly to the First Commissioner of Works, and desire that the necessary provision may be made in the Estimates of his department for 1868-69. A sum is also inserted in the Post Office Estimate now under consideration, of the expense of the manufacture of postage labels and envelopes, and my Lords understand that the amount consequently voted is paid by the Post Office to the Inland Revenue, by which department the actual work of manufacture is conducted. My Lords consider that it is proper under such circumstances that the expenditure in question should be estimated and accounted for by the department of Inland Revenue. Transmit copy of this minute to the Postmaster General and the Commissioners of Inland Revenue, and request that the Estimates for their departments for 1868-69 may be framed in accordance therewith." The effect of that minute is to place upon the Office of Works all works that can be conveniently executed by that Office, and to exclude such work as cannot be conveniently executed by them.

488. Is that a minute signed by myself?—Yes; it seems clearly to imply that there will be charges of that kind in two quarters.

489. That minute laid down the principle that there should be a division between the two departments, but left it to be ascertained what was the most convenient arrangement for that purpose?—Yes.

490. Subsequently to that minute, has there been any distribution between the two departments, with the cognisance of the Treasury of the works to be undertaken by each?—I think not further than general instructions. The Inland Revenue Department have carried out such works as they considered could not be conveniently carried out by the Office of Works. I think it has not been laid down with sufficient distinctness what works were to be executed by each department.

491. That is an administrative question: it would be desirable, in your opinion, I presume, that there should be a distinct rule laid down?—I think there should be a distinct rule. I may at the same time mention, that I believe there are some arrangements being carried out, according to which the country will be divided into districts, and Office of Works' surveyors will be appointed to take charge of certain public buildings in different portions of the country. In that case I am not sure that it may not be practicable to place the charge of all works in connection with public buildings under the Office of Works.

492. In that case the expenditure on these buildings would all be charged against one Vote?—In that case it would all come out of the Vote placed under the Office of Works.

493. You think that that would be a more desirable arrangement than the present, if it can be effected?—Yes, if it can be carried out with sufficient convenience and regard to economy.

494. Supposing that that cannot be effected, do you think it desirable that the terms of the Vote and the Appropriation Act should show exactly to which Vote, supposing there are two, the expenditure of each kind should be charged?—Yes, I think it should be shown as clearly as possible. There would always be a line where it would be difficult to say which department should incur the expenditure; but there can never be a mistake as to which office is to account for the charge, because that must depend upon which office was ordered to perform the work, which paid for it, and which holds the vouchers.

495. (To Sir *William Dunbar.*) Does that meet the view which you and your officers take?—Yes, that meets the suggestion I have made in my Report.

496. Mr. *Sclater-Booth* (to Mr. *Foster*).] After the contemplated revision of the establishment of the First Commissioner of Works is it at all conceivable that he will be able to superintend such petty matters as the repairs of a country post office, putting on a lock, for instance?—The system will be that he will have charge not only of Inland Revenue buildings but of all county courts and all post office buildings; and for petty work, such as putting on a lock, I believe the proposal is to have a tradesman in the town who will perform such minor works under the direction of the head of the office, and transmit the accounts to the Office of Works, and their surveyor for the district will look after the charges, and take care that they are not exorbitant.

497. *Chairman.*] Then the arrangement would be

be this: some person in the Inland Revenue Department would be the agent of the Office of Works for the purpose of superintending or giving orders for such minor matters?—There would be some arrangement of that kind; I am not aware that it is settled in any way yet.

498. If the arrangement you suggested were carried out the person in the Inland Revenue Department, who really looked into the matter, would not be acting as an officer in the Inland Revenue Department, but he would be acting at the request of the Office of Works?—Yes.

Sir *W. Dunbar.*
Mr. *Anderson.*
Mr. *Foster.*
Mr. *Ryan.*
Mr. *Vine.*

18 May 1870.

On Vote 1, Class 2.

499. Lord *Frederick Cavendish.*] It is stated that the excess under Sub-head A. "is owing to the appointment of a Third Lord at an increased salary, and to the pay of two additional supplementary clerks for Appropriation Accounts not having been provided for:" what reason was there to prevent a supplemental Vote being moved for this additional salary?—It is not the practice to take a supplemental Vote for any very small sum; besides which, when the salary was charged, it was not known whether the Vote upon which it was chargeable would meet it or not; there might be other savings sufficient to meet it.

500. *Chairman.*] Then your view is, that it is not a question of account so much as a question of policy?—Yes.

501. The question whether there should be a supplementary Estimate for the purpose depended upon the question whether the Government thought they ought to take the opinion of Parliament upon the question?—Exactly.

502. It is not a question of account?—No; it is not a question of account.

503. Mr. *Stansfeld*] I am not sure that your answer may not be interpreted a little too widely; I think that supplementary Estimates are taken for new services fairly falling within a particular Vote, even if it were probable that that Vote would not be exceeded?—Only if it were for anything important.

504. In this case the charge for the extra salary of a Third Lord was only for a very limited period before it came upon the Estimate?—It was for a very limited period only.

505. It was charged from December to the close of the financial year, I believe?—Only for about three or four months.

506. *Chairman.*] You say that if it is something important upon which an expenditure is to take place, then, notwithstanding that the Appropriation Act would cover the expenditure, there ought to be a supplementary Estimate; is that your view?—If it is of sufficient importance.

507. Supposing the Vote was sufficient to cover it, and there was no risk of the Vote being at all exceeded, if you presented a supplementary Estimate, it would show a greater total expenditure than you really contemplated; is not that so?—Yes; it would show that there was new expenditure contemplated, which had not been contemplated in the original Estimate.

508. Do you think that, under those circumstances, a supplementary Estimate ought to be presented, if it is for a matter of importance?—I think it is a matter of policy, which rests with the discretion of the Treasury to decide whether it is a matter of sufficient importance to be brought specially before the notice of Parliament.

509. Might it not be brought before the notice of Parliament without that being done in the form of a supplementary Estimate?—No doubt it might; but perhaps a supplementary Estimate is the most convenient way of bringing it before the notice of Parliament.

510. There might be a correspondence laid upon the Table of the House, and it might be thought that the salary might be fixed, if no objection was taken by Parliament within a certain time?—Yes.

511. That would bring it under the notice of Parliament as well as a supplementary Estimate, would it not?—Yes.

512. Perhaps a Treasury Minute relating to it might be laid on the Table?—Yes.

On Vote 3, Class 2.

Mr. Alfred Richard Pennefather, called in; and Examined.

513. *Chairman.*] Can you give any reason why, as the estimate for this service, under Sub-head K., has been insufficient for years, it has been allowed to stand at an insufficient amount all this time?—The Estimate of 2,400 *l.* for travelling expenses was framed before the Home Office had any control over the expenditure. The Home Office used to frame the estimates for all the offices under their control. For example, they used to frame the estimate for the Inspectors of Constabulary, but they had no control over the expenditure. And the same with regard to the Inspectors of Mines; the Home Office used to frame the Estimate, but the Treasury spent the money, and the Home Office kept no books to see what the expenditure actually amounted to.

514. But now, the Vote being placed under the administration of the Home Office, and the Home Office having to render an account of it, you will know what sum to estimate for?—Yes, we now estimate according to the average of the preceding years; no such case as this is likely to occur in future.

515. Mr. *Pollard-Urquhart.*] Were not the travelling expenses of the Inspectors of Coal Mines charged to the Home Office formerly?—No; they were paid by the Treasury. That expenditure was controlled by the Treasury formerly. The Vote was not under the control of the Home Office.

Mr. *Pennefather.*

516. Until this year?—Until April 1868; what you have before you is the first Appropriation Account of the Vote since it has been under the control of the Home Office.

517. Mr. *Stansfeld.*] Then the sub-department, until this year, estimated for this expenditure?—The Home Office estimated for that expenditure.

518. Was this incorrect estimate a Home Office estimate?—Yes.

519. Who estimated for this expenditure in the years previous to 1868–69?—The Home Office have done it for years.

520. The Home Office has always estimated for that expenditure?—Yes.

521. *Chairman.*] And they sent in an estimate upon insufficient knowledge?—Yes, just so.

Sir *W. Dunbar.*
Mr. *Anderson.*
Mr. *Foster.*
Mr. *Ryan.*
Mr. *Vine.*
Mr. *Pennefather.*

18 May 1870.

On Vote 5.

522. (To Mr. *Foster.*) In the Report of the Comptroller and Auditor General I find this "Under Sub-head C, 'Incidental Expenses' is included a payment of 24*l.* 6*s.* 8*d.* for fees on Assignment of Arms, &c., for Canada. No special provision would appear to have been made in the estimates of the Colonial Office for 1868-69 for such expenses; and I observe that payments of this description are usually made out of the 'Civil Contingencies Fund' in the first instance, and afterwards voted by Parliament under 'Miscellaneous Civil Services, formerly Civil Contingencies.' It appears to me, therefore, that the sum in question should not be charged to the Vote:" what have the Treasury to say upon that?—It is admitted by the Treasury, and the transfer has been made to the Civil Contingencies Fund as appears by the minute in this Blue Book.

523. Where is that?—At page 319.

524. You say that the Treasury think that the view of the Comptroller and Auditor General is correct in that respect?—Yes, and we have acted upon it.

Mr. John S. Lewes, called in; and Examined.

Mr. *Lewes.*

525. *Chairman.*] What position do you hold in the Colonial Office?—I am Accountant and Examiner.

526. What have you to say upon the statement in the Report of the Comptroller and Auditor General that a sum of 497*l.* 13*s.* 1*d.* was realised under the head of "Extra Receipts" during the year 1868-69, although no portion of such receipts was paid over to the Exchequer?—It was realised under the head of Extra Receipts, but not in connection with the Vote of which this is the Appropriation Account; it was realised in connection with the Vote of 1867-68 for Convict Establishments in the Colonies, and consequently we did not bring it to account as an extra receipt on the Colonial Office Vote.

527. Mr. *Seely.*] What did you do with it?—It was retained in hand until we received orders to pay over Extra Receipts to the Exchequer, and it has been paid over since.

528. *Chairman.*] In what year was it realised?—The greater part of it was realised in Western Australia in the year 1867-68, and a small balance was realised in Tasmania.

529. When was it accounted for in this country?—We brought it to account in July and September 1868 and March 1869.

530. Then the Colonial Office got credit for it in the year 1868-69?—We were closing the accounts of old Votes for 1867-68; we not only had the administration of the new Votes, but also the accounting for balances of the old Votes, of which no Appropriation Accounts had been rendered, and in closing those accounts we did not conceive that this amount which had been realised on the Vote for Convict Establishments in the Colonies, ought to be brought to account in our Colonial Office Appropriation Account for 1868-69.

531. Have you surrendered these moneys as extra receipts on any other Vote?—No; we finally surrendered them as extra receipts on that old Vote.

532. When did you surrender them?—We had further extra receipts, and we surrendered the whole together towards the end of the next year.

533. Then the fact is this, that having brought that money to account in the year 1868-69, you did not surrender it to the Exchequer in any shape or way until the next year?—We had not received instructions to do so.

534. I do not ask for your reasons now; the fact was that you did not surrender it?—We did not surrender it until the 31st of January 1870.

535. What was the reason for that?—The reason was that in the absence of instructions as to the time at which such surrenders should take place, we thought it prudent to retain the amount in hand until the Comptroller and Auditor General said that it was correct.

536. (To Mr. *Ryan.*) Have you anything to say upon this point?—We could not state that the extra receipts were correct; all we knew was that the Colonial Office had a sum in hand on account of extra receipts which was not paid over, and we thought it our duty to call attention to that fact.

537. Mr. *Sclater-Booth* (to Mr. *Lewes*).] What I understand you to say is, that the extra receipts in question had nothing to do with this particular vote?—We did not conceive that they had the least reference to it; this was an Appropriation Account of the Colonial Office Vote for 1868-69; these extra receipts were realised in respect of another Vote of the previous year, with regard to which no Appropriation Account had been rendered.

538. Mr. *Stansfeld.*] What was that other Vote?—The Vote for Convict Establishments in the Colonies for the year 1867-68; the point was a new one; it had not been touched upon in the instructions; the question was raised in reference to these extra receipts, and instructions were furnished to us.

539. *Chairman.*] Have you complete instructions now on the subject?—We have complete instructions now from the Treasury; the Treasury has told us to pay our extra receipts over to the Exchequer quarterly.

540. It is clearly understood at the Colonial Office, that for the future all such extra receipts are to be surrendered to the Exchequer?—Yes; they will be surrendered quarterly unless directions are given to the contrary.

541. Mr. *Seely.*] When was this money voted?—The money was voted for the service of the year 1867-68, and previous years; it represented the balances of old Votes; there never had been an Appropriation Account rendered in reference to it; it was a balance remaining unexpended of Votes for years previous to 1868-69.

542. Mr. *Sclater-Booth.*] If it was a balance of old Votes, you cannot call it an extra receipt?—It was realised from ration, stoppages the sale of stores, &c. It was realised in passing the accounts of charges against those old Votes.

543. Mr. *Stansfeld.*] The extra receipts in question were entirely receipts; they were not balances of Votes, were they?—Two sums of them were balances remaining in the hands of sub-accountants in the Colonies at the close of the year 1867-68.

544. They were not entirely extra receipts, then?—We were instructed to treat those as extra receipts.

545. Mr.

Sir *W. Dunbar*
Mr. *Anderson.*
Mr. *Foster.*
Mr. *Ryan.*
Mr. *Vine.*
Mr. *Pennefather.*
Mr. *Lewes.*

18 May 1870.

545. Mr. *Seely.*] In whose hands were they?—The sums, except the two which I have just mentioned, were realised in Western Australia, and brought to account by the sub-accountants there. In passing those accounts, these sums were brought to account, and of course they were carried by us to extra receipts. They remained there, as I explained, until we received instructions on the surrender of such receipts to the Exchequer.

546. *Chairman.*] The result seems to be that you did not know that you ought to hand over these extra receipts; but now you know that, and this will not occur again?—We did not know when they should be handed over. It will not occur again.

On Vote 6.

547. (To Mr. *Foster.*) With regard to Sub-head C. "Incidental Expenses," the Comptroller and Auditor General says, "There has been charged the sum of 415 *l.* 8 *s.* in respect of payments to Mr. Coode for expenses and services in connection with the inquiry into the works of Harwich Harbour: these expenses do not, however, appear to have been contemplated by Parliament when the grant was made to the Board of Trade for the year 1868-69; and as, moreover, the annexed correspondence will show that the payment was intended to be an advance, to be recovered from the Harwich Harbour Conservancy Board, it appears to me that the sum in question should not be borne as a final payment upon this Vote"; what do you say to that?—The Treasury concur, and have transferred the sum from the Vote to the Civil Contingencies Fund, as an advance to be recovered.

On Vote 7.

548. *Chairman* (to Mr. *Vine*).] What is the meaning of the term "Fractions," under Sub-head E.?—The estimate was for so many pounds shillings and pence, and the Vote is always taken for even pounds. In this case the Vote was for 6,176 *l.*, instead of 6,175 *l.* 7 *s.* 7 *d.*, as shown in the Estimate.

549. This is the only instance where you have a sub-division "Fractions," is it not?—There may be another, but I am not quite certain about it. The sub-heads ought to have worked up to an even sum in pounds.

550. Mr. *Stansfeld.*] The fractions ought to have been added to the other sub-heads?—Yes.

551. It is clearly a mistake?—Yes.

552. It is evident upon the face of it, that it would be impossible to make any charge against a sub-head "Fractions"?—Yes.

On Vote 8.

553. *Chairman* (to Mr. *Foster*).] The Report of the Comptroller and Auditor General upon Sub-head H. "Curragh of Kildare Salaries" is, that "these payments should have been charged to Civil Contingencies, to be voted in the same manner as the salary of the Ranger of the Curragh, which the Lords of the Treasury directed by their letter of the 4th of September 1868 to be paid out of the Civil Contingencies"; what do you say to that?—Undoubtedly some of the original payments were charged to Civil Contingencies; but it is the view of the Treasury that wherever a charge can fairly be placed against a Vote which applies to expenditure of the same nature, the proper course is to show the charge under the Vote, which naturally would cover expenditure of that kind. It was decided that as these charges were met by the Chief Secretary for Ireland, the expenditure would best appear against the vote which he controls.

554. (To Mr. *Ryan.*) What does the Audit Office say to that?—The Comptroller and Auditor General did not consider that the Vote for "Chief Secretary for Ireland Offices" had any reference whatever to the Curragh of Kildare, and therefore he thought the payment ought to have been out of Civil Contingencies; there was nothing in the Estimates to show that those payments were contemplated at the time they were framed.

555. (To Mr. *Foster.*) Who appoints the bailiffs in the Curragh?—The Lord Lieutenant.

556. Is the deputy ranger of the Curragh appointed by the Lord Lieutenant?—I believe so.

557. Mr. *Seely* (to Mr *Ryan*).] Would not the Lord Lieutenant be more likely to have some control over that expenditure than the party who disburses the Civil Contingencies Fund?—In seeing that the expenditure is rightly apportioned, the Audit Office can only go by the terms of the Vote, and if the terms of the Vote do not appear to meet the expenditure we consider it our duty to point it out. This expenditure had formerly been defrayed from Civil Contingencies. The real error seems to have been in not estimating for it at the time under the Vote for "Chief Secretary for Ireland Offices."

558. *Chairman.*] But supposing the Deputy Ranger of the Curragh is an officer on the Irish establishment under the control of the Chief Secretary for Ireland, do you not consider, under those circumstances, that the wages of his officers should be charged against the Vote for the Chief Secretary's office?—No doubt the Irish Office ought to have taken an estimate for it under that Vote, but we can only go by the terms of the Vote; the fact of the officer being under the Lord Lieutenant does not seem to us to authorise these salaries being charged to a particular Vote in which provision has not been made for them.

559. But there is a special Sub-head, "The Curragh of Kildare," in this Vote?—The Curragh of Kildare sub-head has been introduced into the account. Four sub-heads, from H. to K., have been introduced into the account, which are not in the Estimates laid before Parliament.

560. Mr. *Seely* (to Mr. *Foster*).] Then I apprehend in future years there will be an estimate for those sums?—Yes, it will be so. It was new expenditure, and it was considered that being under the control of the Chief Secretary for Ireland this Vote 8 was the right place to charge it.

561. Mr. *Sclater-Booth.*] The Curragh of Kildare has recently been placed under fresh regulations by Act of Parliament, has it not?—Yes.

562. Mr. *Pollard-Urquhart.*] I see that, under sub-heads I. J. K. of this Vote, there are sundry charges of salaries, travelling and incidental expenses for inspectors of fisheries; are you of opinion that these charges are properly made against this Vote?—I think so, as the expenditure is controlled by the Chief Secretary for Ireland.

563. Considering that there were no sub-heads of this kind in the Vote as originally taken, do you not think that the expenditure would come

Sir *W. Dunbar.* Mr. *Anderson.* Mr. *Foster.* Mr. *Ryan.* Mr. *Vine.* Mr. *Pennefather.*

18 May 1870.

more properly out of the Civil Contingencies Fund?—I think it is very desirable that the expenditure should be charged upon the Vote of the officer who has control over the expenditure. The officer having charge of the expenditure for Civil Contingencies has no control over the Inspectors of Fisheries.

564. *Chairman* (to Mr. *Pennefather*).] It is the case, is it not, that the Inspectors of Salmon Fisheries are now put under the control of the Irish Office?—They are under the Chief Secretary for Ireland.

565. And the old inspectors were under the Home Office?—Yes, they were under the control of the Secretary of State.

566. (To Mr. *Foster.*) That being so, if there had been any surplus on the vote for the old Inspectors of Fisheries, who were abolished, it would not be properly applicable to the pay of the inspectors who are put under the administration of the Chief Secretary for Ireland?—Certainly not; it was the duty of the Home Office to surrender the money.

On Vote 15.

Mr. James Beeby, called in; and Examined.

Mr. *J. Beeby.*

567. *Chairman.*] Has your attention been called to the note on Sub-head N. under this Vote: "The excess of payments over estimate was occasioned by satisfying a claim made by the Admiralty for stores supplied to quarantine vessels, which had been allowed to accumulate for five years, and amounted to nearly 200 *l.*, and by the employment of extra medical officers consequent upon the unusual sickness of the season;" why did you not send in your account to the Privy Council Office year by year?—I am not prepared to answer that question without looking into the case. I was not prepared to be examined upon this point.

568. But I suppose you would admit that the right course is to send in the account year by year, and to claim from the Privy Council Office the amount due for stores every year?—Certainly. There must have been something very unusual to have brought about such an occurrence as this.

On Vote 17.

569. *Chairman* (to *Mr. Foster*).] A question has arisen, has it not, between the Exchequer and Audit Department and the Treasury, as to who should render the account of this Vote?—Yes.

570. The principle of the Exchequer and Audit Act is this, that there should be a person or a department charged with the duty of rendering the account of the Vote, and that the Comptroller and Auditor General, by the assistance of his officers, should audit the account?—Yes.

571. That is the general principle?—That is the general principle.

572. Where the account is rendered by a person in the Exchequer and Audit Department itself, and audited by the Comptroller and Auditor General, the Treasury think that that principle is departed from?—It seemed to be so in the view of the Treasury.

573. It complies with the terms of the Act, but you think that it is not within the spirit of the Act, is that so?—It appeared to us that the Exchequer and Audit Department, as a department of audit, should not mix up with those audit duties the duty of rendering an account to itself.

574. I believe under the Treasury Minute that defined who was to render the account, a particular officer in the Exchequer and Audit Department was charged with the duty of rendering the accounts of that department?—Yes.

575. That officer was the secretary, I believe?—Yes, the secretary was selected.

576. But you consider that he being an officer under the control of the head of the department, the account rendered by him is not an account rendered by an officer who is independent of the department that audits?—I think that, as forming a part of the Audit Department, he is not sufficiently independent.

577. In order to get out of that difficulty, it is proposed by the Treasury that the Treasury should render the account of the expenditure of the Exchequer and Audit Department?—Yes; that the Treasury should conduct the expenditure, and render the account.

578. But it would be an unnatural arrangement, would it not, for the Treasury to render an account of the expenditure of the Exchequer and Audit Department, it being an independent department?—The Treasury conducts the expenditure, and renders the account for a great many different departments; for instance, the expenditure for the courts of common law is entirely conducted by the Treasury, and the account is rendered by the Treasury.

579. But in the case of the Exchequer and Audit Department the expenditure is made by that department now; in fact, it consists of salaries principally, does it not?—It is chiefly salaries.

580. The person who would pay the salaries would be a person in the department of the Comptroller and Auditor General, would he not?—According to the new system the Treasury signs a salary list, which is a direction to the Paymaster General to pay these salaries.

581. Would it not be more appropriate for a Treasury officer to render the account of this department than for a Treasury officer to render the account to the Foreign Office, for instance?—I think in both cases it is an inconvenient arrangement, and one that should not be adopted unless there are strong grounds for departing from the general rule.

582. Mr. *Sclater-Booth.*] In your view, the Exchequer and Audit Department is placed in a false position; it is giving the Appropriation Account of its own expenditure?—Yes.

583. And you wish to undertake the expenditure, and let the Comptroller and Auditor General take from you the Appropriation Account?—There being a difficulty, that seems to me the best way out of it.

584. *Chairman.*] In order that the right person may transact the audit, you make the wrong person render the account; that is the proposition, is it not?—The Treasury has full knowledge of what the expenditure ought to be, and it has no difficulty in directing the Paymaster General to pay it; whereas it is clear that the Treasury

Sir *W. Dunbar.*
Mr. *Anderson.*
Mr. *Foster.*
Mr. *Ryan.*
Mr. *Vine.*

18 May 1870.

Treasury could not well undertake the detailed audit of the expenditure.

585. Mr. *Seely.*] What do you mean by saying that the Treasury should conduct the expenditure of the Audit Department?—That they should authorise the Paymaster General to make the payments.

586. But who is to say that the parties shall be employed for whom those payments are to be made?—That is a separate question. The establishment is fixed by the Treasury for all departments.

587. Are the parties who are employed named by the Treasury?—They are appointed by the Treasury in the first instance. The promotion in the office is made by the Comptroller and Auditor General.

588. Then the Treasury has the power of appointing all the Auditor General's subordinates?—The original appointment of all the clerks is made by the Treasury.

589. Are the salaries fixed by the Treasury?—The establishment of salaries is fixed by the Treasury, and confirmed by Order in Council.

590. And are all incidental expenses controlled and authorised by the Treasury?—An amount is granted upon the Estimates to meet incidental expenses of a certain class, which are left to the discretion of the head of the department.

591. *Chairman.*] Do you not think that the rendering of the account by the Treasury, instead of by an officer of the Exchequer and Audit Department, tends to render the Exchequer and Audit Department more dependent upon the Treasury than it would otherwise be?—I do not see in what way it would have that effect. The salaries are all fixed. It is a mere question of carrying out what is settled beforehand. Each clerk has his own salary, and the only question is, in what manner a payment is to be made.

592. We will take the case of the Home Office, which we were just discussing; the Home Office renders the account for the subordinate departments under it, does it not?—Yes.

593. And that is the general principle that the Treasury has gone upon in settling who shall render the account, namely, to make the head office responsible for rendering the accounts of the subordinate departments within its control?—Yes.

594. If you applied that practice to the case of the Exchequer and Audit Department, and allowed the Treasury to account for the Exchequer and Audit Vote, do you not think that that would create an impression generally, I will not say in the public mind, but in the official mind, that the Exchequer and Audit Department was to a certain extent subordinate to the Treasury?—I think it is so well known that the Treasury has the control of the establishments and salaries of all offices, that I do not think the mere fact of the Treasury signing the salary list would increase the impression.

595. (To Sir *William Dunbar.*) What do you say as to that view?—I wish, in the first place, to put in a correspondence which has taken place between the Treasury and the Exchequer and Audit Department upon this subject, which will show, in the first instance, in what way the sum voted for the Exchequer and Audit Department has hitherto been accounted for, and then how it is proposed that in future it shall be accounted for. (*The same was handed in*, vide *Appendix.*)

Now I apprehend that if any difficulty has occurred of a nature to make it requisite that the Exchequer and Audit Account should be differently audited, the proper course would have been to have appointed an independent examiner or auditor, unconnected with the Auditor General himself, to audit that account, or to sign his report to Parliament, together with him. I think that the proposal to hand over the account to the Treasury will more or less have the effect indicated by the Chairman, of conveying an impression to the public departments that the Exchequer and Audit Department is more or less under the control of the Treasury. Now I wish to explain to the Committee what the position of the Comptroller and Auditor General really was intended to be. Mr. Gladstone, in his speech on the 15th of June 1865, when he proposed to combine the offices of Comptroller General of the Exchequer and of Chairman of the Board of Audit in one person, made use of these expressions: "The Comptroller of the Exchequer was at the head of an ancient office. The office was invested with dignity and considerable emolument, was of the very highest station in the permanent Civil Service, and comprised functions which required entire independence of the executive Government." Then, as a justification of the union of that office with the office of the head of the Audit Department, he stated that, thinking that the union of these two offices desirable, "he would for those reasons place the tenure of the combined offices on a higher footing. The recommendation of the Select Committee that the head of the Audit Office should be considered to hold one of the first positions in the Civil Service, was a reason for raising, not only his salary, but his office, to the highest position of dignity and independence."

596. Then your view is that the position of independence would be lowered, supposing that the account was rendered in the manner suggested by the Treasury?—Yes, I think it would; in the first place it would convey the impression you have indicated; in the next place it would be in the power of the Treasury, if it thought fit, to prevent, I may say, or to interfere more or less with the efficient discharge of his duties by the Comptroller and Auditor General.

597. Mr. *Stansfeld.*] I quite understand your evidence with regard to the impression that might be produced upon other departments; but what new power would this arrangement give to the Treasury, or what new control over the payment of your establishment?—As regards the payment of the salaries, I think it of importance that the officers serving under the Comptroller and Auditor General should be made as independent of the Treasury as they can possibly be, and that they should not be placed under any influences whatever that would lead them to suppose that their future prospects depended not upon the head of their department but upon the Treasury; with regard to the incidental expenses they are composed of various items; I will only instance one with respect to which I think the Treasury might prejudicially interfere with the exercise of his duties by the Comptroller and Auditor General; there is a sum of 70 *l.* taken annually for the purpose of enabling the Comptroller and Auditor General to take legal opinions, when he finds it necessary so to do, to aid his judgment; now, supposing that a case were to occur as has occurred before now in which the

Sir W. *Dunbar.*
Mr. *Anderson.*
Mr. *Foster.*
Mr. *Ryan.*
Mr. *Vine.*

18 May 1870.

Treasury itself was interested, the Treasury might decline in such a case to allow the Comptroller and Auditor General to expend any money in that way, although it would be for the obvious purpose of discharging his duties.

598. I think you have hardly apprehended my question; I quite understood already your opinion as to the effect that this proposed arrangement might have upon other departments; but in what way does it increase the positive and actual control of the Treasury over the expenditure of your department; has not the Treasury at this moment, or had it not before this arrangement, the same amount of control as it will have under that arrangement? — It will certainly increase the control of the Treasury, though it may be more apparent than real.

599. Am I right in this, that this arrangement does not strengthen or make more stringent the ctual control of the Treasury?—Perhaps not so much the actual as the apparent control; I suggest that that objection may be obviated by allowing the present plan of the secretary of the Audit Board rendering the account for audit to continue, and combining, with the Comptroller and Auditor General, an independent officer who shall sign that account.

600. With reference to that suggestion of yours, no doubt you have looked carefully into the Exchequer and Audit Act, would that be an arrangement not inconsistent, in your opinion, with the provisions of the Act?—It would be inconsistent with the provisions of the Act; and I hold that in spirit the proposal now made on the part of the Treasury is inconsistent with the provisions of the Act.

601. *Chairman.*] The arrangement proposed by the Treasury would be within the terms of the Act, would it not; if I remember the section right, the Treasury are to determine in the case of every Vote what department or officer shall render the account; therefore it would be within the power given to the Treasury if they appointed one of their own officers to do it?—It would be within the letter of the Act, but I say that in this case it would not be within the spirit of the Act.

602. In case of your suggestion being adopted of having an independent person to sign the account with the Comptroller and Auditor General, that would not be contrary to the provisions of the Act, but it would be outside the Act, would it not?—It would be outside the Act, but it would be in conformity with the spirit of the Act. I would also remark, that while the Treasury propose now to render the account of the Exchequer and Audit Department themselves, the Army and Navy Accounts are not audited, in the true sense of the word, but the certificate of two subordinate officers in those special cases is received as a complete clearance for those accounts.

603. Mr. *Fowler.*] You referred just now, which I think was a very pertinent illustration, to the question of incidental expenses, and you said that if you wanted extra legal assistance, you did not wish to have the getting it or not getting it dependent on the will of the Treasury?—Yes.

604. But if I understand the matter rightly, it is the case at the present moment, that if you want more money, that money must come from the Treasury, and, therefore, your independence at the present moment, if I understand it rightly, is not so complete as you would wish it to be?—I conceive that, under the present circumstances, the Comptroller and Auditor General has, to the extent of 70 *l.*, voted annually for legal expenses, incident to the execution of his duties, the power to take advice whenever he thinks fit.

605. You say that he might want more assistance, and that he might want assistance in a case in which the Treasury were particularly interested; and, therefore, you do not like the Treasury having the power of opposing the expenditure of that money; but they have that power at this moment, have they not?—No, I do not think they have. I hold that, at the present moment, the Comptroller and Auditor General has, within the amount voted by Parliament annually for the purpose of discharging those duties, the power of taking advice whenever he thinks fit.

606. Mr. *Stansfeld.*] And he would continue to have that power if these arrangements were made, would he not; I understand your opinion to be that there would be no difference in the actual control but the Treasury?—The Comptroller and Auditor General must go the Treasury for that money for the future, and he must obtain the sanction of the Treasury when he proposes to take such advice.

607. Mr. *Fowler.*] But that is the case now, is it not?—No.

608. Mr. *Liddell.*] I apprehend that the salaries of yourself and the officers who act under you are fixed by Act of Parliament, are they not?—The salaries of myself and of my assistant are fixed by Act of Parliament.

609. Are not the salaries of the subordinate officers of your department fixed by Act of Parliament?—No, they are not; they are fixed by Order in Council.

610. Is it in the power of the Treasury (because this question affects the relations between your own department and the Treasury) to increase or to diminish those salaries at will?—It is.

611. In that sense you are dependent to that extent upon the Treasury now, are you not?—We are.

612. Supposing a vacancy occurs, who fills it up?—If a vacancy occurs in the higher class of officers, the promotion is made by the Comptroller and Auditor General, but in the case of a vacancy among the juniors, the first appointment is made by the Treasury; in a recent case, I made a promotion, which the Treasury disputed; they contested my right to promote, and it formed the subject of a long correspondence.

613. Is not that a state of things, in which a person holding the rank that you do, would feel that that condition of dependence was, in some degree, detrimental to your authority?—I think it is seriously detrimental; I hold it to be one of the defects (I think there are three) in the Exchequer and Audit Act; it is contrary to the principles of the Act, and it is contrary, I may say, to the established practice in all businesses of a like kind.

614. Mr. *Sclater-Booth.*] I think there is this distinction between the salaries of the Comptroller and Auditor General and his second in command, and the salaries of the remaining subordinate officers in his department, that the former are placed as a charge upon the Consolidated Fund, while the latter are placed upon the Votes of Parliament; is not that so?—Yes; the latter are placed upon the Votes of Parliament.

615. Mr. *Liddell* (to Mr. *Foster*).] Do you think

think it essential that the powers at present vested in the Treasury, with respect to the sanctioning of promotions in the department of the Comptroller and Auditor General, should continue in the hands of the Treasury, as they are now?—My view is that the independence of the Comptroller and Auditor General is not in any way affected by the present arrangement; the establishment and salaries of the department are fixed by an Order in Council, and cannot be altered by the Treasury without a fresh Order in Council; the appointments to the office are made by the Treasury, to the junior class of clerks; the Treasury confers a favour, no doubt, upon the friends of a candidate, in appointing him, but once in the office, he knows that his chief is the Comptroller and Auditor General, and that his advancement in life depends upon him, and not upon the Treasury; therefore, the moment he joins the office I consider that his independence of the Treasury is complete.

616. But do you not think that the Comptroller and Auditor General, in the case of a promotion in his office, that is to say, the advancement of a subordinate clerk to a higher post, is better able to judge of the qualifications of a person in his office for the advancement than an outside department, such as the Treasury?—The Comptroller and Auditor General does promote in his office.

617. (To Sir *William Dunbar.*) I thought we had heard from you that your right of promotion had been contested?—It has been contested in one case, but there is no doubt of the fact that the Comptroller and Auditor General has the promotion in his own office in his own hands.

618. Mr. *Stansfeld.*] On what ground was your right to make that special promotion contested?—By the death of the head messenger and office keeper in my office a vacancy occurred; I promoted the messenger in the office whom I thought best fitted for the duties, and two days afterwards I received a communication from the Treasury to the effect that I had no right to exercise any such power; that the office keeper or head messenger was a substantive office, and that I was consequently precluded from making any such appointment. I may state that I did not admit that view of the case; on the contrary, I acted upon what I conceived to be the law.

619. Then the question which happened to be raised by the Treasury in this case, was not whether you had the right of promotion in your own office, but whether this was a promotion?—Yes; whether this was a promotion.

620. *Chairman* (to Mr. *Foster*).] What do you say to the suggestion that some independent person should give a certificate, together with the report of the Comptroller and Auditor General, with respect to the account of this particular department?—I may say, first, that I believe the Treasury has not the smallest wish to have the charge of the account of the Exchequer and Audit Department; they only made this arrangement, which is under discussion, to meet a difficulty. With regard to appointing an independent officer to audit the account of the Audit Office I see no great objection to it, except that I think it is a very simple matter, and not worth the trouble and expense of having a special auditor for the purpose. There will be some cost involved, which I do not think would be worth incurring.

621. What would be the cost?—You would have to select an officer of some standing, or an independent person of some standing, and to give him a salary. The smallest salary that you can offer to a person in that position would, in my view, far exceed the value of the services, which can be provided for in a very simple way otherwise.

622. (To Sir *William Dunbar.*) When you made this suggestion, who did you propose should be the independent person; some other Government official, or some person outside the Government departments?—It would be a matter of complete indifference to me whether a Government official or some person outside the Government departments were appointed.

623. Has it occurred to you what arrangement should be made?—No, it has not.

624. (To Mr. *Anderson.*) What do you say upon this subject?—I think that if the Committee will read the correspondence which has taken place between the Comptroller and Auditor General and the Treasury, they will see that the present arrangement provides every security which could possibly be required for the proper administration of that Vote.

625. Mr. *Stansfeld.*] What do you mean by "the present arrangement"?—The arrangement which has existed up to the present time.

626. *Chairman.*] You think it is perfect now?—I think it is perfect now. Although the account is rendered and the examination of it performed in the Audit Office, there is no interference with the audit of it. It is treated just like any other account. I think the question ought not to have been mooted at all.

627. Mr. *Pollard-Urquhart.*] Then you do not think that the present arrangement could be so abused as in any way to interfere with the independence of the Audit Office?—I think there is not the slightest objection to the arrangement which has hitherto been in practice. I am quite sure that the Committee will come to that opinion if they read the correspondence.

628. *Chairman.*] Your opinion is the reverse of that put to you in the question; you think that the arrangement formerly laid down by the Treasury cannot be abused by the Audit Office, so that the accounts shall not be properly audited?—Yes, my view is, that the account is audited as independently as any other which comes before us.

629. Mr. *Pollard-Urquhart.*] Will you state distinctly, what is the present arrangement with respect to the auditing of the accounts of the Audit Office; by whom are the accounts furnished to the Audit Office?—By a person named by the Treasury to render the account; he is, so far as the Comptroller and Auditor General is concerned, an accountant, just in the same manner as every other person who renders an account to him; and when the account comes in for examination, it is referred to an inspector, who audits it in precisely the same manner as he does any other account. He puts his queries, and decisions are given upon them; but there is no question as to any discretion of the Comptroller and Auditor General in respect of that expenditure, inasmuch as everything is authorised, either by Act of Parliament, or by Order in Council, and the examiner tests the account with reference to those authorities, just as he does every other account.

630. *Chairman.*] What you say is this; that the Audit would be conducted just as strictly in the case of the account rendered by the Secretary

Sir *W. Dunbar.* Mr. *Anderson.* Mr. *Foster.* Mr. *Ryan.* Mr. *Vine.*

18 May 1870.

of the Audit Office, as in the case of an account rendered by an officer of any other department? —Precisely.

631. (To Mr. *Foster.*) What do you say to that?—I have no doubt that the duty would usually be very well performed. At the same time there is the bias of its being one's own office, and in the next place, the queries having been made, it rests with the officers of the Audit Department to state what steps shall be taken upon those queries. No notice may be taken of those queries, they may be dealt with much more leniently than they would be in the case of another account.—(Sir *William Dunbar.*) I would state, with regard to the salaries, that it would not be possible for the Comptroller and Auditor General to authorise any sum to be paid in excess of what is allowed by Order in Council or by the Treasury without its being shown upon the face of the account. It must be shown upon the face of the account and noticed by him in his report. The Committee would be put in complete possession of the facts if they would read or let me read the correspondence.

632. Mr. *Pollard-Urquhart* (to Mr. *Anderson*).] Am I to understand that it is your distinct opinion that the arrangement just described by yourself cannot be so abused by the Treasury as in any way to interfere with the independence of the Audit Office?—I think the arrangements which were made under the late Board of Audit and continued under the present consolidated office, afford every security you can require for the proper examination of the account.

633. My question is, can it be so abused by the Treasury as to interfere in any way with the independence of the Audit Office?—The arrangement hitherto adopted is not open to that objection.

634. *Chairman.*] There has been a new arrangement proposed by the Treasury?—Yes, but it has not come into operation yet.

635. Mr. *Pollard-Urquhart.*] What I wish to ask you is, is it your opinion that the new arrangement, which has just been proposed by the Treasury, could be so abused by the Treasury as to interfere with the independence of the Audit Office?—No, I think not; I do not consider that it could be abused, but I think the change is an unnecessary one.

636. Mr. *Fowler* (to Sir *William Dunbar*).] If I understand you rightly, you do not wish to audit the account of your own department?—I have no wish to audit the account of my own department; but I contend that the present audit is an independent audit as far as it goes, and that it is as reliable as the audit of any Appropriation Account presented to the House of Commons. This correspondence explains it all. The Treasury addressed to me a letter, upon the supposition that I was both the accountant and the auditor. In my reply to that letter I showed that I was but the auditor, and not the accountant; that the Treasury had overlooked the fact that they had themselves appointed the secretary to render the account, acting as the accountant under their regulations. Mr. Ryan was appointed the accountant, under a letter dated the 25th of March 1867, written by your present Chairman, who had all these matters under his consideration, and who dealt with the anomaly of the Comptroller and Auditor General being, as he would otherwise have been, both the accountant and the auditor, by appointing a separate officer, and laying down for him strict regulations, under which he, in common with all the other public accountants, should act. Mr. Ryan, therefore, is the Accountant to the Treasury; he delivers the account to the examiner, the examiner makes his examination in accordance with the regulations laid down by the department, and I do not see that account until it is laid before me by the inspector. To all practical intents and purposes, it is an independent audit. But I consider it so important that the principle I have always contended for, that the Accounting Department should not audit its own accounts, should be maintained, that when the proposition was made to me by the Treasury that Mr. Ryan should be relieved of the account, I at once assented to the proposal. I did not wish to put any obstacles in the way of carrying out the principle in its strictness, though I cannot but feel that the Comptroller and Auditor General is put on a much lower level than even the subordinate officers in other departments.

On Vote 20.

637. Mr. *Goldney* (to Mr. *Foster*).] How has the diminution of 1,795 *l.* 7 *s.* 6 *d.* taken place on Sub-head E. for the travelling of the Poor Law Inspectors?—I cannot say whether any of the inspectors have been induced to take the higher salary, and give up their travelling expenses; but I should rather imagine that it was in consequence of new appointments; the new officers taking the higher salaries, and losing their travelling allowances.

633. Should you be able to ascertain how this is if the question is postponed?—I could ascertain it from the Poor Law Commission.

639. I should like to know, because this forms an enormous amount compared to the school inspectors, whether this is an optional arrangement, or whether the saving is in consequence of new appointments?—I will look into the matter.

640. You will be able to tell me next time whether it is by an order of the Board making it compulsory, or whether it is optional for them to take it?—I will.

On Vote 23.

641. Mr. *Sclater-Booth* (to Mr. *Foster*).] Why is there the addition of "Imprest Expenses" to the title of this Vote "Inclosure and Drainage Acts"?—The expenses are recovered.

642. Money is advanced by the Commissioners to be repaid by the parties, is that it?—Yes, it is reclaimed from the parties; if you look at the bottom of the Estimate you will see that the Extra Receipts recovered have been 11,404 *l.*, which is about equal to the grant.

643. Mr. *Goldney.*] Just the same question arises with regard to the expenditure here as arose on the former Vote; there has been some fixed arrangement with regard to these expenses of the Assistant Commissioners, and they have been reduced to the amount actually incurred; with regard to the "Salaries," "Travelling" and "Incidentals," Note A. is "Salaries or Allowances to Assistant Commissioners, who are paid according to the work performed, over estimated;" did they have a fixed amount as the Poor Law

Law Inspectors had formerly, or have now for their travelling?—It is according to the work performed.

644. Is that always so or only this time?—I think it is always so. With regard to the over estimate, I think it right to state, with reference to this Vote and a great many others, that this is the first year in which the expenditure was divided under these sub-heads, and that the departments had no means of getting the exact figures as to what the expenditure under these sub-heads had previously been. They had, therefore, in many cases, to make a very rough guess in dividing the total expenditure under the sub-heads.

645. Do you think it a great advantage to have the division?—Yes, a very great advantage, it will make all future Estimates much more accurate.

On Vote 29.

646. Mr. *Goldney.*] The same thing occurs here: in all these Estimates for travelling, the actual amount works out much less than was taken, I think?—I think the tendency of the departments, generally, is to provide amply for what might happen and then they spend as little as they can.

647. Was this estimated in a gross sum for the Charity Commission?—Yes.

648. And paid in a gross sum?—Yes.

On Vote 31.

649. Mr. *Pollard-Urquhart.*] There is this remark of the Comptroller and Auditor General's, at paragraph 3: "In the note attached to the account, the sum realised in the year 1868-69 as 'Extra Receipts,' and paid over to the Exchequer, is stated to be 22,881 *l.* 8 *s.* 7 *d.*; but it appears from the examination of the periodical accounts of this service that the amount of extra receipts realised during the year 1868-69 was 24,453 *l.* 19 *s.* 11 *d.*," whereas only 22,880 *l.* has been paid into the Exchequer: we want to know why the whole has not been paid into the Exchequer?—I have a letter, written by Mr. Greg, the Comptroller, upon the point, which perhaps the Committee would wish me to read. It is dated the 12th April 1870: "In reply to your letter of the 28th ultimo, No. 1,455, I have the honour to state, for the information of the Lords of the Treasury, that the account of the Exchequer Extra Receipts for the year 1868-69 was as follows: Due to the Exchequer on the 1st of April 1868, as an arrear of 1867-68, 6,422 *l.* 10 *s.* 10 *d.*; realised in 1868-69, 24,353 *l.* 19 *s.* 11 *d.*; total, 30,776 *l.* 10 *s.* 9 *d.* Transferred in 1868-69, 22,880 *l.* 0 *s.* 7 *d.*; leaving a balance due to the Exchequer, on the 31st of March 1869, of 7,896 *l.* 10 *s.* 2 *d.* This sum of 7,896 *l.* 10 *s.* 2 *d.* represents the receipts during the last quarter of the year, and it was paid to the Exchequer very early in the succeeding year, 1869-70. During the past year however, I adopted the plan of making a separate transfer, applicable to each month's receipts, and at the close of the year, namely, the 31st ultimo, the only sum remaining due was the receipts for March, which I presume must always be the case, as the March account of these receipts is not rendered to me by the Paymaster General until about the 20th of the following April."

650. *Chairman.*] It appears that it was very difficult for them to ascertain the amount to be paid to the Exchequer in respect of the last month?—Yes, as regards the last month you never can ascertain it till after its close.

651. This is the substance of it; the account is taken monthly, and the surrenders are made monthly?—The account is made out monthly, and the amount is paid over monthly to the Exchequer.

652. And therefore there is always a current account upon the last month?—Yes.

653. Mr. *Pollard-Urquhart.*] It is merely the sum that accrued during the last month that remained not paid over?—Yes.

654. (To Sir *William Dunbar.*) Have you anything further to say upon that?—No, I think not.

On Vote 34.

655. Mr. *Pollard-Urquhart* (to Mr. *Foster*).] The observation of the Comptroller and Auditor General, in paragraph 2, is to the effect that "under Sub-head B. of the account 'Travelling Expenses,' the sum of 4 *l.* 14 *s.* 7 *d.* is included in respect of a payment made without authority;" has your attention been called to that?—Yes.

656. Mr. *Stansfeld.*] Has there been authority given for that since?—The amount has been disallowed, and the accountant has repaid it.

On Vote 40.

657. Mr. *Stansfeld.*] The explanation of the excess upon Sub-head A. "Salaries" is this: "Excess of expenditure caused by one quarter's salary to the officers to the 1st of April 1868" (that is to the end of the previous financial year), "not being provided for;" I presume that that means not having been paid in the previous financial year?—Exactly.

On Vote 2, Class 3.

658. *Chairman.*] There is a surplus of 108 *l.* 15 *s.* 10 *d.* on Sub-head C., which is explained as having arisen from payments of salaries in the year having fallen short of the sum required. The Comptroller and Auditor General's Report upon it is: "In the Treasury Minute the amounts payable to each are distinctly apportioned; but it appears, by replies to applications for the receipt of the clerk, that the accountant has not been able to obtain it"; can you explain how that surplus arose?—The facts of the case are these: one of the clerks of assize was entitled to his own salary, and there was also in the Estimate a vote of 100 *l.* for his clerk. The clerk of assize sent in his account, charging his own salary and the 100 *l.* for the clerk, and the amount was paid to him; in preparing the account for audit, it was found that there was no receipt for the salary of the clerk, and Sir John Bailey has frequently been written to to supply it, but we can get no satisfactory reply from him; the consequence is that we have called for the receipt of his clerk for the current quarters, and have not paid the money, and we are thus gradually obtaining vouchers to cover the payment of the 100 *l.*

659. Then, in fact, the money will be saved to the Exchequer?—Yes.

Sir *W. Dunbar.*
Mr. *Anderson.*
Mr. *Foster.*
Mr. *Ryan.*
Mr. *Vine.*

18 May 1870.

On Vote 3.

660. Mr. *Pollard-Urquhart.*] There is a very large deficiency on this Vote; the explanation is that "these excesses are attributable to the aggregate number of constables employed in the several counties and boroughs having exceeded those estimated for in 1868-69"; I suppose that that is a matter which is not within the cognisance of the Treasury?—The Treasury has no option in providing for the expenditure under this Vote.

On Vote 4.

661. There is a considerable increase in Sub-head F. in this Vote on Salaries "Masters' Offices"; the explanation of which is that "a revision of the salaries of the masters' offices took place subsequently to the estimated cost thereof being voted; hence this excess on the Vote for the year 1868-69": can you tell the Committee to what extent additional salaries would be given or old ones increased, without the consent of Parliament, after a certain sum has been voted for salaries?—I believe the change in the amount of salaries is in consequence of an Act of Parliament which was passed, and which compelled the Treasury to assent to the increase.

662. *Chairman.*] That is not quite correct, is it; under the authority of an Act of Parliament the Treasury and the chiefs of the courts may settle the salaries; is not that so?—Yes, I presume that that is so.

663. Mr. *Stansfeld.*] With reference to Mr. Pollard-Urquhart's question, has it not always been held to be a matter of discretion with the Treasury how far they shall sanction increases of salaries upon any establishment after an Estimate has been laid upon the Table of the House?—That has always been the practice, and I cannot conceive of the service working otherwise.

664. Though a matter of discretion, is it not the case that the discretion is generally exercised in this sense, that the Treasury avoids sanctioning increases to salaries during the currency of the financial year, unless a clear case of urgency is shown?—As far as possible that is the case; and generally, if sanction is given, it has been with the view of carrying out economical arrangements, where by the increase of a salary other salaries are saved.

665. Cases very often occur, do they not, in which departments apply to the Treasury to sanction the raising of salaries, and the Treasury intimates that the question shall be postponed for consideration until the next year's Estimates are framed?—That very often happens.

666. Mr. *Liddell.*] You said, as I understood you, that the Treasury, unless it found itself in a position to increase a salary out of savings or reductions in other salaries, would demur at once to sanctioning such an increase?—It would not demur if it thought it would be beneficial for the service, and that the case was pressing.

667. *Chairman.*] There may be cases, may there not, where, upon an inquiry at the instance of a head of a department, the Treasury may be satisfied that justice has not been done to the officers in the matter of salary, and in that case they may sometimes decide that the increase of salary should date within the financial year, though no provision has been made in the Estimate for it?—That frequently happens.

668. But unless there is some urgent reason of that sort, it is the general practice for the Secretary to the Treasury to postpone the increases until there is a new Estimate framed?—Yes, as far as that can be done without inconvenience to the service, or injustice to individuals.

669. Is it not the case, that with regard to most of the departments, the matter rests within the discretion of the Treasury without the sanction of an Act of Parliament?—In most cases it does.

670. But, in certain cases, Acts of Parliament have laid down, that the Treasury may adjust the salaries, and increase the salaries of officers?—That has been so in some cases.

671. And in those cases it would clearly be regular for them to exercise the powers given them by the Act, if they thought it desirable, even though it was in the middle of the financial year?—That would only be carrying out the provisions of the Act.

672. Mr. *Seely.*] There is this explanation of the saving under Sub-head M.: "This saving is nominal only; owing to the death of the late Registrar, the arrears of salary due to that officer became a charge on the Vote for 1869-70:" will you have the goodness to explain that; I do not quite understand it?—I presume the officer died rather late in the year, and the probate of his will, or the letters of administration, were not presented within the year, and therefore the payment could not take place until the following financial year, so that it became expenditure of the following financial year.

763. The explanation of the saving on Sub-head Q. is "These allowances were not paid until after the expiration of the financial year; hence this apparent saving:" why were they not paid in the financial year?—I presume they were not asked for; it is not the practice of the Treasury to offer money to parties. We always make it a point to wait until money is asked for, and I presume the officers did not ask for the allowances.

On Vote 6.

Mr. Stevenson A. Blackwood, called in; and Examined.

Mr. *Blackwood.*

674. Mr. *Stansfeld* (to Mr. *Blackwood*).] There is a deficiency on the County Prisons and Reformatories under this Vote, under Sub-head E., "Maintenance of Criminal Lunatics in Private Lunatic Asylums," of 1,159 *l.*: is this owing to the fact that the transfer of the criminal lunatics from those private lunatic asylums to Broadmoor Asylum took place so late in the previous year 1867-68 as to cause greater charges to fall upon the year 1868-69 than were contemplated when the Estimate was framed?—It is owing to that fact.

675. *Chairman.*] Do you mean that the charge did not arise within the year 1867-68?—Exactly so; it fell over into the next year.

676. Do you mean that the liability did not accrue in the year 1867-68, or that the account was not paid?—The liability accrued in the year 1867-68,

1867-68, but the account did not come in for payment until 1868-69.

677. It was not brought to account till that year?—No; it was not brought to account until that year, and no provision had been made for it in the year 1868-69, in consequence of its not having been expected that these charges would have to be paid in that year.

On Vote 7.

678. Mr. *Pollard-Urquhart* (to Mr. *Ryan*).] The Comptroller and Auditor General has made a note concerning this Vote, saying that he has advised that part of the salaries which were included under Sub-head A. should be charged under an additional Sub-head I., and that for the future he would recommend their forming part of the Estimates for Superannuation and Retired Allowances, Class 6: have you had any correspondence with the Treasury upon that subject?—The Treasury have adopted that suggestion.

679. Mr. *Stansfeld* (to Mr. *Foster*).] That is so, is it not?—Yes, that is so.

680. Mr. *Goldney*.] I observe that in nearly every item under this vote, the grant and expenditure vary very largely; some items vary to the extent of 20,000 *l*., some 13,000 *l*., and some 5,000 *l*.: there is a variation under Sub-head A. of about 20,000 *l*.; in that case the expenditure was less than the grant: there was an Act of Parliament passed some three or four years ago, enabling the high bailiffs, who were not considered to be any longer necessary, to retire on some terms or other; does that account for the saving in this case?—I cannot give an explanation of it.

681. The next item is B. "Fixed Allowance for Travelling"; the persons to whom that applies have commuted their chance expenses for a fixed allowance; how does that great increase of 2,398 *l*. arise?—There is a footnote relating to it.

682. *Chairman*.] Would it not be the case that that arises from a more accurate distribution of the charges between the two Sub-heads?—I have no doubt that part of it would be accounted for by that.

683. The explanation given under Sub-head B. is this, "The difference arises from transfer from Sub-head A. of allowances for travelling to registrars and high bailiffs"; if that explanation was correct, it would show that there had been previously inaccurately taken, under the head of salaries, things which were allowances, and not salaries?—I think so.

On Vote 11.

684. *Chairman* (to Mr. *Blackwood*).] The expenses of "prosecutions, prosecutors, and witnesses" are always rather a vague estimate, are they not?—Very.

685. You can only go by the experience of the last year or the last few years, and that is either liable to be exceeded, or the amount required not to come up to the amount taken?—Quite so.

686. And the department has no control whatever over it?—No.

687. It depends upon the extent of crime, the nature of the crime, and the expense of prosecuting in particular cases?—Yes.

688. And may it not be the case that in some particular year the prosecutions may be very expensive indeed?—That has often been the case.

689. Mr. *Pollard-Urquhart*.] The diminution of the expense may possibly arise from the lessened number of political offenders?—Yes.

Sir *W. Dunbar*.
Mr. *Anderson*.
Mr. *Foster*.
Mr. *Ryan*.
Mr. *Vine*.
Mr. *Blackwood*.

18 May 1870.

On Vote 12.

690. (To Mr. *Foster*.) In the remarks of the Comptroller and Auditor General he says, "The expenditure under Sub-heads B. C. and F. has exceeded the amounts included in the Estimates laid before Parliament, and no authority from the Treasury has been produced for defraying the deficiencies out of the savings on other sub-heads:" can you explain to us why the Treasury has refused its authority in this case?—The Treasury has not refused it; it has since given its sanction.

On Vote 14.

691. I observe that there is a very considerable saving on Sub-head A. for "Maintenance of Prisoners in County Prisons," on which the Comptroller and Auditor General remarks, that no explanation has been offered by the Accountant, as provided for in the form of account: has any explanation been furnished since?—Yes. On the 31st of March last, the Chief Secretary for Ireland informed us that "a saving upon Sub-head A. of the Vote for County Prisons, Ireland, arose from the charges for the maintenance of the ordinary prisoners in county prisons, for which the Vote was taken, brought to account, having fallen short of the Vote; and the deficiency under Sub-head B. arose from no vote having been taken for the maintenance of political prisoners; the expense was charged to the Vote by the direction of their Lordships." There is further inquiry being made upon these subjects. The statement that a saving upon Sub-head A. arose from the charges for the maintenance of ordinary prisoners in county prisons brought to account having fallen short of the Vote was not considered a satisfactory explanation; and we have asked for a further explanation.

On Vote 15.

692. Mr. *Pollard-Urquhart* (to Sir *William Dunbar*).] I would call your attention to page 119, Vote 15, and your report thereon, at paragraph 5: can you tell me whether the statement of the Lord Advocate relative to this Vote has been received since?—No, it has not been received.

693. Mr. *Stansfeld* (to Mr. *Foster*).] Has it been received by the Treasury?—Yes; we have received it.

694. But it has not yet been transmitted to the Comptroller and Auditor General?—It is under the consideration of the Treasury at the present time.

On Vote 16.

695. Mr. *Liddell*.] Under Sub-head P. "Salaries," there is a deficiency of 1,875 *l*.; the explanatory

Sir *W. Dunbar.*
Mr. *Anderson.*
Mr. *Foster.*
Mr. *Ryan.*
Mr. *Vine.*
Mr. *Blackwood.*

18 May 1870.

planatory note says, with reference to that, "Two salaries transferred from Consolidated Fund, owing to new appointments": under what authority was that transfer made; was it by Statute? —Yes.

696. Mr. *Pollard-Urquhart.*] Can you inform us by whom these new appointments were made? —I cannot.

697. Mr. *Stansfeld.*] Can you give some further explanation of the explanation of Sub-head P.?—Two officers, who formerly were borne upon the Consolidated Fund, dying, and it being directed by statute that all future appointments should be voted upon the Estimates, it followed that the new appointments came upon this Estimate, and they have caused the excess.

698. Mr. *Pollard-Urquhart* (to Sir *William Dunbar*).] I see, in your Report on Sub-head A., it is stated that "under Sub-head A. 'Salaries,' are included payments which do not agree with the estimates, but were authorised by a Treasury Letter of 23rd January 1858; the accountant states that the Estimates were incorrect"; have you any further remark to make upon that?—No.

On Vote 20.

699. (To Mr. *Foster.*) The Comptroller and Auditor General's Report on Sub-head B. says: "The gross amount of expenditure under Sub-head B, should have been 321*l.* 15*s.* 2*d.*; the difference, viz. 8*l.* 1*s.* 2*d.*, arising from re-payments on account of the votes of previous years, should have been paid into Her Majesty's Exchequer as an extra receipt, instead of being placed to the credit of the Vote for the current year; had this course been adopted the total deficiency to be voted would have been 104*l.* 2*s.* 2*d.*, instead of 96*l.* 1*s.*"; do you assent to that?—The accountant has been directed to follow that course in future.

On Vote 21.

700. (To Mr. *Ryan.*) With regard to Sub-head W., the Comptroller and Auditor General in his Report, at paragraph 5, says, "Under Sub-head W., Salaries and Allowances (Transport), and Sub-head Y. (Convict Ships), there are included charges for gratuities for attention, &c., to, and medical attendance on, convicts on board ship, and freight, &c. &c., of ship, amounting to 6,750*l.* 6*s.* 2*d.* The service in respect of which this expenditure was incurred was conducted by the Admiralty, who have failed to comply with the application of the Directors of Convict Prisons for vouchers in support of the payments; no evidence has therefore been furnished to this department of the actual expenditure of this service, beyond a statement signed by the Accountant General of the Navy. I am of opinion that these vouchers should have been furnished with the account in which the expenditure is charged, as required by the 24th and 27th sections of the Exchequer and Audit Departments Act"; was that an incorrect proceeding on the part of the Admiralty?—The charges have been allowed, but it was an incorrect course not to furnish the vouchers with the account.

701. Still you accepted it?—We accepted it because it had been the transaction of a Government department.

Mr. George M. Edwards, called in; and Examined.

Mr. *Edwards.*

702. *Chairman.*] What department are you in?—The department of the Accountant General of the Navy.

703. What have you to say as to the Report of the Comptroller and Auditor General, at paragraph 5 on this account. He says, "The service in respect of which this expenditure was incurred was conducted by the Admiralty, who have failed to comply with the application of the Directors of Convict Prisons for vouchers in support of the payments;" do you know why these vouchers were not supplied by the Admiralty?—The claim for charges paid by the Admiralty for the convict service was made as it formerly used to be by the Admiralty when these charges were borne by the Home Office; I observe that the Comptroller and Auditor General points out that both these sets of Appropriation Accounts were rendered for the first time this year, and therefore attention has not been called to this matter before. We have never been in the habit of rendering more than is stated here, in paragraph 5, namely, a statement by the Accountant General, as to cash payments, and no alteration in practice was made in the mode of making these claims. With regard to not having complied with the application of the Directors of Convict Prisons for vouchers in support of the payments, that is apparently owing to no application, as far as the Admiralty is concerned, being known to have been received.

704. You say you have followed what was your usual practice before?—Yes, we have followed our usual practice.

705. Have any directions been given to vary your usual practice, and require the officer making the payments to produce the vouchers for them? —No directions have as yet been given, because until the attention of the Admiralty was called to this Report of the Comptroller and Auditor General, they were not aware of it. The case has been since gone into, and we are on the point of informing the Comptroller and Auditor General that it will be very inconvenient to furnish these vouchers as they have been all bound in volumes, which are very bulky, as they contain many payments on account of other Admiralty charges; and as a matter of official convenience, it would be preferable if some one from the Comptroller and Auditor General's Department could attend to audit them on the spot.

706. Is it necessary that they should be bound before being audited by the Comptroller and Auditor General. If the binding was deferred until after they had been submitted to the Comptroller and Auditor General, no inconvenience would arise, I apprehend?—It would be very inconvenient to have them remaining unbound for some time after the payment takes place, which would be the case, as the claims on the Convict Prison Department are only made periodically, and in addition to that there is this further objection; some of these charges are small amounts for passages, and they may be mixed up with

with sums for passages of a much larger amount on account of officers of the Admiralty which are chargeable against Navy Votes.

707. (To Mr. *Anderson.*) What do you say to that?—I understand that many of these vouchers, which ought to be produced in support of these payments, are vouchers belonging partly to this account and partly to the Naval Account; and the Admiralty do not like to part with vouchers, the greater part of which belong to their own Naval Account.

708. Do you think that that is a reasonable objection?—I think they might send the whole to us for inspection and we might return them.

709-10. They say that they are bound up in bulky volumes with other vouchers?—That only applies to the past, in future they might, before they bind them, transmit them to us for inspection. (Mr. *Ryan.*) In this case the department accounting for the service has not got the vouchers, and that seems to be contrary to the 24th section of the Exchequer and Audit Act.

711. *Chairman.*] What you say is this, the Directors of Convict Prisons having to render the account, they ought to be in a position to produce the vouchers in support of the charge?—Yes, they ought to produce the vouchers with their account; before they include a charge in their account they are bound to satisfy themselves by an inspection of the vouchers that the service has been performed.

712. And that they do not do at present?—No.

713. (To Mr. *Edwards.*) Would there be any difficulty in the Admiralty giving instructions that payments on this account should be acknowledged, on different vouchers, from payments on other accounts?—Yes, I think there would be considerable practical difficulty in that.

714. Mr. *Stansfeld.*] Would there be any practical difficulty, in future, in transmitting these vouchers to the Audit Office before binding them, for the purpose of the audit of this account?—It would be very inconvenient.

715. *Chairman.*] But if they could not be transmitted, I suppose an officer from the Convict Prisons Establishment could easily attend at the Admiralty and see them?—Yes, certainly.

716. And another officer could attend from the Exchequer and Audit Department, subsequently, and see them?—Certainly.

717. (To Mr. *Ryan.*) Would there be any difficulty about that?—No, provided they are examined and allowed by the Accounting Department before they are introduced into the account; we could subsequently verify them when we audited the account. (Mr. *Anderson.*) I may suggest that the Admiralty could furnish certified extracts from these vouchers which would be transmitted with the accounts.

718. You would allow them to give you certified extracts?—They might furnish certified extracts from the vouchers to the Convict Prisons Department who could again furnish those certified extracts as their vouchers for the account.

719. Mr. *Stansfeld.*] And then your audit would be conducted by sending an Audit Office clerk to inspect the original vouchers?—Yes, we might do that.

720. *Chairman.*] I thought I understood you to suggest that you might accept the certified extracts as the vouchers?—Precisely, if they were certified by the Admiralty they would be furnished to the department that renders the account, and that department would transmit them as the vouchers in support of those payments; the Comptroller and Auditor General would then admit those vouchers in support of the account.

721. (To Mr. *Edwards.*) There would be no difficulty in doing that, I presume, on the part of the Admiralty?—No, there would be no difficulty in that.

722. Mr. *Stansfeld* (to Mr. *Foster*).] What is your view upon this point?—If you observe the wording of paragraph 5, you will see that the service in respect of which this expenditure was incurred, was conducted by the Admiralty; therefore being conducted by the Admiralty, I think the simplest way would be to make it an Admiralty charge, and to make the Admiralty pay it and account for it; the Admiralty which incurs the expenditure should estimate and account for it

723. But the Admiralty incur the expenditure not on their own account, but on account of the Convict Prisons Department?—They incur expenditure for many departments for which they provide in their Estimates.

724. (To Mr. *Edwards.*) In the case of medical attendance, would the navy surgeons be the persons giving that attendance, or would persons be called in from any place where the ship happened to be?—To the best of my belief it is a naval surgeon who is placed in charge of the convicts on the passage, and he is entitled to so much a head for every convict that he lands alive.

725. (To Mr. *Foster.*) That being so, do you consider that a service rendered by the Admiralty, and one which ought to be provided for in their Estimates?—I think so; I think the more you can make the department that has the control of the expenditure account for it, the more simple it becomes.

726. The Admiralty would complain very much of this charge being thrown upon their Estimates, it being a Civil service, would they not?—That is a complaint which is constantly made, but it is a complaint which is not listened to, because it is held, I think rightly, that the department conducting the service should account for it.

727. (To Mr. *Anderson.*) What do you think of the suggestion that the Admiralty should estimate for this service and account for the expenditure?—I think it was the practice some years ago for the Admiralty to take a vote for the convict service, for all the expenses incurred by them for the transmission of convicts, and that vote was transferred by the Treasury to the Civil Service Votes as not being a naval service. I believe that was the case when I was at the Treasury several years ago.

728. (To Mr. *Edwards.*) Are the rules, with regard to the charges for medical attendance, the gratuities, and so forth, made by the Admiralty, or are they made by the Home Office?—I cannot say positively.

729. (To Mr. *Foster.*) Do you know?—No, I do not.

730. Supposing those charges are incurred under regulations laid down by the Home Office, would that alter your opinion as to whether the charges should be borne on the Navy Votes or on the Civil Service Votes?—I think not.

731. Mr. *Stansfeld* (to Mr. *Edwards*).] Then, in accordance with the decision the Committee have come to upon this point, you will furnish the

18 May 1870.

the Convict Prisons Department with certified extracts from your vouchers, so far as they appertain to this expenditure, and they will be accepted afterwards by the Audit Department?—Yes.

On Vote 23.

732. *Chairman* (to Mr. *Blackwood*).] With regard to Sub-head Q., which is "New Buildings and Alterations," it is stated that "these accounts would have been paid previous to the close of the financial year 1867-68, but owing to the delay in auditing the accounts at the Office of Works in London, they could not be paid until after the commencement of the year 1868-69"; was it a new duty cast upon the Office of Works, with reference to these buildings, or had they that duty before?—I am unable to answer that question. (Mr. *Vine.*) I believe the vouchers are sent up to the Office of Works in London to be examined, and are returned to Scotland, where they are paid.

733. Is the term "auditing the accounts at the Office of Works" a correct one?—No; it should be "examining."

734. Then it was an irregularity?—It was a delay in the examination at the Office of Works.

735. Which we may consider an irregularity; they did not get through the work in the time they ought to have done?—It would depend upon the time when the accounts were sent to them; if the accounts were not sent to the Office of Works till March, they could not be returned to Scotland to be paid until the next financial year.

736. The note says that it was a delay in auditing the accounts, not in furnishing them, so that if the note is accurate it would be the fault of the Office of Works in not examining them quickly enough?—That is what the prisons' accountant wishes to be supposed.

737. You think the Office of Works may have something to say to the contrary?—Yes; they may have something to say about it.

On Vote 21.

738. Mr. *Liddell* (to Sir *William Dunbar*).] There seems to be a great deal of irregularity in the mode of keeping the accounts of the Court of Chancery in Ireland; first of all, I should like to ask you whether you have yet received any explanation of the causes of "variation between expenditure and grant," to which you refer in your Report, and whether you have insisted upon those explanations being furnished for the future?—I drew attention to the fact that no explanation of the causes of variation between expenditure and grant had been given on the face of the account, as is usual with all the other accountants. The honourable Member will perceive all the other accountants give explanations showing the causes of variation.

739. Have you called for that explanation?—No, we have not since this Report was written.

740. *Chairman.*] You have to make a report upon the account as presented to you?—Yes.

741. Therefore it would not be within your province to call for such an explanation?—No.

742. (To Mr. *Foster.*) Have you required that this explanation should be given if a variation should occur in future?—We have called upon the Accountant General of the Court of Chancery to give explanations of these matters. At present we have received nothing satisfactory in answer to these questions, and I may say generally that having had an opportunity of inspecting the accounts of the Court of Chancery in Ireland, I do not hesitate to say that they are the worst kept and the most slovenly and unsatisfactory accounts that I ever came across, and I fear that there will be very great difficulty in getting any satisfactory replies from the Accountant General. My view is, that the only course will be to bring him up to town to answer for himself to the Committee. I think also that this might be a good opportunity of mentioning my view as regards the general question of the responsibility of accountants who hold public money, or money for which Parliament is answerable. We have great difficulty in dealing with the accountants under the courts, who are quite irresponsible to the Treasury. My view is, that an accountant holding public money ought to be under the Treasury. Those officers are now under the courts; they can appeal to the Lord Chancellor, who does not understand the question, and has not time to go into it. In fact, the several accountants general of the courts are almost independent. Perhaps the Committee may wish to hear a letter upon the subject, received by the Treasury from the Accountant General of the Court of Chancery in Ireland. I might read an extract, which shows that he considers himself very independent of the Treasury.

743. *Chairman.*] Will you put in the letter?—I will (*the same was handed in,* vide *Appendix*).

744. Mr. *Liddell.*] Will you read the more important passages from it?—"I presume, however, that it is in vain to expostulate, and the only course accordingly that remains for me, painful as it is to me to adopt it, is to cease to perform the duties of Paymaster of Incidentals in Chancery, there being no Act of Parliament or Court Order imposing them upon me, and which I undertook originally simply at the suggestion of Lord Chancellor Brewster, who had been requested by the Treasury to find an officer who might perform these duties, without the remotest idea of the amount of business it entailed upon me, of the pecuniary risk it produced, or of the low class of persons with which the work necessarily brought me into frequent contact, common clerks, tradespeople, servants, housekeepers, errand boys, &c.; and this for an officer of 30 years' standing, whose business had ever been gentlemanlike and respectable, might, I must say, be termed degrading."

745. *Chairman.*] Has any correspondence passed between the Lord Chancellor and the Treasury upon this subject?—Not since the original appointment of the Accountant General to render the Appropriation Account.

746. I meant upon that letter?—No answer has yet been sent to this letter which I have read.

747. Mr. *Stansfeld.*] As you told us some time ago, under the Exchequer and Audit Act the Treasury appoints the persons who are to account for the expenditure of each department?—Yes.

748. The Treasury, I presume, appointed the Accountant General to account for the expenditure of the Court of Chancery in Ireland?—Yes, for the expenditure of the Vote for the Court of Chancery in Ireland.

749. And he objects to the performance of the duty

duty which the Treasury, by virtue of the Exchequer and Audit Act, has imposed upon him? —Yes; he says he will withdraw from the duty.

750. From a portion of the duty?—From a portion of the duty.

751. Mr. *Liddell.*] Has the Treasury given any authority to the accountant to defray the deficiencies arising under Sub-head B., "Incidental Expenses," out of the savings under Sub-head A., because I see that no answer has been given to the Accountant General upon this subject: the authority of the Treasury has not been produced by the court, and I want to know whether it has been given at all?—I believe sanction has been given.

752. *Chairman.*] There is nothing in the Act requiring the sanction of the Treasury to defraying a deficiency on one sub-head out of a saving on another?—No.

753. Out of what has grown the practice of requiring the Treasury to give such sanction?—Out of a Treasury arrangement under which we required the Comptroller and Auditor General to report to the Treasury where an accountant had exceeded the expenditure upon any of his sub-heads, and we gave instructions that no accountant should do so without Treasury sanction.

754. Then by a Treasury rule you have adopted the practice that is statutory as regards the Votes on the Army and Navy Estimates?—Exactly. That is a matter between the Comptroller and Auditor General and the Treasury, and not between the Comptroller and Auditor General and Parliament.

755. Mr. *Pollard-Urquhart.*] I wish to call your attention to the Report of the Comptroller and Auditor General on the same Vote, Number 24, paragraph 6, in which he says: "In reply to a letter drawing the attention of the Treasury to this payment" (the payment for a second clerk in the Taxing Office, at 200 *l.*) "it is stated that it appears correct that there are two clerks in this office with salaries of 200 *l.* each, but that one was omitted from the Estimates of 1868-69, and a second point is, that although the salary provided for a registrar in the Estimates was 200 *l.* per annum, the registrar has been paid 250 *l.* As his authority for this payment the accountant has furnished a warrant of the Lords Commissioners of Her Majesty's Treasury, dated so far back as the 5th of October 1860;" is not it a very unusual practice for any department to refer to a sanction of the Treasury for a departure from their Estimates in a former year, as an approval of a departure from their Estimates in future years?—It appears that the officer's salary was properly 250 *l.* a year, but the Estimate, in error, stated it to be 200 *l.*

756. And you believe that to have been a mere mistake made by the party framing the Estimates?—Yes; it arose from a want of proper care in framing the Estimates.

757. *Chairman* (to Mr. *Blackwood*).] Are you aware what the exact fact is, as regards the Treasury having sanctioned the defraying of a deficiency on Sub-head B. out of a saving on Sub-head A.?—I was under the impression that the Treasury had not given formal sanction in all cases, but I cannot speak with certainty.

On Vote 28.

758. (To Mr. *Foster.*) It would be an irregularity to withhold the paying of a salary until the next financial year, I suppose?—It would; in some offices, however, it has been the practice not to pay the salaries for the March quarter until April.

759. But in that case there would be no saving, would there, because that would have been the case in the previous year too?—In some cases there might have been a saving of that nature from accidental circumstances.

760. (To Mr. *Vine.*) If you look at the total amount of the grant for salaries, namely, 6,650 *l.* and compare it with the saving, namely, 762 *l.*, you will observe that the saving can hardly be of one quarter's salaries, because if it had been, one would have expected the amount to be one-fourth of the whole grant?—The salaries are paid monthly in the Court of Probate, I believe.

761. (To Mr. *Foster.*) If it was a monthly payment, one would expect the saving to be a twelfth part of the grant, whereas it is about a ninth, so that it does not correspond in that way either?—I presume it must have been that some of the salaries were not paid.

762. Mr. *Candlish.*] Is it not very inconvenient to have salaries due during a financial year remaining unpaid as regards that year's account?—I do not think it affects the matter much, as the arrears are generally much the same year by year.

763. But it is not so in this case?—An exception may have arisen in this case, but I think now that they all follow the same system; I think it is very general to pay the salaries up to the close of the year, within the year.

764. Mr. *Pollard-Urquhart.*] In fact, I suppose, until these Appropriation Accounts were rendered there was no uniform system generally followed?—You may say there was no system at all.

765. Mr. *Candlish.*] The Treasury is now acting upon the rule of paying the salaries within the year?—Yes.

On Vote 29.

766. *Chairman.*] The remark of the Comptroller and Auditor General upon this Vote is that "the accountant has failed to offer any explanation of the causes of variation between the expenditure and the grant, as required by the form of account;" has any correspondence taken place about that?—An explanation has been asked for, but no reply has yet been received.

767. Then perhaps you may be in a position to answer the question about it another day?—If we get an answer to our letter.

768. Mr. *Candlish.*] You have an explanation of the cause of the delay?—No.

769. When did you write?—The Treasury Minute directing the letter to be written was dated the 14th of February; the letter would have been written a few days after that: I may say that Mr. Vine and myself visited the office of Mr. Carey when we were in Dublin, and got very little satisfaction in doing so.

770. What were the things with respect to which explanation was needed, and satisfaction sought?—It was with regard to the mode of preparing the Appropriation Account.

771. *Chairman.*] It must be observed that in this case there are savings?—Yes; I may say that this is again a case of an officer who can disregard Treasury control, being under the Law Courts and not under the Treasury.

Mr. *Foster.*

18 May 1870.

On Vote 31.

772. Mr. *Pollard-Urquhart.*] With regard to Sub-head K, "Rent of Barracks," where there is an excess of expenditure over grant of 1,358 *l.* 15 *s.* the note says that it is owing to "an unusual number of new agreements at increased rents entered into during the year." I suppose these increased rents are in respect of fortifications in those barracks put up by the proprietors?—I am hardly able to give any explanation upon that point.

On Vote 32.

773. There is this observation of the Comptroller and Auditor General upon this Vote, that "on Sub-head F, Incidental Expenses, the expenditure has exceeded the grant by 7 *l.* 13 *s.* 2 *d.*, and no authority has been obtained from the Lords Commissioners of Her Majesty's Treasury for defraying this excess out of the savings on the other sub-heads;" has that authority been obtained since?—The Treasury sanction has been since given.

On Vote 34.

774. I see that there is a very considerable excess of expenditure over grant on Sub-head D. for victualling the prisoners; it is a very large per-centage in excess of the Vote. Can you explain that?—There has been a letter received by the Treasury from Dr. Corbet, the manager of the asylum. With regard to the observations of the Comptroller and Auditor General, he states in his reply to the Treasury, "I find that there was an error or errors in my account for the year, as regards Income Tax. I have only to say that they were merely mistakes, and that corrections of them shall be made in my account ending 31st of March 1870."

775. *Chairman.*] Will you write to Dr. Corbet, and ask for explanations as to the deficiencies under Sub-heads D. E. I. and K., which are very large in proportion to the amounts of the grants?—I will.

On Vote 35.

776. Mr. *Pollard-Urquhart.*] There is a very considerable increase in salaries under this Vote, but it is explained by the circumstance that the salaries for the December quarter of 1867 and the March quarter of 1868, which were advanced out of the Civil Contingencies in the year 1867-68, have been repaid to that fund out of the current Vote. The only question is why the amount so repaid was not included in the Estimates, as this circumstance ought to have been known at the time the Estimates were framed?—It was entirely a new Vote. The expenditure was incurred without any vote, and was met out of the Civil Contingencies Fund. Perhaps the accountant in preparing the Estimates for the coming year was not aware that he would have, out of that Vote, to repay the sum due to the Civil Contingencies Fund; it was overlooked apparently.

Wednesday, 25th May 1870.

MEMBERS PRESENT:

Mr. Candlish.	Mr. Pollard-Urquhart.
Lord Frederick Cavendish.	Mr. Sclater-Booth.
Mr. Ward Hunt.	Mr. Seely.
Mr. Liddell.	Mr. Stansfeld.

THE RIGHT HONOURABLE GEORGE WARD HUNT, IN THE CHAIR.

The Right Honourable EDMUND HAMMOND, called in; and Examined.

Mr. *Hammond.*

25 May 1870.

777. *Chairman.*] THE Report of the Comptroller and Auditor General on the Secret Service Vote for the year ended the 31st March 1869, is as follows: "An account of the Vote for this service, the first which has been rendered in the form of an Appropriation Account, has been transmitted to this department by the Treasury, for the financial year 1868–9. But I find myself unable to certify to its correctness, for the following reasons. First, because the account is unaccompanied by any voucher or other documents in support of the expenditure stated to have been incurred; and, second, because the sums entered under the head of Expenditure would appear to represent merely issues or advances, and not actual payments within the financial year, in accordance with the requirements of the 'Appropriation,' and 'Exchequer and Audit Departments Acts.' In corroboration of the latter opinion, I beg to refer to the accompanying correspondence on the subject of the audit of monies expended for secret service, but more particularly to the letter of the Secretary of the Treasury, dated the 26th of November last, acquainting me that after careful consideration, and fortified by legal advice, the Lords Commissioners had come to the conclusion that it was not intended by Parliament that money, disbursed for secret service, should be the subject of appropriation audit; and that in respect of such expenditure, the issue of money must be regarded as 'payment.'" That seems to be the point, namely, whether the issue of money is to be regarded as payment. What have you to say upon that point.—We took the opinion of the law officers of the Crown in reference to that correspondence, and the law officers of the Crown said, that the Civil List Act of the 22nd of Geo. 3 was still operative, and not overridden by the Exchequer and Audit Act. We, wishing to accommodate the Exchequer and Audit Department as much as we could, suggested an expedient for getting over that difficulty; but the law officers, though they concurred in that, with a certain modification, said that they concurred in it, not because they thought that what was proposed to be done was necessary under the unrepealed Act, but just merely to accommodate the Exchequer and Audit Commissioner. Of course, I cannot put in the law officers' opinion, that is quite contrary to rule; but if you will allow me, I will read the substance of it, which I think will meet your purpose. They state their opinion that the Treasury might, "as a sufficient compliance with the Exchequer and Audit Act, and as accountants for the issue of money voted by Parliament for secret service, remit to the Audit Office the receipt given by the Secretary of State." I should explain to you that when the money is issued from the pay office to the Secretary of State, as secret service money, the Secretary of State gives a receipt under his own hand for the money which is issued to him.

778. Mr. *Liddell.*] Does he give a receipt for the lump sum?—For the lump sum. The law officers go on to say that there should be remitted to the Audit Office that receipt of the Secretary of State "for the sums issued to him from time to time, accompanied by a certificate that an account of the expenditure of secret service money has been duly rendered by the Secretary of State." The law officers go on to say: "because if the Secretary of State from time to time makes the statement required by the 22 Geo. 3, c. 82, s. 27, he does duly discharge himself according to law." A payment to him is, in their opinion, a payment within the meaning of the 24th section of the 29 & 30 Vict. c. 39.

779. That is the Exchequer and Audit Act?—Yes. And then they go on to say that they "are clearly of opinion that it was never intended by the 29 & 30 Vict. c. 39, to give the Audit Office power to require any information as to the disposal of secret service money, which remains controlled only by the provisions of the 22 Geo. 3, c. 82, which is an unrepealed statute;" and they "suggest the adoption of the course above-mentioned, as a nominal compliance with the provisions of the later statute, rather as a means of avoiding further discussion than because they entertained any doubt of the legality of the course pursued by the Foreign Office, so long as they keep within the provisions of the earlier statute." That was their opinion.

780. The 24th section of the Exchequer and Audit Act is to this effect: "An appropriation account of supply grants shall exhibit, on the charge side thereof, the sum or sums appropriated by Parliament for the service of the

Mr. *Hammond.*

25 May 1870.

financial year to which the account relates; and on the discharge side thereof the sums which may have actually come in course of payment within the same period; and no imprest or advance of the application of which an account may not have been rendered to and allowed by the accounting department shall be included on the discharge side thereof"; your position is this, that an imprest or advance to the Secretary of State should be included on the discharge side of the account?—It should be accepted as the voucher which the Treasury would present. The receipt of the Secretary of State should be their discharge, under the Exchequer and Audit Act. I understand that to be the law officers' opinion. Of course it is a question as to the interpretation of statute law, and I can only give the opinion which the law officers have given upon it. I do not profess myself to be able to interpret the law. In any difficulty of this kind we are obliged to go to the law officers, and of course we must be guided by their opinion.

781. You say that in the case of secret service money an imprest or advance to the Secretary of State should be allowed by the accounting department as a discharge against the grant?—As a discharge to the Treasury, in fact.

782. As a discharge to the department rendering the account?—That is the Treasury. I should say yes, it is a discharge to them. My contention has always been, and in that I am borne out by the law officers of the Crown, that practically the receipt of the Secretary of State ought to discharge the Treasury. The Secretary of State's discharge is to be obtained by a declaration under the Civil List Act.

783. The 24th section of the Exchequer and Audit Act says this: "An appropriation account of supply grants shall exhibit on the charge side thereof the sum or sums appropriated by Parliament for the service of the financial year to which the account relates;" the grant of secret service money under Vote 2 is the sum appropriated by Parliament for the service of that year, is it not?—Yes.

784. Then the section goes on to say, "And on the discharge side thereof the sums which may have actually come in course of payment within the same period;" what you say is that the imprest to the Secretary of State is a sum which has actually come in course of payment within that period?—So I understand. I am not very well versed in Treasury expressions, but what I understand is that the money is actually paid by the Treasury to the Secretary of State, and therefore the receipt of the Secretary of State should be *pro tanto* the discharge of the Treasury.

785. And therefore you would say that the advance is a "payment" within the meaning of that section, and that it is not an "imprest or advance" within the meaning of the section; that is your contention, is it not?—That is what the law officers, as I understand, say is a payment.

786. Supposing that that practice is upheld, might not the Secretary of State accumulate from year to year for any number of years the balance of unexpended secret service money until it amounted to a very large sum which he might be able to disburse in any one year?—It could not accumulate beyond three years. The Civil List Act says that he must render the account within three years. The wording of that Act is very peculiar, and a distinction is drawn in it between the Secretary of State and Foreign Ministers in this respect.

787. The 25th section of the 22 Geo. 3, c. 82, says this: "And be it enacted, by the authority aforesaid, that when it shall be deemed expedient by the Commissioners of His Majesty's Treasury, or the High Treasurer for the time being, to issue, or in any manner to direct the payment of any sum or sums of money from the Civil List Revenues for Foreign Secret Service, the same shall be issued and paid to one of His Majesty's principal Secretaries of State, or to the First Commissioner of the Admiralty, and the said Secretary or Secretaries of State, or First Commissioner of the Admiralty shall, for his discharge at the Exchequer within three years from the issuing the said money, produce the receipt of his Majesty's minister, commissioner, or consul in foreign parts, or of any commander-in-chief or other commander of His Majesty's navy or land forces, to whom the said money shall have been sent or given, that the same hath been received for the purpose for which the same hath been issued, which said receipt shall and is hereby directed to be filed in the Exchequer in order to charge the said minister, commissioner, consul, or commander of His Majesty's land or sea forces with the same, and the said receipt on proof of the handwriting shall be sufficient to acquit and discharge the said secretary or secretaries, or First Commissioner of the Admiralty, in their said account at the Exchequer." That is the section to which you allude?—Yes; and then the next section but one goes on to provide for monies expended in England by the Secretary of State.

788. The next section but one is: "Whenever it shall be necessary for the principal Secretary or Secretaries of State, or First Commissioner of the Admiralty, to make payment of any money issued for foreign secret service, or for secret service in detecting, preventing, or defeating treasonable or other dangerous conspiracies against the state, in any place within this kingdom, then it shall be sufficient to acquit and discharge the said secretary or secretaries, or First Commissioner of the Admiralty, for such secretary or secretaries, or the Under Secretary of State in the office to which such secret service money hath been paid, or for the First Commissioner of the Admiralty, or the Secretary of the Admiralty, to make oath before the Barons of the Exchequer, or one of them, or before the Cursitor Baron, in the form following:—"I, A. B., do swear, that the money paid to me for foreign secret service, or for secret service, in detecting, preventing, or defeating treasonable or other dangerous conspiracies against the State (*mutatis mutandis*, as the case may be), has been *bonâ fide* applied to the said purpose or purposes, and to no other; and that it hath not appeared to me convenient to the State that the same should be paid abroad"?—Yes, that is the declaration that is required to be made. I make that declaration, although the money is not issued to me, and the Secretary of State makes a declaration in the same form.

789. What you say is this, that you were allowed by this Act of Parliament to expend the sum voted for the service of three years in any part of those three years?—It is a running account.

790. What you say is this: you are allowed by this Act of Parliament, in any one year of the three years, to spend any money which comes

to

to your hands during the course of the three years?—That is the practical effect of it; that we are not obliged to render an account of the disbursement of money voted for secret service until three years after its issue; and the reason why that provision was made is extremely obvious, and there is a very curious distinction drawn in the Act between the process in regard to secret service money issued to ministers abroad and that issued to the Secretary of State at home. The ministers abroad are bound to render their account within one year after their return to England, and to repay any balances in their hands; but as regards the Secretary of State, three years are given to render his account, and there is not a word about repaying any balances. In point of fact, the Secretary of State cannot surrender any balances. His declaration states that the money issued for secret service has been expended for that purpose, and no other, and therefore, under that declaration, he could not apply that money to any other than secret service purposes; he could not repay it into the Exchequer. It is transferred for the purpose of being expended as secret service money from an outgoing Secretary of State to an incoming Secretary of State.

791. Then, as I understand you now, after this oath has been taken, at the end of the three years, as to what has been expended, the Secretary of State who has received the difference between the sum so expended and the grants, keeps the balance if he remains Secretary of State, or hands it over to his successor if he quits office, to be used for the same purpose?—Yes; for the same purpose.

792. So that, in fact, the money may go rolling up even beyond the three years, in the hands of the Secretary of State or his successor?—Yes; because, according to the Act of Parliament, he can only get rid of it by spending it for secret service purposes.

793. So that, in fact, at the end of three years there is no surrender to the Exchequer of the unexpended balance?—No; there can be no surrender under that Act of Parliament by the Secretary of State.

794. Then, according to that view, the money may go on accumulating year after year for an indefinite period?—Of course it might go on; but the amount is so small that it would be impossible that any great accumulation could take place; as an abstract question, of course it might be as you say.

795. Supposing the money was not wanted, it not only might, but must, go on accumulating, according to your view?—But then the Secretary of State would not draw from the Treasury more than he required.

796. That is optional on his part, is it not?—It is optional, certainly; but at the same time there can be no abuse of the money, because he is charged in the Audit Office account with the money which is in his hands; he is answerable for it.

797. What I understand is this: if the Secretary of State applies to the Treasury, the Treasury, as a matter of course, sanctions an issue of money, and it rests entirely within the breast of the Secretary of State, even though he has ample money in his hands, to determine whether he shall apply for a further issue or not; is that so?—Yes; of course he may do so.

798. You say that, in practice, there is no large balance at the end of the three years?—I do; there is no greater balance than is necessary for the carrying on of the current expenditure for secret service purposes.

799. But supposing there were to be a greater balance, it might so happen that a very large sum might accumulate in the hands of the Secretary of State for disbursement for secret service purposes?—It might so happen; of course, it is within the bounds of possibility that that should happen; but, practically, I should say it is utterly impossible that it can happen.

800. Are you able to tell us what the ordinary balance is at the end of three years?—I do not think I ought to be asked that question, because it is connected with the detail of the expenditure of the secret service money; I should otherwise be very happy to tell the Committee anything, but I am under a certain reserve from the necessity of the case.

801. Do I rightly understand you to say that you have no objection to tell the Committee what the ordinary balance is at the end of three years?—No; I think I ought not to tell it. I think it would be rather a breach of my duty to give an account of it. The Audit Office know it; but, of course the Audit Office know it under the seal of secrecy, you may say.

802. Mr. *Liddell.*] Do they know it?—Yes; they see the balance when they receive the account.

803. *Chairman.*] The Committee think that the question I asked, namely, what the ordinary balance is at the end of three years, is a question which they have a right to ask, and to which they have a right to receive an answer; we do not, however, wish to press you to give an answer to it to-day; perhaps you may wish to mention the matter to the Secretary of State first?—Really I have not the slightest wish to postpone the matter. In the way in which you have put the question I can hardly give you an answer to it. The ordinary balance at the end of every year, whether you take a period of one, two, three, five, or six years, is as nearly as possible the amount of half-yearly expenditure. We keep it as nearly as possible to that, in order to provide for an unforeseen emergency which may arise at any moment. We regulate our applications for issues with that view.

804. So as to have half the year's grant in hand?—Yes; we want to have about half a year's expenditure in hand to meet any unforeseen emergencies. It is impossible to say at the beginning of a year what will happen in the course of that year. Perfectly unforeseen things arise which we never could look forward to, and therefore we must keep a certain balance in hand so as not to be run too close.

805. Then, practically, we may take it that the ordinary balance does not exceed the half of the grant?—You may take it that that is so practically; I will not say to 1,000 *l.* more or less, but I feel we are secure if there is money to meet about half a year's expenditure in advance. I should not feel that the public interests were safely guarded if that were not in hand, because, as I have said, unexpected demands may come upon the office, which it ought to have the means of meeting. But I may say this, that for the last two years, from circumstances which I need not enter into, we have been able very much to reduce our applications for issues. We have not drawn from the Treasury for the last two

Mr. *Hammond.*

25 May 1870.

years anything like what we might have drawn, because it so happens that there has been nothing occurring to call for extraordinary expenditure. You will perfectly understand, however, that emergencies may arise which require extraordinary expenditure, and that if such emergencies did arise, it would be impossible for us to say, "An emergency has arisen, and we want more money."

806. I did not wish to ask you any particulars as to the expenditure in any one year, but, as I understand it, your view is this: that supposing you have drawn from the Treasury up to the amount of the grant, and emergencies have not arisen to require it to be spent, you must carry on the balance into future years?—Whatever balance we have in hand we must carry on.

807. There is no such thing as surrendering it into the Exchequer?—It would be utterly impossible under the declaration we are obliged to make. How could that money which was surrendered be expended on secret service? A foreign minister, that is to say one of our ministers abroad, is bound under the Act, to surrender any balance he may have, within a year of his return to England. But there is no provision for the Secretary of State doing that, and the reason why it should be so is quite obvious. Of course, as a matter of public policy, it is very desirable that no opportunity should be given for connecting the expenditure of secret service money with any particular transactions which may occur in a given period; and if the expenditure in one year was less, and in the next year more, a ready wit might connect the two things together and say, you have been spending the money for such-and-such a purpose.

808. Mr. *Liddell.*] Do I rightly understand you to say, that a foreign diplomatic agent or consul is bound, at the end of each year, to surrender any balance in his hands to the Secretary of State?—No, at the end of a year after his return to England he must surrender it.

809. So that it may remain in his hands for as long a period as he is employed?—Yes; but, after all, it comes to a practical question, and I apprehend that no foreign minister keeps a balance in his hands; in fact, I am sure he does not, for I must know all that he draws. He may keep a few pounds, perhaps, in his hands. If he wants to spend 5 *l.* he may draw for 20 *l.*, and keep the other 15 *l.* for another emergency; but as to keeping anything that you might call a balance in his hands, that he certainly does not.

810. Would the Foreign Office, in the event of a considerable advance having been made to a foreign minister or consul, if they had reason to suppose that he had not expended it, call upon him to account for it, and to surrender the balance?—No, they could not call upon him to surrender it; but if a foreign minister was to draw upon the Secretary of State for any unusual sum, I should consider it to be my duty to point out to the Secretary of State that this was an unusual draft, and the Secretary of State, no doubt, would ask, privately, what it was for, and satisfy himself upon the subject.

811. *Chairman.*] I understand the substance of your evidence to be this, that no account at all need be given, and no declaration of disbursement need be made, except once in three years; and at the end of three years, under no circumstances, is the expended balance to be surrendered, but it is to be carried on?—That is the upshot of it. But I must explain to the Committee what perhaps they do not quite understand, that the account of an outgoing Secretary of State is rendered immediately, and then the new Secretary of State starts with a fresh account, carrying on, as the first item on the debit side, the money which has been transferred to him by the previous Secretary of State.

812. By what you call his account, you do not mean an account rendered to the Treasury or to the Exchequer and Audit Department?—Yes, to the Audit Office; I mean that the Secretary of State renders periodically to the Audit Office an account both of moneys received and of moneys disbursed by him; that is to say, it is in one lump sum.

813. He does not show the receipts on one side and the disbursements on the other, does he?—Yes.

814. I thought that was what the Audit Office wanted?—The account does not show the details of the disbursements; on one side there is the receipt, and the first item, for instance, in Lord Clarendon's account on the receipt side will be what was transferred to him by the Earl of Derby; then the next items will be the successive issues from the Paymaster General's Office. The total of that is the amount that he is accountable for. On the other side there will be the amount that he has actually expended; in the first place the amount that, under his directions, I have expended, for which my receipt is his voucher, and my declaration is his voucher. Then the receipts of the foreign ministers for their bills which discharge the Secretary of State *pro tanto*. A foreign minister sends in a receipt for every sum of money he draws upon the Secretary of State; that receipt is rendered by the Secretary of State to the Audit Office in discharge, so far as it goes, of his account, and the balance then remaining in his hands, after deducting these two sums—namely, what the Under Secretary of State under his directions has expended, and what the foreign ministers have expended according to their receipts—is carried on to the next account.

815. That account is sent in to the Exchequer and Audit Office?—Yes.

816. When?—It is sent in when a Secretary of State goes out of office; as soon as I can make his account up, which is generally within perhaps 10 days or a fortnight after he leaves, it goes to the Exchequer and Audit Office; and then with respect to a Secretary of State who stays in office for two or three years, I should generally clear his account every two or three years, as the case might happen; always within the three years, and generally, if I can do it, within two years.

817. Is not that the account to which this paragraph in the report of the Comptroller and Auditor General applies, "because the sums entered under the head of expenditure would appear to represent merely issues or advances, and not actual payments within the financial year"?—No; the Comptroller and Auditor General is referring there to the Treasury Account. If you will look at the last paragraph in that report, you will see the process as it relates to the Foreign Office stated there; it is in paragraph 6.

818. It does not lie within my province to express any opinion upon the policy of excepting the Vote for Secret Service from the operation of the general provisions of the Act in question: I may, however, be permitted to observe, that the value

value of the control of this department for ensuring the due application of monies advanced for the service is acknowledged by the Foreign Office in the annexed correspondence; that the vouchers proposed to be accepted in support of the Appropriation Account are of the same nature as those which have been heretofore deemed sufficient, and that no inconvenience to the public service has been experienced, or even alleged, since the accounts for secret service were first rendered to this department for examination upwards of 70 years ago." That is the paragraph you referred to?—Yes; that refers to the account we render. When that goes to the Audit Office, the Audit Office examine it, and then they send a quittance to the Secretary of State. They keep the Foreign Minister's receipts, and call upon them to clear their account, either after they cease their service or within a year after they come to England. The Foreign Minister gives substantially just the same declaration as the Secretary of State and myself.

819. Mr. *Stansfeld.*] This is not the Annual Appropriation Account; this is the account required under the old Acts?—That is the account under the old Act.

820. *Chairman.*] It is not an Appropriation Account?—No; the law officers say, that that old Act is not touched by the Exchequer and Audit Act, and it was particularly understood between myself and Mr. Childers, who was then Secretary for the Treasury, that it was not to be touched.

821. Mr. *Liddell.*] Is it not excluded from the schedule?—It is excluded from the schedule on that ground, that it was never intended to be touched. Mr. *Hammond.* 25 May 1870.

822. *Chairman.*] Do you refer to the schedule to the Exchequer and Audit Act?—Yes; it specially excluded from the schedule; I spoke to Mr. Childers about it, and the whole difficulty has arisen from the circumstance that it was not stated in distinct terms in the Exchequer and Audit Act that it was excluded.

823. I do not understand this; you say it is excluded from the schedule?—It is not in the schedule of the Exchequer and Audit Act.

824. There is in the schedule, "Miscellaneous Civil Services, Classes 1 to 7"?—I mean the Act of Parliament which relates to this subject is not mentioned in the schedule.

825. You mean that the enactment was not repealed?—Yes; the enactment was not touched by it.

826. The enactment was not expressly repealed; but it does not at all follow that because it is not expressly repealed it is not virtually repealed?—The law officers say that it is still in force; they state that very clearly.

827. Is there any objection to furnish to the Committee, not for publication, but for their own information, the case submitted to the law officers of the Crown and their opinion upon it?—I have read the substance of the opinion of the law officers to the Committee.

Sir William Dunbar, Bart., called in; and Examined.

828. *Chairman.*] Have you taken a legal opinion upon this subject at your office?—I shall be prepared to go into the whole matter and show the legal opinions upon which I take my stand if the Committee wish me to do so. Sir *W. Dunbar.*

829. Mr. *Stansfeld.*] You have taken legal opinions, have you not?—We have not taken legal opinions, but we have legal opinions which are sufficiently pertinent. (Mr. *Hammond.*) According to practice, we could not give in its very words the opinion of the law officers, but that which I have read to the Committee is really and substantially their opinion.

830. *Chairman.*] It does not strike me that the refusal to give that legal opinion in this case would rest upon the same grounds as the refusal to give a legal opinion in ordinary cases; the present case is not like a case between a Government department and a person having a contention with them which may involve an action at law; this has reference only to the manner in which an account should be rendered under an Act of Parliament?—In our opinion, all the opinions of the law officers are confidential, and we never publish them.

831. Mr. *Seely.*] Is this the first legal opinion you have taken upon the subject?—It is the only time the question has been raised.

832. Then you never took an opinion upon it before?—Not upon this particular point, because there was no occasion to take it; it was only taken when the difficulty was raised. I do not know whether the Treasury took any opinion besides or not.

833. Mr. *Liddell.*] Am I right in supposing that the opinion of the law officers, a sort of general summary of which you have read to us, is mainly based upon the fact of the exclusion of the old Act, 22 Geo. 3, c. 82, from the schedule of the Acts affected by the Exchequer and Audit Act?—That is so, according to my understanding of the law officers' opinion. They wound up their opinion by saying that "though they suggested the adoption of the course abovementioned, as a nominal compliance with the provisions of the later statute, they do so rather as a means of avoiding further discussion, than because they entertain any doubt of the legality of the course pursued by the Foreign Office, so long as they keep within the provisions of the earlier statute."

834. Mr. *Pollard-Urquhart.*] You said just now that when one Chief Secretary for Foreign Affairs succeeded another, the accounts were cleared in the manner described by yourself, and that in the event of the same secretary remaining in office, they were generally cleared every two or three years; would any public inconvenience arise from their being cleared annually?—Very considerable inconvenience, I think.

835. *Chairman.*] Or once in three years?—I do not consider that any inconvenience would arise from their being cleared once in three years, because in the way in which the account is rendered it would be impossible to say the exact payment that was made in any one year. The lump sum is stated that has been expended in three years, and you cannot connect that expenditure with any particular transaction in the course of the three years. Of course, the only point that it concerned us to know, in taking the opinion of the law officers was, whether the system which had been going on under that Civil List Act was the one which should con-

Mr. *Hammond.* Sir *W. Dunbar.* 25 May 1870.

tinue to be pursued, or whether it was affected by the Exchequer and Audit Act; and the law officers said no, it was not affected.

836. Mr. *Liddell.*] Am I not right in supposing that the Act 22 Geo. 3, c. 82, has reference to a totally different matter to that which we are now discussing, namely, the Appropriation Act; has it not reference to sums advanced out of the Civil List, which is a charge upon the Consolidated Fund?—Certainly it had reference to that, because at the time that the Civil List Act was passed, the secret service was not an annual vote of Parliament. It ceased to be wholly charged on the Civil List in 1832, I think. There are 10,000 *l.* charged upon the Civil List now; but I apprehend that when the Act was passed all the money was issued out of the Civil List.

837. Mr. *Candlish.*] This question comes before the Committee, in consequence of a report of the Comptroller and Auditor General, does it not?—Yes.

838. It is, therefore, a question between the Audit Office and the Foreign Office?—No, I scarcely apprehend it as such. It comes as a question between the Treasury and the Audit Office. The Treasury are the accountants under the Appropriation Act, and the Audit Office contend that the Foreign Office should be a sub-accountant to the Treasury.

839. The Exchequer and Audit Act establishes an audit on behalf of the House of Commons?—Yes.

840. That officer of the House of Commons takes exception to the accounts rendered by the Foreign Office?—No, I beg your pardon; he takes exception to accounts rendered by the Treasury. The money is issued by Parliament to the Treasury, who are the accounting department. It is merely a question of what should be the discharge of the Treasury account, whether the Treasury should merely send in the receipt of the Foreign Office as their discharge, or whether, instead of complying with the terms of the Act of Parliament (the Civil List Act), the Secretary of State should submit the Secret Service Account to the Treasury as chief accountant, and the Treasury, as chief accountant, should submit that to the Audit Office.

841. For this particular service the Treasury is not the spending department, but the Foreign Office is?—Yes; but I believe the Treasury is the accountable office. The contention of the Audit Office is, that we should be sub-accountants to the Treasury.

842. Does not the Exchequer and Audit Act provide that each spending department should be accountable to the Comptroller and Auditor General?—I presume it does not, for the contention, I believe, of the Audit Office has been with the Treasury, and not with us.

843. Have not you at the Foreign Office already rendered accounts of secret service money to the Audit Office?—The Secret Service Account was rendered by me in common course to the Audit Office, and they refused to audit it.

844. You sent it to the Audit Office?—Yes, in the usual course.

845. Does not that course of procedure on your part recognise that the accounts ought to be rendered to that department?—Under the 22 Geo. 3, c. 82, the account has to be rendered to the Audit Office.

846. Would it not follow that, this disputation arising between the Foreign Office and the Audit Office, any case for legal guidance should be submitted to the Audit Office to have their concurrence?—I do not think you quite understand the position of things. It is not a question between the Foreign Office and the Audit Office; it is a question between the Treasury and the Audit Office. The Audit Office challenge the Treasury account, and say that it is not sufficiently vouched for.

847. I understood you to state to the Committee just now that you rendered the account to the Audit Office?—We render it, but not under the Exchequer and Audit Act.

848. Then I am wrong in supposing that you, a spending department, independent of the Treasury, are in any way accountable to the Audit Office?—We are accountable to the Audit Office under the Act of the 22 Geo. 3, c. 82, but not under the Exchequer and Audit Act.

849. Under whatever Act it is, are you by law accountable to the Audit Office?—Certainly.

850. Should not a case, then, for the guidance of the two departments respectively have been submitted to both, and been agreed upon by both?—No; the question did not arise between the Audit Office and the Foreign Office; it arose between the Audit Office and the Treasury.

851. You have always sent accounts of the secret service money to the Audit Office?—Yes.

852. Wherein do you now propose to change your procedure, which, according to the Comptroller and Auditor General, is now different from what it has been for 70 years?—I beg your pardon; our procedure is just the same; the procedure of the Audit Office is different. We sent the account to the Audit Office, and the Audit Office sent it back; they will not have anything to do with it.

853. Do you think that the Audit Office have the power of passing any accounts other than actual payments?—I am not able to give an opinion upon the power of the Audit Office; we can only act according to law.

854. You do not furnish them with any accounts of actual payments, do you?—Yes; we do under the 22 Geo. 3, c. 82.

855. Is the Comptroller and Auditor General wrong, then, when he states, as he does state in his report, that you propose to adopt a new procedure different from that which you have acted upon for 70 years?—We do not propose to adopt any new procedure.

856. Then he is wrong in that statement?—Certainly; all we want to do is, to continue the old procedure which the law officers say ought to be continued.

857. Have there not been periods in the history of this account, within your knowledge, when the sum in hand at the close of any one year, or any three years, has been very much larger than half a year's disbursement?—Of course I cannot carry my recollection back perfectly; there may have been a little more or a little less, but I can assure the Committee that the amount has not been such as to call my notice to it much.

858. Have there not been cases when the sum has been very large?—Not since I have been Under-Secretary of State.

859. Mr. *Pollard-Urquhart.*] You can only answer for your own time, of course?—I can only answer for my own time.

860. Mr.

860. Mr. *Candlish.*] Are there no records of previous Under-Secretaries of State in the office, which would show it?—No, there are no records.

861. A sum of 15,000 *l.* or 20,000 *l.* left in the hands of the Secretary of State for Foreign Affairs in any one year would enable him to spend the year's vote *plus* that balance in that year, would it not?—Yes, if there was an emergency.

862. Is it not the policy of the Exchequer and Audit Act; is it not, indeed, a provision of that Act itself, that the sum spent in any one year, for any particular service, should be limited to the sum voted by Parliament for that service?—The Exchequer and Audit Act, as I say, does not touch the Act of the 22 Geo. 3, c. 82, and as a matter of public policy, I think it would be very inconvenient to place that absolute restriction upon the expenditure. There must be, of course, a certain discretion, and a certain confidence placed in the Secretary of State, in a matter of that kind. Great public inconvenience, and great public mischief might arise from running the amount too close, and you must trust the Secretary of State; I can only say, for myself, that I should be very sorry to have to leave a balance beyond what I state now to be absolutely necessary for the safety of the State.

863. Will you explain, if you consider it consistent with your duty to do so, the inconvenience that would result from Parliament knowing, year by year, the secret service money expended within the year; I do not say for what purpose, but the sum?—Parliament does know the sum expended within the year.

864. How?—I think the Finance Accounts show it.

865. How will it appear to Parliament if you account for it only once in three years?—The issues from the Treasury show it.

866. The issues are not payments?—The law officers say that they are for secret service purposes.

867. But all that the accounts show to Parliament are the amounts issued by the Treasury?—Yes.

868. They do not show the amount expended by the Secretary of State?—They do not.

869. Can you explain to the Committee the inconvenience of showing the expenditure in the year?—I think it would be extremely inconvenient to publish, from year to year, the exact sum spent in secret service, because I think it would enable a sharp-witted person to discover the precise purposes to which that money was applied. I think that it might tend to very serious inconvenience in that way. And then it would lead to this other inconvenience, namely: supposing in one year a smaller amount appeared to have been spent, and in another year a greater amount, the question would arise, why did you spend more money this year than you spent last year? That, I think, would be perfectly inconsistent with the notion of secret service money, and would be highly inconvenient to the public service.

870. Do you think that the general policy of our legislation, which provides that the sum spent by a department in any one year should be limited to the sum voted for the department for that year, is inapplicable to the present purpose?—I think so. I think Parliament would allow a certain discretion, as a matter of public policy, in a case of this kind. It limits the sum which is voted.

871. You have been in the habit of handing to the Exchequer and Audit Commissioners, previously to the Exchequer and Audit Act, certificates by the foreign ministers that they have spent so much money?—No. The foreign ministers abroad draw bills upon the Secretary of State, from time to time, for the money they require for secret service; and they send in a receipt to show that they are accountable for it. Under the provisions of the Act of Parliament, that receipt is filed in the Exchequer; and within a year after they return to England, they make a declaration similar to that which the Secretary of State makes, that that sum has all been expended for secret service.

872. That receipt you pass to the Comptroller and Auditor General?—That receipt is *pro tanto* a discharge to the Secretary of State.

873. *Chairman.*] I want to be quite clear as to whether I understand the sources of the secret service money. The Act of 22 Geo. 3, c. 82, to which reference has been made, regulates the issue of foreign secret service money to the extent of 10,000 *l.* charged upon the Civil List Revenues?—Yes.

874. Is there any sum for foreign secret service money now charged upon the Civil List Revenues?—No, I am not aware that there is.

875. There is no secret service money now obtained from that source?—I am not aware of any money issued to the Foreign Office coming from that source.

876. The 1 & 2 Vict. c. 2, provides for an issue out of the Consolidated Fund, not out of the Civil List Revenues, of 10,000 *l.* for home secret service?—Yes, I know there is a note upon the annual estimates now, saying that 10,000 *l.* is charged in addition to the sum voted by Parliament.

877. That is still a charge upon the Consolidated Fund, is it not, for the home service?—It would be better to ask those who represent the Treasury that question.

878. It does not come within the cognizance of the Secretary of State for Foreign Affairs?—It does not.

879. Then the whole sum to which your remarks have been applied is the sum voted by Parliament?—Yes.

880. You say that the law officers have given their opinion that the regulations affecting the issue and disbursement of secret service money falls under the Act of Geo. 3?—Yes.

881. How is it if the Act of Geo. 3 only refers to that secret service money which is charged upon the Civil List Revenues, and not to that which is voted by Parliament, that the provisions of that Act are taken to apply to the sums voted by Parliament?—I can hardly say, except that, time out of mind, it has been so; I found it so, my predecessor followed that practice, and it has been the practice unquestioned by the Audit Office for the last 70 or 80 years.

882. I wish to call your attention to the terms of the Act?—I know that the Act specifies the 10,000 *l.*; but as I was thinking the other day whence came the large sums expended on secret service, even within my memory, and certainly in time of war, I know enormously larger sums were spent, and how the Civil List could bear it I do not know.

883. There may have been accumulations from former years?—The accumulations of the 10,000 *l.* from former years would go a very little way.

Mr, *Hammond.*
Sir *W. Dunbar.*

25 May 1870.

884. The point I am upon is, as to the terms of the Act of George 3. It says, "It shall not be lawful to issue or imprest from the Exchequer," and so on, "from the Civil List revenues for the purpose of secret service within this kingdom any sum or sums of money which, in the whole, shall exceed the sum of 10,000 *l.* in any one year." And then the next section says, "When it shall be deemed expedient by the Commissioners of His Majesty's Treasury," and so on, "to issue, or in any manner to direct the payment of any sum or sums of money from the Civil List Revenues for Foreign Secret Service," so that this Act of George 3 applies to monies charged upon the Civil List Revenues?—I cannot tell you the fact, but I presume, that on the resettlement of the Civil List in 1832, provision must have been made for bringing that under the cognizance of Parliament; I am unable to go back so far as that.

885. In the case submitted to the law officers of the Crown, was their attention drawn to the fact that the money now supplied to the Secretary of State is supplied by a Parliamentary grant, and not from the old source to which the provisions of the Act of Geo. 3 applied?—I see, on referring to the case submitted to the law officers, that it was spoken of as the "Vote" for secret services as a lump sum.

886. But was their particular attention called to the fact of a distinction between the sources from which the secret service money came?—Of course, when we spoke of a Vote for Secret Service, that 10,000 *l.* could not come out of the vote.

887. Mr. *Stansfeld.*] I think you can safely say that their attention was called to it; the mere fact of referring them to the old Act of Geo. 3, and the Exchequer and Audit Act, would bring to their minds that distinction, would it not?—I should have thought so; first of all, referring the law officers to the Act, and then speaking of the annual Vote of Secret Service money, certainly must imply something beyond that 10,000 *l.*

888. *Chairman.*] How do they connect, in their opinion, the Secret Service Vote of Parliament with the secret service money charged upon the Civil List Revenues mentioned in the Act of Geo. 3?—I am unable to say that; it would be impossible for me to presume to give a legal opinion.

889. I did not wish to ask you for a legal opinion; I only wanted to know whether as a fact anything had been done to draw the attention of the law officers to the distinction betwen the two sources of supply?—The principle involved equally affects the offices of all the Secretaries of State, and the Admiralty, which share, though in different proportions, in the money annually voted by Parliament for foreign and other secret services; that is clear.

890. Mr. *Liddell.*] Will you tell me if there is anything, and if so, what it is, that prevents advances under the Civil List Act being made from the Civil List Revenues for secret service purposes?—You mean that 10,000 *l.*

891. Taking the maximum of 10,000 *l.*?—I would much rather that some gentleman from the Treasury answered that question, for I really know nothing since I have been in the office of any source from which secret service money is issued, except from the Vote of Parliament.

892. Except the fact that that Act is unrepealed, and consequently its provisions remain as originally framed on the statute book?—I presume that if it was urgently wanted there would be nothing to prevent part of that 10,000 *l.* being issued. I presume it might be so; but all I know is that I am not aware of our ever having claimed anything beyond what we considered was our proportion of the annual sum voted by Parliament; that is all I know of.

893. *Chairman.*] Are you aware of any Act which requires that the annual Vote of Parliament for secret service money should be administered under the provisions of the Act of George 3?—The only thing is that that Act is the one which has always regulated it. My attention has never been called to any other Act as requiring it. I consider that that Act regulates it, and the law officers consider that that Act regulates it. After all, it is a mere legal question, and in these questions we are always guided by the legal opinions of the law officers.

894. Mr. *Candlish.*] You said that money having been granted for secret service it became impossible for the balance at the end of one period to be surrendered to the Exchequer; you mean that there is a legal difficulty in the way?—There is the legal difficulty of our declaration, which is on oath.

895. The ground of the difficulty is that it is voted for special purposes?—The declaration which the Secretary of State makes is in the terms of the Act. I never could quite understand why the Under Secretary of State, who has no money issued to him, was called upon to make a declaration; but, however, I do make one. I will read to you the declaration the Secretary of State has to make.

896. We have it before us?—You will see from it that the money issued to him can only be expended for foreign secret service.

897. You contend that that is a legal difficulty in the way of surrendering balances to the source whence you got them?—Yes; under that declaration we cannot do so, because money once issued cannot be expended for anything except secret service, except in the case of foreign ministers. The Act of 22 Geo. 3, is very remarkable in that respect. It provides for a foreign minister surrendering a balance if he should have any in his hands, but there is no such provision for the Secretary of State.

898. Then, in your opinion, if it is the purpose of Parliament that these balances should be surrendered, further legislation is necessary?—Further legislation would be necessary to release the Secretary of State from that declaration; but as a matter of public policy I think it would be very bad policy to make such a change. I think it would be decidedly mischievous.

899. My question had reference to the legal difficulties in the way, not to the policy?—As a question of policy, after all there must be a certain amount of trust in public men, and I can assure the Committee that we have not the least wish to have a larger balance than I have stated. At least as long as I have been the Under Secretary of State there has not been the least wish to have more. A larger balance is rather a trouble than otherwise.

900. Mr. *Pollard-Urquhart.*] The declaration is only made every three years, is it not?—The declaration is made whenever the account is rendered. As I say, I generally settle it in about two years, or something of that sort. I am very much embarrassed now. I have Lord Derby's accounts, and I cannot get his discharge. A foreign

foreign ambassador wanted lately to go and make his declaration before the Exchequer. I said, "It is of no use your making your declaration, the Exchequer and Audit Office will not take it." I can hardly expose an ambassador to having his declaration thrown back in his face, so I recommended him to wait till the matter was settled.

901. Is the Audit Office calling for something different from you from that which it had last year?—The Audit Office ignore the Foreign Office altogether as the accountant. They require the Treasury to be the accountant. They require us to account to the Treasury. That, I say, is contrary to public policy as bringing more people into the knowledge of our Secret Service Account, and it does not give a single real check. All we should do would be to give to the Treasury the account that we give to the Audit Office, and the Treasury could only pass it on, because the Treasury, I presume, would no more question then than the Audit Office question now the details of the account. It is sufficient, and always has been sufficient, for the Audit Office to accept the accounts as they are rendered to them, with our statutory declarations and receipts, and that is all the Treasury could send in. It is obvious that the less publicity that is given to the Secret Service Account the better. I think, as I said in my letter to the Secretary of the Treasury, that it would be very undesirable that the Secretary of State's account should pass without audit; but I think the audit which has hitherto been practised, while it is all that we can give consistently with the notion of secret service money, is amply sufficient, and has been considered so by Parliament.

902. Is your objection to the intervention of the Treasury; if you accounted direct to the Audit Department, would that get over your difficulty?—That would not meet the requirements of the Audit Office, because the money is not issued to us as from Parliament. A lump sum is voted for Her Majesty's Foreign and other Secret Service, and I think it would be very inconvenient and a great mistake, as a question of public policy, to separate it in the vote by Parliament into so much money for the Secretary of State for Foreign Affairs, so much money for the Home Office, so much for the Colonial Office, and so much for the Admiralty. I think it would be a great mistake, because it would lead to a great number of very inconvenient inquiries, and if the inquiries were answered, it would lead to a great number of very inconvenient disclosures; in fact, it would neutralise the whole idea of secret service money.

903. *Chairman* (to Sir *William Dunbar*).] You have heard the questions which have been put to Mr. Hammond, will you state what your views are upon the subject; as a preliminary question, have you considered the point which was raised in the last few questions which I addressed to Mr. Hammond with regard to the distinction between the sum which was charged upon the Civil List Revenues and the sum voted by Parliament?—I shall touch upon all these points if you will permit me in the observations I shall make upon the evidence given by Mr. Hammond.

904. Then will you state it in your own way?—In the first place, I would say, that this question affords an apt illustration of the proverbial expression that "history repeats itself." This is an old controversy, but not an old controversy with a new face. It has been clothed up in the same arguments which were plied, with more or less effect, by the Secretaries of State between 1797 and 1807, and which were ultimately overruled. I have pointed out in my report that the Case and Opinion to which Mr. Hammond referred had not been submitted to me. The question arose upon the question of accounting. The Case was, however, drawn up, not in concert with the officer who, on the part of the House of Commons, exercises financial control over the votes of Parliament. Now, from the very meagre outlines which Mr. Hammond has given of that Opinion, I gather this fact, that the Opinion is founded upon an erroneous assumption; and if I can prove that, all his arguments fall to the ground with that assumption. The Opinion, and the arguments to support that Opinion, are based upon the assumption that the Secretaries of State, the Secretary of State for Foreign Affairs included, accounted to the Audit Office, under the provisions of the Civil List Act of 1782. When the controversy I referred to arose in 1797 between the Secretaries of State and the Commissioners of Audit, the Secretaries of State took precisely the opposite line. They declined to account for the monies advanced on the ground that they were not bound to do so under the Civil List Act. Then the Committee may ask, how came it that the Commissioners of Audit called for accounts? The Commissioners of Audit admitted the validity of the plea, that the Secretaries of State were not bound to account under the Civil List Act of 1782; but the Commissioners claimed a right to call upon them to account under the provisions of their own Act of 1785, constituting the Audit Board, which Act empowered them to make every public accountant accountable for the monies which he had received. The Committee will thus observe that the Exchequer and Audit Act, having superseded all the other Acts (and they were various), under which the Commissioners of Audit acted, if the Exchequer and Audit Act were not applicable to the votes of Parliament, the Foreign Office expenditure included, the Comptroller and Auditor-General would absolutely have no power whatever of calling upon the Secretaries of State to give in any account of the monies received for secret service. I have already stated that the Commissioners of Audit agreed with the Secretaries of State in 1797 that they were not bound to account under the Civil List Act. The Civil List Act did not prescribe any mode in which an account should be rendered, far less be audited. It prescribed simply the affidavits which should be held as complete vouchers for the payments made by the Secretaries of State and the officers acting under them. An opinion was taken, I think, in the year 1798, upon that subject. The views of the Commissioners of Audit were endorsed by the opinion of the law officers of the Crown in that year. The Treasury, however, did not show much disposition to aid the Commissioners of Audit in compelling the Secretaries of State to render accounts of secret service money; they did not put in force the opinion which had been thus obtained, and after a further period of from eight to 10 years, the Commissioners of Audit took another opinion of the law officers of the Crown, which again confirmed their views, that the Secretaries of State were not bound to account; while under the Civil List Act the Commis-

Mr. *Hammond.* Sir W. *Dunbar.* 25 May 1870.

Sir W. Dunbar. 25 May 1870.

sioners of Audit were entitled to call upon them to account under their own Act of 1785, and to require the Secretaries of State to produce, in support of the receipts, and the payments for secret service, those vouchers or affidavits which had been prescribed by the Civil List Act, as sufficient to substantiate the expenditure. Now the Committee will observe, that if the views of the Commissioners of Audit were right, and they were confirmed, as I have shown, by two several opinions of the law officers of the Crown, it was quite unnecessary when the Exchequer and Audit Act was passed which dealt with the votes of Parliament, and not with advances from the Civil List, to repeal clauses which had reference, not to audit, but simply to the vouchers which should be produced in support of the expenditure by the Secretaries of State. I repeat, it was not necessary to repeal the clauses of the Civil List Act, because it did not touch the question of audit. Mr. Hammond has informed the Committee that he accounts for the secret service money under the Civil List Act. That statement I must pronounce incorrect; he is under a misconception in supposing that he has accounted under the Civil List Act; he has accounted to the Commissioners of Audit under the Act of 1785, under the powers derived by the Commissioners of Audit from that Act, and under the powers which had been exercised by their predecessors, the auditors of imprest. Then the question arises, is there any difficulty in rendering an account under the Exchequer and Audit Act? I, for my part, can see none. Would any public inconvenience arise from rendering an annual account? I am prepared to prove that none such of any importance would or could result. The Treasury are in the administration of the Vote for 32,000 *l.* a year for secret service. They make issues from time to time to the several departments entrusted with the expenditure of secret service money. Let us suppose that they advance a sum of 15,000 *l.* to the Foreign Office for secret service, and at the end of the year they call for an account of the expenditure, that being the sub-voucher to the appropriation account, which they are bound to render to the Comptroller and Auditor General, the account of the Secretary of State might be rendered to the Treasury in this form (*producing an account*): The "account of the Secretary of State for Foreign Affairs in respect of secret service money for the year ended 31st March 1870; received from Paymaster General, 15,000 *l.*; payments expended within the year, 13,000 *l.*; balance 2,000 *l.*;" and the Secretary of State might add this certificate: "I hereby certify that the actual amount expended by myself, or under my directions, for secret service within the year ended 31st March 1870, was 13,000 *l.*, as above stated, and that the vouchers for the same prepared in conformity with the Civil List Act have been transmitted to the Exchequer and Audit Department, 30th November 1870." Now I would ask the Committee what information would that afford to any one at the Treasury or Audit Office, that could be of any public inconvenience?

905. Will you hand in that form of account?—I will. (*The same was handed in,* vide *Appendix*).

906. This supposes that the vouchers mentioned in the Civil List Act are applicable to the disbursement of money out of the vote of Parliament?—Yes, as sub-vouchers to the Treasury account, they would be simply the vouchers that had been in time past sent to the Audit Office by the Secretaries of State. It would practically be the same account they have heretofore rendered. The account would be passed on with the Treasury appropriation account to the Audit Office, but the vouchers would be forwarded direct to the latter department from the Foreign Office.

907. You are assuming that the provisions of the Civil List Act are applicable to the money voted by Parliament?—No.

908. In this account you are?—No, that is a sub-accountant's account, rendered to the Treasury according to the Exchequer and Audit Act; but accepting, in support of the payments included in that account, the vouchers prescribed by the Civil List Act.

909. That assumes that the provisions of the Civil List Act are applicable to money voted by Parliament as secret service money?—I am disposed to admit its provisions as regards the sufficiency of the vouchers or affidavits that were made compulsory by that Act, and which were not expressly repealed by the Exchequer and Audit Act.

910. But in a letter from your office, signed by Mr. Ryan, dated the 10th of December 1869, at page 59, there occurs this passage: "The Civil List Act, 22 Geo. 3, c. 82, which seems to have reference, not to monies voted by Parliament, but to advances for secret service out of the Civil List Revenues, which were charged on the Consolidated Fund, would not render any aid in settling the question, though all its provisions were still operative, inasmuch as it does not provide for an audit of secret service monies by the department of audit." That letter appears to take the view that was suggested by the questions I put to Mr. Hammond at the end of his evidence, that the provisions of the Civil List Act of George the Third, do not apply to monies voted by Parliament?—We consider that they do not apply to monies voted by Parliament; but it has been the practice of the Commissioners of Audit for a long time past, from the nature of the service, upon which the money is expended, to admit the vouchers prescribed by the Act of 1782, as a sufficient warrant to them to clear the account, and we would not change the practice.

911. I am not giving this as my opinion, but taking the supposition that that Act does not apply at all to monies voted by Parliament, then the Audit Office need not accept the vouchers which are prescribed by that Act in discharge of the Civil List?—No; strictly speaking, no doubt the Audit Office are not bound to accept them, inasmuch as that Act has no reference to monies voted by Parliament; but I qualify that by saying that it lies within its discretion to accept a voucher in support of a payment; practically, it lies in the discretion of the Comptroller and Auditor General to decide what is the degree of proof that he requires in support of a special payment. Having regard to the nature of the service, he would accept the same vouchers for the account as the Commissioners of Audit have done before him.

912. And you would be prepared to accept the same degree of proof as is prescribed in the Act of Geo. III.?—Precisely; I should be satisfied with that proof, I require no more; and if they render

render the account in that shape, with the supporting affidavits and declarations of the foreign ministers who have severally expended the advances made to them, I shall accept those vouchers as sufficient; there is no real solid impediment to the rendering of that account annually.

913. And then you say, that if there is any balance over it ought to be annually surrendered to the Exchequer?—Yes, the Exchequer and Audit Act requires that it should be surrendered; and I confess that I cannot understand by what process of legal ingenuity the opinion is arrived at, that issues made from the Secret Service Vote are to be held as equivalent to payments. You have yourself, from the chair, shown that that clause in the Act is so precise that he who runs may read; and that specifically enacts that issues are to be excluded from every account, and payments only entered.

914. Without seeing the case submitted to the law officers of the Crown, I am unable to say how they get over the difficulty that occurs to my mind with reference to the 24th section of the Exchequer and Audit Act?—Let me inform the Committee that the account for secret service has throughout been of the nature of an appropriation account; an appropriation account is an account of a special service for a fixed period, containing the receipts and payments appropriated to that service. The Secret Service Account has been from its very inception, in 1807, up to now, an appropriation account, and yet the opinion of the law officers of the Crown would seem to hold that it should not be considered an appropriation account, and that the plan hitherto adopted of giving a solemn declaration as a voucher for an actual payment is to be superseded by another plan, to the effect that the Secretary of State should simply give his receipt for an issue. This view is sustained, as it appears to me, neither by the Exchequer and Audit Act nor by the Civil List Act of 1782, if the opinions of former law officers of the Crown are to be accepted as expositions of the law. Let me tell the Committee, with regard to this question of secret service money, that between the years 1700 and 1782, all secret service money was issued without account. In 1782, the attention of Parliament was called to the circumstance, when it was determined that that state of things should not continue. The Act of 1782 was therefore passed, and it gave the first indication of an intention on the part of Parliament to call the administrators of the secret service money to account. All monies advanced thereafter for secret service were entered on the imprest notes as monies to be accounted for. As I have before observed, the Civil List Act, namely, the Act of 1782, did not absolutely impose upon those officers the obligation to account. It made no reference to audit. It simply prescribed the means by which they should be able to clear themselves if they did account. But Parliament conferred separate and important powers upon another body, the Commissioners of Audit, to call all public accountants to account, and that body, in the exercise of its jurisdiction, did call the Secretaries of State to account, and after a fight of 10 years, succeeded in compelling them to give an account of the monies they had received. Now I will show the Committee the inconvenience with which the system of non-accounting was attended. Although the Commissioners of Audit had the power of calling for an account of secret service money, under their Act of 1785, they overlooked the fact until 1797, 12 years afterwards, when it was discovered that sums amounting in the aggregate to 1,740,000 *l.*, remained unaccounted for.

Sir *W. Dunbar.*
25 May 1870.

915. Mr. *Pollard-Urquhart.*] When was this?—In 1797; they called upon the several accountants to account for what they had received; and there are proofs in my hand that in several cases the public accountants had died before the three years had expired. The Secretary of State in one case had died, and neither his officers nor personal representatives could render any account; the Under Secretary of State had died, and no account could be rendered either of his disbursements, or of the disbursements of the Secretary of State; there were, consequently, enormous sums of money that could never be accounted for, from the circumstance that the persons accountable had died during the three years allowed for the delivery of the accounts; I can perfectly understand, that at a period when the communications with distant places were slow and infrequent, it might be necessary to give the Secretary of State the power of rendering his account once in three years, but when, by means of steam and electricity, all the ends of the earth have been brought together, can it be said now that any public inconvenience would arise from the various departments which have charge of the money being called upon to render an account of it once within 20 months? All that the Exchequer and Audit Act requires is, that within 20 months they should render an account in the form I have indicated. The vital principles of that Act should be maintained, and, in my opinion, ought on no account, or, at all events, not except on very strong grounds indeed, to be departed from, namely, that every account should be rendered for the year to which the vote applies, that payments and not imprests or issues should be included in it, and that every accountant should surrender his balances into the Exchequer at the end of the financial year. Mr. Hammond has founded rather strongly upon the circumstance that the Secretary of State had under the Civil List Act three years to render his account in, but the Committee did not ask him what had been the practice; he said that a great public inconvenience would arise from the rendering of the accounts more than once in three years, but that statement does not accord with the practice of the department. I have here 40 accounts rendered by the Foreign Office, 15 were rendered under a year, in periods varying from two months to 12 months.

916. *Chairman.*] To whom were they rendered?—To the Audit Department.

917. The old Audit Department?—Yes; 15 were for periods under a year varying from two months to 12 months, so that it would appear that they were able to gather up all the sub-vouchers for the disbursements in order to render them for audit; and it does not yet appear that any public inconvenience has arisen from the circumstance of the audit officers being made acquainted with the disbursements during the limited periods for which the accounts were rendered; 11 were rendered in periods varying from 12 months to 18 months, six from 18 to 24 months, and two from 24 to 26 months; and it is a curious fact that there were only five accounts rendered for periods exceeding two and a half to three

Sir *W. Dunbar.*

25 May 1870.

years; 15 out of them were actually rendered for periods under a year. I will mention the periods, seven months, 14 months, seven months, seven months, 18 months, six months, 24 months, 12 months, 13 months, and so on.

918. Mr. *Seely.*] Are those yearly accounts?—Some were half-yearly accounts, or for other short periods.

919. *Chairman.*] What was the nature of the account rendered in those cases?—It was just such as I have described; what I have handed in is almost a transcript from what they have actually rendered.

920. That was an account of actual payments, was it?—It was an account of actual payments. The Secretary of State made a solemn declaration to the effect that he had disbursed, for the purposes of secret service, so much money. Each officer who had disbursed money under his directions made a solemn declaration that he had disbursed, for the purposes of secret service, so much money. Each minister abroad made a declaration to the same effect. He gave a receipt for the money, and stated that he had disbursed that money for secret service. Mr. Hammond's evidence went to the effect that advances were made to the ministers. We find, on the contrary, that ministers abroad, when they have occasion to expend money for secret service, draw bills upon the Foreign Office. The fact, I believe, is, that they receive the money when they want to employ the money; it does not appear in the shape of advances. The whole of those bills drawn by them come into the account which they render to us. There is no practical difficulty about it whatever.

921. Mr. *Candlish.*] You mean the drafts of the foreign ministers?—Yes.

922. Mr. *Liddell.*] Does not it come to this, that the foreign agents and consuls receive the money, in many cases, after they have paid it?—No, they raise the money abroad; they know that there is so much money available; they receive certain instructions from home, I presume; they act upon those instructions, and they draw for the money they want.

923. Mr. *Candlish.*] They negociate the bills abroad?—Yes.

924. *Chairman.*] They draw bills abroad which are honoured by the Treasury?—Yes; if the Committee desire to see it, I have a schedule of bills drawn abroad in Lord John Russell's account in 1852, which is now before me. I can show the vouchers of the foreign diplomatic agents or ministers, with a schedule of the bills, not the bills themselves. A schedule is attached to the account showing the bills drawn by the foreign ministers.

925. Mr. *Pollard-Urquhart.*] When Mr. Hammond stated just now that considerable public inconvenience would arise from annual clearings of the accounts of secret service money, did you not understand him to mean that that inconvenience would arise entirely from making them public?—Yes; but the annual clearings of the actual expenditure disbursed by the several Secretaries of State would not be made public.

926. Did you not understand him to refer solely to that?—I understood him to say, that if the accounts were rendered annually to the Treasury, there would be considerable risk of detection of the purpose to which the money had been applied, and that, consequently, great public inconvenience might result from it. I say that his statement is belied by the practice of the Foreign Office, for I have shown the Committee that a great proportion of these accounts have been annual accounts. If the danger he apprehends is so great, why were these accounts rendered for periods of seven months, 14 months, seven months, seven months, 18 months, six months, 24 months, 12 months, 13 months, in one case four years, 20 months, and so on.

927. *Chairman.*] Will you give us the first date and the last on which these accounts were rendered; between what dates were they?—They were between the dates of 1802 and 1865. Here is a case in point: an account of Earl Russell, from the 1st of April 1865 to the 3rd of November 1865, that is, seven months; that was delivered three weeks afterwards. Then I have a case of an account of the Earl of Clarendon, from the 3rd of November 1865 to the 6th of July 1866, that is, eight months; it was delivered six months afterwards, therefore, within 14 months; and the requirement under the Exchequer and Audit Act is, that appropriation accounts shall be delivered within 20 months. These are two recent cases. I will hand in this paper stating the periods in the case of the Foreign Office. (*The same was handed in*, vide *Appendix.*)

928. Mr. *Pollard-Urquhart.*] Are these accounts printed and made public in the form you suggest?—No, they are not made public; the Secretary of State's account would be, as appears by the form I have handed in, simply an account of certain issues and certain expenditure. It would be a sub-account to the Treasury Appropriation Account of the whole Vote, but would not be made public.

929. But Mr. Hammond is of opinion that an account of certain issues, and certain expenditure, being published every year, would afford a degree of knowledge to foreign states that might be inconvenient. Surely, a greater degree of information would be afforded to foreign states by the rendering of the account and declaration annually, in the manner suggested by yourself, than is at present the case?—No, I think not.

930. *Chairman.* Would you state exactly what you think ought to be required?—What I think ought to be required is an account from the administering department of the sums received, and actually paid within the financial year. In this case the Treasury, as the administering department, would render the account of the Vote; the sum received would be the Vote of 32,000 *l.*, which would be entered on one side of the account; and on the other side of the account would be entered the payments, which would appear in a lump sum, actually disbursed by the several departments to whom the issues had been made by the Treasury within the financial year.

931. Without details?—Without details, and with the self-same vouchers I referred to, which are prescribed by the Civil List Act, and which the Comptroller and Auditor General may and would for the purposes of secret service hold sufficient.

932. That would give the lump sum expended within the year, by the Secretary of State?—Yes; but the actual smaller payments making up that lump sum would be known only to the Comptroller and Auditor General, as they have been known to his department from time immemorial.

933. They would not be published or adverted to in the report?—They would not be adverted

to in his report to the House of Commons unless there had been a wrong application of an issue. Of course, observations would be made upon the account in that case. Supposing a foreign minister had received 1,000 *l.* for secret service, but it appeared that from some cause, more or less urgent, he had applied it to some other purpose, of course the Comptroller and Auditor General would point out the fact that he had appropriated it to some other purpose than that for which it had been intended. But, except in such a case as that, no remarks could arise upon the account except this, that a certain amount had been voted by Parliament, and that a certain proportion of that amount, or the whole, had been disbursed by the several parties.

934. And showing the balance to be surrendered? — Yes; showing the balance to be surrendered at the end of nearly two years, as it would be. Mr. Hammond said that it was of importance that the Secretary of State should have a half-year's balance in hand for any emergency; I must say that I did not see the drift of that argument. Surely, the Foreign Secretary, if he is in need of money for some emergency, has only to appeal to the Treasury for an issue, and he can always get an issue for secret service for any purpose for which he may require it. It is not necessary that he should retain a balance in hand in order to meet an emergency; an emergency may be met by an application to the Treasury for an issue.

935. Mr. *Pollard-Urquhart*] After all, if that statement was rendered in the mode you suggest, it would not afford the Foreign Governments the means of ascertaining what had been done with our secret service money very much more than the account of 1865 does?—No; we have been dealing with the case of the Foreign Office, but there are three other offices concerned in the question; the Colonial Office, the Admiralty, and the Home Office. The Colonial Office have rendered 14 accounts; of those 14 accounts they have rendered 10, in from two to 18 months; surely, it is as important that the Colonial Office should keep their expenditure of secret service money secret, as it is for the Foreign Office to do so; yet they have rendered 10 accounts in from two to 18 months; they had a period of three years for rendering those accounts by the Civil List Act. The same remark applies to the Admiralty, and to the Home Office also, though not quite to the same extent in the latter case.

936. All these accounts to which you have referred are sent to you directly by the Foreign Office; they are not sent through the Treasury, are they?—No; all these accounts had, before the passing of the Exchequer and Audit Act, been sent to the Audit Office, as I explained, under the Act of 1785, which conferred powers upon the Commissioners of Audit to call for these accounts. When the Exchequer and Audit Act was passed, all other Acts having reference to audit were repealed, and by the cessation of the powers of the Commissioners, the Exchequer and Audit Act remained the only statute in virtue of which the Comptroller and Auditor General could look at, examine, or audit any account whatsoever. The practical result, therefore, is this, that if the Secret Service Vote were not audited under the provisions of the Exchequer and Audit Act, it would pass altogether unaudited, because the Comptroller and Auditor General has been deprived of the powers which the Commissioners of Audit exercised in virtue of their Act now repealed.

937. But if I understood Mr. Hammond right, he said that it was the wish of the Comptroller and Auditor General that the accounts should be submitted first of all to the Treasury, and then sent from the Treasury to the Exchequer and Audit Office?—As a sub-accountant of the Treasury, the Foreign Office must give an account to the Treasury. That account is sent with the account of the Treasury as the administering department to the Audit Office to substantiate the payments included in the Treasury account.

938. And Mr. Hammond, I believe, rather objected to that, saying that the fewer hands the accounts for secret service money passed through the better?—I propose to obviate that difficulty by empowering them to render the account which I have handed in of the lump sum, with a certificate to the effect that the vouchers had been sent on to the Audit Office in support of that lump sum. The Committee will therefore perceive that whatever information those vouchers contain would be as between the Foreign Office and the Audit Office as it always was before, and no information would be communicated to the Treasury. I propose that as an expedient to get over the difficulty which Mr. Hammond has suggested. In an ordinary case the accounting officer of the Administering Department sends in support of its accounts all the sub-accounts with their vouchers. He examines them, and sees that they are correct; he attests his account, and sends it forward with the sub-accounts. I propose in like manner that the Treasury in this case should send forward their appropriation account with the sub-account of the Foreign Office of the lump sum, and that the vouchers bearing out that lump sum in detail shall be sent to the Exchequer and Audit Office to come under their cognizance alone, without passing into the hands of, and therefore without any interference on the part of the Treasury.

939. Mr. *Stansfeld.*] What vouchers would those be?—Those vouchers would be simply the affidavits which the Civil List Act of 1782 prescribes. And though I were gifted with second sight I maintain it would be impossible for me to derive any information of a detrimental character, or any information from which any public inconvenience could result from these affidavits. The Audit Department is not, and never was, entitled to go into the particulars of the expenditure, or into questions of specific application where secret service money is concerned.

940. Do you consider that these affidavits would be "vouchers" within the meaning of the Exchequer and Audit Act?—I think they would be sufficiently so, and I will state my reason; in the first place, the nature of the service very clearly indicates the degree of examination which an auditor should give to such an account, and secondly the nature of the evidence and the degree of proof to substantiate an actual payment which should satisfy the auditor is by the Exchequer and Audit Act left greatly to his own discretion.

941. Then you think that it is not absolutely necessary under the Exchequer and Audit Act, that a voucher for a payment should be a receipt for that payment?—I do not propose to take a receipt;

Sir *W. Dunbar.*

25 May 1870.

receipt; I propose to take an affidavit of a payment.

942. And that you think would comply with the Exchequer and Audit Act?—Yes, that in my opinion would comply with the Exchequer and Audit Act.

943. *Chairman.*] Mr. Hammond's objection to the yearly account was, that it would reveal to the public the money that had been spent in each year, and that they would draw their own conclusions from the variations in amount, and from a knowledge of the occurrences that were taking place as to where the excess over the ordinary expenditure must have been spent; have you anything to say in answer to that?—What I have to say in answer to that is, that undoubtedly the account would show that a lump sum, let us assume of 20,000 *l.*, had been expended by the Foreign Office, and 5,000 *l.* by the Home Office, and another 5,000 *l.* by the Colonial Office; now supposing that that was shown, what is the public inconvenience that could arise from it? Would any one country know whether any portion of that 20,000 *l.* had been spent within its dominions, and is it not important for this country to know the total amount that is spent, and for the House of Commons to be enabled to exercise some control over the establishments which have the expenditure of such monies? It is obvious that in 1782, Parliament began to think that it was necessary to establish some control over that expenditure; and the Exchequer and Audit Act, as it appears to me, was intended to strengthen that control. Let me correct myself, Mr. Ryan reminds me that the expenditure of secret service money would not appear under the separate heads I have mentioned of the different departments, but would simply appear in the appropriation account rendered by the Treasury, as I have before stated, in one sum, so that the inconvenience complained of could not arise.

944. Supposing an account of yearly expenditure was required, if it appeared by the account that a larger sum was spent in one year than in the last, people would be able to form a shrewd guess as to where the excess had been spent?—They might be able to make a guess, but it could only be a guess; it would not appear from the account.

945. Still they would be able to make an inference; that is Mr. Hammond's objection?—Supposing 30,000 *l.* to be spent in one year, and 35,000 *l.* in another, persons might be enabled no doubt to draw a general inference that more money had been spent somewhere; but what would be the public inconvenience that could arise from it? How could the excess be imputed to the Foreign Office more than to the Colonial Office, or the Home Office? Under the existing circumstances in Ireland, might it not be possible that it might be attributed to expenditure in the Home Office, and yet that expenditure might not have occurred there, but in the Foreign Office. How could it be identified with the Foreign Office any more than with the office of any other Secretary of State entrusted with the expenditure of secret service money? No doubt people may make a guess that 10,000 *l.* had been spent in Ireland instead of 5,000 *l.*, but it might be a wrong guess. The fact might be that the additional 5,000 *l.* had been spent on foreign secret service; the account would not show where it had been spent.

946. Mr. *Liddell.*] Could you put in, in addition to the paper which you have handed in for purposes of comparison or contrast with that paper relating to the Foreign Office, a similar paper relating to the Home Office, showing the periods of rendering appropriation accounts of secret service money?—I will put it in. (*The same was handed in,* vide *Appendix.*)

947. Will you put in a similar paper relating to any other office for purposes of contrast?—I will put in a statement relating to the Colonial Office. (*The same was handed in,* vide *Appendix.*)

948. Do I understand you that as far as the Treasury is concerned, you think that the Secretary of State's receipt to the Paymaster General for the lump sum should be a sufficient discharge, but that you would require further, for a more efficient check, the affidavits from the different agents, foreign ministers, consuls, and others of the receipt and payment of those monies to be produced?—No; what I proposed was this, that an account should be rendered in the form in which I placed it in the hands of the chairman, stating on the one side the receipts of the Paymaster General, and on the other side the lump sum of the actual disbursements by the Secretary of State, and the officers under him.

949. Should that go from the Treasury?—That should go from the Foreign Office, and from the Colonial and Home Offices, and to the Treasury; it would simply show the Treasury the lump sum expended by each Secretary of State. For instance, in the case of the Foreign Office, it would show that (we will say) 15,000 *l.* had been advanced by the Treasury, 13,000 *l.* had been spent, and 2,000 *l.* remained as a balance, that the Secretary of State had put his attestation upon the account, to the effect that it was a true account of monies which had been disbursed by him, and under his directions for the purposes of secret service, and that the affidavits prescribed by the Civil List Act of 1782, as supporting vouchers, had been transmitted to the Exchequer and Audit Department. The effect of that would be this. The Treasury would only have the knowledge of the fact that a total sum of 13,000 *l.* had been expended; they would previously have had knowledge of the fact that 15,000 *l.* had been issued from the Exchequer; it would therefore convey no more information than they had before, or scarcely any more. The vouchers supplied by the Foreign Office to substantiate their total expenditure would be sent in, with the sanction of the Treasury, to the Exchequer and Audit Department, and would be examined in support of the 13,000 *l.* in detail, and the information that they contained would be confined, as heretofore, exclusively to the Foreign Office and the Audit Office, as proposed by Mr. Hammond. Similar accounts of secret service would be rendered to the Treasury by the other Secretaries of State, and the only expenditure that would appear in the appropriation account rendered by the Treasury, as the administrator of the Vote, to the Audit Office, would be the aggregate or lump sum expended by all the departments. What Mr. Hammond objects to is not the giving information to the Audit Office, but the Treasury; and in order to meet his objection to the Treasury having any information, which the separate vouchers might afford, I say in reply, send your account of disbursements in a lump sum to the Treasury; make the attestation on the account which

which I have described, and that you send on the supporting vouchers to the Exchequer and Audit Department. Then, whatever you consider important will be confined, as it is at present confined, without objection on your part, to the Foreign Office and the Audit Office. I hope I have made what I propose clear to the Committee. Sir *W. Dunbar.* 25 May 1870.

Mr. Morgan Hugh Foster, C.B., called in; and Examined.

950. *Chairman.*] I wish to call your attention to the terms of the 24th Section of the Exchequer and Audit Act, which says "no imprest or advance of the application, of which an account may not have been rendered to, and allowed by, the Accounting Department, shall be included on the discharge side thereof." The Treasury are the Accounting Department in the case of secret service money, are they not?—They are. Mr. *Foster.*

951. Then when money is issued to a Secretary of State, as in the case of the account of this Vote we are now upon, has an account of the application of that money been rendered to, and allowed by the Treasury?—No, it has not.

952. What is your opinion as to whether an issue of secret service money to the Secretary of State is an imprest or advance within the meaning of that section?—As regards the legal interpretation of it, I agree in the view that the issue to the Secretary of State is an imprest or advance. The question of policy is, of course, a different matter.

953. But you consider that it is an imprest or advance?—I cannot look at it in any other light. —(Sir *William Dunbar.*) I would observe that if the account consisted simply of imprests or advances, you would bring back the state of things which existed antecedent to 1782, which it was the object of the Civil List Act and the Act of 1785 to put a stop to. The Civil List Act and the Act of 1785 required accounts to be rendered, not of issues, but of payments. Throughout the whole of the last 63 years, the accounts rendered have been accounts of payments. To admit, therefore, an account of issues would be simply to revert to the state of things which existed before 1782, when secret service money was issued without account.

954. (To Mr. *Foster.*) Have you seen the case submitted to the law officers, and their opinion upon it?—No, I have not.

955. Lord *F. Cavendish* (to Sir *William Dunbar*).] If I understand you rightly, you would be satisfied if the account of secret service money was rendered 20 months after the expenditure?—They are not bound, under the Exchequer and Audit Act, to render it in less than 20 months from the commencement of the financial year.

956. But in the form you have put in you give an account of all the expenditure up to the 31st of March of a certain year, and that account is to be rendered on November the 30th?—Yes. Under the Exchequer and Audit Act all accounts of voted services are rendered for the financial year; and eight months are allowed by the Act for rendering that account. The account would appertain to payments made within the financial year, but it would not be rendered for eight months thereafter.

957. But sums might have to be accounted for on the 30th of November which had only been expended on the 31st of March; in that case an account would have to be rendered within eight months, not within 20 months?—The eight months are allowed in order to get in all accounts from all parts of the world, and therefore all payments would appear in that account of monies which had been expended in the course of the financial year. That is the principle upon which the Exchequer and Audit Act is based; and it applies to the army and navy as well as the Foreign Office services. What Parliament wants to know is what is the amount of money expended for any particular service within the financial year. The additional time is allowed for the accountant to get in all his sub-accounts and vouchers, and to render the account based upon them to the Comptroller and Auditor General. The account would, of course, not include a payment made on the 30th November, unless it applied to a service performed during the financial year ended 31st March preceding.

958. Mr. *Seely.*] Have you had accounts submitted to you which you were unable to audit?—Lord Stanley's account was submitted to me; and when the Treasury interposed to the effect that I was debarred from calling for an account of secret service money under the Exchequer and Audit Act I returned that account, because I had no other statutory powers to deal with it.

959. You said that the Treasury issued to the several Secretaries of State certain sums of money?—They do.

960. Do they not issue sums to other parties besides Secretaries of State?—For secret service they can only issue, I apprehend, to the persons indicated by the Civil List Act, but I am not aware of what they do. They may issue to other persons for aught I know to the contrary. It does not come under my cognizance.

961. (To Mr. *Foster.*) I will repeat to you the question I put to Sir William Dunbar—are there not other parties besides the Secretaries of State, who share in the receipt of secret service money?—The Vote for Foreign Secret Service Money is divided between the Foreign Office, the Home Office, the Colonial Office, the Admiralty, and the Chief or Under Secretary for Ireland in different proportions. Those proportions are determined by the Treasury, and not by any Act or other decision.

962. Have they any fixed rule?—The Treasury have the power of varying the proportions; but it is customary to give it in fixed proportions.

963. Has it been the practice for some years past to give the same amount to each department?—Yes, nearly.

964. Mr. *Stansfeld.*] Do you mean the same amount or the same proportion?—With the exception of the Foreign Office, which has now and then drawn less than its usual share, the other departments annually get the same amount.

965. Mr. *Liddell.*] Are those proportions assigned as soon as convenient after the money is voted by Parliament?—The proportions are not assigned annually. There are certain proportions in which the money is issued upon the demand of the department concerned. Upon any of these departments applying to the Treasury for an issue, we issue to that department an amount

Sir W. Dunbar. Mr. Foster. 25 May 1870.

equal to the proportion that is usually assigned to it. Supposing any variation were required, that would be a matter that would be dealt with under the consideration of the Treasury.

966. Mr. *Seely.*] Does the Treasury retain any portion of the vote for its own use?—None whatever.

967. *Chairman.*] But the proportions may be varied by the Treasury at their discretion?—Yes, at their discretion.

968. Mr. *Liddell.*] Then it would assume the form of an estimate, furnished by each department, of the amount which that department thought was necessary for its purposes during that financial year?—I think it would hardly be that. Take, for instance, the sum assigned to the Home Office. The Home Office knows the amount it is entitled to draw for, and it would restrict its requirements within that amount. If it were allowed to make an estimate for what it would require, it might possibly ask for a larger sum.

969. Supposing such an occurrence as a secret conspiracy in Ireland to take place, and supposing the consequent demand of the Irish Secretary, or the Home Office, as the case might be, was a sudden demand, and swelled very largely the amount that the department thought it would require, what steps would the Treasury then take in the event of such a largely augmented demand arising from a particular department; how would they meet the ordinary demands from the other departments?—Probably the course would be this: the Foreign Office having the largest share of the Secret Service Vote, there would be private communication between the Treasury and the Foreign Office, to know whether, under the circumstances, the Foreign Office could not spare a portion of that which is usually assigned to them.

970. As a matter of fact, do excesses upon this vote (I am speaking now of the whole Vote for Secret Service) often arise, necessitating supplementary estimates being submitted to Parliament?—Such a thing has, within my recollection, never occurred. The contrary has been the fact; that a portion of the vote has been surrendered.

971. *Chairman.*] In the Appropriation Act of 1866, which I have before me, and I suppose the others follow it, I see the schedule contains these words, "For Her Majesty's Foreign and other Secret Services, 32,000 *l.*," so that there is nothing in the Appropriation Act to confine it to any particular department?—None whatever.

972. (To Sir *William Dunbar.*) Have you taken legal advice upon the point we are discussing?—I have not taken legal advice upon the point; I told the Committee that I had two opinions in my possession, taken in 1798 and in 1807 respectively.

973. You think that the opinions then taken govern this case?—Yes; the opinion of the present law officers that the Civil List Act is still operative, and must therefore be set up as against the Exchequer and Audit Act, seems to be based upon the statement of fact, probably, and if so, erroneously, submitted to them, that the Foreign Office had always accounted for secret service money under the Civil List Act. The Commissioners of Audit, however, as advised by the law officers of 1798 and 1807, called for accounts of secret service under powers conferred by their own Act of 1785, and not by the Civil List Act of 1782, the provisions of which were held not to be applicable, except as regards the production of the affidavits, which were to be accepted as complete vouchers in support of the expenditure. The Secretaries of State had previously declined to render accounts, on the ground that they were not bound to do so under the Civil List Act; and their view was in this respect held to be correct by the Commissioners of Audit, under the opinions obtained from the law officers.

974. Mr. *Stansfeld.*] You have not seen the case submitted to the law officers of the Crown, have you?—No; I stated in the outset of my evidence, that from the meagre statement which had been made, I had drawn certain inferences; in the course of Mr. Hammond's statements, he more then once referred to the fact that the Foreign Office had rendered those accounts in virtue of the Civil List Act; I say that that was a misconception on his part. What I meant to indicate as the tendency of my opinion was, that inasmuch as the Civil List Act never applied to the case, there was no need of legislation, as the account could be rendered under the existing law, and without any public inconvenience; I wish to add a word or two more to evidence; I stated that under the Exchequer and Audit Act, the Accounts are deliverable within 20 months. I wish to add that they are not reported upon, nor will they come in any shape before the public, until nearly two years have elapsed from the commencement of the financial year.

975. *Chairman.*] We are now inquiring into the Accounts of Votes taken for the year ended 31st of March 1869?—Yes; under the Civil List Act, the Foreign Office Account for secret service must be delivered within three years, or at the latest, in the course of the third year. Under the present practice, it would be deliverable in the course of the second year and would not be reported upon, nor could the public come to any knowledge of the nature of these accounts for nearly two years. The difference as to time in the delivery of the account, as required by the two Acts, is about a year.

976. Mr. *Stansfeld.*] You mean for nearly two years from the commencement of the period to which the expenditure applied?—Yes; nearly three years. By the Exchequer and Audit Act nearly two years, and by the Civil List Act nearly three years. The past accounts of secret service have, however, in many cases been delivered, as I have shown, under two years.

977. *Chairman.*] We are now on this day inquiring into the accounts of votes for the year ended 31st March 1869, so that we are only a little over a year from the expiration of the financial year, the accounts of which we are inquiring into?—Yes, fully a year.

978. And your reports have run over a considerable space of time?—Yes, over the whole financial year ended 31st March 1869.

On Vote 18, Class 2.

979. Mr. *Pollard-Urquhart* (to Mr. *Foster*).] In the 11th paragraph of the Third Report of the Public Accounts Committee of last year it is stated: "The accounts of the Commissioners of Woods and Forests contain numerous items of expenditure, of which a part are for salaries and the expenses of officers, and the rest for disbursements in improving the landed estate of the Crown, None of this expenditure is voted by Parliament,

Parliament, whilst, at the same time, a large amount is voted by Parliament for the official establishment and expenses of the Commissioner of Woods and Forests. Your Committee were informed that this mode of dealing with the expenditure was settled in the year 1851, when the separation of the expenditure from the receipts of public monies had not been so fully carried out as at present, and the practice of voting the public expenditure had not been so generally adopted. Your Committee, therefore, recommend that the present mode of dealing with the expenditure of the Department of Woods and Forests should be again considered by Her Majesty's Government;" can you state to the Committee whether the present mode of dealing with the expenditure of the department of Woods and Forests has been again considered by Her Majesty's Government as recommended by the Committee?—I am not aware that it has as yet come under the consideration of the Government. There is a Treasury Minute, which states, "My Lords are desirous, before taking any steps upon the questions referred to in the 11th and 12th clauses of the Third Report" (of the Public Accounts Committee), "of bringing the subjects to which they relate again under the notice of the Committee; and they therefore consider it desirable to defer for the present any action in relation thereto." Mr. *Foster.* 25 May 1870.

980. Mr. *Stansfeld.*] The Minute does not imply that the subject was not considered by the Treasury?—No.

981. *Chairman.*] Then have you any considerations to bring before the Committee in reference to the suggestion made in the Report of last year?—I have not at present.

The Right Honourable JAMES STANSFELD, a Member of the Committee; Examined.

982. *Chairman.*] HAVE you any considerations to submit to the Committee with reference to the report of last year?—The suggestion of the Public Accounts Committee of last year was considered by the Chancellor of the Exchequer and the Board of the Treasury, and the inclination of the Chancellor of the Exchequer's opinion, and of the opinion of the Board was not in favour of the change of system suggested by the Committee; we thought that there were some serious objections to it; that it was inconsistent with the arrangements made in the Civil List Act at the beginning of the reign; that the public interest was in the net receipts from the Woods and Forests, and that there was no practical administrative reason making it to our minds imperative, or urgently desirable, that the change should be effected. That was the general conclusion of the Treasury when they inquired into the matter. They hope that the Committee will reconsider the question this year; and if they were inclined to reconsider it, it would be the duty of the Treasury to put evidence before them as to the nature of the objections which they entertain to the course suggested. There were two courses open to the Treasury; they might have come to a positive conclusion and embodied it in a Minute, or they might have adopted the course which they did adopt, instead of doing that, namely, to ask the Committee to reconsider the question, and perhaps reconsider it rather more fully than they did last year, and to bring before the Committee witnesses who could give them evidence upon the subject. Mr. *Stansfeld.*

On Vote 10, Class 3.

Mr. JOHN S. LEWES, called in; and further Examined.

983. *Chairman.*] WHAT are you in the Colonial Office?—Accountant and Examiner.

984. You are prepared to give us some explanation with regard to excess at Gibraltar, are you not?—Yes; a despatch was addressed to the Governor of Gibraltar, calling for explanations of excesses in regard to the estimate, and a reply has been received which I will hand in if you wish me to do so. Your question refers, I believe, especially to the excess under Sub-head A, "Salaries." That may, perhaps, be partly explained by a variation in the mode of classifying the expenditure. The Estimates were prepared upon an obsolete form, and when they reached this country they had to be reclassified, and it is possible that expenditure has been put in the Appropriation Account under Sub-head A, which was provided for in the Estimate under Sub-head D for the victualling of officers and convicts. There was a saving under Sub-head D of about 1,000*l.*, and that may go *pro tanto* in diminution of the excess on Sub-head A, "Salaries." But the main cause of the excess was, first, that the amount asked from Parliament was not sufficient to provide for the expenditure which might have been anticipated; and, secondly, that the number of convicts to be maintained was largely increased during the year. On the 25th January 1868, the governor was told that the number of convicts to be maintained at Gibraltar should be reduced to 300, and he was called upon to furnish an Estimate based upon that number of convicts, and to say what reductions in the staff of officers should be made, consequent upon that diminution in the number of convicts. This second Estimate was sent in by him; the original Estimate had been already before Parliament, and it was too late to make a change in it, but in its progress through Parliament 2,000*l.* was struck off the Estimate in consideration of the number of convicts at Gibraltar being reduced; no account, however, appears to have been taken of the fact that the officers whose services would be dispensed with, would have to be paid, until a decision should be arrived at upon their case by the Home Government. Mr. *Lewes.*

985. Then in fact the Vote was reduced by Parliament below the original Estimate?—Yes, below the first Estimate that was sent home; it was reduced by 2,000*l.* The second Estimate did not arrive in time to be laid before Parliament, and 2,000*l.* was struck off the first Estimate, but besides that there was a considerable aug-

Mr. *Foster.* Mr. *Lewes.* 25 May 1870.

mentation in the number of convicts to be maintained at Gibraltar in the course of the year. That number was raised in the course of the year from 300 to 500.

986. Lord *F. Cavendish.*] What was the cause of that change?—It was done at the instance of the Home Office, and chiefly, as it appears, in consequence of the increased numbers of convicts in the English prisons. At the commencement of the year, it was thought that 300 would be the number to be maintained at Gibraltar; but later in the year the Director of Convict Prisons said that the experience of the year would show whether the convict prisons in England or the number of convicts at Gibraltar should be increased. Still later in the year the Home Office said that it was very desirable that the Governor of Gibraltar should have 500 convicts, and added that there was a great pressure at the time on the English convict prisons.

987. *Chairman.*] Have you any explanation to give to the Committee as to any other sub-head of the Vote?—There was a question raised in the Comptroller and Auditor General's Report on the Appropriation Account, under Sub-head S.

988. That is for incidental expenses?—Yes; it was in regard to the widow of an officer who had been in the convict service at Bermuda. I believe the Committee wished for some information in reference to that point.

989. What have you to say about that?—Bermuda used to appear in the Convict Estimates, but it has been omitted from those Estimates since 1864, the establishment having been broken up in 1863. This was a service the propriety of which was not disputed. The Colonial Office finding that it was covered by the sub-heads which formed Part 2 of the Estimates, felt no difficulty in paying it and charging it to the Vote; but the Comptroller and Auditor General's difficulty seems to be that he does not find Bermuda in the details which formed part 3 of the Estimate. The Colonial Office felt that it had to be guided by the sub-heads which appear in Part 2 of the Estimate; and though Bermuda does not appear in the details in Part 3, we consider that it was covered by the sub-heads in Part 2.

Mr. Charles Lister Ryan, called in; and Examined.

Mr. *Ryan.*

990. What have you to say upon that point?—Bermuda not being included in the Estimate, and expenditure having been incurred for it, we thought it right to point it out: we have not disallowed the sum. Whenever there is a variation between the sum voted by Parliament and the actual expenditure, we think it right to call attention to it, in order that Parliament may do what it thinks proper.

991. (To Mr. *Lewes.*) Can you give us any further information upon this Vote?—I am not aware exactly what further information you want.

992. Can you give any information with regard to Western Australia and Tasmania?—Yes, with regard to Sub-heads A. and P. The year 1868–9 is quite an anomalous year as regards those Estimates. The Estimates were framed upon an obsolete form of Estimate, and when they reached this country they had to be re-classified, and there was very great difficulty in re-classifying them; you will find that the several sub-heads are linked together with notes, saying this service is provided for under another sub-head and so forth. There was great difficulty in separating the items; I have spent hours in examining tradesmen's bills, to classify the expenditure properly. The excess that occurred in Western Australia under Sub-head P., is explained by the note appended, by the department, to the Appropriation Account as far as we could give an explanation of it. I may also call the attention of the Committee to the great excess there was in Exchequer extra receipts. There was a net deficiency on the whole vote of 6,734 *l.*, but the Exchequer extra receipts realised in the year nearly 12,000 *l.* more than was expected; so that on the gross charge to the country there was a saving really of 6,000 *l.* instead of the excess that appears. And it may be said that this excessive expenditure in Western Australia is counterbalanced by the fact that they made repayments for stores they had drawn out there. There has been great difficulty, as appears by a despatch from the colony, in framing the colonial requisition for stores, on account of the difficulty of ascertaining the prices at which the stores would have to be purchased in this country, and their Estimates have consequently been defective in that respect. They know that they will want certain stores, but they cannot tell what they will cost here, and therefore they are in a difficulty in framing the Estimate of what they will require under any particular sub-head.

On Vote 23, Class 3,

Mr. Joseph Bedder, called in; and Examined.

Mr. *Bedder.*

993. *Chairman.*] What office do you hold?—I am Chief Examiner in the Office of Works.

994. It is stated in a note to Sub-head Q., "This is part of the Vote for 1867–8, and was received from the Treasury previous to the 31st of March 1868, to enable the managers to pay certain accounts incurred in that year. These accounts would have been paid previous to the close of the financial year 1867–8, but owing to the delay in auditing the accounts at the Office of Works in London, they could not be paid until after the commencement of the year 1868–9"?—Yes.

995. Have you anything to say about that?—It arose from an inadvertence. The accounts came to us on the 14th of March; at that time we are under great pressure in getting the accounts ready for the end of the financial year, and it is always our practice to postpone what we call Miscellaneous Accounts till the close of the year, so that the vote accounts shall be passed. Unfortunately in the nomenclature of the office,

Mr. *Foster.*
Mr. *Ryan.*
Mr. *Bedder.*

25 May 1870.

office, the present account not being one of our own Vote services, has been called a miscellaneous account, which it really is not. I gave my directions to my examiners to postpone all miscellaneous accounts, and throw the whole power upon the Vote Accounts, in order that we might get them through before the end of the month. The result was that the account for the Scotch prisons, though it is a voted service, not, however, being our own account, was put aside until the close of the year.

996. Then, in point of fact, it was an irregularity?—It was an irregularity.

997. It will not occur again?—No, it will not occur again.

Mr. GEORGE PIGOTT, called in; and Examined.

Mr. *Pigott.*

998. *Chairman.*] ARE you from the Office of Chancery in Ireland?—Yes.

999. Are you prepared to explain the causes of the variations between the expenditure and the grant with respect to the Court of Chancery, Ireland?—I am not quite prepared to explain them.

1000. Then why did you come?—I am not prepared to explain the variation altogether.

1001. Are you prepared to explain any of it?—I cannot give an explanation of the causes of the variation between the expenditure and the grant.

1002. You are under the Accountant General?—I am under the Accountant General.

1003. Did you come here by written instructions from the Accountant General?—The Accountant General himself directed me to come.

1004. Personally?—Yes, personally.

1005. Did you see the letter which was addressed to him by the clerk to the Committee?—I did.

1006. But you are not prepared to give answers upon the points referred to in that letter?—I am prepared to give answers, but not upon the point about which you first asked me.

1007. Mr. *Stansfeld.*] Have you got with you the letter from the clerk to this Committee addressed to Mr. Starkey?—Yes, I have; this is the letter which came with the summons (*producing a letter*).

1008. "A summons has just been issued by the Committee of Public Accounts for your attendance on Wednesday next. I am directed to inform you that you must be prepared to give a detailed and complete explanation of every question raised by the Comptroller and Auditor General, in his report upon the appropriation account furnished by you as Accountant General to the Court of Chancery, Ireland, and to answer any questions which the Committee may think fit to put to you thereupon." You read that letter before coming?—I did.

1009. *Chairman.*] Have you read the report of the Comptroller and Auditor General upon the Vote of the Court of Chancery, Ireland?—I have. I have got it here in my hand.

1010. Have you considered the different questions raised in his report?—I have.

1011. Are you prepared to give any explanation upon any of the points?—The explanation of the causes of variation between expenditure and grant, I think, was given before.

1012. By whom?—By the Accountant General.

1013. Whom was it given to?—I am not aware.

1014. The report says: "No explanation of the causes of variation between expenditure and grant has been given"?—No explanation was given.

1015. Are you prepared to give it now?—I am not exactly prepared to give it. I can only say this, that it is impossible to estimate the amount that will be required every year for scrivenry for the different offices. It varies so much that it is impossible to make a correct estimate of it.

1016. What point are you prepared to give an explanation to the Committee upon?—I can obtain that information for you.

1017. We want some person here who will give an explanation?—Perhaps you will be kind enough to go on to the next matter on which you want explanation.

1018. Are you able to tell us how it happened that one of the clerks in the Taxing Office was omitted from the Estimate?—Yes; I can tell you that. It was fully explained in a letter to Mr. Blackwood, a copy of which I have got here. Here is Mr. Blackwood's original letter (*producing the same*). It says: "Query, No. 6. Taxing Office. Second clerk. Authority required for the second clerk." The answer is, "No new clerk in the office."

1019. There were two clerks there before; why was only one estimated for?—It was an error.

1020. Then with regard to the court-keeper in the Rolls Court, the 60 *l.* instead of 68 *l.* was an error?—I have a note here to the effect that the court-keeper of the Rolls has not been paid 68 *l.* The Auditor General states that the court-keeper of the Rolls has been paid 68 *l.*

1021. What has he been paid?—He has been paid 52 *l.* 10 *s.*

1022. Here is the letter from the Accountant General's Office, the 16th of May. It says this: "I find, on reference to the Paymaster General, that Mr. Supple received the sum of 52 *l.* 10 *s.* for the year 1868-9, which is the amount of salary he is entitled to as court-keeper of the Rolls Court. The court-keeper of the Court of Chancery, Mr. Osborne, receives a salary of 68 *l.* per annum, although, by an error, the sum of 60 *l.* was all that was provided by the Estimate of 1868-9." That is so; is it?—Yes, that is so; the two salaries together will amount to exactly 120 *l.*

1023. Mr. *Pollard-Urquhart.*] This discrepancy merely arose from a sort of confusion and error in making out the Estimate?—Yes; it was the first Estimate that we ever made out, and it was not so correctly done as it ought to have been.

1024. In short, the whole Estimate was a bungle?—No, not altogether; there were a good many errors in it.

1025. A good deal of it was a bungle?—No; there were three or four errors in it, but I think not more than that.

1026. *Chairman.*] Paragraph 7, of the Comptroller and Auditor General's Report, states, "Included under this sub-head are two special payments of 125 *l.* each to the two registrars for assisting in the preparation of the rules and tables of these rendered necessary by the Chancery Act, 1857." The Treasury letter authorising this expenditure to be made out of the Vote for

Mr. *Foster.*
Mr. *Ryan.*
Mr. *Pigott.*

25 May 1870.

for Incidental Expenses, directed that it should 'be shown as a separate item in the account of the application of that vote;'" that was not done; can you give any reason for that?—The letter from the Treasury directing the payment is in the Audit Office. It is dated the 8th of December 1868. As well as I can recollect, it directed it to be charged under Sub-head B, "Incidental Expenses." That letter could be referred to in the Audit Office, if necessary.

1027. Mr. *Stansfeld.*] That letter is recited in the Auditor General's Report; it directed that the expenditure in question should be shown as a separate item in the application of the vote; why was not that direction carried into effect?—Have you got a copy of that letter?

1028. I do not know that we have, but I think we may rely upon the Comptroller and Auditor General; do you dispute the accuracy of this statement of the Comptroller and Auditor General's?—No, certainly I do not.

1029. Why was not that direction carried into effect?—I suppose we did not understand it at the time, that is the fact; we were new at it.

1030. *Chairman.*] Paragraph No. 8 says that there were payments for scrivenry made in the year 1867-8 charged against the Vote 1868-9; what do you say to that?—By referring to my book, I find that these payments were apparently made on the 2nd and 3rd of April 1868. I think it must have been merely a mistake in the date; it does not affect the account or the balance at all. If the dates were altered to the 2nd and 3rd of April, it would be all right.

1031. What authority would you have for altering the date; which is the correct date, April or March?—The authority would be that it would make the dates correct; they are incorrect at present, and if they are altered they will be made correct.

1032. But the bills were paid, were they not, in March?—No, they were not.

1033. When were they paid?—They were paid on the 2nd and 3rd of April.

1034. They were actually paid in April?—Yes; the first was paid on the 2nd and the other on the 3rd of April; they were dated in March.

1035. Was the receipt dated in March?—Yes.

1036. And you say that it ought to have been dated in April?—Yes.

1037. Mr. *Pollard-Urquhart.*] You just forgot the day of the month; was that it?—I did not do it at all; the clerk who pays the incidental payments paid it; I had nothing to say to it.

1038. *Chairman.*] Paragraph No. 9 is "Extra payments to salaried clerks, amounting to 77 *l.* 8 *s.*, formed the subject of inquiries addressed by this department to the accountant, by whose answers it appears that they were made for making out the annual return, pursuant to Act 4 & 5 Will. 4, c. 78, s. 16, and sanctioned by the Lord Chancellor, and that they are 'customary allowances.' Attention was thereupon drawn to a Treasury Minute, dated 1st of November, 1853, which contains the following directions, namely, that in no case is extra salary or gratuity to be allowed to persons on the establishment of an office, without previous Treasury sanction," which it appears was not obtained in this case: what have you to say about that?—Before this new system was commenced, everyone was paid out of the Suitors' Fee Fund Account. All the salaries of the court were paid out of that account, and there were several extra payments to clerks for doing special duties, which were paid to them beside their salaries. They have been receiving these sums for a number of years. The Accountant General was not aware that the Treasury would not allow them any longer, and he paid them. The order was sent in to him by the head of the office in which the work was done, and he paid them until he got special directions from the Treasury to cease paying them.

1039. Mr. *Pollard-Urquhart.*] Has the Treasury authority been furnished since?—Yes; there is a Treasury authority furnished.

1040. At what time was the Treasury authority furnished for making these payments?—There were certain payments allowed.

1041. Mr. *Liddell.*] They have been disallowed since, as I understand?—Not those; there were certain special payments made that were disallowed by the Treasury. There was a sum for stationery, and also certain payments to the clerks for making out annual returns, which they did, I understand, after hours.

1042. Mr. *Pollard-Urquhart.*] And the Treasury refused to sanction these extra salaries and gratuities to the clerks?—Yes, but they had been paid at the time; they were paid before the Accountant General knew that they would not be allowed.

1043. *Chairman.*] He knows now that they will not be allowed?—I do not know how it will be if the Treasury do not allow those which are absolutely paid. How is the money to be refunded?

1044. I suppose "how it will be" will be this: that if they are not allowed, the person who made the payments without authority will be at the loss?—He had not at the time received a special authority not to pay them.

1045. But he had not received a special authority to pay them?—If a clerk had been in the habit, for several years, of receiving a sum of money for doing a certain service, would it not be a hard thing to stop it all at once without a special direction? If the Accountant General had received a special direction from the Treasury, he would have complied with it.

1046. Under paragraph 11, certain questions were put to the Accountant-General, to which no answers have been given; have you any reason to give why those queries were not replied to; those questions are these: "First, whether, and if so, what directions have been issued by the Treasury for carrying into effect these clauses of the 30 & 31 Vict. c. 44; second, what are the circumstances which are regarded as excluding the office of the custody of papers in lunacy from the provisions contained in the clauses referred to; third, whether any, and if so, what other officers besides the chief clerk of the above office are paid wholly or in part by fees?—Does that mean any other officer in the same office, that is, in the Lunacy Office, or does it mean any other officer in the Court of Chancery?

1047. I apprehend that it means any other officer in the Court of Chancery?—In that case, there are no officers paid by fees but this particular officer.

1048. You did not attend to my question: why was no answer sent to those questions; I was not asking you to give the answers now; if you read the paragraph, you will see that those questions were put to the Accountant General, which I have read to you, and then it is said, "No answers

to

t

o these questions have been received;" why was no answer sent to those questions?—I really do not know; I am unable to answer that question.

1049. Can you give an answer now to them?—I can.

1050. What is the answer to the first?—I must refer you to Dr. Hancock's statement for that; this is it (*producing a letter*).

1051. Will you read it?—It is very long.

1052. Will you hand it in?—Certainly; and there are several pencil memoranda by the Lord Chancellor upon it. (*The same was handed in*, vide *Appendix*.)

1053. Does it answer all these three questions?—It answers the first two, but with regard to No. 3, "Whether any, and if so, what, other officers besides the chief clerk of the above office are paid wholly or in part by fees?" he answers that question, but he merely refers to that particular office.

1054. (To Mr. *Ryan*.) But I take it that that question referred to all the officers of the Court of Chancery?—Yes.

1055. Not to the officers in the Lunacy Office alone?—No, all the officers embraced by the Acts quoted. (Mr. *Pigott*.) There are no others paid by fees but that particular officer.

1056. Are there no others at all?—There are no others at all in the Court of Chancery, that I am aware of. (Mr. *Ryan*.) The object of the question was to get an exhaustive statement as to whether this payment by fee as well as salary applied to any other officer. (Mr. *Pigott*.) As I have stated, that is the only officer paid by fees.

1057. Is he the only officer who receives any fees at all?—He is the only officer who receives any fees at all, and there are no stamps received in the office either, the fees of the several offices being converted into stamp duties.

1058. Mr. Starkey is not well, I believe?—He is not well.

1059. Mr. *Seely*.] How soon do you think Mr. Starkey will be able to come here?—I really do not know; he has been in ill-health for the last month or two; he can furnish a medical certificate if the Committee require it.

1060. Mr. *Stansfeld*.] Does he attend to the duties of his office?—Yes.

1061. He is not confined to his house?—No.

1062. Mr. *Liddell*.] What office do you yourself hold in the office of the Court of Chancery?—I am one of the senior clerks in the Accountant General's Office.

1063. *Chairman* (to Mr. *Foster*).] Have you anything further to say upon the question as to who should account for the vote for the Court of Chancery in Ireland?—I think it would be desirable that the Accountant General should not only account for these votes, but also for all the money he has charge of. I consider it to be very desirable that the Accountants General of the Courts of Chancery should be Treasury officers, not only as regards the vote, but as regards all monies for which they are responsible; I think all public money ought to be in the charge of Treasury officers. Mr. *Foster*. Mr. *Ryan*. Mr. *Pigott*. 25 May 1870.

1064. Is the Accountant General appointed by the Lord Chancellor in Ireland?—No, by the Crown, see 23 & 24 Geo. 3, c. 22, s. 2.

1065. Under statute or by custom?—I am not aware.

1066. There is an Act of Parliament regulating the office of the Court of Chancery?—Yes.

1067. That is a recent Act, is it not?—Yes; I am not sure how far that recent Act touches the appointment of the Accountant General.

1068. Mr. *Sclater-Booth*.] How is it in regard to the English Court of Chancery?—The same rule applies there.

1069. You make the same recommendation with regard to it?—Yes.

1070. How do you propose to carry that recommendation into effect?—I would convert the office dealing with the funds under the Court of Chancery, into a similar department under the Treasury.

1071. It would be a very expensive thing to do, I presume?—I think it would lead to an enormous economy.

1072. But the Accountant General of the Court of Chancery is a very heavily salaried officer, is he not?—He gets a very large salary at present; it will be in the next instance cut down to 2,000 *l*. a year.

1073. You could hardly alter his position without giving him the option of retiring, could you?—No; but I think it would be a very cheap arrangement.

1074. *Chairman*.] Before you come again, will you refer to the Act of the 30 & 31 of Vict. c. 44, and see whether the appointment of the Accountant General is regulated by that Act?—Yes.

1075. And also see whether any legislation will be required to make the alteration you suggest?—Yes.

Friday, 27th May 1870.

MEMBERS PRESENT:

Mr. Candlish.	Mr. Pollard-Urquhart.
Lord Frederick Cavendish.	Mr. Sclater-Booth.
Mr. Ward Hunt.	Mr. Seely.
Mr. Liddell.	Mr. Stansfeld.

THE RIGHT HONOURABLE GEORGE WARD HUNT, IN THE CHAIR.

Sir WILLIAM DUNBAR, Bart., Mr. MORGAN HUGH FOSTER, C.B., Mr. HENRY COLE, C.B., Mr. NORMAN MCLEOD, Mr. CHARLES VINE, Mr. CHARLES LISTER RYAN, Mr. ANTHONY L. SIMKINS, and Mr. WALTER C. COCKS, called in; and Examined.

ON VOTE 9.

Sir *W. Dunbar.* Mr. *Foster.* Mr. *Cole.* Mr. *McLeod.* Mr. *Vine.* Mr. *Ryan.* Mr. *Simkins.* Mr. *Cocks.*

27 May 1870.

1076. *Chairman* (to Mr. *Ryan*).] IN the second paragraph in your Report upon Vote 9, Class 4, Science and Art Department, there appears the following remark: "From the manner in which the account has been rendered it has been found impracticable to ascertain the correctness as to classification of the expenditure charged under the several sub-heads of the grant; and consequently there has been no alternative but to accept the classification as shown in the account;" that is a general observation upon the classification of the expenditure. Will you point out the defect in the way in which the account has been rendered which called for that remark?—I am afraid that to do that accurately would require the Committee to go into a very voluminous examination of the details of the account. The account was so confusedly rendered that there was no time between the 30th of November, when the account was transmitted to the Exchequer and Audit Department, and the time when it was necessary, by Act of Parliament, that the Report should be made to the Treasury, for us to go through all the items, and to check the classification so as to ensure accuracy. We were, therefore, obliged to accept the classification that the accountant has made, and to put a general remark to that effect in the Report.

1077. (To Mr. *Vine*.) Did you give any assistance to the Science and Art Department, with regard to the preparation of their account?—No, they already had books in the department. There was an accountant and book-keeper, and an assistant book-keeper in the department. I found, upon an inspection of the accounts, that I should not be able to prepare a statement of the balance on the night of the 31st of March 1868, I therefore did not think it right to postpone the other votes, and in June 1869 Mr. Foster and myself made a report to the Treasury. If you will allow me, I will read an extract from that Report.

1078. Will you do so?—"Previous to the 31st March last we had the honour to report to your Lordships the savings and deficiencies on the larger portion of the Civil Service Votes to the 31st of March 1868. Before that date we had made such an inspection of the books of the Science and Art Department as satisfied us that they did not afford the means of arriving at a correct balance on that vote. In order not to delay the settlement of the larger portion of the Civil Service Votes, we postponed our investigation. We have now resumed our labours, and find our first impression fully confirmed. From the commencement of the service no comparison has been made between the books of the department and those of the Paymaster General. In the first instance, no returns were furnished by the Paymaster General; subsequently, when furnished by that officer, they were not compared with the books of the Science and Art Department, and moreover, did not contain the whole of the payments chargeable to the vote, but only such portion as had been authorised by the Science and Art Department. No separate accounts are opened in the ledgers under the heads of the 'Exchequer,' 'Paymaster General,' and 'Orders Payable,' but only one general account of the Exchequer, into which all the others have been merged. Under these circumstances, your Lordships will readily perceive that the result arrived at from the books of the Science and Art Department cannot be relied upon." The books of the Science and Art Department show on the night of the 31st of March, a balance on the account of the unappropriated grant, that is a saving on the vote, of 69,935 *l.* 17 *s.* 1½ *d.*, whereas the real saving upon the vote, not taking into consideration any of the questions raised by the Controller and Auditor General was only 19,302 *l.* 5 *s.* The amount in the Exchequer and in the hands of the Paymaster General was, according to the books of the Science and Art Department, 66,199 *l.* 2 *s.* 8½ *d.*, whereas there was only a balance in the hands of the Paymaster General of 34,087 *l.* 14 *s.* 7 *d.* To arrive at this result, we have been obliged to go through the accounts of the Science and Art Department, and recast them from the year 1853–4. That was a very laborious thing to do, but we accomplished it, and on the 22nd of December last we reported to the Treasury that we had done so, and submitted the results.

1079. Will you read that Report to the Treasury?—"We reported to your Lordships on the 30th

30th of June last, that before we could ascertain the correct balance on the 31st March 1868, to be surrendered in respect of the vote for Science and Art, it would be necessary to recast the accounts from the year 1853–4. This task has been accomplished, and a comparison has been made from that date between the books of Science and Art and those of the Paymaster General. We have now the honour to submit the result of our labours, as shown in the following statements: A.—A statement of the liabilities and assets of the Science and Art Department on the 31st March 1868. B.—A statement accounting for the difference between the balances recorded in the books of Science and Art under the heads of 'Unappropriated Grant,' 'Exchequer,' and 'Paymaster General,' certain other explanatory statements, and also a list of imprests to sub-accountants, were enclosed. A considerable portion of the discrepancies now ascertained to exist in the books of the Science and Art Department has arisen from the omission to make a periodical comparison of the orders issued by the department with the actual payments made by the Paymaster General; in making the comparison, however, between the two accounts, some points have been brought under our notice, to which we feel it our duty to call your Lordships' attention; 1. Receipts and payments to the extent of over 3,000*l.*, on account of the Royal School of Naval Architecture, have been altogether omitted from the record in the books of Science and Art, and the balances also in the accountant's hands of 245*l.* 16*s.* 10*d.* on 31st March 1866, increased to 506*l.* 19*s.* 2*d.* on 31st December 1866, remained unrecorded in the books until the 14th July 1868; this delay in the record would appear to us to require explanation. Then there is another point with respect to 'Imprests'; 2. Imprests to the extent of 1,639*l.* appear in Statement A., to be outstanding on the 31st March 1868; we have been furnished with a list N. 5, and your Lordships will observe that some of these imprests were made as far back as the year 1863, and many in the years 1865 and 1866, and that the settlement in respect thereof has in no case been made earlier than May 1868, and that several remained unadjusted on the 3rd December 1869; we think that some explanation of the delay in the adjustment of these advances should be called for."

1080. What is the date of that Report to the Treasury?—The 22nd of December.

1081. Last December?—Yes, December of 1869.

1082. Are you able to say whether the department were called upon to give explanations accordingly?—A copy of this Report was transmitted to the Comptroller and Auditor General, and a copy of the Report, together, I believe, with the reply of the Comptroller and Auditor General, was transmitted to the Science and Art Department.

1083. When?—In March last; and up to this morning no reply has been received at the Treasury.

1084. (To Mr. *Cole.*) You have heard the Report read; what was the answer to it?—I think specific answers have been sent to the Treasury to day to the Report of the Commission of Public Accounts.

1085. You say that the answer has gone?—Yes, it went this morning.

1086. Is it at the Treasury now?—Yes.

1087. Then it is desirable that we should see the letter; have you got a copy of it?—Yes; there was a covering letter signed by Mr. Foster this morning, transmitting the report of the Accountant upon this statement.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Cole.*
Mr. *McLeod.*
Mr. *Vine.*
Mr. *Ryan.*
Mr. *Simkins.*
Mr. *Cocks.*

27 May 1870.

1088. What I understand is this, that after the receipt of that Report of the Commission of Public Accounts which was sent to you by the Treasury, you addressed an answer to the Treasury, which answer went this morning?—Yes.

1089. (To Mr. *McLeod.*) I presume you have a copy of the answer?—Yes; the letter signed by Mr. Foster was merely a covering letter, and this is a copy of the answer.

1090. This is substantially the answer?—That is substantially the answer.

1091. Will you read it?—I will first read the Treasury letter: "I am commanded by the Lords Commissioners of Her Majesty's Treasury to transmit to you, for the information of the Lords of the Committee of Privy Council on Education, a copy of the following correspondence, viz., of a Report, dated 22nd February, of the Comptroller and Auditor General, and of its enclosure, relative to the accounts of the Science and Art Department, together with an extract from a Report, dated 22nd December 1869, of the Public Accounts Commissioners, and a copy of the enclosures of that Report; I am to request that their Lordships may be furnished with any remarks which the Lords of the Committee of Privy Council on Education may wish to offer on the subject;" that is dated the 12th of April 1870, so you see that it is April, not March.

1092. Mr. *Liddell* (to Mr. *Foster*).] Will you tell the Committee, as this is a new phrase, the exact meaning of "the Commission of Public Accounts?"—In consequence of the Exchequer and Audit Departments Act which required Appropriation Accounts to be kept by every public department, it was necessary to appoint officers to establish forms of account, and to instruct the different departments how to keep them, for in most public departments no accounts whatever had been kept; we had therefore to deal with, I suppose, nearly 100 departments, who would have to render Appropriation Accounts under this Act, and the Treasury appointed myself and Mr. Vine to be the Public Accounts Commissioners, to carry out the new Appropriation Accounts which were required under that Act.

1093. *Chairman.*] That is now a standing Commission, is it not?—It is now a standing Commission, and there is very much still to do in order to keep the accountants up to the mark in keeping their accounts in correct form, to answer inquiries, and to give explanations. The officers charged with rendering these accounts were unacquainted with the mode of keeping accounts.

1094. You said that some departments kept no accounts; you meant, I think, that they kept no accounts in the technical sense, did you not?—I think some departments kept no accounts whatever. They issued directions to pay, and those directions were sent to the Paymaster General; but many of them did not keep anything that could be called an account.

1095. Mr. *Liddell.*] I presume that when the new machinery is complete, the necessity for the existence of this Public Accounts Commission will

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Cole.*
Mr. *McLeod.*
Mr. *Vine.*
Mr. *Ryan.*
Mr. *Simkins.*
Mr. *Cocks.*

27 May 1870.

will cease?—In time it may cease; but I think it will be some years before the departments are brought into full training. (Mr. *Cole.*) Before this statement is put in, which is said to be the statement of the Accountant of the Science and Art Department, I wish to state that during the last year, I have been appointed the accountant; responsibility for the accounts was added to my other duties, practically the account keeping of the department has never been under the secretary at all. The accounts for several years were under the accountant of the Board of Trade; and the accountant of the Board of Trade laid down the form of the books which were to be kept. When the department was transferred from the Board of Trade to the Education Office, an accountant proper was appointed, who is at present called the accountant, though I too am called the accountant.

1096. *Chairman.*] The Treasury made you the accountant under the Exchequer and Audit Act?—Yes.

1097. But you have in your department a subordinate officer who is what you in your department call the accountant?—Yes; and he has been so for several years. I may say that I have not yet become sufficiently acquainted with the new system that has been established to be able to hold myself personally very responsible for it; and therefore I would ask the Committee rather to receive the answers of the assistant secretary, who has always looked after the accounts, who has always certified the accounts, and the gentleman who has always been called the accountant; and to accept the fact that the correspondence with the Treasury has always been with the vice-president, and not with the secretary of the department, or the Director of the Kensington Museum. I have no doubt that we shall work into a right system, and without casting off any responsibility from myself I only desire to make it clear that personally I really have had very little to do with the matter of the accounts until lately; I have not had time to make myself master of all the details, and if I am to be held responsible I hope that many improvements will take place.

1098. *Chairman* (to Mr. *McLeod*).] Will you continue reading the statement on behalf of the Science and Art Department?—This is the reply which went in to the Treasury to-day to the various queries:—"First, as respects the discrepancies between the books of the Science and Art Department and those at the Pay Office, I beg to state that no comparison of the orders issued by the Science and Art Department with the actual payments made by the Paymaster General was made while the accounts were rendered under the supervision of the Board of Trade. When the department was transferred to the Board of Education in 1857, the first effort of the present accountant upon his appointment was, to try and compare the balance to be surrendered at that period, as shown by the books of the department with those at the Pay Office. Mr. Williams, the book-keeper, spent two days at the Paymaster General's office, comparing the books, when it was found impossible to ascertain the discrepancies without checking each item from the commencement in 1853; to this objections were raised at the Pay Office, and the examination was then given up. With respect to paragraph No. 1, relative to certain receipts and payments on account of the Royal School of Naval Architecture, the transactions referred to were omitted from the accounts of the department by the express directions of the Commissioners for auditing the Public Accounts (see extract from letter, dated 3rd October 1865, herewith, marked A.); and as regards the delay in recording or paying over the balance, the delay arose owing to a misunderstanding between the Admiralty and the department, the Admiralty having applied the fees received from private students, which were introduced into the Imprest Account, to the payment of Dr. Woolley's remuneration, which the department considered should have been paid out of the sum voted for "professional assistance," and not out of "fees;" the accountant was therefore directed not to pay over any balance until further action had been taken. The balance in the accountant's hands on the 31st of March 1866, was 245 *l.* 16 *s.* 10 *d.*, and that in the hands of the Paymaster General 261 *l.* 2 *s.* 10 *d.*, making together, 506 *l.* 19 *s.* 8 *d.* The accountant advanced, on behalf of the Admiralty during the month of April, out of the balance in his hands on the 31st March, the sum of 195 *l.* 7 *s.* 11 *d.* in payment of wages and subsistence allowance of dockyard pupils, thus reducing the balance on the 30th April to 50 *l.* 8 *s.* 11 *d.*, and subsequently in May, June, and July he paid further sums to the principal of the school, and other teachers, amounting to 127 *l.*, consequently no funds whatever belonging to the Admiralty remained in his hands on the 31st December 1866; on the contrary the Admiralty were considerably indebted to the department for advances at that date in respect of wages, &c. of Admiralty students. Of the imprest outstanding on the 31st March 1868, only one imprest (25 *l.*) was issued so far back as 1863, and that was granted to Mr. Wylde, one of the inspectors, who omitted to render an account of his disbursements previous to his going over to Paris as secretary to the Executive Commissioners of the Exhibition of 1867; the whole of the imprests in question, with the exception of 12, amounting to 182 *l.*, were adjusted after the close of the Paris Exhibition; the remainder have since been closed; these advances were made on account of travelling expenses to and from Paris and London, and as it was doubtful whether these expenses should not be charged to the vote for the Paris Exhibition, some of the accounts were kept open till the following year. Separate accounts for each Imprest Accountant have now been opened in the ledger, as suggested in the Commisioners' Report. With respect to the three receivable orders, one order for 4 *l.* 2 *s.* 6 *d.* was for 'Examples' supplied to the Council on Education. This amount does not appear to have been paid to the Paymaster General; and as so long a time has now elapsed since the transaction took place, it is proposed to deduct that sum from the amount to be surrendered for the year 1868. Another, for 123 *l.* 9 *s.* 5 *d.*, refers to negatives and examples supplied to Messrs. Chapman & Hall, the agents of the department; 70 *l.* 2 *s.* 3 *d.* of this sum was charged to the agents for negatives belonging to the department, then in their possession, but which negatives they afterwards returned into stores, leaving a balance of 53 *l.* 7 *s.* 2 *d.* only due to the department. This amount has since been paid to the Paymaster General by Messrs. Chapman & Hall. The third order, for 19 *l.* 1 *s.* 11 *d.*, is the amount that was received for admissions to the museum and libraries, sale of catalogues, &c., for the period from the 21st to the 31st October

October 1866; this amount, in some unaccountable way, does not appear to have reached the Paymaster General. It was not the practice at the Pay Office at that period to give receipts upon payment of money into that office; consequently, it is now impossible to say to whom the remittance was intrusted. However, as the accountant is responsible for the loss, he will make good the amount by paying it into the Bank of England." That is the statement which went into the Treasury to-day, with a covering letter signed by Mr. Foster, and that is the explanation of the various questions that were raised by the Commissioners of Public Accounts, as read by Mr. Vine to the Committee a few minutes ago.

1099. (To Mr. *Vine.*) Have you followed the explanation with your Report?—I have; but I would suggest that the Comptroller and Auditor General should be called upon to state his views with regard to the clearance of the imprests which were outstanding on the night of the 31st of March 1868.

1100. What sum did you say was outstanding under the head of "Imprests"?—£. 1,639, on the night of the 31st March, and several of these imprests had been made years before; one in the year 1863, and others in the years 1865 and 1866.

1101. (To Mr. *Ryan.*) Have you anything to observe upon that?—Only this, that a considerable portion of these imprests have been cleared, but that the accounts of February 1870, which are the last that we have in the office, show that there are still several amounts of uncleared imprests, of which I have a statement here.

1102. Will you hand it in?—I will. (*The same was handed in.*)

1103. I see that in the statement of imprests which you have just handed in, of January 1870, there are mentioned four imprests to Mr. Cappe, amounting together to 380 *l.*, and imprests to a great many persons for travelling expenses, amounting in the whole to 120 *l.*; and there are remarks in that paper stating that those imprests were still unaccounted for?—They were unaccounted for up to the date of February, which was the last date of the accounts received at the Exchequer and Audit Department.

1104. (To Mr. *McLeod.*) Can you give any account of the reason why those imprests are still uncleared?—They were uncleared in February, and I beg to state, frankly, to the Committee that I think it was to be regretted that many of these imprests were allowed to remain so long unadjusted. I think in several instances, they might have been adjusted sooner. There were small sums either to be paid to the parties who had the imprests, or to be paid by the parties who held the imprests, in the shape of balances either way. They were allowed to go over from time to time unnecessarily, but they have now been adjusted.

1105. The whole of these mentioned in this paper?—Yes, with the exception of the imprests to Mr. Cappe. Mr. Cappe is the agent of the department, and he was also agent for the Paris Commissioners, and there has been some little difficulty in dividing the charges made in his accounts, but the whole of those accounts have now been received. I speak with this reservation, until the accountant comes, that I am not quite sure whether his account has now been adjusted or not; but, I believe, within the last day or two it has.

1106. You mean Mr. Cappe's account?—Yes.

1107. Then will those accounts of these disbursements by these imprest accountants be sent to the Audit Office?—Yes, they will be sent to the Audit Office; we send our accounts monthly to the Audit Office, and the adjustment of these accounts will appear in the month in which they have been adjusted.

1108. *Chairman* (to Mr. *Cole*).] Referring to the appropriation under head B., there is a very large deficiency under the third sub-head of that Head B., amounting to 3,142 *l.* 4 *s.* 7 *d.* Is there any explanation to be given why the expenditure under that sub-head was so largely in excess of the estimate?—The explanation is that the demands from the schools of art for payments on results were much in excess of what the estimate provided for. That head had been reduced. It was at first proposed to be larger than was actually voted, and it was found by experience that more money was required, and that the schools had a right to demand more than we had money voted to pay them with.

1109. Are the payments to managers of schools by results?—Yes, to managers of schools of art. The payments on results are earned by the students, and the payments are made to the managers of the schools.

1110. On the results?—Yes.

1111. Mr. *Liddell.*] With regard to Sub-head B. 2, "Naval Architecture Salaries," there is a deficiency of 944 *l.* 10 *s.* 2 *d.*; can you explain that?—That is not a real deficiency; the Admiralty were more in our debt than that. The system is that the Admiralty takes a vote on behalf of its students, and acts as it were *in loco parentis* for its students, and the Science and Art Department is the contractor for teaching these students. I am sorry to say that the Admiralty were allowed not to pay up as quickly as they ought to have done, and hence there is an apparent deficiency; but, in truth, it is only a matter of account.

1112. *Chairman.*] That was explained, I think, in the paper which is before us?—Yes, I think so. It is not that there was a real deficiency; on the contrary, in the balance of the account there was really a saving.

1113. Mr. *Liddell* (to Mr. *Simkins*).] Am I right in imagining that there was a complaint made by the Commissioners of Public Accounts, that it had been the practice of the Science and Art Department to exclude from their books altogether, the arrears of the fees of those students in naval architecture?—They were excluded by the express direction of a letter from the Exchequer and Audit Department. This is an extract from that letter; it is dated the 3rd of October 1865: "The attention of the Commissioners for auditing the Public Accounts has been called to certain unvouched items of expenditure in the account of the Science and Art Department, the vouchers for which have, it is stated, been transmitted to the Admiralty. The expenditure in question relates to the School of Naval Architecture, and it appears that while the vote to which the expenditure is charged is taken on the Navy Estimates, the conduct of the Service is entrusted to the Science and Art Department, which is supplied with the necessary funds by means of imprests from the Admiralty. In respect, therefore, of the

Mr. *Simkins.*
Mr. *Cocks.*

27 May 1870.

sums so imprested from naval votes, the Science and Art Department are obviously accountable, not to this Board, but to the Admiralty. The vouchers, moreover, are clearly due to the Admiralty, and the final expenditure which the Admiralty, after an examination of the accounts and vouchers, may admit to be properly chargeable to the imprests, will of course be taken credit for in the account which the Admiralty submit annually to Parliament of the appropriation of Naval Votes. Under these circumstances it appears to the Commissioners that the transactions in respect of the application of these Admiralty imprests, form no part of the account of the Science and Art Department with this Board, and it is therefore requested that they may be in future omitted from the account."

1114. (To Mr. *Ryan.*) These vouchers are duly received, I presume, from the Admiralty, in accordance with the wish expressed by the Audit Department?—That direction was given by the Commissioners of Audit in 1865, prior to the introduction of the new system. The direction went only to the effect that those vouchers should not be transmitted to the Board of Audit; it did not require the accountant to exclude them from his books. That direction, however, does not relate to the Appropriation Account; it was given many years ago. (Mr. *Cole.*) As I understand, there has always been a running account with the Admiralty, just as there might be with a gentleman sending his son to Eton; and sometimes, in fact almost invariably, the Admiralty has been in debt to the department; it would be a much simpler way, of course, to take the whole vote under the School of Naval Architecture. This crossing between the two departments leads to some of these difficulties. (Mr. *McLeod.*) At page 205, in the Report of the Comptroller and Auditor General, you will observe the way in which the Comptroller and Auditor General proposes that this vote should be dealt with in future. He says, at paragraph 5, "The amounts of the grant and expenditure are both incorrectly shown in the account; they should have been stated as follows;" and then a form is given. Our department will now, in accordance with the wish of the Comptroller and Auditor General deal with this vote in that way. (Mr. *Cole.*) But I venture to submit that it would be far simpler for the whole vote to be taken upon our Estimates.

1115. *Chairman* (to Mr. *McLeod*).] You mean that the grant is over-stated, according to the Report of the Comptroller and Auditor General?—The grant is over-stated, because we took the 650 *l.* which was payable by the Admiralty, and added it to the grant.

1116. Mr. *Liddell.*] And that was complained of by the Comptroller and Auditor General, was it not?—Yes.

1117. *Chairman.*] Your grant ought to have been stated without the addition of the sum which you claim from the Admiralty?—Yes.

1118. Mr. *Pollard-Urquhart* (to Sir *W. Dunbar*).] That should have been entered as an extra receipt, should it not?—Yes; they supplemented the vote by adding to it the 650 *l.* from the Admiralty instead of paying it over to the Exchequer.

1119. *Chairman.*] It was provided for in the Navy Estimates?—Yes.

1120. (To Mr. *Ryan.*) In fact the grant was divided into two parts, one under the Science and Art Department, and the other upon the Navy Estimates?—Yes.

1121. Mr. *Liddell* (to Sir *W. Dunbar*).] But in strictness that amount ought to have been surrendered, I presume?—It ought to have been surrendered.

1122. Mr. *Pollard-Urquhart* (to Mr. *Cole*).] Should not part of this expenditure have been charged against the Vote in the Navy Estimates?—It was charged so. Of course Parliament voted it to the Admiralty; and the Admiralty professed to be going to pay it to the Science and Art Department; it is now said that it should have been treated as an extra receipt, and therefore paid into the Exchequer. In point of fact we were kept by that means destitute of the payment.

1123. *Chairman* (to Mr. *Ryan*).] In the Navy Account is this entered as a saving?—I have not the Navy Account before me, and I am not aware whether the Admiralty spent the 650 *l.* or not, without referring to their account. (Mr. *McLeod.*) They paid it to us; we received it.

1124. *Chairman* (to Mr. *Ryan*).] It was the duty of the Admiralty to pay over that 650 *l.* to the Science and Art Department?—Yes.

1125. If they have not paid it over it ought to be entered as a saving in their account, ought it not?—Yes, if they have not paid it over.

1126. So that if the Science and Art Department have not received this 650 *l.*, it is a saving upon the Navy Vote?—Yes.

1127. Mr. *Pollard-Urquhart* (to Mr. *McLeod*).] But as I understand this Report the Science and Art Department have received it, have they not?—Yes, we have received it.

1128. *Chairman* (to Mr. *Simkins*).] Not within the year?—Yes, within the year.

1129. (To Mr. *Ryan.*) You do not say that it ought to have been surrendered to the Exchequer, do you?—We say that the Science and Art Department have no business to add to their grant anything beyond that which Parliament gave them for the service.

1130. But they have a right to spend on behalf of the Admiralty that which was taken on the Navy Votes?—Yes; but the account of that expenditure should have been rendered to the Admiralty, and included in their account.

1131. It was not a case for a surrender, was it?—Not unless the money was not spent.

1132. But the mistake is in the account?—It ought not to have been introduced into this account. If the Science and Art Department acted as sub-accountants to the Admiralty for this service, they should have rendered their account to the Admiralty, who should have entered the expenditure in their Navy Account.

1133. Still if they had spent it on behalf of the Admiralty, and had sent in their account to the Admiralty, and the Admiralty had accounted for it, there would have been nothing to have surrendered?—Just so.

1134. (To Mr. *Cole.*) Under Sub-head C., No. 8, "Fuel and Light," there is an excess of 1,256 *l.* 14 *s.*; what have you to say upon that?—First, that the consumption of gas was greater that year than was expected; and secondly, that a bill of the gas company came in just towards the end of the year, which, according to custom, would have been paid in the next year, and therefore the payment of it increased the expenditure for gas in that year.

1135. Do you mean that you paid two years' gas

gas bills in one year?—The gas bill comes in more or less capriciously, and in this case it came a little earlier, and was paid earlier than it would have been in the usual course.

1136. How about the gas bill for the previous year?—There was more paid for gas this year (1868-9) than has been paid on the average in other years for gas.

1137. You say that the actual expenditure was more than the estimate; was there any reason for that in addition to the gas bill coming in at an unusual time?—The cost for gas was rather heavier that year; the cost for fittings was rather heavier, and a larger bill was paid for gas that year, owing to the account coming in at the time it did.

1138. We understand that you brought under the charge of that year that which would ordinarily have come into the charge of the next year?—Yes.

1139. And, in addition to that, was there any reason for the increased expenditure?—There was some addition to the fittings, but that would have been a very trifling addition to the expense if that second gas bill had not been paid.

1140. Did you not save something on the consumption of coals in consequence of the mildness of the winter?—I do not tax my memory with the facts.

1141. Because in the British Museum they spent less than their estimate in that year on fuel and light, and they give as the reason, because it was a mild winter, and there was consequently a decreased consumption of coals?—I am afraid that the tendency of the Kensington Museum, almost by its very nature, is to go on increasing its expenses; the premises increase; the boilers making the hot water in the pipes increase. I am unable to make any remark about the fuel for that year, but I prognosticate that if the Kensington Museum goes on living, it must increase its expenses for fuel.

1142. If the British Museum could save 20 per cent. on fuel and light, do you not think that the South Kensington Museum might have saved something in that year?—No; I think the circumstances are quite different. The British Museum is a fixed quantity, whereas Kensington Museum is an increasing quantity every year.

1143. Mr. *Liddell.*] It is taking a high rank as a spending department?—I am afraid it is inevitable if it is to exist.

1144. *Chairman* (to Mr. *Cole*).] On Subhead D., "National Portrait Exhibition," the Report of the Comptroller and Auditor General is this: "There having been no grant for this service, the expenditure in respect thereof is not properly chargeable to the Vote. It appears by the remark on the account, under letter D., that the intention was, that the expenditure for the Portrait Exhibition should be defrayed out of the fees to be received. Under this arrangement, the fees, &c. received in the year, amounting to 2,510 *l.* 6 *s.* 11 *d.*, after deducting a recovery of 50 *l.*, in respect of an over-payment in 1867-8, should have been applied to the expenses of the exhibition, which amounted to 2,524 *l.* 12 *s.* 1 *d.*, leaving an excess of expenditure of 14 *l.* 5 *s.* 2 *d.* unprovided for. While the above sum of 2,510 *l.* 6 *s.* 11 *d.* has not been applied to the expenses of the Exhibition, on the other hand it does not appear from the accounts rendered to this department that that sum, though stated in Note D. on the account 'as an extra Exchequer receipt,' has been paid over to Her Majesty's Exchequer." What have you to say upon that?—Our explanation, as sent to the Treasury, was, "The National Portrait Exhibition was open for three years. It was intended to be as far as possible self-supporting. The entrance fees, with the vote of 3,000 *l.* taken in 1866-7, were expected to pay the cost. *See* Notes (C.) appended to Estimates, Class 4, for the year 1866-7 and 1867-8. Consequently it is submitted that this account should not be treated as an Appropriation Account. The 50 *l.* referred to in paragraph No. 7, was not a recovery in respect of an over-payment, but a repayment of a sum advanced in the previous year for carriage." The accounts for the National Portrait Exhibition, in fact, were not brought to a close until last year, and the account was considered a running account, until all the liabilities had been settled, obtained, and the whole matter paid off. Practically, I believe, there has been an excess of about 1,800 *l.* over the fees, and the 3,000 *l.* voted. The greater part of that is accounted for by the expenditure necessary for preparing the buildings.

1145. (To Mr. *Simkins.*) The point of this observation is this, that you charge the expenditure against the vote, and that though you state the amount of fees you have not paid the fees over to the Exchequer?—The fees were applied towards the payment of the expenses of the Exhibition, and were introduced into the cash account.

1146. (To Sir *William Dunbar.*) What have you to say to that?—They appear to have paid the expenses of this National Portrait Gallery out of public money, for which no vote was taken. (Mr. *Cole.*) The vote of 3,000 *l.* was taken at the beginning. (Sir *William Dunbar.*) But that does not come into this account.

1147. Mr. *Pollard-Urquhart.*] At the beginning of what?—The first year of the Exhibition.

1148. *Chairman* (to Mr. *Simkins*).] But there was no grant for 1868-9, and yet the expenditure is entered in the Appropriation Account as a sum properly chargeable against the vote?—We have since included this expenditure in the amount to be surrendered. (Sir *William Dunbar.*) But still this stands as a charge upon the account against the vote. (Mr. *Simkins.*) It will be surrendered to the Exchequer.

1149. Mr. *Pollard-Urquhart.*] And all the other extra receipts?—They have all been paid over.

1150. *Chairman* (to Sir *William Dunbar*).] Your view is that it ought to have been excluded from the account altogether?—It ought not to have been included in the account. (Mr. *Cole.*) If another Portrait Exhibition should take place, being informed as to the proper mode of keeping the accounts, I hope we shall give them with strict accuracy, but broadly speaking, I believe that the first vote of 3,000 *l.* and the fees have been appropriated to the payments for the National Portrait Exhibition. The fees have sufficed, and the whole thing has been covered with the exception of a balance of 1,800 *l.* As far as I understand the point, it is that the account has been mis-stated. (Sir *William Dunbar.*) The account has been mis-stated; they have no vote, and they have charged it as if they had a vote. (Mr. *Cole.*) That is to say, we have applied the fees to meet the payments. (Sir *William Dunbar.*) They have included in the account of public moneys voted for other purposes,

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Cole.*
Mr. *Vine.*
Mr. *Ryan.*
Mr. *Simkins.*
Mr. *Cocks.*

27 May 1870.

poses, a sum of 2,500 *l.*, which ought not to be charged against that vote.

1151. *Chairman* (to Mr. *Cole*).] Inasmuch as no provision was made for the service in the Estimate?—Not for that year.

1152. But you intended that the Exhibition should be self-supporting?—Yes.

1153. You took fees almost sufficient to make it self-supporting that year, with the addition of a few pounds, and it ought to have been treated as an entirely separate matter from that account; do you assent to that?—Yes. (Sir *William Dunbar.*) While they made it a charge against the public they did not surrender the fees. (Mr. *Simkins.*) It is now included in the amount to be surrendered.

1154. *Chairman* (to Mr. *Cole*).] You surrendered the fees when you were brought to book?—No; as far as I can see, we have not surrendered the fees at all as a broad account. We had 3,000 *l.* from Parliament to start the business. We then applied the fees successively during the three years, and the whole account being balanced last year, left a deficiency of about 1,800 *l.* as the totality. I understand that our mode of account keeping has been altogether wrong; but, as a fact, the National Portrait Exhibition, with a vote from Parliament of 3,000 *l.*, was self-supporting over a period of three years, minus 1,800 *l.*

1155. (To Mr. *Simkins.*) There is a statement at the bottom of the account, "Estimated Amount of Extra Receipts payable to the Exchequer, 9,008 *l.* 15 *s.* 6 *d.*; Amount of Extra Receipts realised in the year 1867-8, and paid over to the Exchequer, 1,587 *l.* 10 *s.* 8 *d.*" Has that 9,008 *l.* 15 *s.* 6 *d.* been paid over to the Exchequer?—£.5,633 *l.* 7 *s.* 6 *d.* has been paid over to the Exchequer.

1156. Is that exclusive of those fees from the National Portrait Exhibition?—Yes; exclusive of fees from the National Portrait Exhibition.

1157. Then did this extra amount of fees payable to the Exchequer include the fees for the National Portrait Exhibition?—Yes.

1158. Then you paid 5,000 *l.* to the Exchequer, in addition to what you paid under the head of fees?—Out of the 9,000 *l.* we have paid 5,633 *l.* 7 *s.* 6 *d.* Then the fees for the Portrait Exhibition, amounting to 2,560 *l.*, would have made up the 9,000 *l.*

1159. I do not think those two figures added together will make 9,000 *l.*?—The amount of fees was 2,560 *l.* 6 *s.* 11 *d.*, and I see that the other amount paid over to the Exchequer was 6,448 *l.*

1160. That is a larger sum than you gave me before?—Yes, I was looking at the wrong memorandum before. We are to surrender, independent of that, into the Exchequer the amount that we charged to the National Portrait Exhibition Account.

1161. Mr. *Pollard-Urquhart* (to Sir *William Dunbar*).] You state in paragraph 8 of your Report that sum in Note D., stated on the account as an extra receipt, has been paid over to Her Majesty's Exchequer. It is stated at the foot of the account that the amount of exta receipts payable to the Exchequer was 9,008 *l.* 15 *s.* 6 *d.* Do you mean by your observations in paragraph 8, that the amount of 2,510 *l.* 6 *s.* 11 *d.* was not included in this amount of 9,008 *l.* 15 *s.* 6 *d.*?—We do not know how that stands. (Mr. *Ryan.*) The statement was that that amount had not been paid over to the Exchequer at the date of the report.

1162. But was it included in the amounts that were due to the Exchequer, and merely not paid over to the Exchequer, because moneys at that time were only paid over to the Exchequer once a year, instead of once in three months as they have been since; or was it not included in the sum to the Exchequer?—Paragraph 15 will explain the statement about the Exchequer receipts. "It appears from the accounts rendered to this department, that up to the 31st of March 1869, there had been passed to account, as Exchequer Extra Receipts, the sums of 6,438 *l.* 8 *s.* 3 *d.*, out of which there had been paid over to masters and mistresses, &c. the sum of 2,130 *l.* 2 *s.* 9 *d.*, leaving a balance, 4,308 *l.* 5 *s.* 6 *d.* This, however, does not represent the correct amount payable to the Exchequer as Extra Receipts. A further sum of 1,325 *l.* referred to in Note B. 2, on the account should be added to this amount for arrears of fees paid by the Admiralty on account of students of naval architecture, for the Sessions 1866–7 and 1867–8; the votes for which years have been closed; and also the sum of 50 *l.*, referred to in paragraph 7, repaid in 1868–9 on account of an error in December 1867, relating to the National Portrait Exhibition, making together a total sum of 5,683 *l.* 5 *s.* 6 *d.*" That sum of 5,683 *l.* 5 *s.* 6 *d.* does not include the sum that you referred to.

1163. Lord *Frederick Cavendish.*] The Report of the Comptroller and Auditor General on this Vote for the year 1867–8 was not presented to Parliament, owing to the examination of the accounts of this Vote not having been completed when the other Reports were made; was not that so?—The account was not made out in the form of an Appropriation Account for the year 1867–8.

1164. But a subsequent Report was made to the Treasury?—A Report upon the Cash Account was made to the Treasury.

1165. I think it has been stated to this Committee that there was no objection to that Report being presented?—There was no objection on the part of this department to its production.

1166. (To Mr. *Foster.*) I think that Report was not presented?—I understand it was not.

1167. There would be no objection to its now being presented?—None whatever.

1168. *Chairman* (to Mr. *Cole*).] We expect that these accounts will be rendered in a very much better form another year; I suppose your accountant will have learned his duty by that time, because I think, if the same remarks are made in the Report of the Comptroller and Auditor General another year, the Committee will find it their duty to make a very severe Report to the House of Commons upon the subject?—You will hold me responsible?

1169. Certainly; as long as the Treasury keeps you appointed as the accountant, of course you will be responsible?—Then I hope the Treasury will give me the means of exercising my responsibility.

On Vote 7.

1170. *Chairman* (to Sir *William Dunbar*).] I wish to call your attention to the explanation given under this Vote; have you any remark to make upon it?—I merely notice the point, but we are satisfied with the explanation.

1171. Mr.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Vine.*
Mr. *Ryan.*
Mr. *Cocks.*

27 May 1870.

1171. Mr. *Pollard-Urquhart.*] Under these circumstances, ought not the annuity granted under the Treaty of Union more properly to be chargeable upon the Consolidated Fund than to be a Vote of Parliament?—It appears to me that it would be more properly charged upon the Consolidated Fund. (Mr. *Foster.*) It would require an Act of Parliament to do that.

1172. *Chairman* (to Sir *William Dunbar*).] It is not charged upon the Consolidated Fund by the Acts mentioned in the letter on page 199?—I fancy not; that letter contains the explanation of the accountant. I thought it proper to notice it. He said it was payable under the Treaty of Union. The Committee will observe that this payment is referred to in several Acts of Parliament. The Treaty of Union "appointed the payment for seven years, but afterwards, by the 5 Geo. 1, c. 20 (1718), it was fixed in perpetuity," and the amount was subsequently increased by another statute. (Mr. *Foster.*) But it was not put upon the Consolidated Fund. (Sir *William Dunbar.*) I have not seen the Act, but that is the explanation that the accountant gives, that it was to be a perpetual payment.

On Vote 11.

1173. (To Mr. *Foster.*) I observe that on this Vote for the British Museum there is stated to be a saving in the year we are inquiring into, under Sub-head H., "Printing Catalogues, &c.," of 1,928 *l.* 4 *s.* 6 *d.*, nearly 2,000 *l.*; will you turn to the Estimate for the following financial year and tell us what is the Estimate under Sub-head H. for that year?—The Estimate shows a demand of 4,480 *l.* for the service of the year, which is an excess of 1,140 *l.* over the amount which was voted for the previous year, and an excess of about 3,000 *l.* over what was actually spent in the previous year.

1174. Does not the comparison of that Estimate with the expenditure of the year ended 31st of March 1869, raise a presumption that that was not a *bonâ fide* saving, but that the expenditure was thrown upon the next year?—It gives that impression, no doubt.

1175. Mr. *Pollard-Urquhart* (to Sir *William Dunbar*).] Can you tell us anything about this matter?—No; I know nothing of the mode in which the Estimates are prepared.

1176. I mean the mode in which the saving has been effected?—The last year's account has not been rendered yet.

On Vote 14.

1177. *Chairman* (to Mr. *Ryan*).] It was stated here that there was a deficiency of 15,845 *l.* 5 *s.* 1 *d.* on Sub-head L., but the letter from Mr. Kelly and Mr. Newell, the secretaries of the National Education Office, only explains an excess of 11,537 *l.* 18 *s.* 7 *d.*; can you account for that discrepancy?—We have no information explaining the cause of the excess beyond this letter.

1178. (To Mr. *Cocks.*) This refers to a letter of yours, calling for an explanation of an excess of 11,537 *l.* 18 *s.* 7 *d.*, whereas the real excess is stated in the account to be 15,000 *l.*; can you account for that discrepancy?—At the time the letter was written the excess was only 11,537 *l.*, but afterwards the excess became larger; our habit is, the moment we find an excess, to call for an authority for it. (Mr. *Foster.*) I have a letter from the National Education Department, dated the 8th of March 1870, which professes to give an explanation of this circumstance.

1179. Will you read it?—"With regard to the excess of 15,863 *l.* 1 *s.* 1 *d.*, we beg to state that when the late Dr. Sullivan died his executors put in a claim for books ordered in the years 1866, 1867, and 1868, to the amount of 6,273 *l.* 10 *s.* 10 *d.*, which claim, on examination, was found to be correct. This claim was not anticipated, and accounts for a portion of the excess. The balance was caused by a great demand for the new editions of the national school books, which necessitated the purchase of a larger stock than was thought to be required when the Estimate was prepared, but the amount of money received for the sales was 17,074 *l.* 5 *s.* 1 *d.*, instead of 12,500 *l.*, as stated in the Estimate for the year, and this 17,074 *l.* 5 *s.* 1 *d.* was lodged up to the 31st of March last, to the credit of the Paymaster General, as Exchequer Extra Receipts." I see that this letter, although of a different date, repeats almost in the exact words the letter printed at page 219 of the Appropriation Accounts.

1180. Then there is no explanation of the difference between the 11,537 *l.* and the 15,845 *l.*?—Not further than is stated in the letter, namely, that it is caused by a great demand for the new editions of the national school books.

1181. Mr. *Pollard-Urquhart* (to Mr. *Ryan*).] Referring to your letter dated the 8th of November 1869, in which you say that no answer has been received to your former letter, has any answer been since received?—An answer has been since received which I will read to the Committee if they would like to hear it.

1182. Mr. *Liddell* (to Mr. *Foster*).] May I ask whether, in accordance with the recommendations of the Public Accounts Commission, and with what has been done in the case of other departments, a form of accounts to be followed has been furnished to the Department of Public Education in Ireland?—A complete set of accounts has been furnished in the same way as to all other departments.

1183. But they appear not yet to have complied with it?—They have rendered their accounts according to those forms; but, in preparing them they have not taken sufficient care about the division of the sub-heads.

1184. Mr. *Pollard-Urquhart* (to Mr. *Ryan*).] Will you be kind enough to read the answer to that letter of yours of the 8th of November?—"Office of National Education, Dublin, 3rd of March 1870.—Sir,—Your letter of the 8th November last (1,380 A.) addressed to the Right Honourable A. Macdonnell, Resident Commissioner, 'on the subject of the incompleteness of the schedules furnished to your department in support of the account for each sub-head of the vote of Parliament,' was referred in due course to Mr. Gordon, assistant accountant and bookkeeper to this department; but, owing to that gentleman's illness, the reply has been delayed until now. Mr. Gordon informs us that, when he was in London in July last, in attendance at the

Sir *W. Dunbar.* Mr. *Foster.* Mr. *Vine.* Mr. *Ryan.*

27 May 1870.

the Exchequer and Audit Department, he was called upon for explanation as to the present mode of scheduling the sub-heads of the Estimates, and that he then pointed out the difficulties that would present themselves if any attempt were made to alter the system now adopted, to that suggested, viz., scheduling under each item of the sub-heads. Mr. Gordon adds, that he was under the impression that his explanation was considered satisfactory and final, and that no alteration would be insisted on. The following is in substance the explanation given by Mr. Gordon:—Sub-head of Estimate, 1868-9, Schedule 9, Letter I. 'National Schools.' 'Salaries of 8,393 Principal, Assistant, and Junior Assistant Teachers of Ordinary National Schools, and of 143 Schools paid by Capitation Allowance, only 192,500 *l.*' 'Towards salaries of teachers of new schools, and increases to the salaries of existing teachers, consequent on the classification during the year, 7,000 *l.*' In order to carry out the requirements of the Exchequer and Audit Department, it would be necessary to issue a 'special' form of receipt for payments under the first item of expenditure (192,500 *l.*), taking care that payments of salaries to the teachers of new schools should be excluded from the schedule of this first item. With respect to the second item (7,000 *l.*), it would entail on the office considerable trouble in keeping the receipts for payments to teachers of new schools separate from the receipt for payments under the former item; and a separate receipt should be issued in the case of every teacher in the service, who, by an improvement in classification during the year, would be entitled, at the end of each quarter, to an additional payment over and above the former rate of salary. This sum of 7,000 *l.*, taken separately, has been only conjectural; and any attempt to subdivide the items would cause a serious delay in the quarterly payments; the issue of money orders would, in numerous instances, be doubled, and the cost of commission on the orders consequently increased. Some of the remaining items, under the sub-head 'National Schools,' could be scheduled, but the operation would involve considerable care and additional labour in preparing for the payments, and, subsequently, in furnishing for audit. With respect to another sub-head, 'Model Schools,' Schedule 8, or letter H., particularly in the case of District Model and Minor Model Schools, the difficulty increases. It would be impracticable to analyse the expenditure accounts correctly, so as to bring out into separate schedules the sums, as against the various items under this sub-head numbering 24. As to the remaining sub-heads under which the Parliamentary Vote is accounted for, the same difficulties present themselves in attempting to subdivide minutely the expenditure. In conclusion, we are directed to express the hope that, on the foregoing explanation, no alteration in the present system of rendering the accounts, as recently laid down by the Commissioners on Public Accounts, will be insisted upon; at the same time, we are to state that every care will be anxiously taken to carry out all the requirements of the Exchequer and Audit Department.—We have, &c. (signed) *James Kelly, Will. H. Newell,* Secretaries."

1185. *Chairman.*] What you have read shows that it is a very detailed statement; I think the letter ought to be referred to the Commissioners on Public Accounts, to see if they can get over the difficulties suggested by it; does it raise any question of principle?—It shows the difficulty which there would be in complying with what we consider to be a question of principle.

1186. Mr. *Pollard-Urquhart.*] But we cannot very well ascertain whether those difficulties are insurmountable, or whether they can be surmounted, without having the letter before us?—Perhaps not. (Sir *William Dunbar.*) It is obvious that the only mode in which the Comptroller and Auditor General can discover the intentions of Parliament (for he is bound, as far as he can, to discover the intentions of Parliament) is by referring to the Estimates. Now if the account is not prepared more or less in accordance with the Estimates, it is impossible for him to say whether the monies have been properly appropriated to the purposes for which it is intended by Parliament to make provision. I only thought it my duty to point out that that difficulty necessarily occurs, and that I cannot give Parliament the information which it ought to have, unless that is done.

1187. Mr. *Liddell.*] Do you find that you have any difficulty in checking the Appropriation Accounts furnished by the Education Department of the Privy Council?—No, they provide the schedules; they provide us with accounts framed upon the Estimates.

1188. If a similar form of accounts copying precisely the mode adopted in the Education Department in England were furnished to the Education Board in Ireland, would there in your opinion be any difficulty on the part of the Education Board in Ireland in complying with those schedules?—I do not think there would; if the Education Board in Ireland would prepare their Estimates upon an analogous principle to that which applies to the English Education Department, as a matter of course there would be no difficulty in the Comptroller and Auditor General giving Parliament the information which he cannot now afford.

1189. Mr. *Pollard-Urquhart.*] But if I recollect right, there was some difficulty on the part of the Education Board in England in preparing the accounts of 1867-8 in conformity with the Estimates; I speak only from memory?—In 1867-8, I do not think the accounts could have been rendered in the form of an Appropriation Account.

1190. If I recollect right there was a considerable discrepancy between the form of account prepared by the English Education Board and the Estimate for that year?—Yes; they did not render it quite in proper form that year, but that was the first year of their rendering an Appropriation Account.

1191. There appeared to be much the same difficulty in their case as the Irish Education Board complain of now?—No; I do not think it arose in their case from the same causes at all; their difficulty was that they had not then the right form of account.

1192. (To Mr. *Vine.*) When was the form of account delivered to the Irish Education Office?—In time for the year 1868-9.

1193. Have you seen this letter which Mr. Ryan has produced?—No, I have not.

1194. As far as you have followed that letter as it has been read, do you think that there really is any difficulty in complying with the directions of

of the Treasury about the account?—None whatever; I think the case is this: Parliament and the Treasury decided the sub-heads under which the service was to be provided for. If I understand the Comptroller and Auditor General right he is not satisfied with those sub-heads, but calls upon the department to furnish the account under more numerous sub-heads; there is the difficulty.

1195. The Report says this: "Under the sub-head L. 'National Schools,' the large expenditure of 245,113 *l.* 19 *s.* 1 *d.*, instead of being divided into the 13 detailed heads contained in the Estimates, is by the Schedules furnished to this department, presented under the general sub-head 'National Schools' only"?—Parliament has not required the departments to render an account under any other head than that shown in the Estimates.

1196. Then your view is this, that the Audit Office is requiring more than Parliament intended should be given?—Yes.

1197. (To Sir *William Dunbar.*) What have you to say to that?—What we hold is that the detailed Estimate is the regulated basis upon which the Comptroller and Auditor General founds his Report, and from which alone he can gather the real intentions of Parliament. (Mr. *Foster.*) I may, perhaps, be allowed to point out that the division of the vote into sub-heads is under the direction of the Treasury, and that the Comptroller and Auditor General only reports as to excesses upon sub-heads, at the request of the Treasury and not of Parliament.

1198. Mr. *Liddell* (to Sir *William Dunbar*).] You have heard the observation made by Mr. Foster in regard to the details under the sub-heads; have you any remark to make upon it?—I do not concur in Mr. Foster's views; I hold that the Comptroller and Auditor General being called upon to interpret the intentions of Parliament, the only means by which he can arrive at his conclusions as to the intentions of Parliament is by going into the detailed matter contained in the Estimates. In so large an item as 247,810 *l.* placed in the Estimate, under a sub-head containing only the words "National Schools," it is obviously impossible for me to report, in strict fulfilment of the duty imposed upon me by the 27th section of the Exchequer and Audit Act, unless the account is rendered to me in such a form as will enable me to ascertain the proportions of the vote expended for the separate purposes which it is intended to provide for.

1199. But do you consider that you are competent to require, and that it is within your province to require, any department to furnish its accounts in any other form than that prescribed by the Treasury authority?—They may not be bound to render us the accounts in any other form than that prescribed by the Treasury; but we consider that we are entitled to call upon the departments to furnish us with the necessary information to enable us satisfactorily to discharge our duties.

1200. And that you are bound to be satisfied with?—We consider we are entitled to call upon the department to provide us with detailed schedules of the expenditure, in such form as we may deem indispensable for the proper examination of the account.

1201. *Chairman* (to Mr. *Vine*).] But I do not understand how your remark applies; the Comptroller and Auditor General's Report says that the expenditure under sub-head I., instead of being divided into the 13 detailed heads contained in the Estimate, is rendered under the general sub-head "National Schools." The term "Detailed heads," does not mean A., B., C., D., E., and so on?—No, the Estimate is divided into three parts. The first part is the amount of what is shown in the Appropriation Act; the second part consists of the sub-heads under which it is divided by the Treasury, and sanctioned by Parliament in the Estimates; and the third part is the detailed explanation, which may be looked upon in the shape of an Appendix.

1202. As I understand, the Comptroller and Auditor General required the Estimate to be classified under more detailed heads than those which are lettered from A. to M. in the Estimate; is that so?—Not the Estimate; he requires an account to be rendered under more sub-heads than are shown in the Estimate. If the accounts are rendered in that way, the Estimate ought to be altered, because the two ought to be identical.

1203. And in the Estimate the words are used, "Sub-heads under which this Vote will be accounted for"?—Yes.

1204. And if a further sub-division were made, it would not be in accordance with that which is presented to Parliament in the Estimate?—Just so. (Mr. *Ryan.*) The intention was not to ask that the accounts should consist of more sub-heads than are contained in the Estimates, but that the Comptroller and Auditor General might have such information as would enable him to see that this sum of 245,000 *l.* did really consist of those 13 heads (one of them being over 100,000 *l.*), which are shown in the detailed part of the Estimate; without that he could not tell whether it had been really spent at all.

1205. (To Sir *William Dunbar.*) Do you wish to make any further remark on this point?—In the Estimates for 1868-9 there is this item, "Salaries of 8,393 *l.*, principal assistant and junior assistant, teachers of ordinary national schools, and of 143 schools paid by capitation allowance only, 192,500 *l.*," and other purposes; the total of the Estimate for national schools being 247,810 *l.* But supposing that the whole 247,810 *l.* had been appropriated to only one of those purposes, and that all the other purposes had been overlooked, what means have I to discover that, and to know whether the sum of 247,810 *l.* has been devoted to the various purposes for which Parliament intended it under this Estimate? Without proper schedules it is next to impossible. As I have pointed out, there is a total for national schools of 247,810 *l.*; I presume it was the intention of Parliament that that sum should be applied as far as practicable in the proportions fixed by the Estimate for the several purposes named in the sub-head; but supposing that, instead of the 13 detailed heads here included, the department were to devote the whole 247,810 *l.* to one of these purposes, is it not requisite that Parliament should know that the whole of that sum had been devoted to one instead of the many purposes for which it was intended?

1206. But does not Parliament say that the Vote shall be accounted for under the several sub-heads, naming them; the words are these, are they not; "Sub-heads under which this Vote will be accounted for"?—Yes; but those words are in a Treasury Estimate, which I cannot accept as a Parliamentary enactment; there is nothing

Sir *W. Dunbar.* Mr. *Foster.* Mr. *Ryan.* 27 May 1870.

in any Act of Parliament which requires or gives me authority to accept these sub-heads as the limit of my examination in cases in which they are insufficient for the satisfactory discharge of the duty which the Legislature has imposed upon me.

1207. Then you say that you ought to require more than that, and that they should be accounted for in greater detail?—No; we say that they ought to be accounted for under the several sub-heads, but that the sub-heads should be accompanied with schedules of the expenditure that would enable us to judge whether, under each sub-head, the money has been devoted to the several purposes for which Parliament intended to appropriate it.

1208. (To Mr. *Foster.*) What do you say to that?—I think that if this system is followed in this case, you must follow it throughout the whole of the Estimates, and every single item which appears in the Appendix to the grants must be checked by the Comptroller and Auditor General. I feel convinced that that is not the wish of Parliament. I think Sir William Dunbar might perhaps with reason find fault with the Treasury for not having sub-divided the grant into a larger number of sub-heads; but if the Comptroller and Auditor General were to attempt to check every item which is put in the Appendix to the Estimates, his duties would be increased to an enormous extent, and the whole thing would break down from the impossibility of carrying it out.

1209. To see whether we can arrive at a practical result, let me ask you this: do you think that it would be expedient to sub-divide the Sub-head I. in Vote 14; that is to say, to sub-divide the item now headed "National Schools"?—I think, perhaps, it might be desirable, being a large sum, somewhat to sub-divide it; but, as a matter of principle, I think that to recognise the right of the Comptroller and Auditor General to go, in the matter of appropriation, below the sub-heads which are laid down in the Estimate would lead to insuperable difficulties.

1210. Mr. *Liddell.*] Would not the requirement of the Comptroller and Auditor General actually place all the Departments under the necessity of keeping a double system of accounts, one for the satisfaction of the Comptroller and Auditor General, and one for the purposes of their own Department, if each grant is to be further sub-divided than Parliament already requires?—It would extremely multiply the accounts of Departments, and would lead to very heavy expense, and it would need more book-keepers to keep them.

1211. Mr. *Pollard-Urquhart.*] Into how many sub-divisions is this Sub-head "National Schools" divided in the schedule appended to the Estimate?—Thirteen.

1212. Supposing that the whole of the sum so voted had been spent on five of these sub-divisions, and that nothing whatever had been spent on the other eight, do not you think that that would call for some observations from the Comptroller and Auditor General?—He naturally would report to the Treasury that the money had been spent in a way that the Treasury had not authorised. All these salaries to which the chief number of heads apply, are salaries given under the authority and sanction of the Treasury. If the Department were to spend more upon one of these items for salaries, the Comptroller and Auditor General, under the direction which he has from the Treasury, would ascertain that the salary had been paid without Treasury sanction, and would report it accordingly.

1213. But I am supposing the extreme case of the whole sum so voted being spent on five out of 13 sub-divisions, and none whatever being spent on the other eight; should you not say that that was a thing that the Comptroller and Auditor General ought to look into?—He could not help reporting that to the Treasury.

1214. Therefore, he must look to the sub-divisions of each head?—No; he would have to report that certain parties had been paid salaries who were not properly entitled to them, who had received no Treasury authority for them.

1215. (To Sir *W. Dunbar.*) I believe you have heard the question which I have just put to Mr. Foster; what do you say on the subject?—If instead of the expenditure being incurred under 13 detailed heads the whole of that expenditure were laid out on five, the result would be simply this, that the account rendered to the Comptroller and Auditor General would not enable him to detect it. I could not report the misappropriation, because I could not detect that the money had been devoted to five only instead of 13 purposes. If the department had thought fit, as the honourable Member puts the case, to apply to five purposes what was intended for 13, it would pass undiscovered for the reasons I have stated. (Mr. *Foster.*) Excepting in this way, that the Treasury, having authorised salaries to the amount of 100,000 *l.*, the Auditor General would see that the authorised salaries had been exceeded. (Sir *William Dunbar.*) Practically, I should not possess the means of affording to Parliament satisfactory information upon the subject.

1216. *Chairman* (to Sir *William Dunbar*).] Supposing that you got the account rendered in the way in which you ask for it, should you propose to present that detailed account to the House of Commons, showing the savings and deficiencies upon each of the 13 detailed heads?—No; I should not propose to do that unless the sub-heads of the Estimate were altered accordingly; but if the detailed schedules were furnished I should see that, in regard to the several purposes to which the 247,810 *l.* was intended to be applied, the vote was so applied.

1217. You can now, cannot you?—No; I can see the fact that it has been applied to National Schools, but not that it has been applied to the several purposes included under that sub-head. The honourable Member put it very well just now; he asked the question whether, in case of the whole sum being applied to five instead of 13 items, it would come under my notice; I say that it would not be in my power to give satisfactory information on the subject.

1218. (To Mr. *Foster.*) What do you say upon that?—I think that it would illustrate the matter if we turned to Sub-head H. I find that in the Estimate, under Sub-head H., there are more than 80 different heads. Now, if one sub-head was to be multiplied into 80 detailed heads, I think it is evident that the amount of labour to be expended in keeping it in that shape, and on the part of the Comptroller and Auditor General in checking it in that shape, must be something fearful.

1219. Mr.

1219. Mr. *Pollard-Urquhart.*] But if the Comptroller and Auditor General does not find fault with that arrangement, that takes away some of the force of your argument, does it not?—My view is that it would lead to an expenditure that would cost 10 times the amount that it would save.

1220. *Chairman* (to Mr. *Ryan*).] Have you required this in the case of any other vote?—We have practically received this in almost all the rest. It is only in the case of very large votes, with very large sub-heads, that any difficulty arises.

1221. Mr. *Pollard-Urquhart.*] I suppose that there are more sub-divisions in these votes for education for England and Ireland, than in most of the other votes in Parliament?—I think so; I presume that in presenting these estimates to Parliament, the department has for its own information the means of arriving at the details of these different subjects. If they have, and if they keep their accounts under those, I do not see the great difficulty of sending us the schedule.

1222. (To Mr. *Foster.*) Have you any remark to make on that?—I think that the purpose would be equally answered without the schedules; for if 100 officers receive certain rates of salary, knowing what these rates are, it would be easy to calculate the total amount; it would not be necessary to keep a distinct account of every payment on account of those 100 people, in order to prepare the estimate.

1223. Mr. *Candlish.*] But you would have separate ledger entries setting out every other sub-account; for instance, under I. you would have a separate ledger account setting out the transactions of every school?—It is quite possible that, for statistical purposes, they keep an account of each school; but that would not meet the audit requirements, because the accounts of each school consist of a great variety of expenditure, which may fall under different sub-heads.

1224. In point of fact, have you not a ledger account of each school?—Of each school I dare say there may be a separate ledger account; but that would show of that school not only the salaries, but all other expenses which come under other sub-heads, and that would not enable them to send a schedule of payments of those items under Sub-head I.

1225. Lord *Frederick Cavendish* (to Mr. *Ryan*).] Do you have such a schedule in the case of the English Educational Department?—The English Department Grant in Aid to Schools is paid over generally to managers in a lump sum, and it is not a case of calculation.

1226. *Chairman* (to Sir *William Dunbar*).] How many detailed heads do you think this sub-head ought to be divided into?—Just the same number as we now have; 13, with a schedule showing the purposes to which the moneys under each sub-head were devoted by Parliament. Without the aid afforded by the schedule, I can only tell Parliament that the lump sum of 247,810 *l.* has been spent for national schools, but not whether it has been devoted to the several 13 purposes included in that sub-head. If it were devoted to five of the 13 purposes only, I should not have proper information on the subject.

1227. Has Parliament asked you to do more than tell them what has been paid under that sub-head?—I think so. When an estimate is laid before Parliament with detailed information, I consider that that detailed information is given in order to convey to the Comptroller and Auditor General the intentions of Parliament with reference to that expenditure.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Ryan.*

27 May 1870.

1228. I am not going now into the question whether the division is right, but when you have following the fact of the vote this statement, "Sub-heads under which this vote will be accounted for by the Commissioners of National Education in Ireland," do not you consider that all that Parliament asks is that you shall report to them as to the amount of the vote that has been expended under those sub-heads?—No, I do not think that that is sufficient.

1229. I do not ask whether it is sufficient, but whether it is not all that Parliament has asked you to do?—No, I do not take that view of the matter; more than that is required from me under the terms of the Exchequer and Audit Act. I am called upon to interpret the intentions of Parliament. Well, now, here is found an item "National Schools," that includes a total expenditure and a particular expenditure; is it sufficient for me to say that a total expenditure has been incurred of 247,810 *l.*, but that I can tell Parliament nothing about the particular expenditure, whether that expenditure has or has not been devoted to those special purposes to which Parliament intended that it should be devoted?

1230. That is rather a different question; it is a question whether Parliament ought to require the accounts in a more detailed way. But what I want to put to you is this: has Parliament asked you to account for it in any greater detail than under these sub-heads?—I think it has. The instructions of Parliament are clearly expressed in the 27th and 32nd sections of the Exchequer and Audit Act.

1231. (To Mr. *Foster.*) Do you wish to add anything?—The 23rd section of the Exchequer and Audit Departments Act says, "The plan of account-books and accounts adapted to the requirements of each service in order to exhibit, in a convenient form, the whole of the receipts and payments in respect of each vote, shall be designed under the superintendence of the Treasury." The form of the account which the Treasury designed was under these sub-heads. The Treasury may be blamed for not designing it otherwise, but it appears to me that this section leaves it to the Treasury to design the form of account in which the payment of each vote shall be shown.

1232. And Parliament, by passing the vote in the shape of the Treasury, has accepted the Treasury view for that year?—It appears to me so.

1233. It may be that a greater sub-division is required?—Certainly; but that, it appears to me, rests upon the responsibility of the Treasury.

1234. That does not affect the question as to what Parliament requires under the Appropriation Act and the vote as it now stands?—It appears to me that the Comptroller and Auditor General has no opinion to give on that point.

1235. That is, you say, that it is beyond the province of his department to give an opinion on that point?—Yes.

1236. Mr. *Pollard-Urquhart.*] If you turn to Class 4, Vote 9, you will see that there the various sub-heads which are denoted by letters have under them a number of sub-divisions which are denoted by figures; under the Sub-head C., for instance, there are nine sub-divisions. Do you think that it comes within the province of the Comptroller and Auditor General to say that the

Sir *W. Dunbar.* Mr. *Foster.* Mr. *Ryan.* Mr. *Blackwood.*

27 May 1870.

money which was voted by Parliament has been spent under each of the sub-divisions denoted by figures?—Yes, because that is the form of account which the Treasury has laid down for this vote.

1237. Should you say that it would be more satisfactory, if the Treasury would lay down for Public Education, Ireland, the same form of account as that which they have laid down in the vote which I have just referred to?—I think that it might very well be extended in that manner.

1238. That it might be carried out as far as it has been carried out in Vote 9?—Somewhat like that.

1239. *Chairman.*] Has the account rendered by the Educational Department in Ireland, followed the form prescribed by the Treasury?—Yes.

1240. Mr. *Pollard-Urquhart* (to Sir *W. Dunbar*).] If the Vote 14, for Public Education, Ireland, was divided into sub-heads and sub-divisions as Vote 9, to which I have just referred, is, could you not then better carry out what you conceive to be your duty in regard to seeing that the money has been spent in the manner designed by Parliament?—Yes, certainly.

1241. And if it was divided to the same extent as Vote 9 is, perhaps you could carry out as much as you conceive to be your duty?—Yes, it is possible that I might. I said before that it is my duty to interpret the intentions of Parliament. To enable me to do so, as far as I can, I look at the information laid before Parliament, because the Comptroller and Auditor General is the officer appointed by Parliament to examine the expenditure, and report upon it. The information afforded to Parliament, must, I conceive, also be considered as information afforded to him to guide him in the performance of his duties.

1242. *Chairman* (to Mr. *Foster*).] Have you the Estimates for 1868–9 before you?—Yes.

1243. Will you look at the Estimate for the Science and Art Department for that year, Vote 9. Do you consider that the Sub-divisions in that Estimate, 1, 2, 3, 4, 5, 6, 7, and so forth, under the different letters, are sub-divisions within the meaning of the prefix to the Vote?—Certainly.

1244. So that in that case the account must be rendered in that detailed way?—Yes.

1245. (To Sir *William Dunbar.*) I think your view would be this, that in the case now before the Committee there ought to be a greater sub-division in the Estimate?—There ought to be a greater sub-division in the Estimate. But I have some difficulty in knowing what degree of importance I am to attach to these explanatory statements that are laid before Parliament in support of the votes required from Parliament. How far are these statement to be a guide to me? Am I to disregard them altogether? When Parliament makes a grant, with a full explanation placed before it of the purposes for which that grant was intended to provide in detail, is it intended that I should take no cognisance of a statement of that nature laid before Parliament for its information?

1246. Mr. *Pollard-Urquhart.*] But if the Sub-heads A., B., C., on to M., of Vote 14, were sub-divided in the same manner as the sub-heads of Vote 9 are sub-divided, then your own view of your duty would pretty nearly coincide with Mr. Foster's idea of it?—If there were a larger sub-division no doubt it would go to a great extent to obviate the difficulty which I point out. A larger sub-division would enable me to afford Parliament a larger amount of information than I am now able to afford as to the application of the particular expenditure. With the permission of the Committee, let me add, with reference to the difficulties and expense the Treasury witnesses state would arise in sub-dividing the expenditure, and in explanation of my previous answers on that point, that the same expenditure is already reported to Parliament in the Annual Report of the Commissioners of National Education, presented by Command of Her Majesty, under the 13 heads or sub-divisions to which I have directed the attention of the Committee.

On Vote 10.

1247. *Chairman* (to Mr. *Blackwood*).] The Report of the Comptroller and Auditor General says: "The accountant has not transmitted to this department the authority of the Lords Commissioners of Her Majesty's Treasury for charging the excesses under the Sub-heads A. and B. of the Estimates to the savings effected under the other sub-heads of the Vote, although twice requested to do so;" have you any explanation of that to offer?—He has replied to the Treasury, who addressed him on the subject, and has practically requested their authority, which, in effect, has been given.

1248. Then I may say "authority given"?—Yes.

The Right Honourable James Stansfeld (a Member of the Committee), Examined.

Mr. *Stansfeld,* M.P.

1249. *Chairman.*] The Report of the Comptroller and Auditor General on this vote contains the following passage in reference to Sub-head D., "Incidental Expenses:" "The account under this sub-head is further complicated by a charge against the grant of certain costs, amounting to 32 *l.* 17 *s.* 1 *d.*, incurred by the Vice Chancellor as the returning officer, under the Act 30 & 31 Vict. c. 102, s. 41, in relation to two elections of a Member to represent the university in Parliament. The propriety of including this sum in the general expenses of the university seems to have received the consideration of the Senate, and to have been referred, by its directions, to the Lords Commissioners of the Treasury, under whose sanction the payment was entered in the account, as appears from the accompanying letter, transmitted to this department by the senate, in answer to an inquiry for explanation of the grounds upon which the charge was made against the vote. It will be observed from this letter that the decision of their Lordships, that the expenses referred to must be charged to the university, was not made without legal advice, and that the Secretary of the Treasury adds, 'It would appear probable that the further costs which may on future occasions be incurred in respect of poll clerks, &c. &c., would also be liabilities of the university.' Although it would thus appear that costs incurred by the Vice

Vice Chancellor as returning officer are held to be properly recoverable from the public, it does not seem to me to have been within the intention of the House of Commons to make provision for such expenses, when the University Vote was passed; and I am therefore of opinion that the payment in question is not properly chargeable to the Parliamentary Grant of 1868–9." Has your attention been called to that passage in the Report of the Comptroller and Auditor General upon the University of London Vote?—Yes. I should like to say, although perhaps it may not be strictly official so to do, that I am especially responsible for the conclusions which the Board of Treasury arrived at in this case. As the Committee are aware, the Member for the University of London happens to be the Chancellor of the Exchequer, and is practically the head of the Board of Treasury, because, practically speaking, the First Lord takes no part in the ordinary business of the Treasury; and under the present *régime* the Chancellor of the Exchequer takes an active part. The application to which you have referred came from the University of London, and the Chancellor of the Exchequer sent it to me with a request that I would deal with it. I interpreted that request as meaning that I should deal with it not only without taking his opinion but without his cognisance, and I carried out that to the letter, because when the conclusion at which, as representing in this case the Board of Treasury, I arrived was communicated to the London University, our letter concluded in these words: "I am to add that their Lordships have not communicated with the Chancellor of the Exchequer on the subject, and that it seems to them the most fitting course that, as Member for the University of London, he should be informed by you of the result." The first question which we considered was the chargeability of these trifling expenses to the university or not, under whatever head they might be charged. We took legal opinions upon the matter, and were advised and satisfied ourselves that the candidate was not legally liable for these expenses. The candidate not being legally liable for these expenses, it appeared to me as a matter of precedent, and with a view to the successors of the present representative of the university, that it was objectionable even to allow him to pay those expenses; and I then entered upon the consideration of the question to whom they could be charged. No doubt they could have been charged against and paid out of the private pocket of the Vice Chancellor, he having given the orders. I suppose that if we had not found the money in some way, the Vice Chancellor would have had, as the returning officer, to pay. But it appeared to me, considering the source from which all expenses of the London University are derived, and all the circumstances attending the case, that these were expenses which ought to be charged against the university itself. The Committee are aware that the university was the creation of Parliament, that all its expenses are met by Parliament, and that its receipts are paid into the Exchequer. The Committee are also aware that the University of London, which was an university called into existence by Parliament, was also by Parliament made a constituency; and under those circumstances it appeared to me that the duty being cast upon the Treasury of interpreting as well as it could the intent of Parliament, the candidate not being liable, there being no duty cast by Parliament upon the Vice Chancellor to pay those expenses out of his own pocket, all the fees of the university coming into the Exchequer, and all its expenses being paid out of the vote, I ought to hold that the intention of Parliament would have been, if its mind had been directed to this question, and that therefore for the purpose of the settlement of this question, it must be held to have been that these expenses should be paid out of the vote.

Sir *W. Dunbar*, Mr. *Foster*, Mr. *Ryan*, Mr. *Stansfeld*, M.P.

27 May 1870.

1250. Have you considered the question, against whom those expenses would be chargeable in another constituency?—Yes, more or less, I considered the question at the time.

1251. I do not know what the expenses are; it does not appear here?—They were expenses connected with advertising the election, and issuing notices and circulars.

1252. In the case of a borough constituency, who would be chargeable with those expenses?—I regret that I do not happen to have my papers, with the notes of legal opinions, with me; but I think my memory is sufficiently exact, and what I found was this, if I remember right, that there is no legal liability imposed upon a returning officer to pay any of the costs of an election; that if law does not provide for the payment of the costs, or any part of the costs of an election, those costs have to be paid by those persons, whoever they may be, who have ordered the expenditure which has to be defrayed.

1253. Has not Parliament prescribed that the candidate shall bear a certain portion of the expenses?—In the case of ordinary elections it has.

1254. Do you know whether these expenses fall under the same category as those which I have just alluded to?—I am not sure that I could give a reliable answer to that question.

1255. Lord *F. Cavendish.*] The returning officer's expenses would be the same?—In that sense they would be the same.

1256. Mr. *Pollard-Urquhart.*] Did you inquire into the practice of elections at Oxford and Cambridge?—Yes, we did.

1257. And who is liable for the expenses of an election there?—The expenses, I believe, do not fall upon the candidate; I should say I am quite distinct in my recollection upon this point with respect to the liability of the candidate for the London University, that he could not be held liable; upon that we took a legal opinion.

1258. *Chairman.*] Do you maintain that, because the candidate is not legally liable, therefore his election expenses are properly chargeable against the Vote of the University?—My opinion was that, for the reasons I have stated in this case, I was justified in holding it to be within the constructive intent of Parliament that it should be charged against the vote. I found the candidate not liable, and therefore it appeared to me that I should not be justified in inviting the candidate to pay those costs. I found the Vice Chancellor liable in this sense only, in the way in which anyone who gives an order is liable for the cost of the execution of that order, if no one else provides the money; but I did not imagine that it could have been held to be within the intention of Parliament that a Vice Chancellor, holding an honorary position in an university created by Parliament, made into a constituency by Parliament, of which Parliament paid all other expenses, the whole receipts of which were paid

Sir *W. Dunbar*, Mr. *Foster*, Mr. *Ryan*, Mr. *Stansfeld*, M.P.

27 May 1870.

into the Exchequer, should meet these charges out of his own private pocket.

1259. But do you think that the expenses of one Member of Parliament ought to have gone on the Votes of Parliament, and that the expenses of no other Member of Parliament ought to have gone on the Votes of Parliament?—Yes; my conclusion was entirely based upon reasons appertaining solely to this constituency.

1260. Mr. *Candlish.*] Parliament has created the constituency which I represent, but Parliament has left me liable to the returning officer for the expenses that he incurs?—My starting-point is this, we were advised that the candidate is not liable.

1261. Do you remember on what ground he was exempted from liability?—You must let me postpone my answer to that question, but that is the distinct legal opinion, and that is the basis from which I started.

1262. *Chairman* (to Sir *W. Dunbar*).] There is a grant for the Scotch Universities?—Yes, there is.

1263. And Parliament has lately given Members to the Scotch universities?—Yes.

1264. Have there been elections falling in the same year in the Scotch universities?—In the same year, and subsequently.

1265. Have any claims been made against the Vote for the Scotch universities for election expenses?—No; because there is an express provision in the Scotch Reform Act, to the effect that such expenses shall fall upon the candidate.

1266. (To Mr. *Stansfeld.*) Was your attention called to that?—I believe it was.

1267. Do you think that any argument arises upon that?—Yes, I do; because under that Act the liability clearly fell upon the candidate; in this case, as we were advised, the candidate was not liable.

1268. That being so in the Scotch universities, might it not be considered, in the case of the University of London, that the candidate of that university should be held liable to the same charges as all other candidates seeking other constituencies?—If you mean at law, we were advised that he was not liable by law.

1269. Not even for any charges for which candidates in other constituencies are liable?—As far as I remember, the legal opinion (but I shall be quite prepared upon another occasion to give you exact replies), the ground was this: a candidate for the representation of the London University would have the liabilities of any other man for expenditure which he had authorised, but this was not expenditure which he had authorised, and he had nothing to do with this expenditure. The Vice Chancellor, representing the administrative body of the university, issued certain notices, advertisements, and circulars, and incurred what you might call, roughly speaking, certain returning officer's expenses; those were not incurred by the authority of the candidate; and, as we were advised, the candidate was not legally liable for them; and, practically speaking, the question therefore was, whether the man who had given the orders, the Vice Chancellor, should pay them out of his own pocket, or whether they should come out of the only other fund available.

1270. Mr. *Candlish.*] So far as I know, every other candidate is in the same position; I never ordered any returning officer's expenses, nevertheless I am liable by statute?—Just so; you are liable by statute; but there is no statutable liability in this case. I am quite sure that the Committee will see that this was a moot point of some little intricacy, and on which there was nothing very clear to guide one; it was the business of the Treasury to come to as sound a conclusion as it could on the matter.

1271. *Chairman.*] The amount is a very small amount, only it strikes one as very peculiar that the election of any Member should be charged upon the Votes of Parliament?—Yes; but I think that some limit should be placed upon what you have just said; it is not the expenses of an election of a Member of Parliament, it is certain expenses incurred in connection with the election of a representative for a given constituency.

1272. I am only using the term of the Treasury Letter, "the costs which have been incurred in the election of a Member"?—They were the only costs; they were the costs incurred by the university itself, not by the candidate; as the Committee are aware an election for an university differs in many respects from any ordinary election. The candidate in an university takes no part, but stands aside entirely. If there had been a contest, and if there had been rival Committees, and the expenses of Committee-rooms, as a matter of course those costs would have had to be paid by the rival committees or candidates.

1273. But I am speaking of the necessary expenses of the election of a Member; does not it strike you as wrong in principle that the necessary expenses of the election of one Member of Parliament should be charged upon the Votes of Parliament, while that is not the case with respect to other Members of Parliament?—A charge of this kind in point of policy, I clearly agree with you, is exceptional; but I do not know that we are discussing policy; if we are to talk of policy, my opinion has always been in favour of those expenses being charged upon the constituency.

1274. But we must remember that a proposition was made to that effect to the House of Commons, and was rejected, and notwithstanding the rejection of that proposition, we are now asked to report to the House that the necessary expenses of the election of a Member for the London University are properly chargeable against the vote?—I do not know whether the Chairman has considered what the alternative would have been.

1275. (To Mr. *Foster.*) Have you anything to say on the point?—I think that there is one fact which perhaps has been overlooked, which is this: that at Cambridge these expenses, which were for advertising and printing, are paid out of the university chest; and that they do not equally fall upon the candidate seems to me to be clear, because, from the Act quoted by Sir William Dunbar, we may infer that it was necessary to pass an Act to impose these expenses upon the candidates of the Scotch universities, which showed that by law the candidate was not legally liable.

1276. How is it at Oxford?—I think the same as at Cambridge; but I know that at Cambridge it is paid out of the university chest; therefore, it appears to me that, in a similar case in the London University, it ought to come from the university chest. Now what is the London University chest? it is the Exchequer; that is the chest out of which these expenses, if met in the same way as at Cambridge, would be met.

1277. The London University chest, then, is replenished

replenished in other ways than by the Vote of Parliament?—By fees; but the income arising from those fees, instead of being expended in meeting the expenses of the university, is paid to the Exchequer, which thus really becomes the university chest, and a sum is granted out of it by Parliament to meet the expenses of the university; and surely the expenses which the university must incur for electing a candidate are, "Expenses of the University," which is the term of the Vote in the Estimates.

1278–79. The fact is this, that all the fees payable to the university chest of the University of London are handed over to the Exchequer?—That is so. Mr. *Stansfeld*.) If the Committee will look at Vote 10, they will see that the total of the grant is 9,063 *l.*, and that the amount of extra receipts realised and paid over to the Exchequer is 4,158 *l.* 4 *s.* Then there is a second branch of the question which I think is worth referring to, because it bears upon a difference of opinion which has cropped up between us and the Comptroller several times. The opinion of the Audit Office is thus expressed: "Although it would thus appear that costs incurred by the Vice Chancellor as returning officer are held to be properly recoverable from the public, it does not seem to me to have been within the intention of the House of Commons to make provision for such expenses when the University Vote was passed; and I am therefore of opinion that the payment in question is not properly chargeable to the Parliamentary Grant of 1868-9." Now there are one or two other similar expressions of opinion on the part of the Comptroller, and there is a little difference in our view which I think we might as well state. According to our view it is not correct to ask in this sense what was positively in the mind of the House of Commons at the time that a given vote was passed. I think, with reference to this particular question, that the very heading of this Sub-head, "Incidental Expenses," would be a sufficient answer. If Parliament votes a sum for "Incidental Expenses," I think that you are not entitled to ask the question what incidents were in the mind of Parliament at the time that it voted that sum, because, from the very heading, it appears that it is intended to cover incidents which may or may not be anticipated, and some of which could not be anticipated. But besides that, the intent of Parliament is to be judged by the votes, and not by the sub-heads; that I believe is a well recognised rule in the interpretation of these votes. Our view, therefore, of the matter is this, that if an expenditure comes within the terms of a given Parliamentary Vote, even though that special expenditure could not have been in the mind of Parliament, because the occasion for it arose for the first time since the vote was granted; nevertheless, the Treasury is entitled to sanction it, and to charge it to the vote, and even to create a new sub-head of the vote to which to carry the charge. Now there is some little difference of view between us and the Audit Office, which, I think, it is just as well to bring before the Committee on that subsidiary point.

1280. *Chairman* (to Sir *W. Dunbar*).] Will you explain to the Committee your view of this matter?—Much of the evidence which the Secretary of the Treasury has given has been based upon the question of law. He has told the Committee that the Treasury have been advised that this is a sum not chargeable to the candidate, and that they have arrived at the conclusion that if it was not chargeable against the candidate it must be chargeable against the university. Now, though the sum involved is small, the principle, I consider to be of vital importance, because, on referring to the letter of the Secretary of the Treasury, I found that, in the answer to the senate of the university, he opened up a broader question, and that was whether the expenditure on poll-clerks, polling-places, and such like might not also become liabilities of the university. It appeared to me that this would be a question which would crop up sooner or later, and as it was not unlikely that the expenditure in the event of a contested election, so incurred, would be very considerable, I thought it was peculiarly necessary for me to consider whether this sum was a sum properly chargeable against the vote. The Committee will observe that I did not deal with the question of law; I left the question of law to be settled between the Committee and the Secretary to the Treasury. I dealt with it simply as a charge made against the vote, and allowed against the vote by the Treasury, which I thought was not properly chargeable against it, in virtue of the provisions of the Exchequer and Audit Act. Now the account for the election expenses was brought to the notice of the superior officers in my department by the inspector entrusted with the examination of the account, and it was thought of sufficient importance to be brought under my immediate attention. I directed a letter to be addressed to the senate to ask them to explain the grounds upon which that expenditure was charged against the vote, and in reply, as stated in my report, they sent, as the authority for the charge, the Treasury letter. Now the reasons for the conclusions that I have come to are simply these. In the first place I found that, on comparing the University Vote for 1868-9 with the University Vote for 1867-8, the identical sum of 738 *l.* was introduced in both Estimates for Incidental Expenses. I drew from that circumstance this inference, that no sum had been placed in the Estimate for a charge so foreign as I conceived that to be to the purposes of the University Vote. My second reason for coming to the conclusion was, that the estimates were framed by the university authorities, and revised, I suppose, by the Treasury; and I considered that if the university authorities had intended to introduce a sum which should be applied to this special purpose, they would have considered it unnecessary to apply to the Treasury for its sanction to that charge. The doubt raised in the minds of the senate of the university tended greatly to increase my doubt, or rather to confirm the conclusion which I came to. My third reason was, that the expenditure from its very nature is occasional and cannot be foreseen, and therefore cannot be provided for in an annual vote. But my fourth reason (and it is the most important of all) was this: I had to consider, as the Comptroller and Auditor General, called upon, as I stated before, in the discharge of my duties, to interpret the intentions of Parliament, what were the purposes to which this vote for the university was intended to be devoted. Now, I find that the purposes for which the vote is granted are educational purposes. It appeared to me a vote for educational purposes, and I confess that I could not detect any affinity between an expenditure for election purposes and an expenditure for educational purposes. Upon those

Sir *W. Dunbar.* Mr. *Foster.* Mr. *Ryan.* 27 May 1870.

those four grounds I came to the conclusion that even if the law, as laid down by the Secretary to the Treasury, was correct, nevertheless inasmuch as no direct provision for election expenses had been made by Parliament for the reasons assigned, that charge could not for that year (I did not go beyond that) be made against the University Vote. Now the difficulty which the Secretary to the Treasury appears to have had was this, if it is an expenditure which the Vice Chancellor could not reasonably be required to pay, if it is an expenditure which is not legally exigible from the candidate, how can it be provided for except from this vote? Well, I have a very plain answer to that. I say this expenditure, being from its very nature unforeseen, is just that expenditure which ought to have been charged temporarily, by way of advance, upon Civil Contingencies, which is a fund specially devoted to unforeseen and unprovided expenditure; that it should have been voted, according to the established practice in replacing such advances, in the following Session of Parliament, and the subject-matter would thus have been brought legitimately under the notice of Parliament. I have stated the reasons as succinctly as I could which guided me in this matter. As I have said, I was not in the least degree called upon to consider the question of law. I should have considered the question of law if the expenditure had fallen within the apparent intention of the vote, because if the vote had not been legally liable, even though the charge might have fallen within the apparent intention of the vote, I should have considered it my duty to disallow it. But I was not called upon to consider the question of law. As I said before, I confined my attention exclusively to this point: was it intended by this one vote for that financial year to provide for an event which was not, and, from its very nature, could not, be anticipated? I would further illustrate my views by making reference to the estimate for the present year. A sum is taken for incidental expenses. No doubt at this moment not one person seated at these tables is under the belief that an election for the university will take place during the current financial year. I do not suppose that it is in the mind of the Government at this moment, or in the mind of Parliament, to make provision for the expenses of an election which may or may not happen; but surely it is within the bounds of possibility that an election may take place, that a contest may arise, that a considerable amount of expenditure may be incurred; and I put it to the Committee whether, if such circumstances were to arise, I should be justified in allowing such a charge to be made against an educational vote? I have only one further observation to make. The Chairman alluded to the Scotch universities, and I think it was said that the London University chest consists of fees which are paid over to the Exchequer. Now in the case of the Scotch universities, they have both funds of their own and grants of Parliament to sustain them; but in their case there was an express prohibition against any expenditure of such a nature being paid either out of their own funds or out of the Vote of Parliament. Let me point out to the Committee that, in this case, the Treasury did not create a sub-head. If the expense had fallen within the proper intention and meaning of the vote their duty was to have created a sub-head. They ordered it to be charged against "Incidental Expenses." I contend that, if properly payable by the public, it ought to have been charged temporarily, by way of advance, against the Civil Contingencies Fund, which is intended to provide for unforeseen expenditure; and that it should, in the next Session of Parliament, have been voted by the House.

1281. Lord *F. Cavendish.*] In the Vote under the Sub-head "Incidental Expenses," there are various detailed heads, such as Advertisements, Stationery, and Postage. Was there anything to prevent the university charging these various expenses of the election under those detailed heads?—Yes, I think there was. The university authorities, if I am to judge from the action which they took in the matter, appear to have thought that it was very doubtful whether election expenses could be charged against incidentals. The persons who had made the expenditure and had to decide upon it were the best persons to raise the question. If it had been a charge which would legitimately have fallen under ordinary Incidental Expenses, I presume that the senate not only had the power to charge it against Incidental Expenses, but would have done so without going to the Treasury.

1282. If they had charged it against those detailed heads should you have objected?—It is charged against those detailed heads.

1283. I thought it was made separate?—No, it is charged under Incidental Expenses. The account, as produced in support of the charge, bears to be for election expenses. I would draw the attention of the Committee to the fact that the account was headed "Election Expenses." Had the account been simply headed "Advertisements," of course my attention would not have been drawn to the subject, because the account might have been for advertisements or anything else clearly identified with the ordinary educational expenditure of the university; but, because it was headed "Election Expenses," and because the senate of the university did not think fit to charge it as ordinary incidental expenses, but, on the contrary, considered it their duty to bring it under the attention of the Treasury, the question of how that charge should be made naturally fell under my attention.

1284. The grant is made to pay the expenses of the University of London; there is nothing in the general head of that vote to restrict it to educational purposes, is there?—That vote appears in a general class, having relation to Learned Bodies and Educational Institutions; and, as a matter of course, the conclusion that I have drawn, and that I have drawn all along (and the whole of the detailed expenditure shows what were the purposes of the vote), is this: If the vote was intended for education and no other purpose (and this vote could have been intended for nothing else, for this simple reason, that the several Reform Bills had not passed when the University Estimate was presented to Parliament), how could it apply to an expenditure that could not possibly have been foreseen or provided for?

1285. *Chairman* (to Mr. *Foster*).] Do you wish to make any observations on the subject?—Generally, it appears to me that inasmuch as the expenses were incidental expenses, and provision was made under this sub-head for advertisements and postage (both of which formed items in the account in question, the principal sum being advertisements), Sir William Dunbar's argument would lead to this, that if there were some new thing started next year, something new which did not

not exist when the University Vote was passed, and a letter were written on that account, the postage of that letter would not be properly chargeable to this vote, but ought to be charged to Civil Contingencies. This evidently is not the intention of Parliament. I would further remark, with regard to charging it against Civil Contingencies, that I think it extremely important to maintain the principle that, if there is a vote which covers the expenditure, it ought to be charged against the vote, and not be separated from the vote to which it applies and be put under Civil Contingencies.

1286. Mr. *Candlish.*] Would it not be well that such a charge as this should come under the review of Parliament?—I think that might apply to 50 different things that might come under the head of Incidental Expenses; I think that there being provision for Advertisements and Postages under Incidental Expenses, that meets the point.

1287. But advertisements "for election purposes"?—I do not know how the Estimate could have stated all the purposes for which advertisements might be required.

1288. But, as the special purpose was unknown to Parliament, would not such a course as would bring it under the review of Parliament be a preferable course, and would not the charge in the Civil Contingencies have brought it under their review?—I think it would rather have led to conceal the charge. Falling upon the University of London among other items it would have been just as likely to escape attention as here. If it had been a large sum, I think that the Treasury might have authorised a separate subhead for it; but as it seems fairly to fall under Incidental Expenses, I should hardly have thought of proposing that. (Sir *William Dunbar.*) Supposing I had done this; that I had accepted the law as laid down by the Secretary to the Treasury, that there had been a contested election, that not only these expenses but the expenses of polling places and such like had been incurred, and that the expenditure instead of being 32 *l.* had been 300 *l.*, and supposing that in the discretion left to me (for a great amount of discretion must necessarily be left to the man who is under no control himself) I had allowed that expenditure, and passed it over without comment in my report, how would it have come under the notice of Parliament? Supposing that I had accepted the two views, that election expenses were legally chargeable to the vote, and though not specially provided for by the vote, formed a proper charge, as contended by the Treasury, against Incidental Expenses, in what way would Parliament have come to the knowledge of the fact that an expenditure not previously sanctioned by it, had been incurred and paid out of the vote? It would have come under the notice of Parliament, undoubtedly, if the course which I suggested in a previous part of my statement, that the sum should be advanced out of Civil Contingencies, had been followed. (Mr. *Foster.*) An expenditure of 300 *l.* would produce a large excess upon the sub-head, which would have to be accounted for, and be reported upon to Parliament.

Sir W. *Dunbar*
Mr. *Foster.*
Mr. *Ryan.*

27 May 1870.

On Vote 17.

1289. Mr. *Stansfeld* (to Mr. *Ryan*).] I see that the Comptroller and Auditor General reports that the deficiency of 21 *l.* 3 *s.* 2 *d.* ought to be converted into a saving of 17 *l.* 7 *s.* 4 *d.*?—A satisfactory voucher has since been produced to the Audit Office in reference to that matter, and the amount has been allowed since.

Wednesday, 15th June 1870.

MEMBERS PRESENT:

Mr. Candlish.	Mr. Liddell.
Lord F. Cavendish.	Mr. Pollard-Urquhart.
Mr. A. Egerton.	Mr. Sclater-Booth.
Mr. W. Fowler	Mr. Seely.
Mr. Ward Hunt.	Mr. Stansfeld.

THE RIGHT HONOURABLE GEORGE WARD HUNT, IN THE CHAIR.

Sir WILLIAM DUNBAR, Bart., Mr. MORGAN HUGH FOSTER, C.B., Mr. WILLIAM GEORGE ANDERSON, Mr. CHARLES VINE, and Mr. CHARLES LISTER RYAN, called in; and Examined.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Vine.*
Mr. *Ryan.*
15 June 1870.

ON VOTE 2, CLASS 5.

1290. Mr. *Liddell* (to Mr. *Foster*).] WILL you be kind enough to tell the Committee the principle upon which the tonnage bounty upon slavers is based?—The tonnage bounty is the sum that is allowed per ton to the captors of a slave vessel captured with or without slaves on board. The slave bounty is so much per head for each slave captured.

1291. Then I imagine that, in framing the Estimate for this expenditure, there must be considerable margin allowed?—Certainly. It is impossible to make a very close estimate of what number of ships or slaves will be captured.

1292. But in sanctioning the payments, do you receive from each captain a list clearly drawn out of the precise number of the slaves taken, and, in the event of there being no slaves, of the tonnage of the vessels captured by him?—We are guided by a decree of the Vice Admiralty Court on the station where the ship is condemned. Those Vice Admiralty Courts are presided over, not by legal officers, but by consuls, by merchants, by half-pay captains, and others who have not had the advantage of legal training. Therefore it is impossible to look at those decrees with the strictly legal view with which a decree in England would be regarded. We are obliged in all cases to use considerable discretion. All cases are referred to the Registrar of the Court of Admiralty in London, who gives his advice to the Treasury upon the matter; and the Treasury, using a certain amount of discretion where there may be a deficiency in any minor point, orders the payment to the captors of either the tonnage bounty or the bounty on slaves.

1293. Is it the opinion of the Treasury that this is a Vote which requires at all times very careful scrutiny, and might be liable to abuse?—We are obliged to be almost entirely guided by the advice of the Registrar, who is a legal officer, well versed in these matters. I should doubt there being any likelihood of abuse taking place. The condemnation of the vessel is always effected by an established Court, and the deficiencies which occur in the decrees are generally mere legal defects. The Court always deals with the matter with sound common sense, and does the best it can with the facts before it. I do not think that there is any reason to doubt the efficiency of the Court in dealing with the questions that come before it in a reasonable and proper manner.

1294. Mr. *Pollard-Urquhart.*] The note on Sub-head L., "Presents to Niger Chiefs," is, "This charge having been reported after the general Estimate was submitted to Parliament, no sum was inserted on account thereof:" would not that have been more properly chargeable under the same head as some extraordinary expenses under Vote 5 have been charged to, because I see that there was a large sum incurred on account of the Niger Expedition, which has been charged to Vote 5, and the Comptroller and Auditor General has made some remarks upon it?—Vote 2, "Tonnage Bounties, &c.," is a Vote which is considered to apply entirely to the slave trade, and as these presents to Niger chiefs are given in connection with the slave trade, it was considered that Vote 2 would be the most appropriate to put that expenditure under.

1295. Then am I to understand that these presents were not given at the time that this Niger Expedition was made, on account of which the sum included under Vote 5 was expended; one would think that the two would, to a great extent, go together; there is no sub-head for the Niger Expedition, but in his report the Comptroller and Auditor General remarks that some expenses for the Niger Expedition have been charged to Sub-head E. of Vote 5?—With regard to that sum of 1,741 *l.* 6 *s.* 10 *d.*, charged to "Incidental Expenses" under Vote 5, the case is perfectly different; that expenditure had nothing to do with the slave trade. We had a consulate up one of the rivers on the Niger, and that expenditure was incurred in the defence of the consulate against some native tribes. The vice consul there sustained a siege of several months in the most gallant manner. He was driven to considerable extremities, and had to buy from the factory there brass rods and different things, which he cut up into bits to form shot to fire at the natives. There was a regular siege, which ended

ended by his beating the enemy off. The cost of sustaining that siege amounted to 1,741 *l.* 6 *s.* 10 *d.*, and it was thought that a charge in defence of a consulate was properly chargeable upon the Consular Vote.

1296. These presents to Niger chiefs, included in Sub-head L., Vote 2, had nothing to do with that siege, and the expenditure consequent thereon?—Nothing whatever.

1297. *Chairman.*] I suppose the presents to Niger chiefs were for information with regard to slaves which had been deported to the coast?—They were entirely connected with the slave trade.

1298. Mr. *Pollard-Urquhart* (to Sir *W. Dunbar*).] Did this charge for presents to Niger chiefs attract your attention?—Yes; I only noticed it because there was a sub-head added which was not provided for in the original Estimate.

1299. You thought it was properly chargeable to Vote 2, although it was not provided for in the original Estimate?—I did not express any opinion upon the propriety of charging it to that Vote.

1300. But you think, as things stand at present, that the presents to Niger chiefs were properly chargeable to Vote 2?—We cannot tell the actual purposes to which these moneys have been devoted; it must follow the Estimate; but in this case I pointed out that there was no sub-head to include this expenditure. I made a remark on the subject with regard to an expenditure of 1,741 *l.* 6 *s.* 10 *d.* on a subsequent Vote for Consuls Abroad.

1301. Mr. *Liddell.*] I presume the money spent for those purposes would be looked upon rather in the light of secret service money, would it not?—No, I should think not. I suppose that the Treasury consider this to be an expenditure incidental to this particular Vote.

1302. *Chairman.*] Why could not it have been classed under Sub-head F., "Incidental Expenses," under Vote 2?—It is for the Treasury to explain that.

1303. (To Mr. *Foster.*) What have you to say upon that point?—It might have been thrown in with "Incidental Expenses"; but the Treasury considered that it was better to bring the actual expenditure more clearly out. It is plain that we should have had an excess on "Incidental Expenses," if we had thrown this expenditure into that sub-head, and there must have been an explanation if it had been exceeded.

1304. You thought it better to have a separate sub-head?—It appeared to us to be more clear in that way.

On Vote 5.

1305. Has any rectification of what appears to be a mistake in charging Lieutenant Colonel Mansfield's military pay to this Vote been made?—The Treasury consider that the military pay of this officer ought to be charged against military funds, and they have directed the Foreign Office accordingly.

1306. Mr. *Seely.*] Supposing that Colonel Mansfield had no military pay, would the consular salary which is allowed to him be sufficient?—I think that it is very probable that if he had no military pay, they would either not have chosen Colonel Mansfield, but would have been satisfied with an inferior officer; or else they might, under the circumstances, have given him an additional allowance.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Vine.*
Mr. *Ryan.*

15 June 1870.

1307. *Chairman* (to Sir *W. Dunbar*).] But you have not disallowed the proportion of pay which represents the military pay of Colonel Mansfield as a charge against the Vote?—No.

1308. (To Mr. *Ryan.*) It ought to be disallowed, ought it not?—It was in the Estimate, therefore it could not be disallowed; but it appeared to us to be an incorrect state of Estimate, and therefore we thought it desirable to call the attention of the Committee to it.

1309. If it is now to be charged to the Army Vote, how will the account be adjusted?—It will be adjusted in the subsequent Estimates; but it will continue to be charged against the Consular Vote, even down to 1870-71, because it is included in the Estimates for the present year.

1310. Mr. *Seely* (to Mr. *Foster*).] If the amount charged is only a fair remuneration to the officer, the military pay ought to be included in this Vote, because this Vote ought to represent the actual expenses of the department?—The salaries of the consuls are all fixed; the department could not increase the salary without Treasury sanction. The Foreign Office may sometimes consider that, by taking a military man who has military pay, they get a superior class of officer to represent them to what they would get if this were not allowed; if it necessitated the increase of the consular salary, they most likely would abandon it, and appoint an inferior officer.

1311. Mr. *Egerton.*] In a case of this kind, where a salary is given in addition to pay from another source, would it be correct or not that there should be a foot-note explaining that it is given in addition to the standing pay of the officer?—Certainly, that is done in most cases; there may be omissions, but it is intended that the Estimates should show that.

1311* That would have been right in this case?—Yes.

1312. Mr. *Stansfeld* (to Mr. *Ryan*).] There was a note in this case, was there not?—I think not; but we knew that the military pay was charged from the gross amount.

1313. (To Mr. *Foster.*) In some instances, is there not an arrangement between the departments, that when a military or naval officer is appointed to a civil post, his military or naval pay should cease, and that the Civil Department should bear the whole of his remuneration?—That is done in several cases.

1314. And by that kind of arrangement between the departments, the view of the honourable Member for Lincoln is carried out?—Yes.

1315. I believe that the military pay as well as the consular salary of Lieutenant Colonel Mansfield is taken in the Estimates of 1870-71?—Yes.

1316. Do you happen to know whether his military pay is also estimated for in the Army Estimates?—I could not answer that question for certain; but I should presume that if it is in the Consular Estimate, it is not in the Army Estimate.

1317. But if this Committee should be of opinion that the military pay, in the absence of any arrangement between the departments, such as that to which I have referred, should not be included under the Consular Vote, would there be any difficulty in charging the Consular Vote only with the consular salary and Colonel Mans-

Mr. *Vine.*
Mr. *Ryan.*

15 June 1870.

field drawing his military pay from the War Office Vote?—The Treasury could quite easily give that direction.

1318. Mr. *Liddell.*] In the event of a military or a naval officer being appointed to a civil office of this kind, and the department undertaking the whole pay, I presume the Estimate would show what the amount of his salary as a consul would be, and, in addition to that, the amount paid to him in excess of the ordinary salary as military pay?—I think that the Estimate would show it either as civil pay entirely without any observation, or if he received military pay it would or should state the civil salary in the Civil Estimates, with a note attached, showing that he also received military pay under the Army Estimates.

1319. That would give the full information that Parliament would be entitled to ask for?—I think so.

1320. Mr. *Seely.*] Is there any clause in the Act of Parliament which prescribes that any military officer employed on civil service should not, during the time that he is so employed, receive any military pay?—In the Appropriation Act there is a clause which states that any officer upon half-pay, if he receives civil employment, and the remuneration for it exceeds three times his half-pay, shall cease to draw that half-pay.

1321. Is it not the object of these accounts to present to Parliament the cost of certain departments, and if so, ought not the entire costs to be represented in the account of this Vote?—It may be said that the half-pay is looked upon not as remuneration, but as a retaining fee for future services; thus, a half-pay officer being retained for future service, the army which would benefit by his future service should bear the cost of it.

1322. But the Treasury, I suppose, would admit the principle that whatever is a fair remuneration for the officer employed ought to be charged against that particular Vote?—I think that that system would be the right one to follow as regards the remuneration to be given to the officer for that service, but where there has been a fixed salary, and a civil servant has been always paid at that rate of salary, I am not sure whether in appointing a half-pay officer they would be bound to include his half-pay in the civil salary, because the remuneration for his service to the Civil Department is met by the ordinary salary, and the half-pay, which is a retaining fee, is met out of the Army Votes in consideration of the future service he will give to the Army Department, if required.

1323. I think I understood you to say that you got a superior officer in consequence of taking a gentleman who had half-pay, and that if he had not had half-pay you would have had an inferior one?—I think that arrangement has that effect, and does sometimes secure better officers for particular posts.

1324. If it is desirable to have a gentleman of that class, is it not desirable to charge against the Vote the full amount which you pay to him?—I think where the service requires necessarily an officer of high standing, that argument tells completely; but I think there are some cases where it is rather accidental that a military officer is appointed, and the place might be equally well filled by a person who does not draw half-pay, in addition to his salary.

1325. *Chairman.*] Can you tell in the case of this particular officer, whether he draws the full consular pay as well as his military pay, or whether any abatement is made from the consular pay in consequence of his receiving military pay?—I understand that he draws his regular consular salary in addition to his half-pay. At Warsaw it is important to have a military officer as consul.

1326. The deficiency of 2,176 *l.* 8 *s.* 2 *d.* on Sub-head E, "Incidental Expenses," is explained thus: "The excess of expenditure was occasioned by circumstances which could neither be foreseen nor controlled;" can you give any further explanation of that?—I think it must be owing to the same cause as has been stated in explanation of many of these deficiencies, namely, that this is the first time that an Appropriation Account has been rendered, that the Consular Accounts were not kept under these headings before, and that it was very difficult to form an estimate of what the incidental expenses really had been, and therefore what they were likely to be in the following year.

1327. Mr. *Stansfeld.*] Do you happen to remember whether the attention of the Foreign Office has been drawn to the insufficiency of that explanation?—Not officially certainly.

1328. Mr. *Seely.*] This discrepancy is not likely to occur again?—No, it will not occur again, I hope.

1329. Lord *F. Cavendish.*] A large proportion of this excess was accounted for by the sum of 1,741 *l.* 6 *s.* 10 *d.* expended for the Niger Expedition, was it not?—That is so.

1330. *Chairman* (to Mr. *Ryan*).] If that information has reached the Comptroller and Auditor General, why should it not have been included in the original explanation?—The Comptroller and Auditor General has had no information that this expense of 1,741 *l.* 6 *s.* 10 *d.* was incurred for defending the consulate against an attack. On the contrary, we thought that these expenses, the voucher for which I have here, and which I shall ask the Committee to look at, were for presents to the Niger chiefs, inasmuch as the nature of the expenditure is the same as that which is charged under Vote 2, for presents to the Niger chiefs. It is true that there are three kegs of gunpowder included, but they only count for 3 *l.* out of the 1,741 *l.* 6 *s.* 10 *d.*

1331. Then the item for brass rods does not appear?—There is an item of 155 cases of brass rods, amounting to 1,007 *l.* 10 *s.* Then next comes "fez caps," then "rose nails," then "white chintz," then "brass tacks," and further on we come to "red Turkey twill," "cases of gin," "strings of real coral," and a "damaged muslin turban."

1332. Is that gin for the Niger chiefs?—I think that these things must have been put into canisters and fired at the Niger chiefs' heads; that is the only way I can account for it (*handing in the Account*).—(Mr. *Foster.*) I believe the brass rods were cut up not in order to make presents to the natives, but to fire at their heads. With regard to the spirits, I suppose they were to keep up the courage of the allied tribes who aided in the defence.

1333. I see in this account a keg of green paint, and a paint brush, was that to paint the chiefs with?—I have here an interesting account of the siege, if any honourable Member wishes to read it.

1334. Mr. *Seely.*] Who authorised this expenditure?—The consul there had no means of obtaining

obtaining authority for the expenditure. He was suddenly attacked, and had to defend himself, in the centre of Africa, as best he could. He had no opportunity of obtaining authority for the expense, and when his bill to pay for the cost of sustaining the siege first arrived in London, it was refused; but when his graphic account of the siege came, the Government thought they had no choice but to allow the expenditure, and accordingly they paid the bill.

1335. Mr. *Fowler.*] You consider that the siege was a circumstance which could not be foreseen nor controlled?—Certainly it was not foreseen, and could not be controlled.

1336. That is what you mean by that explanation?—That is not my explanation.

1337. *Chairman* (to Mr. *Ryan*).] Who is that account signed by?—It comes from Mr. Alston at the Foreign Office.

1338. There is the signature of a Mr. Lewis?—He is the general agent, I believe.

1339. Is he a general agent of the Foreign Office on the Western Coast of Africa?—No, of the West African Company.

1340. Did he authorise the expenditure?—The consul incurred the expenditure, I presume.

1341. On his own authority?—On his own authority, and afterwards it was allowed by the Foreign Office, and came in the account to the Audit Office as sanctioned by the Foreign Office.

1342. Mr. *Seely.*] Then was it claimed specifically on the ground that he had been attacked?—We had no explanation or reason to assume, until this moment, that that was the nature of the expenditure. We conceived that it was expenditure for presents to chiefs, and that it bore an analogy to the other expenditure under Vote 2, which was put down as being presents to the Niger chiefs.

1343. *Chairman* (to Mr. *Foster*).] Have you a paper which explains this charge?—I have a paper which gives a full explanation of the whole of the circumstances.

1344. Will you read it to us, if you please?—"Mr. Macleod is British consul for the districts of the Niger and Chadda (or Benuwe), with salary and allowance of 700*l.* per annum. His station is Lukoja, at the confluence of the Niger and Benuwe, an important town in the territory of King Massaba, which seems to have grown up within the last few years. Its origin is said to be due to the circumstance that Dr. Baikie once built himself a hut on the spot; subsequently it became the site of a factory of the West African Company, Limited (17, Dickinson-street, Manchester), round which has gathered a community of 2,000 souls, natives of different tribes, who have come for purposes of trade, or for the protection of the white man, redeemed slaves, soldiers, and missionaries. Mr. Macleod's duties are:—1. To repress the slave trade, and, so far, are extremely vague. 2. To encourage British trade with the natives, which apparently means to cater for, and in all ways foster, the factory of the West Africa Company, Limited. 3. To succour the missionaries whenever their zeal may lead them into difficulties. The mode in which these duties are to be performed is left very much to his discretion, so long as his expenses do not exceed 200*l.* per annum. Upon this point only do the instructions given him by the Foreign Office appear to be definite. His relations with the inhabitants of Lukoja and with King Massaba are somewhat peculiar. The inhabitants consider themselves British subjects, and look upon the consul as governor of the town, on behalf of Her Majesty; they obey him implicitly, and trust to him for protection. On the other hand, the consul's policy seems to be to let no opportunity escape of acknowledging Massaba's prerogative as Sovereign of Lukoja; and such a course is clearly dictated by prudence, because for several months in the year the Niger is closed to European navigation, and during this period the consul must depend upon the king for protection against the bands of pirates who infest the river and its tributaries. Thus Mr. Macleod enjoys the advantage of a sort of double vice-royalty, representing concurrently Queen Victoria and King Massaba. Perhaps this circumstance explains the comparatively sluggish interest taken by Massaba in the fate of Lukoja. He is ready enough to send soldiers for its defence, his troops having been quartered there since 1865, but he insists upon the consul paying for their support, and would appear not to care to visit the place in person, whatever need there may be for his presence. At the same time he seems flattered by that officer's attention, and repays him with patronising compliments and advice, and in short shows a shrewd appreciation of his real position, which does much credit to his sagacity. The above remarks may help to make the following narrative intelligible. About two years ago Mr. Macleod felt it his duty forcibly to rescue the Bishop of the Niger, who had been kidnapped by the pirate chief Aboko. On the 1st November 1867, when the navigation of the Niger was closed to Europeans, three piratical chiefs, Smicoja, Abajee, and Agabedoko, with 1,200 followers, appeared before Lukoja and demanded of the consul 200 slaves, or 1,000*l.* worth of goods as ransom for the rescued prelate. Mr. Macleod refused, perhaps feeling that he had already paid dearly enough, for the rescue had cost the life of Mr. Fell. Upon this the chiefs said that they did not want to fight about it, but would for the present turn their attention to a collateral object of their expedition, viz., the vacant throne of Ghibbi, a district on the opposite side of the river, for which Agabedoko was a candidate. They then ensconced themselves in threatening positions on either side of the factory and within musket range; Agabedoko and Semicoja with 1,000 men at the point of confluence of the Niger and Benwe, and Abagee on Duck Island with 200 men. Mr. Macleod could not doubt their ultimate intention, but determined to remain strictly on the defensive. There were only 200 of the royal troops in the place. Messengers were sent to apprise the king, and meanwhile the consul trained the townsmen, mounted some old guns 'which became the wonder of the country and terror of the enemy,' cut two military roads, one four and the other three and a half miles long, to help in obtaining supplies, and in a word took all those measures which were to be expected from a person of his energy and readiness of resource. In January 1868 Messaba sent 600 warriors to protect the town, but their keep proved so expensive that Mr. Macleod was obliged to send them back again in the course of a week. In the following month a relay of 400 Bunns came from the king, with orders to remain, and bearing a message from his

majesty to the effect that 'he was much pleased with the measures taken for the defence of Lukoja. He knew the enemy intended to attack, and begged Mr. Macleod not to leave the consulate without a guard.' A friendly king named Achia also arrived with canoes and a body of followers. He was one of the rival candidates for the Ghbibi throne, and hoped to secure Massaba's support by helping him to defend Lukoja. March at length came round, and the people of Lukoja began to be busy with their farms. Then for the first time did the pirates attack the factory. They were repulsed, however, with a loss of 17 killed, three prisoners and a gun, both the latter at once being sent to Massaba as trophies of war. After this the enemy attacked some three or four times a week, but without decisive results. Mr. Macleod did not feel able to assume the offensive till the end of March, when he was joined by one of Massaba's best generals, Galadmo, with a body of cavalry. He then proposed to construct some large rafts, warp them up the river, and after embarking upon them with a party of troops under his own leadership, drop quietly down the stream to a point whence the enemy might be attacked in the rear. In the meanwhile Achia with his canoes was to engage the pirates in front. This plan, however, broke down because 'the Nussies' were afraid to trust themselves on the water; Achia, therefore, and his men made an assault by themselves on Duck Island, captured 113 prisoners, who were duly sent to Massaba, and forced Abagee to take refuge with his brother chiefs at the confluence of the Niger and Benuwe. The next three months and a half passed by in comparative inactivity. In April the consul erects two masked batteries, and contrives a respectable grape out of some odds and ends of metal. In May he receives a message from Massaba explaining that Nussies cannot fight on water, and promising to send a party of Kakundàs who can. The Kakundàs did not come till the 21st July, and for two or three days after their arrival were a little doubtful which side they would join. Mr. Macleod's diplomacy, however, in the end prevailed over the intrigues of Semicoja. On the 23rd the original plan of attack was revived, and the Kakundàs take the enemy in the rear, whilst Achia engages them in front. Mr. Macleod remained in Lukoja superintending a vigorous bombardment from his batteries; the fight lasted till the 27th, when the pirates fled in disorder, Semicoja with 200 men up the Benuwe to Upper Atipo, and Abagee and Agabedoko with a considerable body of followers to Beaufort Island. Agabedoko, however, died of his wounds in seven days afterwards. Mr. Macleod felt that though broken, the pirates were far from destroyed. A few months later reinforcements would reach them from the delta, and they would become as formidable as ever. The only safety lay in utterly stamping them out. In August, therefore, when the Niger was again open to British vessels, and Her Majesty's ships 'Pioneer' and 'Investigator' arrived in the river he arranged an expedition with Lieutenant Sandys for the purpose of crushing Semicoja. The ships took up a position before Upper Atipo on the 21st August. Negotiations for the surrender of the pirate chief proving fruitless, fire was opened upon the village of Atipo, and in a little time they were reduced to ashes. Semicoja wounded and abandoned by all but one wife, was forced to fly to the Adelaide Mountains, no one daring to offer him shelter. In like manner on the 17th September, Her Majesty's ships, by order of the consul, destroyed the strongholds of the pirates on Beaufort Island. But just before this was done, Mr. Macleod was obliged to leave for Madeira on account of ill-health. Nine months' fighting with pirates had told upon his constitution; but this was not all. There was a heavy bill to pay, and the Foreign Office had forbidden him to incur any extraordinary expense. Throughout the whole of the siege of Lukoja, Mr. Macleod had been obliged to provide for the maintenance of several hundred troops, and at one time certainly for a good many more than the number of besiegers. No doubt the native inhabitants were made to furnish free quarters to the defenders; but for the rest, Mr. Macleod had to look to the factory of the West Africa Company, Limited. This firm supplied him with brass rods and other articles used in traffic with the natives; their bill for the first year amounted to 1,741 *l.* 6 *s.* 10 *d.*, and on the 15th September the general manager, Mr. Lewis, wrote to the consul as follows: 'I have been thinking over the manner you proposed yesterday of settling up my account by simply signing it. This appears to me very unsatisfactory, and I should be glad if you will square up in the usual manner by a bill. I do not doubt you have orders not to draw, but there must be a mistake, inasmuch as how can the Foreign Office expect you to keep up the consulate here without funds?' This letter removed Mr. Macleod's scruples, and he at once 'squared up' in the manner desired. The bill has been presented in England, and after a little demur been accepted by the Foreign Office and charged provisionally to the Vote for Special Missions."

1345. Was that paper supplied to you by the Foreign Office?—No; it is a paper prepared at the Treasury.

1346. I see it is headed confidential; I suppose you have committed no breach of confidence in reading it?—I believe not.

1347. Mr. *Liddell.*] That paper has not been submitted to Parliament, has it?—No.

1348. Mr. *Fowler.*] In that paper there is a reference to the expenses of keeping the men, the provisions, and so on; if I understand the narrative rightly, that is the great ground of expense which is put forward, but the expenses which appear by the voucher are not at all for provisions; can you explain that?—The consul had to pay all the native troops who came to assist him in some way or other, and his means of paying them was by supplying articles of this nature to them.

1349. Then you mean to say that the brass rods were used for two purposes, to fire and to pay with?—So I understand.

1350. *Chairman.*] I suppose we may consider that the Factory Company, Limited, did a great stroke of business during these few months?—I suppose they did not omit to charge their profit upon the articles they supplied.

1351. The person who signs that account as the general agent of the Foreign Office is the head of the factory, is he not?—Mr. Lewis is the agent of the factory; he has nothing to do with the Foreign Office.

1352. (To Mr. *Ryan.*) I understood from you that the account was signed by Mr. Lewis as the general

general agent of the Foreign Office?—He is the general agent of the West African Company, Limited, who received the money.

1353. I think you said in your former answer that he was the general agent of the Foreign Office?—I was wrong if I said so.

1354. In fact that is the bill sent in by the Factory Company and signed by its manager?—Yes, it is signed by him as received.

1355. I was under the apprehension that it was signed by the agent of the Foreign Office as a voucher for its correctness?—No.

1356. Mr. *Stansfeld* (to Mr. *Foster*).] I think, after this explanation, it would be as well if you would state to the Committee whether any steps have been taken to prevent the possibility of the recurrence of such proceedings?—I believe the consulate has been done away with.

1357. Lord *F. Cavendish.*] Why was not this explanation given to the Audit Office when they demurred to the heading under which the expenditure was charged?—The explanation was omitted originally by the Foreign Office, but it was supplied to the Comptroller and Auditor General on the 23rd of December last.

1358. *Chairman.*] Do you know the conditions under which the Foreign Office accept bills drawn for a larger amount than their agent is authorised to spend?—The first step of the Foreign Office was to refuse the acceptance of the bill, and it was not paid until explanations were received from the consul, and then under the circumstances they thought they would scarcely be justified in refusing to pay for the articles which had been supplied to the consul, but a determination was come to to abolish the consulate.

1359. Was any inquiry made before the bill was accepted as to the propriety of the charges?—I do not know that any special inquiries were made of the West African Company. It is difficult to say that these articles were not required.

1360. But then it may be a question whether the prices charged were proper?—I imagine the bill underwent the usual scrutiny which the Foreign Office would give to such bills,

1361. Is the usual scrutiny a strict one, do you know?—I think it would be better to get some one from the Foreign Office to answer that question. I should not like to undertake to give an answer to it.

1362. (To Sir *W. Dunbar.*) Have you anything to say upon this item beyond what you have said in your report?—No; I wish only to observe that the letter of the 23rd of December 1869 does not give us any specific information as to the real purposes to which the money had been applied, and I wish also to observe that the Foreign Office appears originally to have charged it against the Vote for Extraordinary Expenses for Foreign Missions, the Vote which I consider it ought to have been charged against. The quarrel seems to have arisen out of the capture of a bishop; that seems to have been the *fons et origo mali.*

1363. (To Mr. *Foster.*) What have you to say against the proposition that this sum ought to be charged against the Vote for Extraordinary Expenses for Foreign Missions?—I think the explanation is this; that it was a defence of a consulate, not a defence of a mission; there is no mission there.

1364. Then the mission, which is the first item in that account, does not mean a foreign mission, but an Evangelical mission, does it?—I imagine the agent of the West African Company was not much up in the difference between missions and consulates.

VOTE 5 was postponed.

Mr. STEVENSON A. BLACKWOOD, called in; and Examined.

ON VOTE 6.

1365. Mr. *Liddell.*] I OBSERVE that there is a large deficiency of 2,769 *l.* 8 *s.* 8 *d.* under Sub-head B., for "Legation Guards;" I should like to ask, if you can tell us, whether this expenditure for Legation Guards in China, Japan, and Siam is in the nature of extra pay to our troops, or whether it is for natives engaged in this special service?—I believe that the Legation Guards in Japan consist of a distinct police force sent out from England.

1366. Is that force organised in England and sent out?—It is.

1367. Does that apply to Siam as well as to Japan?—Only to Japan and China.

1368. Then we are to understand that this deficiency occurred in Japan?—In Japan and China.

1369. Mr. *Pollard-Urquhart* (to Mr. *Foster*).] If the accounts had been kept in the manner in which they were kept in previous years, this deficiency of 2,769 *l.* would have been charged against "Incidental Expenses," would it not?—In former years a vast number of charges were thrown upon "Incidental Expenses." The Vote, I believe, was about 10,000 *l.*, and the expenditure was often 15,000 *l.* The accounts were very badly kept, and everything that could not fall elsewhere was charged to "Incidental Expenses." Under the new system the sub-heads have been so arranged that the expenditure will be clearly shown under the different heads to which it applies.

1370. Mr. *Stansfeld.*] Were not explanations upon this subject afforded in the Excess Votes, presented to the House at the commencement of the Session?—Yes, they were.

1371. Mr. *Liddell.*] A question arises out of the answer that Mr. Blackwood has just given, which I should like to clear up; he says that the Legation Guards are a police force sent out from this country; if that be so, it is quite clear that the Estimate for the expenditure upon that service can be accurately ascertained; then I want to know how it occurs that an excessive expenditure on account of Legation Guards sent out from this country, to such an extent as 2,769 *l.*, can occur unless the services of native or other guards were engaged out there?—I imagine that the grant made was for the salaries, and did not include all the "Incidental Expenses." I understand that large numbers of horses were purchased on the spot, which had not been anticipated. I am told that the cost of the horses was about 200 *l.* a piece,

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Vine.*
Mr. *Ryan.*

15 June 1870.

which of course would soon add up to a large amount.

1372. Mr. *Pollard-Urquhart.*] The explanation with respect to these Legation Guards is that "the expenditure on account of Legation Guards was formerly subdivided, part being charged as pay, and part as Incidental Expenses;" turning to Sub-head H., "Incidental Expenses," we observe that there is a deficiency of 587 *l.*; if the accounts had been kept in the manner in which they were kept last year, the deficiency under the head of "Incidental Expenses" would have been 2,769 *l.*, plus 587 *l.*, that is, about 3,300 *l.* altogether, would it not?—No doubt there would have been a heavier deficiency on "Incidental Expenses," the usual deficiency in previous years having been somewhere about 5,000 *l.* on the average.

1373. Mr. *Liddell* (to Sir *W. Dunbar*).] Did you require any explanation of this excess of 2,769 *l.* 8 *s.* 8 *d.*?—No, we did not.

1374. Mr. *Pollard-Urquhart* (to Mr. *Foster*).] Considering that the deficiency would have been so large as about 3,300 *l.*, should you not say that it required rather more explanation than is given here in explaining the deficiency under Sub-head H.?—I think a fuller explanation might have been given; the only excuse is, that it is the first time that this Appropriation Account has been in operation, and no doubt in future years the account will be more accurate and better explained.

1375. It was thought better to divide the deficiency under these two heads, "Legation Guards," and "Incidental Expenses," than to have a very large deficiency under one head?—No; I do not think that that was the reason; I think it was thought desirable not to show the cost of Legation Guards as being less than it really was, but to put it all under one head.

1376. In short, we may regard it as a sort of irregularity incidental to the transition state of the accounts?—Yes; I think so.

1377. Mr. *Liddell* (to Sir *W. Dunbar*).] Are these the reasons which explain why the Audit Office did not call for explanations of this excess?—We do not take any notice of the explanation given by the accountant; the fact is, when the expenditure falls obviously within the intention and meaning of the Vote, we do not think we have a right to question it. It is a matter which then falls within the proper administrative functions of the Treasury, and not of the Audit Office.

1378. Mr. *Fowler.*] You mean that it is not a question of account at all?—Just so.

1379. Mr. *Sclater-Booth* (to Mr. *Foster*).] Will you give me an explanation of this note, which says "A sum equal to one-third of the charge for diplomatic and consular services in China is contributed from Indian revenues"; does that mean one-third of the expenditure, amounting to 122,000 *l.* odd, or is it one-third of the grant?—It is for China only.

1380. *Chairman.*] Is the sum contributed from the Indian revenues included in the Extra Receipts realised in the year 1868-9, and paid over to the Exchequer?—It is paid as a contribution, and comes in as revenue.

1381. Mr. *Sclater-Booth.*] Does the Indian Government get the advantage of their proportion of the extra receipts which ought to go in diminution of the amount they would contribute?—I believe they do not.

1382. *Chairman.*] Do they pay one-third of the gross charge, or one-third of the charge after deducting the extra receipts?—I do not think the extra receipts are taken into account.

1383. Mr. *Sclater-Booth.*] That is hardly fair, is it?—Perhaps not; but the whole amount of extra receipts were not received in China, only a portion of them.

1384. *Chairman.*] They probably will claim it in future now that their attention has been called to it by these questions?—Very likely.

1385. Mr. *Stansfeld.*] With regard to Sub-head F. in this Appropriation Account for the year 1868-9, can you tell us whether Major Crossman prepared the Estimate of 8,200 *l.* against which the expenditure was 11,798?—Major Crossman is solely concerned with the expenditure. The Foreign Office prepare the estimate of what that expenditure will be, and it would rest with them to ascertain as well as they could what the expected expenditure was likely to be.

1386. (To Mr. *Vine.*) Have you before you the Statement of Excesses for the year 1868-9?—I have.

1387. Referring to Vote 6, in Class 5, "China, Japan, Siam, Services in," I find the excess which we have before us upon this Appropriation Account; and then I find that there were accumulated excesses in 1864-5, in 1865-6, in 1866-7, and in 1867-8 amounting to 58,443 *l.* 11 *s.* 11 *d.*?—Yes, it is so.

1388. Those sums were voted by Parliament, were they not, to square the account at the beginning of this year?—They were.

1389. Can you explain to the Committee shortly, how it is that during all those years, including the year 1868-9 the difference was so considerable between the grant and the expenditure?—It arose from the Estimates being badly framed; no accounts were rendered of the whole of the expenditure in China, Japan, and Siam classified in proper form, and very large excesses, indeed, fell upon the item of "Incidental Expenses."

1390. For one thing this year, 1868-9, was the first year of the Appropriation Audit, was it not?—Yes.

1391. And am I right in saying that this is the first year in which the accounts have been absolutely brought to a balance and closed?—Yes, except by this process of going back from the year 1864-5. And I may state with regard to the account for the year 1868-9 that I do not think there was sufficient information before the Foreign Office when they framed the estimate, and I believe that for the subsequent years they have taken steps to obtain better information so as to enable them to form a better estimate for the future.

1392. May not the irregularity of these estimates be also partly accounted for by this fact, that the expenditure was met in running account from the Treasury Chests at those outlying stations?—Yes, it was so.

1393. So that neither for the purpose of the Appropriation Account, nor for any other purpose was the account of each year finally closed within the year?—It was not, and as the claims of the Treasury Chest did not come in until the subsequent year, the account never could show the actual state of expenditure for any given financial year.

1394. Mr. *Pollard-Urquhart* (to Sir *W. Dunbar*).] With regard to the incidental expenses under

under Sub-head H, I see these incidental expenses include the sum of 117 *l.* 0 *s.* 11 *d.* for freight of specie, and the question arises in your opinion whether that sum had not better be charged to the Treasury Chest, do you still adhere to that opinion?—I have merely suggested this for consideration, I have expressed no absolute opinion upon it.

1395. *Chairman* (to Mr. *Foster*).] What do you say to the suggestion?—I think when the cost of the freight of specie is incurred in connection with the Treasury Chest generally, it is quite fair that it should go to that Vote; but where it is incurred for other departments, I think the other departments for whose accommodation the cost is incurred should bear it. If the specie is sent for army purposes, we look to the War Office to pay the cost of remitting it; if it is for consular services, we look to the consular service to pay for it.

1396. Mr. *Pollard-Urquhart.*] I suppose you adhere to the opinion given at page 322?—We do.

1397. (To Sir *W. Dunbar.*) Do you acquiesce in the opinion given by the Lords of the Treasury at page 322?—I merely threw out the point for consideration. I said before, that I had no very decided views upon the subject.

1398. (To Mr. *Anderson.*) You see the opinion expressed in the Treasury Minute upon the point which the Comptroller and Auditor General threw out for consideration; do you coincide with that opinion?—It is a matter of very small importance. If it is clearly shown in the Estimate where the expense is provided for; that is all that the Comptroller and Auditor General can require. I must, however, observe that the charge for freight of specie is not provided for in the separate Estimates of the different departments, but in one Estimate for all services.

1399. Mr. *Liddell* (to Mr. *Foster*).] Are the payments to the Treasury Chests in these various Oriental consulates always made in specie rather than by bills?—The Treasury Chests are sometimes replenished by bills drawn upon the Treasury, and sometimes by specie remittances.

1400. There is no specific rule, then?—None beyond this; that we watch and see which will be the most advantageous arrangement. It depends upon the rate of exchange. If the rate of exchange is favourable, we authorise the officer to draw bills. If he telegraphs to state that the rate of exchange has gone down very much, we take measures to ship specie.

On Vote 7.

1401. Lord *F. Cavendish.*] The Comptroller and Auditor General suggests on Sub-head N., which consists of pensions to the amount of 251 *l.* 11 *s.* 10 *d.*, that it might be desirable to transfer this item of expenditure to Class 6, "Superannuation and Retired Allowances;" do you agree with that recommendation?—I think it would be extremely inconvenient. They are not pensions payable in this country; they are payable at the different Courts where the ministers reside, and I think it is best that the officers who pay the pensions should account for them.

1402. Mr. *Pollard-Urquhart.*] I see an additional Sub-head I., was introduced, which was not in the original Estimate; should you not say that it was a dangerous precedent to introduce any sub-head not included in the original Vote, however small the expenditure under that sub-head may be?—I think it would be impossible, in some cases, to avoid authorising an expenditure not specifically referred to in the Estimate; and where it is necessary to incur expenditure not authorised under a sub-head, it is desirable to show it, if it is anything new, under a new sub-head.

1403. Mr. *Stansfeld.*] In fact, the insertion of a new sub-head indicating the cause of expenditure is rather an additional explanation to Parliament than anything else?—It is a clear explanation to Parliament of what the cause of that expenditure is. The expense would have to be incurred under any circumstances, and it might have been hidden under "Incidental Expenses"; but it is dealing more openly with Parliament to set it forth under a fresh sub-head.

1404. Mr. *Pollard-Urquhart.*] You think it is better to insert a new sub-head rather than to put down the expenditure under "Incidental Expenses"?—Yes, I think it is more candid to do so.

1405. Mr. *Stansfeld.*] This was a particularly suitable instance in which to insert the sub-head, as I believe in former years there had been such a sub-head, had there not?—Yes; in nearly all the Estimates there is a sub-head for "furniture"; and therefore as the expenditure had been incurred, it seemed right to put into this Vote a sub-head which exists in most others of a similar nature.

On Vote 8.

1406. *Chairman.*] I see that the salaries of the governors, paid in the course of the year, sometimes include five quarters, and sometimes less than four; there is an irregularity, is there not, in paying five quarters' salary within the year?—It is sometimes unavoidable, as the bills which are drawn in distant colonies for the payment of the salaries may be one year much longer in reaching this country than they are in another; and as the date of payment regulates the charge, it naturally will occur sometimes that a bill which should have arrived before the 31st of March is delayed until after that date, and appears against the account in the following year.

1407. Mr. *Seely.*] Are all the salaries due on the same day?—Usually they are due on the quarter days ending the 31st of March, the 30th of June, the 30th of September, and the 31st of December; but since the introduction of the payment of salaries in the United Kingdom monthly, to a considerable extent, in order to relieve the Pay Office of the great pressure which would arise at the close of each quarter, it has been found convenient to make certain of the salaries due and payable at different dates in the third month of the quarter. Some are paid now on the 15th of March, some on the 18th, and on different days up to the last day of the quarter. That is purely in order to facilitate the payment as regards the duties of the Paymaster General.

Mr. JOHN SAYER LEWES, called in; and Examined.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Vine.*
Mr. *Ryan.*
Mr. *Lewes.*

15 June 1870.

1408. Mr. *Fowler.*] CAN you give any further explanation of Sub-head R. "Passages of Governors and other Colonial Officers," beyond that which is given in the Appropriation Account, which is very vague; it says that the expenditure of the year, which had been estimated at the same amount as in 1867–8, proved to be unusually large?—The cause of the excess I believe to have been imperfection in the Estimate, which was apparently based on that of the previous year. It is very difficult to foresee what payments of this nature will occur in the course of a year; a governor may die, or it may be desirable to recall him, or, for other reasons, it may be necessary to send out a fresh governor. This is the actual expenditure incurred within the year. In the subsequent Estimate care has been taken to forecast as far as possible the changes in the various colonial governorships, and to put down on the Estimates just what they will cost, with a margin for contingencies of the death or of the recall of a governor.

1409. Mr. *Seely* (to Mr. *Foster*).] I see upon Sub-head I., the Comptroller and Auditor General observes that 431*l.* 7*s.* 10*d.* is not properly chargeable to the Vote, and that the balance which ought to be surrendered should be 8,435*l.* 19*s.* 4*d.*, instead of 8,204*l.* 11*s.* 6*d.*; have you any observations to make upon that?—It is in some respects a small matter, but it involves, I think, a very important principle. The grant of Parliament is a grant in aid of the expenditure in certain Colonies; amongst these grants there is one in aid of the Virgin Islands of 3,000*l.* Parliament granted this sum in aid of the Virgin Islands in consequence of a violent hurricane, which had swept away the huts of the negroes, and had destroyed some of the public buildings. There was great distress in the islands; the people were starving; there was no revenue to be obtained by taxation; the public buildings were partly destroyed, and Parliament granted 3,000*l.* in aid of the Colony. The first thing that was done was to supply medicines and assistance to the people who were starving, and the Treasury authorised the Colonial Office to pay the bill that was incurred for that purpose. The Audit Office, I think a little inconsistently, did not raise any final objection to that expenditure, although there was no proof as to who were the people to whom the money was paid. They admitted the receipt of the one bill for the medicaments as final and sufficient. Further distress in the island arose from the damage to huts and buildings. The Government of the island was quite unable to relieve the people in this respect, because there was no revenue to be obtained, and it was, in the judgment of the Treasury and the Colonial Office, desirable to place the Government in a position to aid the people whose dwellings had been destroyed, and to repair the public buildings; accordingly, in the discretion of the Treasury, they authorised a sum to be issued to the governor, to aid him in this work. The Audit Office take exception to this payment, and state that it was a misappropriation of money. I believe the ground of that view on their part is, that the explanation in the Appendix to the Estimates (Part III.) mentions that it is to repair damages occasioned by the hurricane. All I can imagine that they intend by their objection to do, is to insist that the Treasury or the Colonial Office should either have repaired the damage, or have taken vouchers to prove that the damage was repaired. It appears to me that that is interfering with the administration of the executive, and that it amounts to stating that the Treasury was not discreet in repairing the damage done by the hurricane in the way they did. I think that if the Comptroller and Auditor General had a right to interfere, and to say what was the right mode of spending money to repair the damage, it would interfere with the responsibility of the Executive Government, and the Comptroller and Auditor General would have to bear a share in that responsibility. I think it would be desirable to come to a clear understanding that the mode of repairing damage or aiding a Colony should be left to the discretion of the Executive Government. The explanation which is given in detail in the Appendix was added by the Treasury itself, as an explanation of the original cause of the expense, namely, the hurricane; but the grant by Parliament is a grant in aid of the expenditure of the Virgin Islands, and I think the Comptroller and Auditor General was going beyond his province, and taking a share in administrative responsibility, when he went into the question as to the mode in which that aid should be given.

1410. (To Sir *W. Dunbar.*) You have heard what Mr. Foster says; have you any explanations to offer upon his statement?—Yes. Mr. Foster has referred to certain strictures made upon proceedings of the Comptroller and Auditor General, which are contained in the Treasury Minute. I will, with the permission of the Committee, reserve what observations I have to make upon that point for a future stage. I propose in this case to deal simply with the principle of the question.

1411. *Chairman.*] Will you give us your explanation of this paragraph in your Report: "Of the expenditure under this sub-head (Sub-head I., Virgin Islands), amounting to 641*l.* 17*s.* 11*d.*, to repair damages occasioned by the hurricane, satisfactory vouchers of the application of 210*l.* 10*s.* 1*d.* only have been furnished to this department; the difference of 431*l.* 7*s.* 10*d.* is, therefore, not properly chargeable to the Vote;" what was the nature of the vouchers that were offered to you with regard to the expenditure of this 431*l.* 7*s.* 10*d.*?—The vouchers offered to us were insufficient; they were imprests. The sums appear as advances upon the account of the accountant. There were no vouchers that could substantiate a payment, and, in the exercise of the duties which I had to perform on behalf of Parliament, I rejected this sum of 431*l.* 7*s.* 10*d.* on the ground of its not being properly and sufficiently vouched.

1412. (To Mr. *Foster.*) What have you to say to that; under the Exchequer and Audit Act an imprest is not to be taken as a voucher, is it?—Certainly not; but vouchers satisfactory to the Audit Office have been supplied for everything except 250*l.*, which was paid as a final payment to the governor of the Colony. I believe the whole question rests upon the 250*l.*, which was a contribution to the governor, in aid of the revenue of the island, to meet the disaster occasioned by the hurricane, and not an imprest.

1413. What was the nature of the voucher with

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Vine.*
Mr. *Ryan.*
Mr. *Lewes.*

15 June 1870.

with regard to that 250*l.* which was supplied to the Comptroller and Auditor General?—It was the receipt of the governor; it was his bill. (Sir *W. Dunbar.*) Allow me to explain to the Committee, that one of these sums was an imprest; and as regards the other two sums the vouchers were not satisfactory. The Committee will better understand this question if I refer to what actually took place between the two departments. These are the printed regulations of the Colonial Office. "Funds derived from Imperial grants in aid of local revenues. In any cases in which money has been voted by Parliament for specially named colonial services, documentary evidence must be furnished that the money has been applied to the particular service for which it was voted; on this point special instructions will be given to the governors concerned." These are instructions issued by the Colonial Office to their sub-accountants. In accordance with this regulation, a Colonial Office Letter, dated the 25th May 1868, remarks generally that when sums are voted by Parliament for particular colonial services, the Comptroller and Auditor General may possibly think, with reference to the 24th section of the Exchequer and Audit Departments Act, 1866, that receipts for monies paid out of the grant into the Colonial Treasury do not constitute evidence sufficient to enable the Secretary of State to treat the transactions as final payments. That is a suggestion coming from the Colonial Office itself. The answer of the Audit Office was in a letter of the 29th of May 1868. The Colonial Office was informed that the Comptroller and Auditor General was of opinion that the "expenditure for particular colonial services" should be supported by documentary evidence that the money issued on account of the grant has been applied to the purposes for which it was granted. The Colonial Office, on the 16th June 1869, invites the Comptroller and Auditor General's attention to Sub-head I. of the Vote for 1868-9, for grants in aid of expenditure in certain Colonies (Civil Services, Class V., Vote 8), in the details of which, appended to the Estimate, "Parliament was informed" that it was intended to "repair damages occasioned by the hurricane," and states that the object of the letter is to ascertain whether a certificate which had been forwarded to the Colonial Office afforded sufficient evidence of the due application of the sum covered by it. In my answer of the 23rd June 1869, the Colonial Office was informed that the Comptroller and Auditor General did not consider that the document contained sufficient proof of the due application of the money granted by Parliament, and returned the document with an intimation that he would be glad to be furnished with a statement showing the heads of expenditure in respect thereof. With reference to the preceding correspondence (paragraph 3), a letter was received from the Colonial Office, dated the 18th September 1869, requesting to be informed whether the Comptroller and Auditor General would be satisfied with a statement signed by the Colonial Auditor, and countersigned by the Governor in Chief, showing the expenditure under several heads, accompanied by a certificate signed by the Colonial Treasurer and Governor, that the expenditure shown in the statement had been defrayed from funds drawn from the Parliamentary Grant "for the repair of the damages occasioned by the hurricane, so far as the funds allowed." The Committee will observe that throughout the whole of this correspondence the Colonial Office assumes that that money was intended exclusively for the repairs of damages occasioned by the hurricane. The Audit Office Letter of the 23rd September 1869, in reply to the above, states that it appears to the Comptroller and Auditor General, under the circumstances, that the documents prepared in the forms specified would be sufficient to satisfy him of the due application of the grant. As it was understood that directions had been given by the Colonial Office that these documents should be furnished, early in January 1870, personal inquiry was made at the Colonial Office as to whether it was likely that they would be received before the Comptroller and Auditor General made his report on the account; and it was then ascertained that there was no chance of their being received at the Colonial Office in sufficient time. The Report of the Comptroller and Auditor General was accordingly prepared, and the accountant was informed by "Query or Observation," No. 29, dated the 19th January 1870, that, in the absence of evidence that the sum of 431*l.* 7*s.* 10*d.* had been expended in repairing damages occasioned by the hurricane, the amount had been reported to Parliament as not being properly chargeable to the Vote. Now, the Committee will observe that a correspondence took place upon this subject between the Colonial Office and the Audit Office, it being in the view of both Departments that the 3,000*l.* voted specifically for the repairs of damages done by the hurricane should be applied to those purposes. It would appear that when the Appropriation Account was rendered, the vouchers which the Colonial Office agreed to produce were not rendered with the account. I am informed that application was made to the Colonial Office with reference to these vouchers, and that they considered that they could not be produced in time; I therefore had no alternative, under the circumstances, but to report that in consequence of their not being sufficiently vouched, these sums could not be charged against the Vote. It was not my duty, it was a mere matter of courtesy on my part, to communicate with the Colonial Office after I had made my report that there were certain expenses which had been disallowed. It must be obvious to the Committee that after the accounts are rendered there would not be time for the Comptroller and Auditor General, if he were so disposed, to enter into negotiations and correspondence with the several departments as to the items in the accounts after they had been rendered simply for report. As I stated, on the 19th of January 1870 an intimation was made to the Colonial Office that the sum of 431*l.* 7*s.* 10*d.* had been reported as not being properly chargeable to the Vote. With the reply to the foregoing observation on Query No. 29, paragraph 5, dated the 3rd February 1870, vouchers were transmitted for expenditure (that is after the account had been reported upon), amounting to 181*l.* 7*s.* 10*d.*; and the Colonial Office Letter to the Treasury of the 19th of October 1868, and the Treasury Letter in answer thereto were also produced. Now, in the Colonial Office Letter of the 19th of October 1868, with reference to a sum of 250*l.* which had been advanced by the Admiralty in aid of colonial revenue, the Colonial Office ex-

Mr. *Lewes.*

15 June 1870.

presses itself thus: "As the sum which has been granted by Parliament is to repair damages occasioned by the hurricane, a contribution to the colonial revenue might be viewed as not coming strictly within that description." In reply to the Colonial Office Letter, I allowed the two sums constituting the total of 181 *l.* 7 *s.* 10 *d.*, and I disallowed the 250 *l.*, as not having been specifically applied to the purpose for which it was voted, and as being in the view, even of the Colonial Office itself, a very doubtful expenditure to be incurred by them. As I stated before, we had no means of ascertaining what purposes this 431 *l.* 7 *s.* 10 *d.* had been devoted to; and it was obviously my duty, when the Appropriation Account was rendered without the vouchers necessary to substantiate those payments, to disallow them until the proper vouchers were produced.

1414. Mr. *Pollard-Urquhart.*] Then your objections to those payments were of a very different nature to that which we were given to understand just now, namely, that you thought the money might have been better applied?—I state that I disallowed the items constituting the sum of 431 *l.* 7 *s.* 10 *d.*, because satisfactory vouchers had not been produced. That is in strict exercise of the powers conferred upon me, and indeed the duties required of me, by the Act of Parliament. When the vouchers were produced I considered that two of them might be allowed; the third could not be allowed, as I considered, even according to the view of the Colonial Office itself, who thought it necessary to apply to the Treasury for leave to apply the sum of 250 *l.* in aid of the Colonial revenue, which sum appeared to have been intended to be specifically applied to the damages done by the hurricane. This opens up a very much wider question than the simple disallowance of this amount. In the view of Mr. Foster, the Treasury was entitled to authorise the sum of 250 *l.* to be applied in aid of local revenues, because that was the general heading of the second part of the Vote; the general heading of this particular sub-head. I have already pointed out that the Colonial Office did not themselves take that view of the matter, nor can I admit that the Comptroller and Auditor General should confine himself to this very limited view of the question. If this had been a grant simply in aid of the Colonial local revenues, it would have been stated just as the grants in aid of the local revenue for Gambia, the Gold Coast, Lagos, Heligoland, the Falkland Islands, and Labuan are stated. The Committee will observe that that heading, "in aid of Colonial Local Revenues," is a general description, and as such it was correct, but there are some items which are specifically described. If the Committee will look at "Bermudas," they will see that there is included "the salary of the governor, part of ditto of chief justice, part of ditto of Colonial Secretary," making a total of 2,500 *l.* If, in consequence of the death of the governor or of any other officer, 1,000 *l.* had been saved, would it have been alleged that it was competent for the Treasury to apply that saving of 1,000 *l.* in aid of local revenues? Here is a specific application of 2,500 *l.* to the payment of the governor's and other salaries, and if the Treasury had the power, which they claim to have in this case, of appropriating a part of 3,000 *l.*, which is specifically appropriated in aid of local revenues, so also would they have in the case of the salary of the Governor of Bermuda. But there is another case here, that of St. Helena, for which a sum is voted "in order to assist the Colony in difficulties occasioned by a very general destruction of the public and private buildings by the white ant." Now I admit that, if the definition of the expenditure in the case of the Virgin Islands had been the same as that, the sum would have been paid over to the governor without any further inquiry. But the Committee will observe that here there is a very special description, a specific appropriation to the repair of damages occasioned by the hurricane. I therefore came to the conclusion that what was good for a part would be good for the whole, and that, according to their contention, the Treasury might have applied the whole 3,000 *l.* in aid of local revenues. I could not hold that that would have been a proper appropriation of the money so voted by Parliament.

1415. *Chairman* (to Mr. *Lewes*).] What have you to say upon this point?—It is necessary to go back a little, and to point out to the Committee, first, that the Colonial Office being new to this work, and wishing to render accounts in every respect to the satisfaction of the Comptroller and Auditor General, consulted him at the outset as to the form of voucher which he would be satisfied with.

1416. Mr. *Pollard-Urquhart.*] At what period was that?—The Colonial Office took up these accounts at the beginning of 1868-9; they rendered no account before that; the department was therefore new to the work.

1417. When did you ask the Comptroller and Auditor General as to the form of voucher which he would be satisfied with?—We communicated with the Comptroller and Auditor General, and said, "What description of evidence will you require, first, in the case of grants in aid of local revenue; and secondly, in the case of grants that Parliament intends to be applied to specific purposes?"

1418. My question was, when you asked that?—We asked in May 1868, having commenced the account in April 1868. The reply of the Comptroller and Auditor General was that he would accept a certificate from the colonial authorities that the money voted in aid of colonial local revenues had been carried into the local chest; but that as regarded money voted for particular services, he would require documentary evidence that the money issued on account of the grant had been applied to the purposes for which it had been granted. He said he would require "documentary evidence," but that phrase was not very definite, and we wrote to the Government of the Virgin Islands asking them to certify not only that the money had been carried into the local chest, but that it had been applied to the repairs of the damages occasioned by the hurricane. We wanted to meet the views of the Comptroller and Auditor General. Besides that, we hoped to receive accounts which would prove this expenditure in the ordinary way; but as complete accounts did not arrive, we wrote subsequently to the Comptroller and Auditor General to know whether the certificates we had obtained would suffice for his purpose. He replied that they would not suffice. Thereupon we wrote again to propose something that would meet his views, and, it is essential to bear in mind, that in that letter we specifically said that we had already finally paid in this country 641 *l.* 17 *s.* 11 *d.*, which

is

is the sum appearing in the Appropriation Account. We sent a schedule of the payments at the same time, containing the very sums which are now objected to by the Comptroller and Auditor General, and we said that the balance of 2,358 *l.* odd, which, with the exception of less than a sovereign, had been advanced to the Colonial Government, was all that remained to be accounted for. We never thought that he would apply his rule to money which had been spent in this country. The 250 *l.* was not treated as an imprest. It had been advanced by the captain of a man-of-war. The devastation occasioned by the hurricane having caused very great distress, the people were not able to pay their taxes. The local Government gave some of them provisions, the charge for which the Comptroller and Auditor General has admitted, and at that time of great distress it relieved the people of a particular tax. Then, in order to meet the loss thus caused to the colonial revenue, it applied this 250 *l.* out of the proposed grant; it added it, in fact, to the colonial chest. This money was supplied by the captain of a ship-of-war. The amount was claimed from us by the Admiralty. We obtained a certificate that this money had been carried to the credit of the colonial revenue, and the claim was paid. We never thought that the Comptroller and Auditor General would consider that as coming under the category of payments which were open to question. We said, in our communication to him, that it had been paid finally in this country, and that the balance was all that remained to be accounted for. We construed the answer of the Comptroller and Auditor General as applying to the balance and not to what had been so spent. As our vouchers to which he has demurred had been with him for so long a period, we should have anticipated that before our Appropriation Account was rendered he would have given us an opportunity of explaining the facts. The sum of 431 *l.* 7 *s.* 10 *d.* noticed in the Comptroller and Auditor General's Report consisted of three amounts, two of which we repaid to the Treasury in February 1869, and the last, this amount of 250 *l.*, we repaid to the Admiralty in June 1869. As these vouchers were all in the Audit Office by the end of August 1869, we should have hoped that before his report was made in January 1870 the Comptroller and Auditor General would have given us an opportunity of amending or of supplementing those vouchers which he had already had before him.

1419. Mr. *Pollard-Urquhart.*] If I understand you rightly, this 250 *l.* was applied in paying to the Colonial Government what would otherwise have been a bad debt?—Yes, it made good the loss of colonial revenue. Some of the people were relieved by grants of provisions: beef, pork, and peas; others were relieved in the remission of taxes. The cost of the beef, pork, and peas has been admitted as a charge against the Vote, and we consider that the remission of taxes should be also admitted as a charge against the Vote.

1420. It is rather of the same nature as the charge made against the Irish landlord, at the time of the famine, of applying the relief which was given for the distress towards paying their rents, is it not?—I do not see the analogy at the moment.

1421. Mr. *Liddell.*] Was the whole of this 3,000 *l.* voted by Parliament to meet losses incurred by the hurricane?—I presume that that was the intention of Parliament in granting it. I may mention that the expenditure had, in fact, in a great measure been already incurred. The hurricane took place in the autumn of 1867. The expenditure had mostly been incurred, at least the expenditure which is now objected to had been incurred, when the sum was voted.

1422. Then the Vote was based upon an estimate furnished from the Colony of the amount of the losses incurred?—I believe the Vote arose out of a correspondence between the Colonial Department and the Treasury, in which the Treasury arrived at that amount.

1423. Then I want to understand, if the grant by Parliament, based upon an estimate furnished from the Colony was 3,000 *l.*, how it turned out that the expenditure was only 641 *l.*?—The reason of that is that we were unable to charge, within the financial year, more than 641 *l.* against the Vote. As I explained to the Committee, we had obtained what we hoped to be satisfactory vouchers to the Audit Office, and had charged these as final payments. The outstanding amount consists of imprests we had made to the Colonial Government, intending that the Colonial Government should render us vouchers which would satisfy the Audit Office. We hoped to get accounts of the expenditure, and when the accounts did not come we thought it well to ask whether, as regarded not only the amounts which had been applied in aid of the colonial revenue, but as regarded the amount which had been applied in repair of damages, the Audit Office would be satisfied with what we could produce: but no question was raised, in fact, in the correspondence about the amounts which we had already charged finally against the Vote, as we told them at the time.

1424. Are we to understand you that the whole of that unexpended balance will come in course of payment in the year following that, the accounts of which we are now considering?—We are hoping now daily to get from the Virgin Islands documents to enable us to charge it against the Vote. Parliament has granted a Vote to meet it.

1425. Mr. *Egerton.*] Is the amount voted in this year's Estimates?—Yes.

1426. What is the amount?—I believe the exact deficiency was voted this year on a Supplementary Estimate for last year.

1427. Lord *F. Cavendish.*] Do I rightly understand you to say, with respect to the items amounting to 431 *l.* 7 *s.* 10 *d.*, that you had no information that any objection was taken to them until after they had been disallowed?—We had no reason whatever to suspect that the Comptroller and Auditor General objected to our documents until January 1870.

1428. *Chairman* (to Sir *W. Dunbar*).] As I understand your point, it is this; that you are not to look to the general heading of the Vote, but you are to look to the sub-head as showing the intention of Parliament with regard to the purpose to which Parliament intended that the money should be applied?—Yes, that is my view. My view is that I am entitled to look at the whole Estimate as laid before Parliament.

1429. Do you say that that amount would not have been accounted for under the sub-head of "Virgin Islands;" do you say that there was no sub-head under which it could be accounted for?—No; I say that it should be accounted for under the sub-head in which the Virgin Islands are included.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Vine.*
Mr. *Ryan.*
Mr. *Lewes.*

15 June 1870.

1430. "Virgin Islands" is a sub-head of itself?—Yes.

1431. If you look at the Estimate, you will see that the general heading of the Vote is "Estimate of the Amount required in the Year ending 31st of March 1869, in Aid of Colonial Local Revenue, and to defray the Salaries and Allowances of Governors, &c., and other Expenses in certain Colonies;" and then follows "Sub-heads under which this Vote will be accounted for;" after going through the others, you come to "I. Virgin Islands"?—Yes, and then you find the explanation of it "to repair damages occasioned by the hurricane."

1432. You say that that Vote is restricted by the explanation given of the sub-head to the repair of damages occasioned by the hurricane?—Yes.

1433. Is that under the terms of the Exchequer and Audit Act?—Yes.

1434. (To Mr. *Anderson.*) Will you refer to the section of the Act which obliges you to limit the sub-head to that particular object, "to repair damages occasioned by the hurricance"?—The 27th section of the Act directs the Comptroller and Auditor General to ascertain "whether the money expended has been applied to the purpose or purposes for which the grant was intended to provide." He cannot ascertain the purpose without looking at these details. And by the 32nd section of the Act the Comptroller and Auditor General is required to report upon the account for the information of Parliament, and in his report he is bound to "call attention to every case in which it may appear to him that any payment was for any reason not properly chargeable against the grant." Inasmuch as the details of expenditure in the explanatory part of the Estimate show what are the purposes for which the grant is intended to provide, the Comptroller and Auditor General must examine the account with reference to those details, in order to satisfy himself that the charges are for the purposes contemplated by Parliament. That is the view of the Comptroller and Auditor General.

1435. Mr. *Seely.*] But might you not justly suppose that the money having been granted to alleviate distress, it might properly be applied to the remission of taxes by being carried into the local chest?—The Treasury may take that view if they please. All the Comptroller and Auditor General states is that the explanation given in the Estimates does not extend the grant to those purposes. He makes the observation for the information of Parliament, as he is directed to do under the Act. But because he makes that observation upon it, it is not necessarily an objection. He calls the attention of Parliament to the matter, in order that Parliament may institute inquiries if it thinks proper.

1436. *Chairman.*] You have referred to the 27th section of the Exchequer and Audit Act, and you say that in the examination of the accounts, according to that section the Comptroller, and Auditor General is directed to ascertain, "whether the money expended has been applied to the purpose or purposes for which such grant was intended to provide"?—Yes.

1437. What are you to look to in order to see what was the intention of Parliament in making the grant?—To the explanatory part of the Estimate, because the sub-heads given in the Estimate are frequently expressed in very general terms. It would be impossible to ascertain what the purposes of the grant were without looking to the details.

1438. You say you must look at the detailed explanation to see the intention of Parliament?—Yes.

1439. Then if there is anything not mentioned in that explanation, you say that it ought to be excluded from any charge against the Vote?—No, I do not say that it ought to be excluded; I say that it is the duty of the Comptroller and Auditor General, in reporting on the account, to call the attention of Parliament to it, not necessarily to object to it, but to call attention to it.

1440. Mr. *Stansfeld.*] But if you look at the Report of the Comptroller and Auditor General in paragraph No. 3, you will find that he not only calls the attention of Parliament to it, but states distinctly that "The difference of 431 *l.* 7 *s.* 10 *d.* is therefore not properly chargeable to the Vote."—Yes, because there was no explanation whatever in the explanatory part of the Estimate that would have led him to suppose that Parliament contemplated that appropriation of the money.

1441. But I understand you to say that the Comptroller and Auditor General was directed and authorised by the Exchequer and Audit Act to draw the attention of Parliament to any expenditure which did not appear to have been contemplated by Parliament, looking not only to the Votes themselves, but to the explanations attached to those Votes in the sub-heads?—Yes, certainly.

1442. But I should not be correct, I imagine, in interpreting you as meaning that the Comptroller and Auditor General would be justified necessarily in disallowing any such expenditure; a Vote, I take it, is a thing quite distinct from a sub-head?—In this particular case the disallowance was made on the ground of defective vouchers.

1443. That is another question altogether, but as far as appropriation is concerned, what has to be regarded is the Vote, is it not, and not the sub-heads, upon the Estimates?—The Treasury have the power, no doubt, of exceeding upon the sub-heads, but the expenditure which they include under the sub-heads should be clearly expenditure contemplated by the Estimate.

1444. The Treasury, for instance, has the power of creating a new sub-head?—It has done so in numerous cases.

1445. It has the power of sanctioning expenditure which seems to be justified by the general Vote, and of creating a new sub-head under which to charge it?—Yes, the Treasury has that power.

1446. Does not it follow from that, that any statement upon the face of the Estimates of the sub-heads under which the Vote will be accounted for, together with the explanations appended to these sub-heads, are for the sake of explaining the Estimates, and are not to be taken as absolutely defining the limits of the expenditure by those sub-heads and by those explanations?—They do not limit the amount applicable to each of the sub-heads in the account, but the expenditure should fall within the description given in the explanatory part of the Estimate.

1447. Should it fall within the explanation attached to the sub-head?—It should fall within the description given in the Appendix to the Estimate. For instance, in this particular case the

the explanation states that the money is required to "repair damages." That is placed in the Estimate under a distinct heading, and is not in the same form as the rest of the Estimate, which says that the money is required in aid of the colonial revenues. If the money voted is applied differently from that special appropriation described in the Estimates, I think the Comptroller and Auditor General is bound to draw the attention of Parliament to it.

1448. Are you of opinion that if the expenditure did not fall strictly within that explanation attached to the sub-head, it could not be charged against the Vote?—I think that in this case Parliament intended to make a special appropriation of that sum, and that the Comptroller and Auditor General is bound to see that that appropriation is adhered to.

1449. I understand your opinion to be, that Parliament intended this money to be expended directly in repairing damages occasioned by the hurricane; but as a matter of fact, Parliament granted that sum in aid of the expenditure in certain Colonies; those are the terms of the grant of Parliament?—That is part of the grant of Parliament, but there are three cases, I think, in that Vote in which Parliament has made a special appropriation of the sum voted. There is a general appropriation in aid of the local revenue, under six heads, but as regards three Colonies there is a special appropriation. As regards the Bermudas, the grant is to be specially applied to the salaries of the governor, the chief justice, and the colonial secretary. In regard to St. Helena, it is to be applied to assist the Colony in the difficulties occasioned by the destruction of the buildings by the white ant. And with regard to the Virgin Islands, there is a special appropriation to the repair of damages occasioned by the hurricane. Now the Comptroller and Auditor General, being bound to look to the intention of Parliament in granting money, ought to see that the money has been applied to those special purposes.

1450. But do you think that, supposing the money had been expended for a different object than that for which it had been the intention of Parliament to provide, under no circumstances would it be properly chargeable against the Vote? — If the money is applied to purposes which are not contemplated by the Vote, the Comptroller and Auditor General is bound to call the attention of Parliament to that circumstance.

1451. No one disputes that he is bound to call the attention of Parliament to it; under the 27th section of the Act he is bound to ascertain "whether the money expended has been applied to the purpose or purposes for which such grant was intended to provide;" granting that he has ascertained that not to have been the case, and reported upon it, the question is this: ought the money so spent to be rejected as a charge against the Vote if it is covered by the terms of the Appropriation Act?—If it is covered by the terms of the Vote I do not think it should be rejected.

1452. Will you be good enough to attend to my expression, "if it is covered by the terms of the Appropriation Act?"—But the terms of the Appropriation Act are so general that they cannot reach these descriptions. The terms of the Appropriation Act are simply these: "Grants in aid of Expenditure in certain Colonies," but the intended application of some of that expenditure is specially described in the explanatory part of the Estimates.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Vine.*
Mr. *Ryan.*
Mr. *Lewes.*

15 June 1870.

1453. What I want to know is this; is the intention of Parliament to be gathered from the terms of the Appropriation Act, or is it to be gathered from the details of the Estimate? — From both.

1454. But you say that the terms of the Appropriation Act are limited by the expression in the details of the Estimate?—The general heading in the Appropriation Act, of course, is intended to embrace all that the Vote provides for.

1455. Is it a misappropriation if it is covered by the terms of the Appropriation Act?—I do not say that it is a misappropriation. It may be the duty of the Treasury to vary the sub-heads if they think proper, but it is the duty of the Comptroller and Auditor General to point that out.

1456. The two questions are perfectly distinct, namely, as to whether it is the duty of the Comptroller and Auditor General to report upon money as having been applied outside the intention of Parliament, and whether it is his duty to reject it when it has, in his opinion, been so applied?—He is bound to object to any charge against a Vote which he thinks the Vote was not intended to provide for.

1457. What do you mean by "the Vote" in that case?—The Vote as explained by the Estimate; I look upon the detail of the Estimate as merely explanatory of the grant; it is only from that detail that the Comptroller and Auditor General can gather the intentions of Parliament.

1458. Do you say that an expenditure for any object which was not contemplated when the Act was passed is illegal if the details of the Estimate do not show that it was contemplated?—It is illegal until Parliament has made provision for it.

1459. Would not that reduce the thing to an absurdity if you followed it out?—I think not; the Comptroller and Auditor General has no power to disallow a charge, practically speaking; all he can do is to report to Parliament that such a sum is not properly chargeable against the Vote; the Treasury has the power of disallowing a payment before that.

1460. It is clear, in my opinion at least, that in this case the sum was voted by Parliament with the intention of repairing damages occasioned by the hurricane; but under the 27th section of the Exchequer and Audit Act, the Comptroller and Auditor General is bound to ascertain whether the money has been applied to the purpose for which it was voted; and I presume that, taking your view of it, under the 32nd section he would be bound to mention it in his report; but then comes the question, supposing he has fulfilled his duty in that respect, which he has in the present case, ought he to reject the payment as a charge against the vote; now if you look at the terms of the Appropriation Act, you will see that they are wide enough to cover this expenditure, and the question is whether it should be rejected?—If the explanation in the Estimate had been that this was a grant in conformity with the heading, that is to say, a Vote in aid of the general expenditure of the Colony, the Comptroller and Auditor General would have made no objection; but Parliament has made a special appropriation of that sum to the repair of the damages occasioned by the hurricane.

1461. That

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Vine.*
Mr. *Ryan.*
Mr. *Lewes.*

15 June 1870.

1461. That is begging the question; these are the terms of the Appropriation Act: "For the Salaries and Allowances of Governors, &c., and for other Expenses in certain Colonies;" there is nothing in the Appropriation Act to restrict that part of the Vote to the object of repairing damages occasioned by the hurricane in the Virgin Islands?—How is the Comptroller and Auditor General to interpret the words "other expenses," which you read? He can only ascertain what those "other expenses" are by the Estimates.

1462. No doubt he is bound to ascertain that, and to report upon it; but the question is, whether, having done that, he has not discharged his duty, and whether he ought then to refuse to allow it as a charge against the Vote?—He cannot actually disallow it; the power of allowing or disallowing is assumed by the Treasury. The Committee will find, in the Treasury Minute at the end of the Comptroller and Auditor General's Reports, several cases in which his decisions have been reversed by the Treasury.

1463. Mr. *Stansfeld.*] There are three heads of the grant: first, "In aid of Colonial Local Revenue;" secondly, "To defray the Salaries and Allowances of Governors, &c.;" and thirdly, "Other Expenses;" in the first head is included the sub-head Virgin Islands, 3,000*l.*; then comes the heading of "Salaries, &c. of Governors;" then you come to "Passages of Governors," "Maintenance of Steamer, Western Coast of Africa," "Mineralogical Survey, West Indies," "Clergy, North America;" these four last sub-heads being evidently the "other expenses in certain Colonies;" is not that right?—Yes, that may be the explanation of the title of the Vote.

1464. Do you not find the sub-head "Virgin Islands, 3,000*l.*" under the head of "Grant in aid of Local Revenues"?—Yes, so far as the heading is concerned.

1465. Has it not always been recognised and understood, that the explanations of sub-heads, which are not to be found under the Estimate, but attached to the Estimate, are for the information of Parliament, but are not part of the appropriation by Parliament of the sums which it votes?—Certainly not; I never understood that to be the view. I consider that whatever is placed before Parliament for its information in granting the money, is also placed before the Comptroller and Auditor General, to enable him to ascertain what are the purposes to which Parliament intended that the money should be applied. The explanation is for the information of Parliament in the first instance, for the guidance of the Treasury in appropriating the money in the second instance, and for the guidance of the Comptroller and Auditor General in the third instance, when he comes to look at the Appropriation Account.

1466. But the distinction that the Chairman drew, and which I intended also to draw, is this, that no doubt this information is intended to guide Parliament, and not to mislead it; Parliament votes with that information before it, and therefore it is the duty of the Comptroller and Auditor General to draw the attention of Parliament to any expenditure which does not seem to accord with the intention Parliament had in acceding to that Vote; but the question is, whether that is a reason for his disallowing such expenditure, or whether he would not have discharged his duty by simply drawing the attention of Parliament to it?—That would be a mere question of words, whether the Comptroller and Auditor General said, "I object to this expenditure," or, "I call the attention of Parliament to it as an objectionable expenditure."

1467. *Chairman* (to Sir *W. Dunbar*).] I will take, as an illustration of this, a question which was raised in Parliament as to whether the shutters to the embassy at Therapia should be iron or not; supposing the detail had shown that the Vote was for providing iron shutters, and it was afterwards found out that iron was not so good as some other material, and the money was spent upon some other material, what view would the Comptroller and Auditor General take of that expenditure?—I should consider that the money being applied to shutters, it did not matter whether they were of one material or another.

1468. But it would have been contrary to the intention of Parliament if they had not been made of iron?—The intention of Parliament was that the money should be applied to shutters; the material is a subordinate question.

1469. Mr. *Stansfeld.*] Is there no distinction in point of consequences between the Comptroller and Auditor General disallowing an item in an account, and his simply drawing the attention of Parliament to that item?—The Comptroller and Auditor General has no power to disallow. The Treasury has made the payment, and whatever form of words the Comptroller and Auditor General may use, all he can do is to call the attention of the Treasury and of Parliament to the payment; he cannot disallow it. It has been allowed to the officer who paid it. It is a mere question of calling the attention of Parliament to the expenditure.

1470. Mr. *Seely.*] Was not it the intention of Parliament to vote a certain sum of money to relieve distress in the Virgin Islands?—It is not so stated. I daresay that may have been the intention, but there was a special appropriation made "to repair damages occasioned by the hurricane."

1471. The question then comes to be, what is meant by repairing damages; they may be damages to buildings, damages to provisions, and so on; it gives a wide scope?—There is a difference between that and the appropriation of money by handing it over generally in aid of local funds, because if you give this money over in aid of local revenues, it may be applied to purposes totally foreign to those which were described in the Estimate laid before Parliament.

1472. Mr. *Pollard-Urquhart.*] When you positively disallowed this expenditure, you did it at first, if I understand you rightly, because no satisfactory vouchers had at that time been furnished to you of that expenditure?—Yes.

1473. But afterwards, when vouchers were furnished to you, you thought that expenditure of 250*l.* so very questionable as to make it your duty to call the attention of Parliament to it?—No; that is not the question before the Committee.

1474. The question of disallowing the expenditure arose entirely in consequence of no vouchers having been furnished to you?—That question has been raised by Mr. Foster, but it is not absolutely before the Committee. As I said before, it opens up a very important question, which I should like to see fully argued out; it has not been as yet fully argued.

1475. *Chairman.*]

1475. *Chairman.*] There has been a little confusion as to two points in discussing this question; the one is, whether it is the duty of the Comptroller and Auditor General to ascertain whether it was the intention of Parliament that the money should be applied to this purpose, and to report upon it; the other is, whether the expenditure is properly chargeable to the Vote; if you will put aside the question that it was not the intention of Parliament to provide the money for that purpose, and now go to the question of its being properly chargeable against the Vote, I think we should be able to discuss the matter; the question is, whether granting that that which is outside the detail was not in accordance with the intention of Parliament, and granting that you duly reported that it was not in accordance with the intention of Parliament, is it chargeable against the Vote; will you direct your attention to that point only?—As there is a little difference of opinion between the views of the Treasury and the Audit Office, I am very anxious to go to the very root of this question.

1476. Up to this time the two points I have referred to have been rather mixed up?—Mr. Foster has made a statement, I think, upon the somewhat fallacious assumption that the Exchequer and Audit Department would interfere with or attempt to arrest the functions of the Treasury in dealing with these payments. The Comptroller and Auditor General has made no proposition so absurd. He knows perfectly well what his duties are. He knows that the Treasury in the exercise of its discretion, and in the plenitude of its power, may charge any sum that it pleases to any Vote, provided it can justify it to Parliament. But what he does claim as his right is to express an opinion upon it, and to bring his views before the House of Commons in fulfilment of the duties and powers which he is authorised to discharge by the Exchequer and Audit Act. Now, if Parliament had thought fit in the exercise of its wisdom, as it might have done, to appoint a special Committee of its own House to audit the accounts, employing examiners to point out where difficulties occurred, and this had been the Committee, I take it for granted that the Committee would not have considered itself precluded from asking for information, seeking for it, and making use of it for the purpose of eliciting the fact whether or not moneys voted by Parliament had been devoted to the purposes intended by Parliament.

1477. That is not my point; I assumed that you discharged your duty correctly in ascertaining whether the money had been applied according to the intentions of Parliament, and that you discharged your duty properly in reporting upon it. Putting that aside, and assuming that the money had been applied to a purpose which Parliament did not intend, will you now consider whether it is properly chargeable to the Vote?—There are two duties which in the examination of the account, which he conducts under that 27th section on behalf of the House of Commons, the Comptroller and Auditor General is called upon to perform. He is first to ascertain "whether the payments which the Accounting Department has charged to the grant are supported by vouchers or proofs of payments." This expenditure was not supported by what he considered to be proper vouchers.

1478. That is not the point upon which I want your opinion?—I want to bring the whole question before the Committee.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Vine.*
Mr. *Ryan.*
Mr. *Lewes.*

15 June 1870.

1479. There is no difference of opinion upon that point?—The second duty of the Comptroller and Auditor General is to ascertain "whether the money expended has been applied to the purpose or purposes for which such grant was intended to provide." Now I say that under this clause he is bound to discover what the intentions of Parliament are, just as an Auditing Committee of the House of Commons would have been bound to discover what the intentions of Parliament were, and that in order to inform himself he is obliged to avail himself of all the information laid before Parliament that he may report, as he is required to do by the 32nd section, for the information of the House of Commons, what the result of his examination is.

1480. No one questions that you are bound to do all that; you must have proper vouchers in support of payments; you must ascertain what the intentions of Parliament are, and if the intentions of Parliament have been contravened, you must report upon it; that being so, vouchers being duly produced in support of a payment, but the payment having been made outside the intentions of Parliament, and you having reported it to have been so, the question is, is it properly chargeable against the Vote?—I say that that is a matter of opinion. I think the difficulty arises from the word having been used from time to time, of the Comptroller and Auditor General "disallowing" expenditure. The Comptroller and Auditor General has, by the Exchequer and Audit Act, no power of "disallowing" any expenditure, but he has the most ample power to make any report he pleases, and to express any opinion he likes upon any items which he deems objectionable, or which, in his judgment, is not properly chargeable against the Vote. (Mr. *Anderson.*) Will the Committee allow me just to call their attention to a section of the Annual Appropriation Act, it says; "The said aids and supplies, provided as aforesaid, shall not be issued or applied to any use, intent, or purpose whatsoever, other than the uses, intents, and purposes before mentioned or specified in the several schedules referred to in this Act." If those words have any meaning, any expense which is not embraced in these purposes ought not to be chargeable to the Vote.

1481. What section is that?—The 25th section of the Consolidated Fund (Appropriation) Act; it is the Act of last Session.

1482. This section refers to the schedules?—It refers to the schedules of the Votes.

1483. It is the 27th section of the Act of the year into which we are now inquiring; it refers to the schedules in the Act. The words of the schedule in the Act, with regard to this particular Vote, are very general, namely, "for the salaries and allowances of governors, &c., and for other expenses in certain colonies;" so that according to the terms of the Appropriation Act there would be nothing incorrect in charging it against the Vote, if we do not look beyond the Appropriation Act?—That is if it comes within the "uses, intents, and purposes" described in the Act.

1484-5. There is nothing in the Act, if we do not look at the details of the Estimate, to limit it to repairing damages occasioned by the hurricane?—That can be seen only by looking at the Estimate; you cannot discover the intents and pur-

15 June 1870.

poses without referring to the document upon which the money was voted.—(Sir *W. Dunbar.*) I would observe, in order to follow out this subject, that it would appear that the contention of the Treasury is, that though there may be a specific appropriation, yet, if the heading of a sub-head will cover any other appropriation, the Treasury should have full power to devote the money voted to any other purpose which that sub-head will cover. Now let me take an illustration just to show how that would work. We will take the Houses of Parliament, for instance; the general heading of a Sub-head, F., is "Works of Art." In the detailed information given to Parliament, those works of Art, which amount to 4,600 *l.*, consist of "The Judgment of Daniel," "The Acquittal of the Bishops," "The Lords and Commons presenting the Crown to William and Mary," and a statue of one of the sovereigns; supposing that instead of these four works which Parliament intended to have executed under this Vote, the department charged with the expenditure were to substitute four other works, say, an incident in the life of Cromwell, a statue of Cromwell, the triumphal entry of the Pretender into Edinburgh, and some others, all these would come under the general heading or designation of "Works of Art;" but could it be said that such an expenditure would be expenditure intended by Parliament to be incurred? But take another case, the case of the palaces in the occupation of the Sovereign; there are very large sums voted for the purposes of these palaces; there are sums voted for Buckingham Palace, for Windsor, for Frogmore, and for various other palaces in England, amounting sometimes to very large sums, it may be 30,000 *l.*, 40,000 *l.*, or 50,000 *l.*; supposing the Treasury, in the exercise of its discretion and its power, chose to devote the whole 40,000 *l.* or 50,000 *l.* to two palaces, one of them being Holyrood Palace, in Scotland, that again would fall under the description of palaces, but would it be a proper appropriation of expenditure voted by Parliament?

1486. It is quite clear that you would have to report upon that, but the question is would it be properly chargeable against the Vote; there can be no question that it is your duty to find out whether the intention of Parliament has been carried out or not?—If it was in direct contravention of the intention of Parliament, I hold that I am clearly entitled, under the 32nd section of "The Exchequer and Audit Act," to express an opinion to the effect that it is a sum expended which is not properly chargeable to the Vote, leaving the House of Commons to deal with the matter.

1487. Mr. *Liddell.*] Is not this question that we have been discussing so long almost, if not strictly, *in pari materia* with the question that arose the other day upon the appropriation, or the misappropriation as you properly called it, of certain monies voted for the London University, but applied to the expenses of the election of the Chancellor of the Exchequer?—It is precisely the same case.

1488. *Chairman.*] Only this is a stronger case?—It is even a stronger case, but it is precisely analogous. An enormous amount of misappropriation might take place under a very skilfully worded heading in the course of time. If the departments chose to ask for moneys for popular purposes, and other moneys for unpopular purposes, they might, of course, ask for a large sum in the detailed information given for the one set of purposes and a smaller sum for the other, so skilfully wording the heading as to be able to jumble up the two, or to appropriate the moneys intended for the one purpose to an entirely different purpose.

1489. The whole question is the intention of Parliament in voting the money in the first instance, and if the money is appropriated to a purpose that was outside the intention of Parliament, you hold it to be your duty to disallow the account of money so expended?—Not to disallow it; I have no power to disallow in the ordinary sense, but to report it as not properly chargeable against the Vote.

1490. To report that that is a misappropriation of public money?—Yes. In my opinion, a misappropriation, and therefore a sum not properly chargeable to the Vote.

1491. Is not this a vital question in respect to the duties and functions thrown upon you by Parliament, with a view to maintaining a check over the appropriation of public money?—I consider it to be so. I hold that whatever functions a Committee of Parliament would have exercised, if it had been specially appointed for the purpose, those functions have been delegated to the officer of Parliament for the performance of the same duties.

1492. Mr. *Pollard-Urquhart.*] To return for a moment to the point from which we started; supposing your office had existed at the time of the Irish Famine in 1846 and 1847, and supposing a certain sum had been voted for the relief of Irish distress at that time, and placed in the hands of a local committee, consisting principally of landlords, and supposing this committee had applied a great part of the sum placed in their hands to the payment of their own rents due from these distressed people and otherwise irrecoverable, would you not have thought it your duty to report that to Parliament?—Yes.

1493. Should not you call this a strictly analogous case to that which I have supposed?—I should consider it a perfectly analogous case. If I am precluded from looking at the detailed information presented to Parliament, I should possess less powers than are possessed by any ordinary auditor; I should become merely a cash auditor, and it would hardly be worth while, in my opinion, to keep up an expensive machinery, such as that which I am at the head of, for such a purpose. The work might be done by an officer of lower grade, at a lower remuneration. I may further observe that since the last meeting of this Committee, the question of the powers of an auditor has been decided by a court of law. If the Committee will permit me, I will show them what are the ordinary powers of an auditor. This was a case decided in the Court of Queen's Bench, before Justices Blackburn and Mellor, on the 1st of June last; the great question here was as to the powers of an auditor in auditing the accounts of a local board.

1494. *Chairman.*] Was it under an Act of Parliament?—I do not know. I take this from the "Times."

1495. That is a very important thing to know, is it not?—We will assume that it was under an Act; I am under an Act.

1496. Then it is very important to know what the words of the Act are, because there is no such

such thing as an audit at common law; it must be an audit under an Act of Parliament?—I presume so. You will find that the general powers of auditors are brought out in this judgment.

1497. That is, the powers of an auditor under some particular local Act, I suppose?—Yes, I suppose so.

1498. You have not got the terms of the local Act here to refer to, have you?—No; but there are some principles laid down here by the judges as to the powers of an auditor, which may be worth quoting. The contention here is, that the Comptroller and Auditor General is not entitled to look at the information laid before Parliament.

1499. I have not heard that contended?—I understood that it was said the other day that this was an appendix which did not come within the purview of the Comptroller and Auditor General.

1500. I have not heard that?—If that is conceded I have nothing further to say. (Mr. *Anderson.*) These were answers given to questions at the last examination. Mr. Vine stated, in answer to Questions 1195 and 1196, that the Audit Office was requiring more than Parliament intended should be given. It was upon the question of these detailed Estimates, the Appendix to the Estimates. Mr. Foster stated, in answer to Question 1208, "I think if once the Comptroller and Auditor General was going to check every item which is put in the Appendix to the Estimates, his duties would be increased to an enormous extent, and the whole thing would break down from the impossibility of carrying it out." He goes on again, in answer to Question 1209, to say, "I think that to recognise the right of the Comptroller and Auditor General to go below the sub-heads which are laid down in the Estimate would lead to insuperable difficulties;" and, in answer to Question 1210, he says further, "It would extremely multiply the accounts of departments, and would lead to very heavy expense, and it would need more bookkeepers to keep them;" and then he says, in answer to Question 1234, "It appears to me that the Comptroller and Auditor General has no opinion to give on that point;" that is upon the sub-heads. He goes on to say that it is beyond the province of his department to give an opinion on that point.

1501. *Chairman* (to Mr. *Foster.*).] Is it the contention of the Treasury that, under the Exchequer and Audit Act of 1866, it is not the duty of the Comptroller and Auditor General to ascertain what was the intention of Parliament as to the appropriation of the money voted by Parliament, and to report upon it?—It is certainly the view of the Treasury that he has full power to do so.

1502. Is not he required to do so by the Act?—Yes; my observations were intended to show that if the intention of Parliament was to be arrived at by the Comptroller and Auditor General going into the details of the sub-heads, the accumulation of the work of audit and of account keeping would render the matter extremely expensive and very difficult.

1503. You do not contend that it is not the duty of the Comptroller and Auditor General to satisfy himself of the intention of Parliament with regard to the appropriation of the money voted, and to report when he thinks the intention of Parliament has been set aside?—Certainly not.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Vine.*
Mr. *Ryan.*
Mr. *Lewes.*

15 June 1870.

1504. Mr. *Seely.*] He may look at the sub-heads for his information?—Yes, to guide him in his judgment.

1505. If I understand you rightly with reference to this particular question, the Treasury thought that the head "Repairs of Damages" might fairly be construed as showing an intention of Parliament to appropriate a certain sum of money to relieve the distress that had occurred in this particular island?—Certainly; especially as the Vote says that it is to be granted in aid of the Colony; it was granted in aid of the colonial revenue, to support the Colony in this time of trial. I should like to observe that the Comptroller and Auditor General did not raise any objection as to its coming under the meaning of the Vote when he admitted the charge for medicines; his only objection was the want of vouchers. Now I cannot conceive that a sum granted to the governor to aid the Colony comes less under the meaning of the Act than paying a bill for medical supplies to the island; if the sum granted to the governor to aid the Colony does not come within repairing the damages done by a hurricane, I do not see how medicines do.

1506. *Chairman.*] Your view is this, that it was not outside the intention of Parliament to apply the money in this way?—Certainly, it was within the intention of Parliament.

1507. But supposing the Comptroller and Auditor General thought it was not, it was his duty so to report?—It was his duty so to report, but not to state positively that it was not chargeable against the Vote, in which case the expenditure would fall upon the accountant if we adopted that decision. It was stated that the words in which the objection was raised made little difference; but it would make this difference to the accountant, that in the one case, if he was wrong, he would be reproved, and in the other case he would be called upon to make good the money, which is a very serious difference. But then I think the Comptroller and Auditor General drew attention to the wording with respect to St. Helena. He says, he would not hesitate for a moment to admit the simple receipt of the governor of the Colony in St. Helena, for the payment in respect of the repairs of the destruction caused by the white ants, but he will not take the receipt of the governor of the Virgin Islands for a payment to repair the damages caused by the hurricane. (Sir *W. Dunbar.*) I will ask Mr. Foster to read the whole of that passage, and not to omit the essential words.

1508. *Chairman* (to Mr. *Foster*).] The Committee wish to inquire into the principle of the thing; they do not want to go into these minor details, which give rise to a great deal of complication?—I should like to mention one point, with regard to Bermuda; it was stated that there was a special appropriation of the salary of the governor, which I think would affect the principle. The Comptroller and Auditor General states that he considers the salary of the governor to be a special appropriation. I think the Treasury would contend that it was not a special appropriation, because if the Treasury thought it right that the salary of the governor should be reduced by 200*l.*, and that the salary of the chief justice should be increased by 200*l.*,

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Vine.*
Mr. *Ryan.*
Mr. *Lewes,*

15 June 1870.

I think the Treasury would deem it quite within their power to make that change, and would not look upon the sum voted for those salaries as a special appropriation by Parliament.

1509. Supposing it was within the power of the Treasury to make that change, it would still be within the duty of the Comptroller and Auditor General to remark upon that transfer in his report, would it not?—I think if he were to do that in every case there would be no end to it.

1510. He would not be exceeding his duty in so reporting; it would be a question of discretion?—Yes.

1511. Mr. *Candlish* (to Mr. *Anderson*).] You regard it as important to look to the terms under which Parliament votes the money, that is to say, the terms of the Estimate?—Yes.

1512. When the Appropriation Account comes before you, it is submitted by the department direct, is it not; this Appropriation Account, Vote 8, came from the Colonial Office, did not it?—Yes.

1513. Do you not notice that the heading there, as furnished in the Appropriation Account, differs from the heading in the Estimate?—Yes.

1514. (To Sir *W. Dunbar.*) Is there not a very great inconvenience in having the headings under the different Votes in the Appropriation Accounts, varying from the terms in which the Votes were granted by Parliament?—I think there is some inconvenience.

1515. I notice other variations; Vote 7 is in different terms, and Vote 10 is in different terms?—There is no doubt some inconvenience; the inconvenience has arisen out of this difference of opinion.

1516. Would it be part of your duty to correct this heading, and put it in the terms under which the money was first voted by Parliament?—No; that is exclusively the duty of the Treasury.

1517. Do these accounts come from the Colonial Office to you direct, or do they come to you through the Treasury?—They come to us direct.

1518. Then it could not be the duty of the Treasury to correct the headings of an account which they never saw?—But the forms in which the accounts are to be rendered are prescribed by the Treasury in virtue of an Act of Parliament.

1519. Do you see what the difference is between the Estimate and the Appropriation Account in Vote 8?—Yes.

1520. Is there not very great inconvenience in submitting to Parliament a heading in the Appropriation Account which is different from the heading in the Estimate?—I confess that I think they had better be assimilated.

1521. *Chairman* (to Mr. *Foster*).] Can you give any explanation of the reason of the variation in these headings?—No, I cannot. I do not think that the Treasury is to blame. It was probably an accidental omission. The Colonial Office in preparing the account did not put in the full heading, and when it went to the Comptroller and Auditor General, I think it rested with him rather than with the Treasury to correct it.

1522. It would seem better, would it not, that the terms of the Appropriation Account should follow the terms in which the money was granted?—Yes.

1523. Mr. *Candlish* (to Mr. *Lewes*).] This Appropriation Account is rendered by your department, is it not?—Yes.

1524. Will you explain why there is a difference between the heading in the Appropriation Account and the heading in the Estimate?—There was, I believe, so little intention to make any difference that I am inclined to suppose that it may have been accidental. The words may have been omitted in printing; they go side by side up to a certain point.

1525. You see that there are differences in the headings of almost every Vote?—I have not studied other Votes, but I believe it was intended to make them correspond in this case; the difference may have arisen from an omission in printing.

1526. As the Comptroller and Auditor General has to examine your account with reference to the Estimate, is it not clear to you that the terms put before the Comptroller and Auditor General in your account should have been those used in the Estimate?—I certainly should have prepared it according to the terms used in the Estimate.

On Vote 5.

Mr. Francis B. Alston, called in; and Examined.

Mr. *Alston.*

1527. *Chairman.*] We wish to call your attention to paragraph 3 in the Comptroller and Auditor General's Report upon this Vote; it is this: "I have further to point out that an expenditure of 1,741 *l.* 6 *s.* 10 *d.*, on account of the Niger Expedition, was by direction of the Treasury in a letter dated the 11th of March 1869, charged to the Sub-head E, Incidental Expenses, the Vote for which amounted to 1,200 *l.* only." We have had it in evidence that this sum was expenditure incurred by Mr. Macleod, Mr. Macleod being at the time restricted not to expend more than 200 *l.* a year on the public account; was that so?—It was so, but this was an extraordinary expenditure incurred by the consul without previously reporting the circumstances to our office.

1528. We have heard that a bill was drawn by him upon the Foreign Office, the Foreign Office demurred at first to accept the bill, but afterwards, taking all the circumstances into consideration, they accepted it?—Yes, taking all the circumstances into consideration, they accepted it with the Treasury's sanction.

1529. What the Committee wanted to know was whether any examination was made by the Foreign Office into the propriety of the charges?—The Foreign Office made such an examination as was practicable at the time. We fully believed that the expenditure had been incurred by the consul, this I say, without expressing any opinion as to whether the consul acted wisely in incurring it; we certainly had no reason whatever to doubt that the expenditure had been incurred.

1530. Practically, was there any examination of

of the account?—I am afraid I cannot give any other answer to that question. Undoubtedly there was an examination of the account, but I understood the drift of your question to be whether the expenditure was a necessary expenditure.

1531. What I wanted to know was this: first of all it does not appear by that account that Mr. Macleod certified that the expenditure had been incurred; there is nothing at the end of the account to show it; the account is signed by the person who supplied the articles?—Yes.

1532. It is not verified by the person who incurred the liability?—It is not.

1533. Do you know whether any certificate was given by Mr. Macleod on any other document that he had incurred that liability in respect of those articles?—I am unable to answer that question at this moment.

1534. Mr. *Liddell.*] In consequence of an answer you gave, probably inadvertently, I should like to ask you whether the Foreign Office is in the habit of sanctioning expenditure without an accurate account of such expenditure being furnished in all cases?—Certainly not; but this was a peculiar and exceptional case, and we had to be satisfied with the best account we could obtain. I answered the question supposing that it had reference to the circumstances under which we had accepted the bill, as to which I spoke, subject to correction by Mr. Foster. My impression is that, the bill having been drawn upon the Foreign Office, we paid it under Treasury direction, and I cannot at this moment say whether the vouchers sent in support of that bill were deemed to be satisfactory or not. I must honestly admit that I had no recollection of the existence of that account, which has just been put into my hands.

1535. *Chairman.*] What is the practice of the Foreign Office as regards accounts sent in by consuls at remote stations?—They are carefully examined.

1536. In what way are they certified?—The accounts are signed by the consuls themselves and supported by vouchers; but I repeat that this was an exceptional case. This is not the account of the consul himself, it is rather the voucher; and I must conclude that it was a voucher sent by the consul in support of the account, for it certainly is not the account itself.

1537. That is, in fact, the bill sent in by the manager of the company?—It is

1538. And signed by the manager?—Yes.

1539. You are not able to say whether the consul certified to the correctness of the charge?—I assume that he did so; I have no doubt he did.

1540. But you are not able to say, as a matter of fact, that he did?—I have here a despatch from the consul, dated the 18th of November 1868, explanatory of the charge.

1541. Do you know what was the date of the acceptance of the bill?—My impression is that it was towards the end of 1868, or early in 1869, that the bill was accepted.

1542. Does that despatch, which seems to be a long one, contain a certificate to the correctness of the account?—It contains a full explanation of the circumstances under which the expenditure had been incurred.

1543. But does it certify that the charges made by the manager of the factory were correct, that the articles had been supplied, and that the prices charged were proper?—I do not find any reference to this account in the hurried examination which I am able to make of this despatch at the moment. The letter of the Foreign Office to the Treasury says that the Earl of Clarendon transmits "the accompanying despatches as marked in the margin from Mr. Macleod, explaining the circumstances under which he drew the bill in question, and enclosing a statement of the expenses on account of which the bill was drawn; and I am to request that in laying these papers before the Lords Commissioners of Her Majesty's Treasury, you will state to their Lordships that it would appear that Mr. Macleod was placed in a position of more than ordinary difficulty, at a considerable distance in the interior of Africa, and out of reach of instructions. Lord Stanley, before whom the question of the payment of this bill was first brought, was of opinion that Mr. Macleod might not unnaturally have felt that he was bound to uphold the interests committed to his charge, and that therefore he was justified in incurring the expenditure which he did. I am to state that Lord Clarendon concurs in the view of his predecessor in this matter, and his Lordship has therefore given directions, pending the decision of the Treasury as to the funds out of which Mr. Macleod's bill should be paid, that it should be paid and charged to the Vote for 'Special Missions.'" I apprehend that that is not an account in the sense in which consular accounts are usually rendered.

1544. Then do you gather from that letter that Mr. Macleod verified the accuracy of that account by enclosing it?—I conclude so. This account is marked as an enclosure in this long despatch from the consul; I cannot find any distinct reference to this account in the despatch, but I must assume from the despatch, which bears the signature of the consul, that he sent that account in as representing accurately his expenditure as far as he was able to render it.

On Vote 10.

1545. *Chairman* (to Mr. *Vine*).] The note to this Vote is, "Of this sum only 474 *l.* 1 *s.* 7 *d.* remains available for surrender; a sum of 162 *l.* 15 *s.* 4 *d.* having been surrendered in excess of the savings of the previous year;" have you anything to say upon that?—I have. The saving upon the previous year was surrendered in consequence of a report of the Public Accounts Commission, and 162 *l.* 15 *s.* 4 *d.* was excluded, there being a doubt whether it was expenditure chargeable against the year 1867-8 or not. The doubt was this, whether the persons who expended this money were sub-accountants of the Emigration Commissioners or not. From the information we had obtained we did not consider that they were so, and therefore the surrender was made without taking into consideration the 162 *l.* 15 *s.* 4 *d.* That being the case, I consider that the 162 *l.* 15 *s.* 4 *d.* ought to have been included in the first open account, that would be in the year 1868-9. It has not been included in this Appropriation Account. It appears that the Comptroller and Auditor General has made neither an objection nor an observation upon it. I would refer to page 168 of the Appropriation Accounts. In the third paragraph, under Subhead B., "Incidental Expenses, Court of Chancery, Ireland," the Comptroller and Auditor General states, "There are also included two payments

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Vine.*
Mr. *Ryan.*

15 June 1870.

for scrivenry, amounting together to 8*l.* 6*s.* 8*d.*, which, having been made in March 1868, are inadmissible as a charge against the Vote for 1868–9." That, I presume, is an objection raised by the Comptroller and Auditor General. If you will turn to page 77 you will find in paragraph 4, "I also observe that two payments, amounting to 12*l.* 7*s.* 6*d.*, included in the last-mentioned sum of 24*l.* 14*s.* 3*d.*, were made during the year 1867–8, and should have been included in the account of the Vote for that year." In the one instance where the sum has not been charged against the first open account, the Comptroller and Auditor General neither makes an observation nor an objection. In the second case, in regard to the account of the Court of Chancery, Ireland, the Comptroller and Auditor General makes what I consider to be an objection, because he recommends that the sum should be disallowed. In the case of the "Exchequer and other Offices, Scotland," the Comptroller and Auditor General contents himself by making a simple observation. I do not quite understand the distinction which the Comptroller and Auditor General draws between these cases.

1546. (To Mr. *Ryan*). What have you to say upon this point?—With reference to the note made upon this account, we did not consider that there was any necessity for us to make any observation whatever; the note explains itself.

1547. You accepted the note?—We left the note for the Committee to raise any question upon which they thought proper. (Mr. *Vine.*) The Vote shows that there was a sum of 162*l.* 15*s.* 4*d.*, which had been surrendered in excess of the savings of the previous year. (Mr. *Ryan.*) The sum was not charged against the account, therefore we took no notice of it. (Mr. *Vine.*) If these items were omitted from the accounts of 1867–8, they ought to have been included in the first open account, which was 1868–9.

1548. (To Mr. *Ryan*). Your report is to this effect, that "the amount of the net saving to be surrendered should be 637*l.* 13*s.* 9*d.*, and not 636*l.* 16*s.* 11*d.*, as shown in the account"; notwithstanding that note, you consider that the whole of the sum of 636*l.* 16*s.* 11*d.*, with the addition of a few shillings, should be surrendered?—We reported upon the account simply as it stood. The saving shown by the accountant was 636*l.* 16*s.* 11*d.*; there was a small disallowance to be taken into account, and therefore we said the sum to be surrendered for that year is not 636*l.* 16*s.* 11*d.*, but 637*l.* 13*s.* 9*d.* With reference to the note, we left that as it stood. (Mr. *Vine.*) It appears to me to be evident from the note that the account is wrong.

1549. How do you say that the account ought to have stood?—I maintain that the 162*l.* 15*s.* 4*d.* ought to have been included in this account as expenditure, it having been omitted from the account for 1867–8, it must therefore necessarily be charged against the first open year, which is this one.

1550. Under what sub-head?—Under whatever sub-head the expenditure took place.

1551. (To Mr. *Ryan.*) What have you to say to that?—We reported upon the account itself as it stood. We did not think it necessary to tell the accountant that he must include in the Appropriation Account any sums of which we had not at that moment any knowledge except by this note.

1552. Mr. *Stansfeld* (to Mr. *Anderson*).] You looked to the account only, and not to the note appended to the account?—Yes; the Comptroller and Auditor General says, that the surplus on the Vote for this year is 637*l.* 13*s.* 9*d.* This note says, that the sum of 162*l.* 15*s.* 4*d.* was surrendered in excess of the proper savings of the previous year, so that the balance only would be surrendered this year.

1553. Your view is, that there is no real difference?—No, there is no practical difference at all.

1554. *Chairman* (to Sir *W. Dunbar*).] Your report seems defective, does not it, in not alluding to this?—The saving on the Vote for the year is really the sum stated; the correction of the error made in the surrender of the saving on the previous year's Vote was the duty of the Treasury.

1555. Mr. *Stansfeld* (to Mr. *Ryan*).] The point is, that the report says the amount "to be surrendered" is such and such?—These particular sums will be charged, by directions of the Treasury, against this year 1869–70, instead of against 1868–9; they have not been included in the former account.

1556. *Chairman.*] I understand your view to be that you made a report upon the account of this year, and that if there was an error in the year before by too large a sum being surrendered, that did not come into this year?—Yes, we did not make ourselves responsible for the balance with which the account commenced.

1557. Mr. *Candlish.*] The standing over amount was an amount chargeable in the next year?—It will be charged on the year 1869-70.

1558. The amount remaining unpaid in 1868-9, or the previous year 1867-8, will be chargeable in the next year's account?—The sum ought to be charged in the year in which it is actually incurred.

1559. Not having been charged then, would it not be rightly chargeable in the next year's account?—It cannot be otherwise dealt with.

1560. (To Mr. *Anderson.*) You have not pointed that out as the course to be pursued; you have not corrected the account in that way?—I understood the note to mean that 162*l.* 15*s.* 4*d.* was surrendered last year in excess of the actual saving; it was the duty of the Treasury to correct that error of theirs, by taking that excess of surrender out of the surrender to be made this year; that is the meaning of that note.

1561. *Chairman* (to Mr. *Vine*).] Your position is this, that the nominal savings of this year must be debited with certain payments to replace the savings of last year?—That expenditure is nowhere shown in the account, it is neither included in the 1867-8 account nor in the 1868-9 account. There was a question whether the payments were made through sub-accountants. Mr. Foster and myself entertained doubts about it, and therefore we considered that this sum would be properly chargeable against the year 1868-9. The Comptroller and Auditor General entertained a different opinion, and the amount was not included in this account.

1562. And then you say that it ought to have been included in the expenditure account of this year which we are inquiring into?—I think anything omitted from the account of one year ought to be included in the expenditure account of the first open year.

1563. It was the fault of the accountant of the department, was it not?—Yes, to a certain extent; but I think that attention ought to have been called to this note, and to the fact that the account

was

was incorrect. (Mr. *Ryan.*) This was the first Appropriation Account rendered by the department. (Mr. *Foster.*) It not having been pointed out, the expenditure will not appear in any account. (Mr. *Anderson.*) The Comptroller and Auditor General's Report begins with this statement, "This is the first account of this service which has been rendered to this department as an Appropriation Account." There was no previous account to which it could be charged, therefore it was taken out of the balance. (Mr. *Foster.*) The Controller and Auditor General was informed by the note that there was expenditure which clearly ought to have fallen into the first open year, 1868-9. (Mr. *Anderson.*) It appears to me to be a distinction without a difference.

1564. Mr. *Egerton.*] Supposing that this case had occurred this year, what course would the Comptroller and Auditor General have taken next year in regard to it; you said that one reason for taking no notice of this particular circumstance was that this was the first Appropriation Account of that department?—Yes.

1565. In the case of a second Appropriation Account being submitted to you, what course would your department take?—I presume that if they had surrendered too much in a previous year they must take it out of the surrender in the next year. It is only a different way of doing the same thing. We state that the saving upon the actual expenditure of the year is 636 *l.* 16 *s.* 11 *d.*, but it appears by the note that 162 *l.* 15 *s.* 4 *d.* has been already surrendered, and the balance alone remains now to be surrendered.

1566. Mr. *Stansfeld.*] No; you say that the balance "to be surrendered" is a large sum, namely, 637 *l.* 13 *s.* 9 *d.*?—Yes, perhaps those words, "to be surrendered," might have been omitted; but the same sum is stated in the Treasury Minute as the proper amount to be surrendered on the Vote for the year.

1567. Mr. *Egerton.*] You would have to take notice of it in some shape or other; you take no notice of it in this case, but in a future case you would have to take some notice of it?—Yes.

1568. Mr. *Candlish.*] What will you do with this 162 *l.* 15 *s.* 4 *d.* next year?—It will probably be charged against the Vote of the following year, indeed I am told they have done so; it is paid.

On Class 6, Vote 2.

1569. Lord *F. Cavendish* (to Mr. *Foster*).] The Comptroller and Auditor General calls attention to the fact that the balance of 1867–8 under this Vote has not been paid into the Exchequer; has it since been paid?—It has since been paid.

On Vote 3.

1570. In paragraph 3 of the Report of the Comptroller and Auditor General it is stated, "Under Sub-head A., I have to observe that no vouchers in respect of a sum of 1,206 *l.* 7 *s.* 3 *d.*, have been produced, the papers relative to the payment having been mislaid at the Board of Trade; the sum cannot, therefore, be admitted as a charge against the Vote"; have you any remark to make upon that?—These vouchers have since been discovered, and the amount has been allowed.

On Vote 4.

1571. In paragraph 2 of the Report of the Comptroller and Auditor General, it is stated "The expenditure under Sub-head 22 should be increased from 56,512 *l.* 0 *s.* 3 *d.* to 56,712 *l.* 0 *s.* 3 *d.*, a sum of 200 *l.* (a repayment of a pension for a period anterior to this account) having been credited to the Vote instead of to Exchequer extra receipts"; has that correction been made?—I believe it has been made.

1572. The next paragraph is, "A sum of 26 *l.* 13 *s.* 4 *d.* having been paid under Sub-head 27 as the pension to the late Mr. Neal, Her Britannic Majesty's consul at the Piræus, for which no receipt has been produced, the expenditure under this sub-head should be reduced from 26,710 *l.* 18 *s.* 8 *d.* to 26,684 *l.* 5 *s.* 4 *d.*, has that voucher been furnished?—The Assistant Paymaster General understood that the Audit Office were completely satisfied with the evidence he had produced. I have since understood that the Audit Office were not quite satisfied.

1573. (To Mr. *Ryan.*) Were you satisfied?—No; the facts were that the Pay Office paid the pension of Mr. Neal without seeing that he had not signed his receipt at the time, though the examiner puts "examined" to it. Mr. Neal has since died, and so no proper receipt can be got from him; and the sum cannot be allowed under the 32nd section of The Exchequer and Audit Act.

1574. Mr. *Sclater-Booth.*] Was Mr. Neal entitled to that sum of 26 *l.* 13 *s.* 4 *d.*?—Yes. (Mr. *Foster.*) And there is the best evidence that it was paid to him.

1575. Mr. *Egerton.*] But it was an irregularity?—Yes; it was an accident which could not be repaired under the circumstances.

On Vote 7.

1576. *Chairman.*] There is a deficiency under Sub-head B. of this Vote of 6,409 *l.* 1 *s.* 4 *d.*, owing to the amount required for the quarter ended the 31st of March 1868 having been paid in the year 1868–9; that was an irregularity, I suppose?—It was a mere question of account.

On Class 7, Vote 1.

1577. Lord *F. Cavendish.*] In the Report of the Comptroller and Auditor General it is stated that various vouchers have not been produced, and that consequently the excess on the Vote for the year should be reduced from 19,382 *l.* 11 *s.* 4 *d.* to 17,366 *l.* 13 *s.* 5 *d.*; have all those vouchers since been produced?—I believe the whole of them have.

1578. With respect to Sub-head Q, there is a Vote for 1,700 *l.*, and the expenditure is 12,639 *l.* 5 *s.* 1 *d.*; is there any reason for that enormous excess?—The inquiry into the Irish railways was extended.

1579. *Chairman.*] There was a subsequent report presented by the Commissioners, was there not?—Yes, there was a further report for which voluminous inquiries were instituted, as to the state of the accounts of the railways.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*

15 June 1870.

Revenue Departments and Post Office Packet Service.

Vote 1.—Customs.

1580. *Chairman.*] On this Vote the Comptroller and Auditor General says, "I have also to observe that whereas, in the Customs Accounts all Repayments and other Extra Receipts are (with one exception in the present account) credited to Revenue, in the Post Office they are credited to Extra Receipts; and in the Inland Revenue Accounts they are credited in some cases to 'Extra Receipts,' and in others to 'Revenue.' It appears to me that it would be desirable that the mode of recording 'Extra Receipts' in the accounts of the three Revenue Departments should be uniform;" have you anything to say upon that?—I think it would be desirable to have it uniform. As regards Customs and Excise the Extra Receipts are shown entirely separate from the Revenue in the Finance Accounts, but they are paid into the Exchequer as Revenue, and there is just this advantage in that arrangement, that it keeps the total receipts of the Customs or Excise Departments together. In the case of the Post Office they pay their Extra Receipts in separately as Miscellaneous Revenue, and they do not appear as Receipts of the Post Office. The Army any Navy Departments pay in their Extra Receipts in the same way as the Post Office, and I think it would be desirable to arrange that the Customs and Excise should pay their Extra Receipts in the same manner.

Mr. William Dick, called in; and Examined.

Mr. *Dick.*

1581. *Chairman.*] Have you anything to observe upon this subject?—No. I believe it is the opinion of the Comptroller General of the Customs that the Extra Receipts ought to be paid in in aid of the Vote, according to the observations of the Comptroller and Auditor General.

1582. He accepts that view?—I believe he accepts it.

1583. Mr. *Sclater-Booth.*] You mean that they should be paid in as extra receipts, and not as revenue?—Yes. (Mr. *Foster.*) I do not think it would be desirable to pay extra receipts in as appropriation in aid of the Vote. I think the amount should all go into the Exchequer as extra receipts; but if I understood Mr. Dick rightly, he stated the opinion of the Comptroller General of Customs to be, that the sums repaid by the Board of Trade for work done by the Customs should go to aid that Vote, and not to the Exchequer; that I should dissent from. (Mr. *Dick.*) With regard to the sum paid by the Board of Trade, I believe it stands in this way: it is for work done, and the expense of the work done is voted. The Board of Trade pay a sum of close upon 14,000*l.* a year for clerical work; the expense of that clerical work is voted in the Customs Estimates. It is a question whether that should not be applied as a set-off against the Customs Vote.

1584. *Chairman* (to Mr. *Foster*).] What have you to say on this point?—I think that it would be objectionable; I think it is much better that each department performing work should estimate for, and account for the expenditure, and that any contributions in aid should go to the Exchequer.

1585. Mr. *Sclater-Booth.*] You would explain in a foot-note that a sum of 14,000*l.* a year was paid by the Board of Trade?—Yes. (Mr. *Dick.*) That is explained, I think, by a foot-note now; but still the amount goes into the revenue.

1586. Mr. *Stansfeld* (to Mr. *Foster*).] The rules which govern this question of extra receipts are not at all consistent; I believe they vary in the same department, and they vary between the different departments?—It is extremely difficult to lay down a strict and invariable rule with regard to them, but my own individual view is very much in favour of paying to the Exchequer all extra receipts, and voting the total expenditure for the department that incurs that expenditure.

1587. But, as a matter of fact, there is no rule of that kind controlling the question with reference to the expenditure of each department?—There are considerable exceptions to that rule.

1588. There are exceptions as between the departments, and different rules applying to extra receipts within a given department?—Yes, that is so, in some cases.

1589. Does not it appear to you desirable, not only that the mode of recording extra receipts in the accounts of the three Revenue Departments should be uniform, but that it should be made uniform throughout the services?—I think it should, as far as possible; I should not be prepared to say that it should be carried out without exception.

1590. *Chairman.*] Then do you propose, with regard to the Board of Trade, that they should estimate for the work done for them by the Customs?—I should prefer to omit it from the Vote of the Board of Trade, and let the whole expenditure fall upon the department which incurs the expenditure and pays the money.

1591. In that case there would be no extra receipts at all?—In that case it would drop.

1592. Do you not think it objectionable to vote money to be afterwards paid in as revenue?—I think, as far as it can be avoided, it should be avoided, because otherwise Parliament is voting the money twice over.

1593. Mr. *Candlish.*] Thereby doubling the annual Estimates?—Yes.

1594. The annual Estimates are not, therefore, a correct record of the annual expense to which the country is put?—Exactly; and the difficulty could be met by making a foot-note against the Vote, showing the expense that the department incurs for any other department.

1595. *Chairman.*] A foot-note showing whether the expense is incurred on its own account, or on account of any other department?—Yes.

1596. Mr. *Sclater-Booth.*] Do not you think that the Revenue Departments are in rather a different position from the spending departments in that respect, and that it would be an advantage to ascertain the cost of collection in them?—I think

think that it might be if you could really ascertain it; but the Customs, for instance, or the Inland Revenue Department, undertake work for so many departments, that it would not be a fair means of judging of the cost of collection. The Custom House officers all over the country are very much employed, and in some cases the chief part of their employment is for other departments; for instance, they make payments for the Army, for the Navy, and for the Paymaster General in all parts of the country. They collect lighthouse dues, and incur a variety of expenditure which you could not possibly eliminate from the cost of the collection, because the one salary of the collector pays for the whole duties which he undertakes. I think, therefore, that it would be futile to attempt to show the real cost of the collection of Customs duties in the Estimate.

1597. And do you think that, as a matter of fact, the net cost of collection never has been and never is ascertained? — Never; and in the Finance Accounts the statement of the percentage of the cost of collection has been omitted, because it was felt to be so entirely erroneous. Sir *W. Dunbar* Mr. *Foster.* Mr. *Anderson.* 15 June 1870.

1598. Mr. *Candlish.*] Here on this account there would be 13,000 *l.* Customs receipts which, in point of fact, are not Customs receipts, but payment to the Custom revenues by the Board of Trade?—Money voted by Parliament, paid by the Board of Trade to the Customs, and transferred back to the Exchequer.

1599. *Chairman.*] What have you to say on that sum of 306 *l.* 15 *s.* 6 *d.* mentioned in paragraph 6?—That sum has been adjusted in accordance with the recommendation of the Comptroller and Auditor General.

Vote 2.

Mr. Frederick Gripper, called in; and Examined.

1600. Mr. *Pollard-Urquhart.*] With regard to Sub-head D., there is this explanation; "The excess of expenditure under this sub-head was caused by the payment of extra remuneration to clerks to Commissioners of Income Tax, under the authority of the Treasury Letter of 31st August 1868, in consideration of the labour resulting from the imposition of the additional income tax of 1 *d.* in the pound"; is that a very great additional labour, for it is almost the same labour to collect 6 *d.* in the pound as 1 *s.* in the pound, is it not?—It was an allowance in respect of the additional 1 *d.* in the pound imposed at a late period of the year 1867, after the assessments for the year had been prepared. Parliament met in December of the year, and granted the additional 1 *d.* for the purposes of the Abyssinian War. Mr. *Gripper.*

1601. Was it not collected at the same time?—It was collected at the same time, but the assessments had been prepared at the former rate, and a great deal of additional labour fell on the clerks to Commissioners.

1602. Mr. *Candlish.*] Those sums would be properly chargeable, would they not, to the Abyssinian Expedition?—They were additional expenses in the cost of the collection of the tax.

1603. *Chairman.*] There are certain errors in the classification, which are commented upon by the Comptroller and Auditor General in his report; have they been adjusted?—They were adjusted by the Comptroller and Auditor General. The account had been rendered incorrectly.

1604. And the department accepts the corrections of the Comptroller and Auditor General?—Yes. With regard to the item of 319 *l.* 12 *s.* 9 *d.*, under Sub-head A., "Omitted and carried in error to other sub-heads," I may observe that it was attributable to the manner in which certain sums for salaries were claimed; it had been the practice, on the removal of officers, for the Board to allow to the officer removing, the amount of his salary, pending his leaving one station and taking charge of another, and that had, under the regulations of the Board, been claimed under the head of "Removal Expenses." The Comptroller and Auditor General deemed it more proper that such amounts should be claimed as salary, and an Order was issued accordingly; subsequently to the date of that Order all such amounts have been claimed as "salaries."

Vote 3.

Mr. George Chetwynd, called in; and further Examined.

1605. *Chairman.*] At page 307, the Comptroller and Auditor General says, "I deem it right to refer to my Report of the 15th of January 1869 (paragraph 22), on the subject of the application by the Post Office of the void money orders, and other public moneys not voted by Parliament, and to observe that I have received no further communication, either from the Lords of the Treasury or from Her Majesty's Postmaster General, on the subject. The Committee on Public Accounts, in their Third Report of last Session, stated that they had agreed that these moneys had better be paid over as 'Extra Receipts;'" is there any explanation of that, whether it has been accepted?—The Treasury did make a communication to the Postmaster General on the subject, and the matter is now under the Postmaster General's consideration; I believe that he is about to confer personally with the Treasury on the subject. Mr. *Chetwynd.*

1606. "With reference to the expenses under Sub-head F. of the Estimates, 'Government Annuities and Life Insurances,' it appears that no adjustment has, as yet, been made with the National Debt Commissioners, although the service has been in existence since April 1865;" have you anything to say about that?—That has since been adjusted; the amount has been collected.

1607. Mr. *Stansfeld.*] Have you anything to add to your answer about void money orders?—Mr. Foster tells me that a reply has been sent to the

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Chetwynd.*

15 June 1870.

the Treasury; I inquired before I came up, and I was told that no reply had been made.

1608. *Chairman* (to Mr. *Foster*).] Can you state the substance of the letter generally?—I think that I can give it briefly. The Postmaster General considers that it is very desirable to maintain the arrangements with respect to the Void Money Order Fund for three special reasons; the first is, that it encourages clerks to insure their lives "in stable insurance offices, by paying part of their premiums;" secondly, that it enables the Post Office to meet claims "arising from neglect or dishonesty of its servants, and which, though generally without legal foundation, were considered, especially when the claimants were poor, to carry with them some degree at least of moral obligation."

1609. That has reference to paragraph 3 of the Report of the Comptroller and Auditor General, has it not, and not paragraph 2?—This is the fund which is produced by the application of void money orders, and out of which these purposes are met. "Thirdly, some of the fund, though a very small part, has been employed in making good losses when payment could not be obtained from bondsmen." The Postmaster General considers the application of the fund in this way perfectly legitimate, and that great inconvenience and injury would result from a measure which would cause any interruption to it. The Treasury have replied that they are of opinion "that the system of remunerating or meeting the expenses of, or losses by, Post Office officials out of the Void Money Order Fund is objectionable, and is apt to lead to a want of zeal on the part of these officials in securing the correct delivery of letters conveying property, and the safe remittance of money by means of post-office orders," and they further request that they may be furnished with a statement of the cash and securities now standing at the credit of this fund; and they add that my Lords are prepared to consider the cases which may be brought before them by the Postmaster General of those clerks who, under the present arrangement, have enjoyed a beneficial interest in the revenue of the fund.

1610. In fact, the matter is still under discussion between the two departments?—Yes; I think the Treasury have decided that the proceeds of the fund will go to the Exchequer. I consider that the Treasury has come to that decision.

1611. At all events, there is no Minute yet which goes that length, is there?—There has been a previous Minute. In that previous Minute we informed the Postmaster General, that "In accordance with the recommendation of the Committee the amount of void money orders may be paid over to the Exchequer as extra receipts from the commencement of the next financial year."

1612. Then the decision of the Committee is to be abided by?—Yes.

VOTE 4.

1613. *Chairman* (to Mr. *Chetwynd*).] The report of the Comptroller and Auditor General says, "It will be observed by the statement of 'Extra Receipts,' which accompanies this account, that a very large sum is paid out of the Vote for this service, which, when repaid, is carried to the credit of 'Extra Receipts,' so that the Appropriation Account exhibits expenditure far in excess of the actual amount required for the management of the Post Office Packet Service;" have you anything to say about that?—It is done in accordance with the Treasury Order.

1614. Mr. *Candlish* (to Mr. *Foster*).] Do the Treasury intend to adhere to that course of procedure with regard to paying extra receipts to the Exchequer?—I cannot say whether the Treasury will adhere to it; I hope they will.

1615. *Chairman.*] There is a Vote taken for the whole of the estimated amount, and then the sums received from the Indian Government and other sources are paid in as extra receipts?—As contributions.

1616. And there is a foot-note to the Estimate explaining that?—Yes.

1617. Mr. *Candlish* (to Mr. *Chetwynd*).] Would it not be a better arrangement if it so stood in the account as that the actual cost of the Post Office might appear?—We show the actual cost of the Post Office in the Postmaster General's Annual Reports.

1618. Mr. *Sclater-Booth* (to Mr. *Foster*).] So do the Commissioners of Customs, do they not; they contend that the net cost is shown?—In their report.

1619. You do not hold to their per-centage?—I think that it is fallacious. No two people would agree as to what is the net cost.

1620. Mr. *Candlish.*] Could Parliament have put before it year by year, not balances, but the actual cost?—I think that a statistical statement might be prepared, showing within a fair margin what the net expenditure of the different departments would be; but it would be more matter of opinion than of fact.

1621. But really the estimate submitted to Parliament in the total sum is very much in excess of the actual cost?—In many cases it is so. In some cases it would be less than the actual cost, because part of the expenditure is borne by another department.

1622. Whenever these repayments of expenditure from one department to another go into the Exchequer, that would swell the amount of total expenditure?—Yes, it would.

1623. That happens to a very large extent, does it not?—I do not think that there are many cases where one department pays money over to another department.

1624. *Chairman.*] There was a Vote that we postponed the other day of Class 3, Vote 34, "Dundrum Criminal Lunatic Asylum, Ireland"; you undertook to write for explanation of some of the items?—We did have a reply, but I am sorry to say that it was very little more satisfactory than the previous one. I am afraid that I have not the reply with me, but it would not enlighten the Committee if I were able to read it.

1625. Mr. *Stansfeld.*] You can tell us, I think, what arrangements are made, in the hope that this account will be satisfactory in future years?—There are certain inspectors who have been in the habit of superintending the accounts of the asylum, and it is arranged that the accounts shall continue to be inspected by these gentlemen, and I have no doubt that for the future the account will come prepared in a much better way.

1626. *Chairman* (to Sir *W. Dunbar*).] On Vote 17, Class 2, the "Exchequer and Audit Department," there was a question postponed as to what should be the arrangements about rendering the account and auditing; I think it was suggested that that should be considered by the Treasury and the Comptroller and Auditor General; has any

any discussion taken place between the departments?—No, I think it was postponed for the consideration of the letters which I laid before the Committee; certain letters which passed between the Treasury and the Exchequer and Audit Department, explaining the nature of the question which had arisen between the two departments.

1627. But a suggestion was made that some independent person might be called in to assist in the audit; have you considered who that person might be?—That would be, to a certain extent outside the Act. I find that the account takes about three or four days to audit, so that, in fact, the expense of a second examiner would be trifling; but I do not think that that would be necessary. It appears to me that, supposing Mr. Ryan to remain the accountant, he might be required, as the Accountants General in the Army and Navy are, to put a certificate to this effect: "We, the undersigned, declare to the best of our knowledge and belief that no part of the expenditure contained in the above Army Appropriation Account has been incurred without authority superior to that of the department in cases where such superior authority is required by the regulations." That is signed in the case of the Army Appropriation Account by the Accountant General and the Chief Auditor of Army Accounts.

1628. You would propose to adopt the security taken in the Army and Navy Account for the Exchequer and Audit Department?—Yes.

1629. (To Mr. *Foster.*) Have you anything to say to that?—I do not place much faith myself in certificates; but I see no harm in Mr. Ryan, if he remains the accountant, subscribing to such certificates.

1630. Do you think that so long as it remains the practice with regard to the Army and Navy Account, it might be adopted with regard to the Exchequer and Audit Department Account?—Yes, it might.

1631. Mr. *Sclater-Booth.*] That would not affect the real question at issue, would it?—No. (Sir *W. Dunbar.*) In connection with that, I would direct the attention of the Committee to my Report, on page 88: "This is the first account of this service prepared as an Appropriation Account, and as appertaining to the expenditure of my department it has been very carefully checked both as to accuracy and the requirements of Treasury authority." They would therefore have the attestation of two separate parties. I ought to mention also that upon the last occasion the Financial Secretary put a question to me, which I was then cautious in answering. I stated in my answer that the control of the Treasury had been more apparent than real; I find that my answer ought to have been more real than apparent. As the head of my department I may authorise, indeed every chief of a department is entitled, as the Votes are administered, to authorise, expenditure for the various purposes included in the Estimates, provided it does not exceed the limits of each sub-head; but by transferring the administration of the Vote, I should require the sanction of that department to the Treasury to every item of expenditure, to the inconvenience of both departments. Practically, therefore, the Comptroller and Auditor General would be dealt with as simply a subordinate officer of the Treasury, subject to its control; so long, however, as the Comptroller and Auditor General has the power of reporting, I do not think that there is much apprehension of any abuse of power on the part of the Treasury or any other department which might have the administration of the Vote. (Mr. *Anderson.*) There is an observation made by Mr. Foster which I think I should not pass over. He says that he has no faith in these certificates; now I have the greatest confidence in them, and I think the best proof that the officers referred to do their duty is, that last year in the account for the Navy, the Accountant General refused to sign the certificate, because he was not satisfied that the regulations had been complied with. (Sir *W. Dunbar.*) I must say that I do not personally object to the transfer. I may mention that the Audit Vote was administered by the Treasury up to 1854 or 1856, but they found it so inconvenient that they transferred the administration of the Vote to the late Commissioners of Audit.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*

15 June 1870.

Friday, 17th June 1870.

MEMBERS PRESENT:

Mr. Candlish.	Mr. Pollard-Urquhart.
Lord F. Cavendish.	Mr. Sclater-Booth.
Mr. A. Egerton.	Mr. Seely.
Mr. Ward Hunt.	Mr. Stansfeld.
Mr. Liddell.	

THE RIGHT HONOURABLE GEORGE WARD HUNT, IN THE CHAIR.

Mr. HENRY W. S. WHIFFIN, called in; and Examined.

Mr. *Whiffin.*

17 June 1870.

1632. *Chairman.*] THE Report of the Comptroller and Auditor General on the Army Appropriation Account states in the first paragraph "that the Account of the Receipt and Expenditure for Army Services for the year 1868-9, was not delivered at the period fixed by the Exchequer and Audit Departments Act, 1866, namely the 31st of December 1869"; was there any reason why the date fixed by the Act was not complied with?—It was a very exceptionally heavy account for the year, in consequence more particularly of the introduction of the expense of the Abyssinian Expedition. And the question was referred to the Treasury as to whether it was desirable to classify that expenditure under the sub-heads of the vote, and the answer of the Treasury was not received until the 14th of December. The Account was delayed in consequence, and was rendered on the 15th of January 1870; but I have no doubt that in succeeding years we shall be able to render it within the time prescribed by the Act.

1633. Mr. *Pollard-Urquhart.*] The expenditure in consequence of the Abyssinian Expedition has not been classified under the sub-heads of the vote, has it?—It was found quite impracticable to make that classification in consequence of the vouchers, which had been forwarded from India, embracing services of every description. It would have led to an analysis which it would have occupied months to carry out.

1634. Referring to paragraph 3 of the Report of the Comptroller and Auditor General, he says towards the end, "and it is noticed that certain discrepancies appear in these columns" (namely, the columns of expenditure, in consequence of the Abyssinian Expedition); "for instance, under Vote 1, page 1, the extra expenditure for Abyssinia is stated to be 194,728 *l.* 13 *s.* 9 *d.*, while at page 11, showing the expenditure under the sub-heads of the same vote, two sums are charged in respect of the Abyssinian Expedition, which amount together to 196,389 *l.* 13 *s.* 10 *d.*" These descrepancies exist, I observe, in several of the accounts of the Abyssinian Expedition; can you explain them at all?—If you will allow me I will give a written explanation. I have not looked into this Account; the first time I have seen it has been this morning. I was served with a notice to attend here on the Army Estimates; I was not aware that the Account was going to be taken into consideration.

1635. *Chairman.*] Have you a written explanation ready?—No; I will put it in in answer to the question either on another day or when the evidence is sent to me for correction.

1636. Mr. *Pollard-Urquhart.*] Just to illustrate what I mean, will you turn to page 30 of the Account?—I have it.

1637. You see there, "Advances by the Local Government of India on Account of the Expenses incurred for the Abyssinian Expedition, 170,079 *l.* 17 *s.* 2*d.*;" a little lower down you will see "Charges for Abyssinia, 194,728 *l.* 13 *s.* 9 *d.*" I want you to reconcile those two amounts?—The explanation is that the sum of 170,079 *l.* 17 *s.* 2 *d.* is the amount expended through the Indian Accounts which have been rendered to us, and the 194,728 *l.* 13 *s.* 9 *d.* includes that sum, and also sums which had been paid direct out of Army Services for the Abyssinian Expedition, such, for instance, as batta paid to regiments that returned from Abyssinia to England; they were paid in this country.

1638. The latter, I suppose, being so mixed up with the charges for ordinary expenditure, that it was found impossible to discriminate between the two?—There is no detail furnished of the 170,079 *l.* 17 *s.* 2 *d.*, because it includes all the services comprehended under Vote 1.

1639. I look upon the 170,079 *l.* 17 *s.* 2 *d.* as a sort of repayment to the Indian Government; but then I want to know about the difference of 24,600 *l.* between the two amounts?—The 24,600 *l.* is the sum paid in this country for the same services. For instance, a great many of the officers on the staff returning to this country were paid direct by the War Office, and that sum of 170,079 *l.* 17 *s.* 2 *d.* is the sum actually paid by the Indian authorities in India or Abyssinia.

1640. I suppose the 24,600 *l.* expenditure is so mixed up with other expenditure for ordinary services that you found it quite impossible to give the two separately?—There would be no difficulty in giving the detail of the 24,600 *l.*, because it has been placed in the books from the audited vouchers, which passed through our War Office, but there would be great difficulty in giving the detail of the 170,079 *l.* 17 *s.* 2 *d.* paid in India and Abyssinia.

1641. It is an item of expenditure?—Yes, and comprehends expenditure under every item of the

the vote. Staff pay, batta, and every kind of allowance the troops are entitled to.

1642. The same explanation will account for the apparent discrepancies on the other votes, I suppose?—I have no doubt it will.

1643. *Chairman.*] On page 28 there appears a sum of 26,309 *l.* 16 *s.* 8 *d.* for "Special Allowances to European Troops serving in the Abyssinian Expedition;" that is under the head of Batta?—Yes, that is the batta allowance.

1644. Then there is the 170,079 *l.* 17 *s.* 2 *d.*, to which the honourable Member has just referred, on page 30?—Yes.

1645. Ought these two sums together show the whole of the extra charge for Abyssinia?—I have no doubt that there have been some credits which have been abated from that total sum, making the net sum of 194,728 *l.* 13 *s.* 9 *d.*, as shown on page 30. The two sums stated on pages 29 and 30 would make a total of 196,389 *l.* 13 *s.* 10 *d.*

1646. That is the sum mentioned in the third paragraph of the Comptroller and Auditor General's Report?—Yes.

1647. Then he says, "Under Vote 1, page 1, the extra expenditure for Abyssinia is stated to be" less than that amount, namely, 194,728 *l.* 13 *s.* 9 *d.*?—I have no doubt that that arises from some sums which have been placed on the credit side of the accounts, but I can furnish that information either in my corrected evidence, or on the next occasion when the Committee meets.

1648. Mr. *Pollard-Urquhart.*] Will you turn your attention to pages 10 and 11, to letters Nos. 2 and 3, which is the correspondence referred to in the Report of the Comptroller and Auditor General; you see that the conclusion of letter No. 3, signed by Mr. Hamilton, says, "I am at the same time to transmit to you a copy of a report by the Auditor General on the subject; and as regards the explanatory paper suggested therein, for the information of the Public Accounts Committee, I am to request that you will inform my Lords if there will be any difficulty in preparing it in time for use"; I presume that the report referred to therein is that letter dated the 6th of December, at the bottom of the preceding page, signed by Mr. Ryan?—That refers to the classification of the expenditure for the Abyssinian War, under the different sub-heads of the Vote. Mr. *Whiffin.* 17 June 1870.

1649. But when it speaks of a "Report by the Comptroller and Auditor General," I suppose it relates to the letter dated the 6th of December, which is the preceding letter in the correspondence; are you able to give us any information upon the subject?—This letter from the Exchequer and Audit Department relates to the propriety of classifying the expenditure under the different heads of service.

1650. My question was, whether that letter from the Exchequer and Audit Department is the report referred to in the concluding paragraph of letter No. 3, signed by Mr. Hamilton?—I presume it is; the margin refers to a letter of the 6th of December, and the letter to which you refer is the only letter of that date in this correspondence.

1651. You see something about an "explanatory paper suggested therein," and you also see an "explanatory paper suggested" in the last paragraph of letter No. 2; has that explanatory paper been prepared to be submitted to the Committee?—I am not aware.

Mr. Henry Thomas Dundas Bathurst, called in; and Examined.

1652. Mr. *Pollard-Urquhart.*] Has an explanatory paper, which is suggested in the concluding paragraph of the letter from the Exchequer and Audit Department, at the bottom of page 10, dated the 6th of December 1869, been prepared?—I am not aware that it has. Mr. *Bathurst.*

1653. Mr. *Liddell* (to Mr. *Whiffin*).] A question arises upon the next letter from the War Office, dated the 10th of March, in which reference is made to an Act, the 30 & 31 Vict. c. 110; is that an Act regulating the pay of enrolled pensioners?—I am not aware; I have not seen anything of this account until this morning; that was the first time it was put into my hands, and I can give very little information upon any detail of the correspondence which has been raised upon the account. I have only taken over the appointment of Accountant General in the last fortnight or three weeks. The whole of this matter has been in the late Accountant General's hands, and I have not been cognizant of it until very recently. I may further state that the notice served upon me was that I was to be examined upon the Army Estimates, and I came prepared with information upon that point, but if you would postpone this subject, and take evidence upon it another day, I should be quite prepared to give the very fullest detail upon the different questions raised in the Comptroller and Auditor General's Report.

1654. *Chairman.*] Will not the bookkeeper be able to give that information?—I have no doubt he will be able to give some detailed information.

Mr. Morgan Hugh Foster, C.B., called in; and Examined.

1655. Mr. *Liddell.*] If you refer to page 11 of the Appropriation Account, in the correspondence of the Comptroller and Auditor General with the War Office, you will see that a reference is made in the letter of the 10th March 1869 to the Act of 30 & 31 Vict, c. 110; is that Act an Act regulating the pay of enrolled pensioners?—It is an Act, I believe, which relates entirely to the reserve forces, and places them under a different system of inspection which necessitates a distribution of charges different from that which was provided for under the Estimates. It was an entire re-organisation of the reserve forces which made it difficult to retain in the accounts the subdivisions which had been given in the original Estimates for that year. Mr. *Foster.*

1656. Then it was an Act which involved an alteration in the mode of charge under these different heads, I presume?—Exactly.

1657. *Chairman.*] In fact, the alteration of the organisation rendered indispensable an alteration in the Account?—Yes, that followed.

Mr. *Whiffin.*
Mr. *Foster.*
17 June 1870.

1658. Mr. *Liddell.*] I see, in a subsequent portion of the same letter, that the result of the instructions based upon that Act "is, that no distinction has been made between the charges for the men of the old and new organisation in the accounts rendered by them;" therefore, to that extent it appears that there is no alteration; I do not quite reconcile that statement with the answer which you have just given?—I think I can reconcile it.

1659. *Chairman.*] I understand that paragraph to mean this, that the account was made out as if the men employed under the old organisation had been employed under the new?—The accounts sent in by the staff officers of pensioners, did not keep up the distinction which would enable the accounts to be placed under the same classification as the Estimates.

1660. So that after the Act was passed, the account was made out as if that Act had been in force from the beginning of the financial year; that is the case, is it not?—Yes.

1661. Mr. *Pollard-Urquhart.*] I suppose we are to regard the present arrangement, with respect to showing the expenditure in the annual statement of savings and deficiencies as one sum instead of two, as merely temporary?—It is merely temporary during the change from the old arrangement to the new arrangement.

1662. *Chairman.*] With reference to questions about extra receipts, the Treasury have power, under an Act of Parliament, to give directions to the different departments with regard to the disposal of extra receipts, have they not?—They have.

1663. Lord *F. Cavendish.*] Have all the points relating to that subject, raised by the Comptroller and Auditor General in his report, since been decided?—The Treasury have, I think, in every case decided in favour of the view taken by the Comptroller and Auditor General.

1664. Mr. *Liddell.*] There is rather a remarkable letter, at the bottom of page 12, from the War Office, in which it is contended by Mr. Secretary Cardwell that, "the excess of fines levied upon the pensioner beyond his pay is applicable to his receipts from the public for the full period of training"; that is rather a difficult phrase to understand, but am I right in supposing that the excess of fine levied upon a pensioner, beyond his pay, is virtually a deduction from his pension?—I imagine the explanation to be this, that the pensioner receives certain pay while he is out for training, and the War Office were of opinion that the fines levied upon the pensioner should go towards meeting his pay.

1665. In aid of the vote?—Yes; and in some cases the fine actually exceeds the amount of his pay for a particular period.

1666. But then it comes to this, that any excess of fines beyond his pay is a deduction from his pension; I cannot conceive that it can arise in any other way?—I should think that the meaning of this was, that the excess of fines might be considered to go in aid of the vote, because there had previously been a payment for training which had been charged against the vote.

1667. Mr. *Sclater-Booth.*] Would not the explanation be, that the fine might have been levied towards the end of his training, and then it was thought that the charge, beyond what was due to him, should go back in aid of the vote, because the previous pay had been taken?—I think that that is what is meant, but it is not quite clear.

1668. *Chairman.*] However, the Treasury have decided that it is to be treated as an extra receipt, and it has been so treated, I suppose?—Yes, it has been so treated.

1669. Mr. *Liddell.*] Referring to page 15, there is a letter from the War Office, dated the 28th of January, in which the Secretary of State says, that "army grants have to bear the liabilities arising from the transactions of prior years"; I want to know whether liabilities arising from the transactions of prior years are held to be, as it were, the first lien upon the vote for the current year, or whether they can only be met in the event of savings accruing under the different heads of the vote?—They may be treated as the first lien, or a lien amongst other charges coming in course of charge at that date. They are not intended to be met merely out of savings.

1670. Then they are considered strictly in the light of a first charge upon the vote for the current year?—You may say so. If the account to which they apply is closed, they, as a matter of course, fall into the first account which is open.

1671. Then supposing the whole vote for the year to be reduced, which it necessarily must be, inasmuch as provision is only made in the vote of the year for the actual requirements of the year, a deficiency must occur upon the whole vote, and that, I presume, would be required to be supplied upon a supplemental estimate furnished to Parliament, and by a supplemental vote being taken?—If there were an excess, it would require to be supplied either by a supplemental vote or an excess vote.

1672. *Chairman.*] But that would only be, of course, supposing the Treasury declined to sanction the transfer of the charge from one vote to the other, or in case of the whole vote not being equal to it?—Yes. In order to bring that about, the whole vote must be exceeded.

1673. Either the whole vote must be exceeded, or the Treasury must have refused to sanction a transfer from the one vote to the other?—Yes.

1674. Mr. *Liddell.*] Supposing savings to arise upon different votes sufficient to meet the liability carried over from a previous year, would it be in the discretion of the Treasury to apply those savings to meet that deficiency?—Yes.

Mr. JOHN HANBY, called in; and Examined.

Mr. *Hanby.*

1675. *Chairman.*] If you refer to the third paragraph of the Report of the Comptroller and Auditor General on the Appropriation Account of the Army Services for the year ended 31st March 1869, you will see that he notices a discrepancy between two statements of extra expenditure for Abyssinia; under Vote 1, page 1, it is stated to be 194,728 *l.* 13 *s.* 9 *d.*, while at page 11, showing the expenditure under the subheads of the same vote, two sums are charged in respect of the Abyssinian Expedition which amount together to 196,389 *l.* 13 *s.* 10 *d.*; can you give

give any explanation of that discrepancy?—It has arisen from certain credits on account of travelling expenses. Cash advances by way of imprests were issued to certain officers, and, on the allowance of their accounts, nett sums were passed to account in the preceding year. When the imprests charged against the various officers were cleared, it was necessary to extend the amounts previously paid; consequently, in the present "Appropriation Account," a credit appeared to a corresponding extent, and therefore, taking that into consideration with reference to the aggregate charges for the Abyssinian Expedition, a less amount was shown than these two sums together make up.

1676. I suppose there ought to have been an explanation given by a note upon the account to show how the discrepancy arose?—It would have been desirable to have appended a note for that purpose.

1677. Mr. *Pollard-Urquhart.*] Will you turn your attention to page 32 in this Account; there also we see a discrepancy between the charges for the Abyssinian Expedition in the two different columns; in the one the advances by the local Government of India are 1,257,039*l.* 13*s.* 9*d.*, and just below the item of "Charges for Abyssinia," is 1,276,289 *l.*; I do not see any expenditure for Abyssinia shown under any other head; can you explain that?—That difference merges in the other charges; there were selections made; some of the charges were on account of the purchase of animals in various parts of the world, which came in course of settlement in 1868–9; and therefore they went for the most part against transports, and the contingencies went to other items, therefore the difference is only a selection.

1678. The advances by the local Government of India on account of the Abyssinian Expedition were only a part of the whole charge of 1,276,289 *l.*?—They were only a part of that; the difference was paid out of the army grants; a note there also might have been desirable.

1679. There might have been an explanation showing how the balance was made up?—Yes.

1680. As you do know the exact balance, I suppose you would have had no difficulty in classifying it under the different heads?—We could prepare a statement to show that. (Mr. *Whiffin.*) But only to the extent of the difference.

1681. *Chairman.*] I think on pages 36 and 38, you will also find discrepancies; I suppose the same explanation applies to them; there is a very small discrepancy on page 36, between the advances by the local Government of India for the Abyssinian Expedition, which amount to 81,897 *l.* 8 *s.* 4 *d.*, and the "Charges for Abyssinian War," which amount to 81,904 *l.* 0 *s.* 4 *d.*; that is a difference of only about 7 *l.*?—The same explanation which I have given applies to this, and to other similar cases all through the account.

1682. The amount of the advances by the local Government of India does not profess to cover the whole expenditure on account of the Abyssinian Expedition?—No.

1683. There was a correspondence between the Treasury and the War Office with regard to the charges for the Abyssinian Expedition, which we find on pages 156 and 157?—Yes.

Mr. *Whiffin.*
Mr. *Hanby.*
17 June 1870.

1684. The decision of the Treasury then was, in accordance with the determination of the Treasury when the Abyssinian Expedition was, first commenced, that the expenditure on account of the Expedition should be defrayed out of the ordinary grants for the year, as far as they would go?—Yes, that was the understanding.

1685. And that any excess beyond that was to be defrayed out of the Vote of Credit?—Yes.

1686. But the ordinary grants of the year, so far as they would go, were to be charged with the expenditure of the Expedition?—Precisely.

1687. Therefore you would expect, under the different sub-heads of the ordinary grants, to learn that part of them comprised expenditure for the Abyssinian Expedition?—Exactly.

1688. And it would be spread over the different items, according to the nature of the service?—Just so.

1689. Mr. *Pollard-Urquhart.*] Reverting to page 10 of the Army Appropriation Account, in the concluding paragraph of letter No. 2, signed by Mr. Ryan, it is stated, "The Comptroller and Auditor General would likewise suggest that an explanatory paper showing the expenditure for the Abyssinian Expedition under the sub-heads similar to that contained in the Appendix to the Reports of the Committee of Public Accounts in 1869, should be prepared and laid before the Public Accounts Committee in the next Session of Parliament;" has such an explanatory paper been prepared?—Not yet.

1690. Is it in course of preparation?—It will be prepared at the request of the Committee, as it was last year.

1691. *Chairman.*] Has no direction been given by the Government upon the subject?—None whatever, because we supposed that the Treasury communications would meet all requirements. It was in a very great measure a detailed classification with regard to the Indian charges; therefore, if we were to prepare anything detailed from the account at large, it would not be a perfect document according to the programme contained in the Army Estimates.

1692. But I suppose a full account might be given under the classification which has been made use of in India, when the accounts have been sent home?—Yes; but it would take a very long time to make it at all agree with the sub-heads contained in the Army Estimates.

1693. But I say that, without arranging it under the sub-heads contained in the Army Estimates, an account could be given with the classification made use of by Mr. Turner in India in the accounts which he sent home?—Yes.

1694. Has such an account been furnished?—Not yet.

1695. Has it been made up?—Not yet.

1696. When could it be made out?—It is a very difficult thing to say.

Mr. Charles Turner, called in; and Examined.

Mr. *Whiffin.*
Mr. *Hanby.*
Mr. *Turner.*
Mr. *Knox.*

17 June 1870.

1697. *Chairman.*] Has any account, such as we are inquiring about, been laid before the Abyssinian Committee?—A Paper has been prepared showing the expenditure in India.

1698. To be laid before the Abyssinian Committee?—Yes; it was printed with their first Report.

1699. That will give all the information we should get, I suppose, if the suggestion which has been made, were complied with?—That Paper will show the expenditure through the whole of the Indian Accounts.

1700. Classified?—Yes. This account, I presume, would have reference only to the charges in the Army Account for this year. Of course the two would differ considerably. (Mr. *Hanby.*) In that case, what the War Office would have to contribute would be but small, as you will see by the amounts of the differences.

1701. (To Mr. *Turner.*) Is the Paper laid before the Abyssinian Committee in print?—It is; it is printed in the Appendix to the Report of that Committee of last Session. I might perhaps say that that statement is in the very greatest detail that could possibly be given. It includes both army and navy expenses. (Mr. *Whiffin.*) To divide the expenditure under the sub-heads of the vote would require an immense amount of time; it would involve a complete re-analysis of about from 40,000 to 50,000 vouchers.

1702. Lord *F. Cavendish* (to Mr. *Hanby*).] Did the explanatory Paper, prepared for this Committee last year, take a great deal of labour in preparing?—I should think that it must have taken 10 days.

1703. *Chairman* (to Mr. *Turner*).] If the suggestion of the Comptroller and Auditor General, contained in his letter of the 6th of December 1869 to the Treasury, were adopted, would the whole of the vouchers have to be again gone through and the account analysed, and a new classification made?—I presume the Comptroller and Auditor General would desire that the Indian expenditure should be shown under the same heads as the home expenditure. If so, I think it would be almost impossible to produce such a document, for the charges in India differed very materially from those in England; under the same vote there would be all kinds of minor headings, which would clash altogether with the home classification.

1704. Mr. *Pollard-Urquhart* (to Mr. *Whiffin*).] Will you turn your attention to the concluding sentence of the letter No. 22, at page 19; it says, "As a doubt has been entertained about the accuracy of the proceedings in these matters, the Secretary of State will cause an inquiry to be made as to the best manner of drawing a distinction between the two classes of stores, and of prescribing the manner in which the expenditure should be reported to Parliament, the result of which will be duly communicated to you;" you inform the Committee whether such an inquiry has been made, and if so, whether the result has been communicated to the Comptroller and Auditor General?—There is a committee sitting at Woolwich on this question, and it is reported that a report will be made in the course of a week or two, and arrangements have been made in the Estimates for next year with respect to it.

1705. Then you think that the Secretary of State will be in a more satisfactory position to decide upon the best mode of making this classification after this committee, to which you refer, has finished its sittings?—No doubt.

1706. Lord *F. Cavendish* (to Mr. *Knox*).] With regard to Vote 14, at page 110, there is an excess of 16,620 *l.* 17 *s.* 1 *d.* on the Vote for "Improvement of Defences at Quebec," and at page 141, I see that the sanction of the Treasury was requested to that excess being provided for out of this vote, on the understanding that explanations of this large excess of expenditure were to be sent to the commanding officer from Canada; was that explanation sent in?—The excess of expenditure in that case is not an excess of expenditure upon the work; it is an excess of expenditure above the amount which was voted to be spent in that year. There was no excess upon the work, but it was found convenient in Canada to progress with the work more rapidly than was expected, and the Commanding Royal Engineer undertook, upon his responsibility at the time, that the works should go on.

1707. Mr. *Sclater-Booth.*] In fact he has sent in the explanation which was alluded to in the letter from the War Office?—Yes.

APPENDIX.

Appendix, No. 1.

PAPERS handed in by Mr. *James Beeby*, 18 May 1870.

(Treasury No. 2869–68.)
(No. 548.)

LETTER from the Secretary to the Treasury to the Secretary to the Exchequer and Audit Department.

Sir, Treasury Chambers, 3 March 1868.

I AM commanded by the Lords Commissioners of Her Majesty's Treasury to transmit to you, for your information, the form of account which it will be your duty to render quarterly after the 1st of April next, to the Comptroller and Auditor General, of the Parliamentary grant for the expenses of the Audit Office; and I am to state that the Commissioners on Public Accounts will be instructed to render you such assistance as is necessary in the preparation of any books that may be required for the purposes of the account. Under Act 29 & 30 Vict. cap. 39.

I am to desire that the Paymaster General may be informed of the names of the persons who will be authorised to sign and countersign orders for payment out of the funds voted by Parliament; and I am to state that he will be directed to return to you monthly all such orders, with the acquittances of the parties to whom payments have been made, in return for which I am to direct you to furnish him with a certificate of the amount of the vouchers which have been examined and passed by you.

The Paymaster General will also be instructed to acquaint you, at the same time, with the amounts which have been drawn from the Exchequer on account of the grant for the expenses of your office.

I have, &c.
(signed) *George Ward Hunt.*

The Secretary to the
Exchequer and Audit Department.

(Treasury No. 5764–70.)
(No. 590.)

LETTER from Mr. *W. Law* to the Comptroller and Auditor General.

Sir, Treasury Chambers, 25 March 1870.

I AM commanded by the Lords Commissioners of Her Majesty's Treasury to acquaint you, that the attention of their Lordships has been directed to the arrangements under which the Parliamentary grant for the salaries and expenses of the Exchequer and Audit Department is accounted for by yourself.

The consequence is, that you are charged at the same time with the duty both of accounting for and auditing the expenditure of that grant, a course of proceeding which their Lordships conceive to be at variance with the objects contemplated by the Exchequer and Audit Departments Act, 1866.

At the time when, under the provisions of the 22nd Clause of the Act, their Lordships determined the departments by which the different Appropriation Accounts should be prepared and rendered, they overlooked the anomaly that you, who examine all such accounts on behalf of the House of Commons, would, if you also prepared and rendered the account of the grant for your own department, be so far examining your own account.

Their Lordships therefore, now that their attention has been called to the point, consider that an arrangement ought to be made which shall be less open to such an objection; and they are pleased to direct that the account in question shall be henceforward prepared and rendered to you by this department.

I am to desire that the necessary arrangements may be made in accordance with this decision, so as to commence on the 1st of April next.

I have, &c.
(signed) *William Law.*

The Comptroller and Auditor General.

Appendix, No 1. (No. 590.)

LETTER from the Assistant Comptroller and Auditor to the Secretary to the Treasury.

Exchequer and Audit Department,
Sir, 12 April 1870.

I AM directed by the Comptroller and Auditor General to acknowledge the receipt of Mr. Law's letter of the 25th ultimo, in which it is stated that the attention of their Lordships has been directed to the arrangements under which the Parliamentary grant for the expenses of this department is accounted for by the Comptroller and Auditor General himself, and that their Lordships are of opinion that such a course of proceeding is at variance with the objects contemplated by the Exchequer and Audit Departments Act.

I am directed by the Comptroller and Auditor General to request that you will inform their Lordships that they are under some misapprehension as to the course pursued in this department in conducting the audit of the payments in question.

The anomaly which it is proposed to correct was both foreseen and intended to be provided against by Mr. Ward Hunt, upon whom, as Secretary of the Treasury, devolved the responsibility of considering and settling the many difficult points which occurred in carrying the Exchequer and Audit Departments Act into execution.

On reference to his letter, dated the 3rd of March 1868, their Lordships will observe that an officer of this department was appointed by the Treasury to render an account to the Comptroller and Auditor General, according to a form prescribed by their Lordships, at stated periods, showing the expenditure out of the Parliamentary grant. The account of this officer, when rendered in accordance with their Lordships' instructions, is subjected to an independent examination, and the accountant is bound to produce, in support of his account, all necessary vouchers and Treasury authorities, in precisely the same manner as every other person who renders accounts to this department for audit. The inspector charged with the examination of the account, when he has fully satisfied himself that it is in every respect correct, submits the same for allowance, under the same regulations as are applicable to all other similar accounts.

The Comptroller and Auditor General cannot, therefore, admit that their Lordships are correct in stating "that the grant for the salaries and expenses of the Exchequer and Audit Department is accounted for by himself," nor can he admit that he "examines his own account,"

While the Comptroller and Auditor General has thought it right to explain the actual practice pursued with reference to the account, he directs me to state that, as he considers it of the utmost importance that the principle should be maintained which the Exchequer and Audit Departments Act was intended to enforce, namely, that no department should audit and allow its own expenditure, he can have no objections to offer to the proposal that the account shall, henceforth, be prepared and rendered by the Treasury Department, if their Lordships should remain of opinion that the regulations in relation thereto, laid down in Mr. Ward Hunt's letter above referred to, do not sufficiently meet the requirements of the Act. As, however, it does not lie with the Comptroller and Auditor General to release from his responsibilities the officer who has discharged the duty of preparing and rendering the account under the direct instructions of the Treasury, their Lordships will probably consider it proper to make the necessary communication to him withdrawing the authority under which he has hitherto acted, and, at the same time, to substitute such other regulations in reference to the payment of the official salaries and other expenses of this establishment as their Lordships may deem advisable to give effect to the suggested alterations in the mode of preparing and rendering the account.

I have, &c.
(signed) *W. G. Anderson*,
The Secretary of the Treasury. Assistant Comptroller and Auditor.

(Treasury No. 77725–70.)
(No. 876.)

LETTER from the Secretary to the Treasury to the Comptroller and Auditor General.

Sir, Treasury Chambers, 5 May 1870.

THE Lords Commissioners of Her Majesty's Treasury have had before them your report of the 12th ultimo, and I am to state, that their Lordships are glad to observe that, on the ground of the importance of maintaining the principle which the Exchequer and Audit Departments Act was intended to enforce, namely, that no department should audit and allow its own expenditure, you have no objection to offer to the arrangement communicated to you in the letter from this Board of the 25th ultimo, under which the account of the Parliamentary Grant for the salaries and expenses of your department should be henceforward prepared and rendered by the Treasury.

The course now pursued, by which the account is rendered by the Secretary of your Department to you, was directed to be adopted by their Lordships as the best expedient which occurred to them at the time when the arrangements for carrying the Exchequer and Audit Departments Act into operation were under their consideration; and they have no

no doubt that the audit of the account thus rendered has been conducted, as stated by you, in precisely the same manner as the audit of the Appropriation Accounts rendered to you by other departments.

Their Lordships consider, however, that the apparent anomaly should not be permitted to continue while it can be so easily remedied by transferring the duty of rendering the account in question to another department; and it appears to them of special importance that the grant for your department, which is charged with the duty of auditing the accounts of public expenditure, for all Imperial services rendered by a very large number of accountants, should be dealt with in such a manner as to remove every possible ground for objection.

The necessary directions for the transfer of the duty of rendering the said account will therefore be given by their Lordships.

I am to add, with regard to the arrangements for conducting the expenditure of the Grant for the present year, that it only appears to be necessary that the salary lists of your department should be transmitted to this Board about a week before the date on which they have been hitherto paid, and that periodical application should be made for the imprest of such sums as may be required to defray the incidental expenses of your department.

Any minor details of arrangement would be best settled by communication between such officer of your department as you may depute for the purpose, and the principal clerk of the financial division of the Treasury.

I have, &c.

The Comptroller and Auditor General. (signed) *James Stansfeld.*

(Treasury No. 7725-70.)
(No. 877.)

LETTER from the Secretary to the Treasury to the Secretary to the Exchequer and Audit Department.

Sir, Treasury Chambers, 5 May 1870.

WITH reference to the letter of this Board of the 3rd of March 1868, directing that the accounts of the Exchequer and Audit Department should be prepared and rendered by you for audit, from the 1st of April 1868, I am commanded by the Lords Commissioners of Her Majesty's Treasury to acquaint you, that their Lordships have been pleased to direct that the said accounts should be prepared and rendered to the Comptroller and Auditor General by this Board, from the 1st ultimo.

I have, &c.

The Secretary to the Exchequer and Audit Department. (signed) *James Stansfeld.*

Appendix, No. 3.

Appendix, No. 3.

PAPER handed in by Mr. *Pigott*, 25 May 1870.

MEMORANDUM for *Digby P. Starkey*, Esq., Accountant General, Court of Chancery.

I HAVE, as requested, examined the questions raised as to Vote No. 24, Court of Chancery (Ireland), Office of Clerk of the Custodies of Papers in Lunacy, and beg to submit the following observations:

1st Question.—*Whether any, and if any, what directions have been issued from the Treasury for carrying into effect Sections* 181, 182, *of* 30 *&* 31 *Vict. c.* 44 *?*

No such directions have reached the Lunacy Office.

2nd Question.—*What are the circumstances which are regarded as excluding the office of Custody of Papers in Lunacy from the provisions contained in the clauses referred to?*

There do not appear to be any such circumstances; on the contrary, Mr. Plunkett, Clerk of the Custodies, upon 14th December 1867, reported to the Treasury that the then Lord Chancellor (Mr. Brewster) was about to make a general order, bringing the office under the operation of the Act of 1867, and made a return as to salaries, by his Lordship's directions, upon which sums were voted for the office in 1868–69 (Vote 24), and again in 1869–70 (Vote 20).

The fees received in the office are all received under the Statute 4 Geo. 4, c. 61, an Act regulating the officers of the Court of Chancery in Ireland, and especially regulating the fees. Under this Act the Clerk of the Custodies and the Chief Clerk are both sworn in as officers of the Court to observe the Act.

It would probably be held that the provisions of the 181st Section of the Chancery (Ireland) Act, 1867 :—" That no officer of the Court of Chancery shall be entitled to receive or retain for his own use any fee or reward whatsoever," applies to the Lunacy Office, and that it is the duty of the Lord Chancellor and the Treasury, under the 181st Section, to fix the salaries of the officers.

This seems to be the first step to be taken in the matter. The saving in Section 182, of the right of the officer to his existing emoluments until the Lord Chancellor should make an order, was intended to cover the period between the passing of the Act and the fixing of the salary by the Lord Chancellor and Lords of the Treasury, under Section 181.

If this were once done, it appears to be the plain duty of the Lord Chancellor to make the order under Section 182.

The present Lord Chancellor, not having been aware of what had occurred in connection with the subject during his predecessor's period of office, and not having had the matter brought under his notice, nothing beyond what is mentioned above has been done by him. He, however, sees no objection to carrying the intentions of Mr. Brewster into execution, subject to the following qualification:

It has been for some time past in contemplation to carry out the plan of lunacy reforms, which was under the consideration of the English and Irish Law and Chancery Commission in 1866, though not reported on by them, to extend the Lunacy Acts, 1853 and 1862, to Ireland, with appropriate modifications. Steps have been actually taken in this direction, but have been delayed owing to the interference caused by the Church and Land questions, with all detail legislation.

As there does not appear to be any immediate prospect of the Lunacy Acts being extended to Ireland, the simplest way to carry the Act into effect would be to fix the salary of the Clerk of the Custodies at the average net income received by clerks of the custodies from the office during the past five years, the salary of the Chief Clerk to be regulated on the scale he is now in receipt of from the funds of the Court of Chancery, with the addition of his average receipts for the past two years from the fees of the office.

The Scrivenery Clerk should be paid on the scale he is now entitled to as a Scrivenery Clerk of the Court of Chancery, a sum for scrivenery equivalent to the average estimated amount received for scrivenery from the office for five years being added to the vote for incidental expenses of the Court of Chancery, to allow of his payment per folio from that fund in lieu of his payment from the fees of the office as heretofore.

It is to be distinctly understood that this fixing of salaries is to be provisional only, with a view to allowing the policy of the Act for at once terminating the interests of the officers in the fees of the office to be carried out, and that the whole subject of the duties and salaries

salaries of the office will be reconsidered when the extensive reforms in the Irish law as to the custody and care of lunatics contemplated by the Lord Chancellor have been effected, as these are calculated largely to increase the business and income of the office. Appendix, No. 3.

3rd Question.—*Whether any, and if so, what other officers besides the Chief Clerk of the above office are paid wholly or in part by fees?*

The Chief Clerk, as above explained, receives part of his emoluments from the fees of the office.

The Scrivenery Clerk's pay per folio in addition to his allowance as Scrivenery Clerk of the Court, also comes out of the fees.

The Clerk of the Custodies is entitled to the entire fees of the office for his own profits (less the payments thereout as above to the Chief Clerk and Scrivenery Clerk).

22 April 1870. *W. Neison Hancock.*

Appendix, No. 4.

PAPER handed in by Mr. *Ryan.* Appendix, No. 4.

The Secretaries to the Commissioners of National Education, Ireland, to the Secretary to the Exchequer and Audit Department.

Office of National Education, Dublin, Account, 1868-9.
2 June 1870.

Sir,

We received in due course your letter of the 30th ultimo, informing us that at a meeting of the Committee of the House of Commons on accounts, the account of the Vote for this Department, 1868-9, was under consideration, and that you were requested to obtain from us an explanation of the causes of the further excess on Sub-head L, in addition to the explanation given in our letter of the 25th May 1869. The excess therein referred to being 11,537 *l.* 18 *s.* 7 *d.*, whereas the total excess on the account, on Sub-head L, reached 15,845 *l.* 5 *s.* 1 *d.* No. 1073.

In answer to your communication, we are to observe that the explanation contained in our letter of the 25th May 1869, applied to 10 months only of the financial year 1868-9, and that the difference between the two sums, viz., 11,537 *l.* 18 *s.* 7 *d.* and 15,845 *l.* 5 *s.* 1 *d.*, was occasioned by the expenditure under the schedule for the remainder of that year, namely, for the months of February and March 1869.

On reference to the explanatory letter of the 25th May 1869, it will be seen that the increased demand for the new editions of the National School books caused a larger expenditure for stock to meet that demand than was anticipated when the estimate for this service was in preparation. We are also to call attention to the fact that although the expenditure under this head amounted to 41,297 *l.* 13 *s.* 1 *d.*, the receipts for the sale of books amounted to 17,074 *l.* 5 *s.* 1 *d.* And thus the total cost to the State was only 24,223 *l.* 8 *s.*, a sum under the amount set forth in the estimate.

We are, &c.
(signed) *James Kelly.*
W. H. Newell.

The Secretary,
Exchequer and Audit Department,
Somerset House.

Appendix, No. 5.

Appendix, No. 5.

PAPER handed in by Mr. *Blackwood.*

The Secretary to the Exchequer and Audit Department to the Secretary to the Treasury.

Exchequer and Audit Department, Somerset House,
London, W.C., 6 April 1869.

Sir,

I AM directed by the Comptroller and Auditor General to transmit herewith, for the consideration of the Lords Commissioners of Her Majesty's Treasury, the abstract state of the cash account of the Science and Art Department, from 1st April 1867 to 31st March 1868. The account has been very imperfectly rendered to this Department, and its examination has led to the discovery of the discrepancies and irregularities set forth in the following remarks and explanatory statements.

CHARGE.

Under the heads of Fees of Admission, Sale of Season Tickets, Rent of Refreshment Rooms, Receipts for Admission, Students' Fees, sums collected and certified to have been paid to, and acknowledged to have been received by, the Accountant in one month, are not entered in his account until the following month; other entries of a like description are three and four weeks in arrear of the dates when they are certified to have been paid to the Accountant; and the absence of dates in many other instances renders it impossible to verify the correctness of the entries.

DISCHARGE.

The Accountant's monthly accounts do not in some cases include the whole of his cash transactions, and in other cases they include transactions which do not properly belong to the month of account, viz.:

1. Payments are recorded in the account for the month following that in which the payments are made.

2. Payments are recorded in the month of account preceding that of the actual payment.

3. Credit is taken in one month for the payment of expenses incurred in the month following; it will thus be seen that the real balance in the hands of the Accountant at the end of these months respectively could not have been correctly shown.

IMPRESTS OR ADVANCES.

The manner in which these Imprests or Advances have been dealt with in the account appears to the Comptroller and Auditor General to be very irregular, as the accompanying statements marked A. and B., fully show.

2. It will appear from these statements that Advances made in the years 1864–5, 1865–6, 1866–7, remained unrecovered on the 31st March 1868, although accounts of expenditure, to which these Advances were to have been applied, have been rendered by, and the amounts due on those accounts paid to, the several persons to whom the Advances were made.

Subsequent Imprests have also been received and accounted for within the period in question by some of the same persons.

In connection with this subject the Comptroller and Auditor General wishes to call their Lordships' particular attention to the observations at the end of the statement marked B., to which no reply has been given by the Accountant.

SALARIES, &c.

Under this head of expenditure numerous payments have been made in advance of the dates when the Salaries became due, in some instances to the extent of one and two months, and a payment has been made to a temporary clerk at the rate of 1 *s.* per hour for 10 weeks, during which period he is stated to have been absent on leave. As an amount for extra work performed by Mr. Bartley has been allowed by your letter of 26th

26th December 1868, the Comptroller and Auditor General did not feel justified in disallowing a sum paid to Mr. Cole, junior, for extra work, although this payment appears to be at variance with the terms of their Lordships' Minute of 1st November 1853. Appendix, No. 5.

Vote for purchases at the Paris Exhibition for the Department of Science and Art, 15,000 *l.* (Supplementary Estimate, 1867–8).

No separate account has been rendered of this Vote, and I am to request that you will call their Lordships' attention to the accompanying document, marked C (being copies of Queries Nos. 279 and 280), and to Mr. Cole's letter of February 1869, in reply thereto, which will afford all the information the Comptroller and Auditor General has been able to obtain on this subject. 2.

Disallowances included in the Statement of the Balance of the Account.

Under this head it is only necessary to notice two over-payments of 500 *l.* and 250 *l.* respectively, the particulars of which are given in the accompanying statement marked (D).

I am to add that the Comptroller and Auditor General regrets to have to remark that there appears to be a general want of supervision in regard to the mode of conducting the pecuniary transactions of the Science and Art Department, as well as in the preparation of the account for transmission to this Department for examination; and, that much inconvenience is experienced in consequence of the great delay which occurs both in the transmission of accounts and vouchers, as well as replies to queries.

I have, &c.

The Secretary, Treasury. (signed) *C. L. Ryan.*

Monday, 28*th March* 1870.

PUBLIC ACCOUNTS.—Standing Order of the House [3rd April 1862] relative to the Committee of Public Accounts read, and amended, by leaving out the word "Nine" and inserting the word "Eleven," instead thereof—(Mr. *Stansfeld*).

Committee of Public Accounts nominated:—

Mr. Stansfeld.	Mr. Algernon Egerton.
Mr. Pollard-Urquhart.	Mr. William Fowler.
Mr. Sclater-Booth.	Mr. Goldney.
Lord Frederick Cavendish.	Mr. Candlish.
Mr. Seely.	Mr. Ward Hunt.
Mr. Liddell.	

Wednesday, 22*nd June* 1870.

Ordered, THAT the Committee have power to report their Observations, together with the Minutes of Evidence taken before them, from time to time to The House.

REPORT - - - - - - - - - - - - p. iii
PROCEEDINGS OF THE COMMITTEE - - - - - p. vi
MINUTES OF EVIDENCE - - - - - - - - p. 1

SECOND REPORT.

THE COMMITTEE of PUBLIC ACCOUNTS have made further Progress in the Matters to them referred, and have agreed to the following SECOND REPORT:

ARMY SERVICES.

1. YOUR Committee have examined the Statement of the Savings and Deficiencies upon the Grants for Army Services, for the year ended the 31st March 1869, together with the Appropriation Account of those Grants, and the Report of the Comptroller and Auditor General thereon.

2. They find that the aggregate expenditure for the year, including that incurred for the Abyssinian Expedition, was - - - - - - - - - £. 17,629,026 4 1

While the original grants were - -	£. 15,455,400	
And estimated appropriations in aid -	868,766	
Making together - - - - - - -		16,324,176 - -
There was therefore a deficit, after appropriating the Savings on the ordinary Army expenditure, of -		£. 1,305,850 4 1

Which has been provided for as follows:

By amounts realised in excess of estimated appropriations in aid - - - - - - -	£. 32,747 4 3
From Vote of Credit for the Abyssinian War -	1,272,102 19 10
	£. 1,305,850 4 1

3. The Comptroller and Auditor General, in his Report, adverts to the late period at which the Appropriation Account was delivered. Your Committee have ascertained that this arose from very exceptional circumstances, in consequence of the difficulty of bringing to charge expenditure connected with the Abyssinian Expedition.

4. The discrepancies noticed in the 3rd paragraph of the Comptroller and Auditor General's Report appear to have arisen from the fact that there were certain credits which were taken into account in one statement of expenditure and not in the other, and that the net charge is represented by the lower sum therein mentioned.

5. Your Committee have to state, that with reference to the question raised in paragraph 10 of the Comptroller General's Report, and about which an inquiry was promised by Sir Edward Lugard's letter of the 19th November 1869, no evidence as to the result of that inquiry has been laid before them, and the matter is in their opinion worthy of the early attention of the Secretary of State for War and the officers of his Department.

NAVY SERVICES.

6. Your Committee have examined the Statement of the Savings and Deficiencies upon the Grants for Navy Services for the year ended the 31st March 1869, together with the Appropriation Account of those grants, and the Report of the Comptroller and Auditor General thereon.

	£.	s.	d.
They find that the aggregate expenditure for the year, including that incurred for the Abyssinian Expedition, was - - - - - - -	14,069,384	6	10
While the original grants were - - - -	11,157,290	–	–
There was therefore a deficit, after appropriating in aid Savings on ordinary Naval expenditure, of £.	2,912,094	6	10

Which has been met out of the Votes of Credit for the Abyssinian War.

7. Your Committee are of opinion that the two accounts that are now, by Act of Parliament, required to be rendered, namely, the Statement of Savings and Deficiencies and the Appropriation Account, might be amalgamated into one account, in which should be given those detailed explanations and variations which are now given in the first-mentioned account, and that such account might be rendered by the 31st December in each year, and the Treasury concur in this view.

This would allow time for the Account to be reported upon by the Comptroller and Auditor General by the 31st January next ensuing.

8. They have ascertained that directions have been given to prevent the recurrence of the irregularity mentioned in the 11th paragraph of the Report of the Comptroller and Auditor General, and also that the suggestion of that officer, contained in paragraph 12 of his Report, will in future be adopted.

9. The discrepancy noticed in paragraph 13 of his Report appears to have been the result of an error in calculation.

OTHER ACCOUNTS.

10. Your Committee have also examined the undermentioned accounts, namely, Greenwich Hospital (Capital and Income) Woods, Forests, and Land Revenues, Consolidated Fund, Civil Contingencies Fund, and Fortifications.

GREENWICH HOSPITAL.

11. They approve of the suggestion made in the Report of the Comptroller and Auditor General, that the cost of auditing these accounts should be borne upon the funds of the hospital.

WOODS, FORESTS, AND LAND REVENUES.

12. With reference to the recommendation made by this Committee in their Third Report of last year, that the present mode of dealing with the expenditure of this department should be again considered by Her Majesty's Government, your Committee have been informed that consideration has been given to the matter, and that, for reasons which seem to your Committee sufficient, they are not prepared to make any alteration at present.

13. Your Committee are of opinion that the very large balance kept in hand on the Land Revenue (Income) Account requires the attention of the Treasury.

CONSOLIDATED FUND.

14. Your Committee have ascertained that the error of introducing into this account the 600,000 *l.* due upon Exchequer Bonds and paid off has been rectified.

15. They understand that, in compliance with their recommendation last year, the Treasury have given directions that the examination of the dividend accounts of the Bank of England by the Comptroller and Auditor General shall be discontinued.

CIVIL CONTINGENCIES FUND.

16. Your Committee observe that the sum of 120,000 *l.* allotted to the Civil Contingencies Fund has, for the second time since the institution of this fund, been overdrawn. It was remarked by one of the witnesses that such an event could not recur if the excesses of expenditure on the different Votes were defrayed by overdrawing the sums originally voted by Parliament, instead of applying to the Civil Contingencies Fund. They reserve their suggestions for future consideration.

FORTIFICATIONS.

17. Your Committee have no observations to make on this account.

GENERAL OBSERVATIONS.

18. Your Committee are of opinion that their labours would be far more valuable if the examination of the Appropriation Accounts could be concluded by them in each year before the time arrives for asking Parliament to make good, by Votes in Supply, the Deficiencies found to have arisen upon any of the Grants of the previous financial year, or to approve, by Resolution, of the sanction given by the Treasury to the appropriation of Savings under Votes for Army and Navy Services, to cover Deficiencies on other Votes.

19. Your Committee are informed by the Secretary to the Treasury, that no future difficulty need be apprehended in this respect if the Committee of Public Accounts is nominated as soon as possible after the meeting of Parliament in the spring.

20. The recommendations made in their First Report as to the Form of Accounts for the Civil Service will apply, *mutatis mutandis*, to the Army and Navy Appropriation Accounts.

18 *July* 1869.

PROCEEDINGS OF THE COMMITTEE

Wednesday, 6*th July* 1870.

MEMBERS PRESENT:

Mr. HUNT, in the Chair.

Mr. Liddell.	Mr. Seely.
Mr. Sclater-Booth.	Mr. Egerton.
Mr. Pollard-Urquhart.	Mr. Goldney.
Lord F. Cavendish.	Mr. Stansfeld.

The Committee considered the Navy Appropriation Account, and Savings and Deficiencies, and Greenwich Hospital Account.

Sir *W. Dunbar*, Mr. *Beeby*, Mr. *Anderson*, Mr. *Foster*, Mr. *Ryan*, and Mr. *Bathurst* were severally examined.

The Committee further considered the Accounts of Woods and Forests, Civil Contingencies.

[Adjourned till Wednesday next, at Twelve o'clock.

Wednesday, 13*th July* 1870.

MEMBERS PRESENT:

Mr. POLLARD-URQUHART, in the Chair.

Mr. Sclater-Booth.	Mr. Liddell.
Mr. Candlish.	Lord F. Cavendish.
Mr. Egerton.	Mr. Stansfeld.
Mr. Goldney.	

The Committee further considered the Woods and Forests Account and the Civil Contingencies Account.

[Adjourned till Monday next, at Three o'clock, to consider Report.

Monday, 18*th July* 1870.

MEMBERS PRESENT:

Mr. POLLARD-URQUHART, in the Chair.

Mr. Seely.	Mr. Egerton.
Mr. Sclater-Booth.	Mr. Goldney.
Lord F. Cavendish.	Mr. Stansfeld.

DRAFT REPORT proposed by Mr. *Hunt*, read the first time, as follows:—

"THE Committee of Public Accounts have made further Progress in the Matters to them referred, and have agreed to the following Second Report:

"ARMY SERVICES.

1. "Your Committee have examined the Statement of the Savings and Deficiencies upon the Grants for Army Services, for the year ended the 31st March 1869, together with

with the Appropriation Account of those Grants, and the Report of the Comptroller and Auditor General thereon.

2. "They find that the aggregate expenditure for the year was £. 17,629,026 4 1
"While the original grants were - - £. 15,455,400
"And estimated appropriations in aid - 868,766
"Making together - - - - - - - 16,324,176 – –
"There was therefore a deficit of - - - - £. 1,305,850 4 1

"Which has been provided for as follows:
"By amounts realised in excess of estimated appropriations in aid - - - - - - - £. 32,747 4 3
"From Vote of Credit for the Abyssinian - - 1,272,102 19 10
£. 1,305,850 4 1

3. "The Comptroller and Auditor General, in his Report, adverts to the late period at which the Appropriation Account was delivered. Your Committee have ascertained that this arose from very exceptional circumstances, arising out of the difficulty of bringing to charge expenditure connected with the Abyssinian Expedition.

4. "The discrepancies noticed in the third paragraph of the Comptroller and Auditor General's Report appear to have arisen from the fact that there were certain credits which were taken into account in one statement of expenditure and not in the other, and that the net charge is represented by the lower sum therein mentioned.

5. "Your Committee have to state, that with reference to the question raised in paragraph 10 of the Comptroller General's Report, and about which an inquiry was promised by Sir Edward Lugard's letter of the 19th November 1869, no evidence as to the result of that inquiry has been laid before them, and the matter is in their opinion worthy of the early attention of the Secretary of State for War and the officers of his Department.

"NAVY SERVICES.

"Your Committee have examined the Statement of the Savings and Deficiencies upon the Grants for Navy Services for the year ended the 31st March 1869, together with the Appropriation Account of those grants, and the Report of the Comptroller and Auditor General thereon.

"They find that the aggregate expenditure for the year was - 14,069,384 6 10
"While the original grants were - - - - - - 11,157,290 – –
"There was therefore a deficit of - - - £. 2,912,094 6 10

"which has been met out of the Votes of Credit for the Abyssinian War.

"7. Your Committee are of opinion that the two accounts that are now, by Act of Parliament, required to be rendered, namely, the Statement of Savings and Deficiencies and the Appropriation Account, might be amalgamated into one account, in which should be given those detailed explanations and variations which are now given in the first-mentioned account, and that such account might be rendered by the 31st December in each year.
This would allow time for the Account to be reported upon by the Comptroller and Auditor General by the 31st January next ensuing.

8. They have ascertained that directions have been given to prevent the recurrence of the irregularity mentioned in the 11th paragraph of the Report of the Comptroller and Auditor General, and also that the suggestion of that officer, contained in paragraph 12 of his Report, will in future be adopted.

"9. The discrepancy noticed in paragraph 13 of his Report appears to have been the result of an error in calculation.

"OTHER ACCOUNTS.

"10. Your Committee have also examined the undermentioned accounts, namely: Greenwich Hospital (Capital and Income); Woods, Forests, and Land Revenues; Consolidated Fund; Civil Contingencies Fund; and, Fortifications.

"GREENWICH HOSPITAL.

"11. They approve of the suggestion made in the Report of the Comptroller and Auditor General, that the cost of auditing these accounts should be borne upon the funds of the hospital.

"WOODS, FORESTS, AND LAND REVENUES.

"12. With reference to the recommendation made by this Committee in their Third Report of last year, that the present mode of dealing with the expenditure of this department should be again considered by Her Majesty's Government, your Committee have been informed that some consideration has been given to the matter, and that, for reasons which seem to your Committee sufficient, they are not prepared to make any alteration at present.

"13. Your Committee have been struck with the fact that a very large balance is kept in hand on the Land Revenue (Income) Account.

"CONSOLIDATED FUND.

"14. Your Committee have ascertained that the error of introducing into their account the 600,000 *l.* due upon Exchequer Bonds and paid off has been rectified.

"15. They understand that, in compliance with their recommendation last year, the Treasury have given directions that the examination of the dividend accounts of the Bank of England by the Comptroller and Auditor General shall be discontinued.

"CIVIL CONTINGENCIES FUND.

"16. Your Committee observe, that the sum of 120,000 *l.*, allotted to the Civil Contingencies Fund has, for the second time since the institution of this fund, been overdrawn. It was remarked by one of the witnesses that such an event could not recur if the excesses of expenditure on the different Votes were defrayed by overdrawing the sums originally voted by Parliament, instead of applying to the Civil Contingencies Fund. They reserve their suggestions for future consideration.

"FORTIFICATIONS.

"Your Committee have no observations to make on this Account.

"GENERAL OBSERVATIONS.

"18. Your Committee are of opinion that their labours would be far more valuable if the examination of the Appropriation Accounts could be concluded by them in each year before the time arrives for asking Parliament to make good, by Votes in Supply, the deficiencies found to have arisen upon any of the grants of the previous financial year, or to approve, by Resolution, of the sanction given by the Treasury to the appropriation of Savings under Votes for Army and Navy Services, to cover deficiences on other Votes.

"19. They believe that this may be effected, as a general rule, if the recommendation made in their First Report with regard to the desirability of the Comptroller and Auditor General making his Report direct to the House, were passed into law, and if the Committee of Public Accounts were nominated as soon as possible after the commencement of February in every year.

"20. The recommendations made in their First Report as to the form of Accounts for the Civil Service will apply, *mutatis mutandis*, to the Army and Navy Appropriation Accounts.

Motion made and Question, That the Report be now read a second time, and considered paragraph by paragraph, put, and *agreed to.*

Paragraph 1, *agreed to.*

Paragraph 2 and 3, amended, and *agreed to.*

Paragraphs 4 and 5, *agreed to.*

Paragraph

Paragraphs 6 and 7, amended, and *agreed to.*

Paragraphs 8–11, *agreed to.*

Amendment proposed, in lines 4 and 5, paragraph 12, to leave out the words "and that, for reasons which seem to your Committee sufficient"—(Mr. *Goldney*).—Question put, That those words stand part of the paragraph.—The Committee divided:—

Ayes, 4.	Noes, 2.
Mr. Egerton.	Mr. Goldney.
Mr. Stansfeld.	Mr. Seely.
Mr. Sclater-Booth.	
Lord F. Cavendish.	

An Amendment made.—Paragraph, as amended, *agreed to.*

Paragraphs 13, 14, amended, and *agreed to.*

Paragraphs 15–18, *agreed to.*

Paragraph 19, *disagreed to.*

A new paragraph inserted.

Paragraph 20, *agreed to.*

Question, That this Report, as amended, be the Report of the Committee to The House, put, and *agreed to.*

Ordered, To Report.

LIST OF WITNESSES.

Wednesday, 6th July 1870.

MINUTES OF EVIDENCE.

Wednesday, 6th July 1870.

MEMBERS PRESENT:

Lord Frederick Cavendish.
Mr. Algernon Egerton.
Mr. Goldney.
Mr. Ward Hunt.
Mr. Liddell.
Mr. Pollard-Urquhart.
Mr. Sclater-Booth.
Mr. Seely.
Mr. Stansfeld.

THE RIGHT HON. GEORGE WARD HUNT, IN THE CHAIR.

Sir WILLIAM DUNBAR, Bart.; Mr. WILLIAM GEORGE ANDERSON; Mr. MORGAN HUGH FOSTER, C.B.; Mr. JAMES BEEBY; Mr. CHARLES LISTER RYAN, and Mr. HENRY THOMAS DUNDAS BATHURST, called in; and Examined.

1708. *Chairman* (to Mr. *Beeby*).] THE first paragraph of the Report of the Comptroller and Auditor General states, "that the provisions of the Act 29 & 30 Vict. c. 39, have not been complied with as respects the delivery of the Appropriation Account of Naval Grants, the Account for 1868–9 not having been transmitted to this department until the 21st of February 1870, instead of the 30th of November 1869, as required by the above Act;" has any explanation of that been given?—The Admiralty has explained to the Treasury, as accounting for the delay, that considerable difficulty has been experienced for some years past in preparing these Accounts by the time prescribed by the Act of Parliament; but more especially since they have been required to render the Account of Savings and Deficiences in detail. The numerous explanations that are now needed in preparing that Account require a much greater length of time than was formerly the case, when the explanations were afforded on the Appropriation Account only.

1709. When was the alteration made with regard to the Savings and Deficiencies Account?—The Account for the year 1862–3 was, I think, the first to which it applied. The alteration was made by a Treasury Minute of 27th January 1863.

1710. (To Mr. *Anderson.*) Have you got the Minute there?—Yes.

1711. Will you hand it in?—(*The same was handed in.*)

1712. Mr. *Pollard-Urquhart* (to Mr. *Beeby*).] If I understand the Report of the Comptroller and Auditor General rightly, the Savings and Deficiencies Account was not rendered until a very considerable time after the Appropriation Account?—That was so.

1713. Therefore the difficulty of making out the Savings and Deficiencies Account properly, could have been no excuse whatever for the slow delivery of the Appropriation Account?—Yes; it did affect the Appropriation Account, because we must look to what the explanations will be upon the detailed account before we can make out the explanations of a general character upon the Appropriation Account; but there were other causes which led to the delay in the delivery of both these Accounts besides the ordinary one. With respect to the detailed explanations, one of which was the re-organisation of the department, and the transfer from Somerset House to Whitehall, that was an additional cause for the delay.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Beeby.*
Mr. *Ryan.*
Mr. *Bathurst.*

6 July 1870.

1714. Mr. *Sclater-Booth.*] How do you apprehend that it will be for the future?—For the future we have suggested that the period for rendering the Account should be extended, and that both these Accounts should be rendered at the same time, namely, on the 31st December, in the same manner as the Army Accounts.

1715. Mr. *Liddell.*] That would be an extension of one month?—Yes; and that they should be considered as one Account.

1716. Mr. *Sclater-Booth.*] You will not have another move from Somerset House next year?—Part of the department may be moved; it is only a partial removal that we have had hitherto.

1717. Mr. *Liddell.*] Does the Admiralty undertake to have the Accounts fully prepared, if that extension of time is granted?—We think if that extension of time were granted we should be able to comply with the requirement.

1718. Mr. *Sclater-Booth.*] The extension of time could not be granted except by an Act of Parliament, could it?—No.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Beeby.*
Mr. *Ryan.*
Mr. *Bathurst.*

6 July 1870.

1719. *Chairman.*] That is as regards the Appropriation Account?—Yes.

1720. But as regards the Savings and Deficiencies Account it rests upon a Treasury Minute, and therefore a Treasury Minute could alter it?—Yes.

1721. Mr. *Pollard-Urquhart* (to Sir *W. Dunbar*).] Supposing the time for the delivery of these Accounts was extended in the manner proposed by Mr. Beeby to the 31st of December, would you find it possible to have your report delivered by the time prescribed by the Act of Parliament, which, I think, is within one week after the meeting of Parliament?—No, I do not think we could. I think a corresponding extension of time would be necessary to enable the Comptroller and Auditor General to examine the Accounts, and make his report thereupon.

1722. *Chairman* (to Mr. *Beeby*).] It is the case, is it not, that the Savings and Deficiencies Account is the same Account as the Appropriation Account, only in a more detailed form?—It is.

1723. Have you any suggestion to make with regard to their being in future one account instead of two?—Yes; I would suggest that they should be treated as one account, and that the general explanations should be dispensed with, and that we should give only the detailed explanations of Savings and Deficiencies, as, I perceive, has been done in the case of the Army Department for the year 1868-9.

1724. (To Mr. *Anderson.*) I suppose you were consulted when this Treasury Minute which you have handed in was framed, were you not?—Yes.

1725. Probably you drew it?—Yes, I drew the Minute.

1726. Have you anything to say as to why these should not be one account instead of two?—It was not contemplated at the time when the Minute was passed to interfere with the presentation of the Appropriation Account proper under the Act. We thought at the Treasury that a separate account of Savings and Deficiencies might follow at a later time. There was no time prescribed by the Act for that second account, and therefore it was left as a matter of arrangement. The War Office have consolidated the two Accounts; but that was never directed by the Treasury; it was their own act.

1727. But the Appropriation Account of the Navy is now rendered under Act of Parliament?—Yes, the Appropriation Account of the Navy is required by the Act to be rendered by the 30th of November.

1728. But when the Treasury Minute of the 27th of January 1863, was passed, the Appropriation Account was not rendered under an Act of Parliament, was it?—Yes, it has always been rendered under Act of Parliament since the year 1832.

1729. Will you refer to the Act?—The 2 & 3 Will. 4, c. 40.

1730. Then the Exchequer and Audit Department Act of 1865 superseded that Act?—It embodies the provisions of that Act, so far as they relate to the Navy, but there was an intermediate Act of 1847, the 9 & 10 Vict. c. 92, which extended the Appropriation Audit, which prior to that was confined to the Navy, to the Army, and the Ordnance.

1731. Do you see any objection to there being only one Navy Account rendered now instead of two?—No, I see no objection to it; it would cause a little extension of time; the object was that this Account should be before Parliament before the discussion of the Estimates for the following year; and provided it does not overstep that period, I see no objection to an extension of time.

1732. But at present the votes for deficiencies are taken before the examination of the Account by this Committee, are they not?—Yes, it is necessary that they should be taken early, in order to settle the accounts of that back year before the close of the current financial year.

1733. That is so, is it not, with regard to the deficiencies upon all the Votes, whether Civil Service or others?—Yes; it was done so this last year as regards the Civil as well as the Army and Navy deficiencies.

1734. The Votes to cover those deficiencies are taken before the examination of the accounts by this Committee?—Yes.

1735. Does it not strike you that that is wrong in principle; ought not it to be the rule, if this Committee is to examine the accounts on behalf of the House of Commons, that the examination should take place before the deficiencies are voted?—Undoubtedly, and that can only be accomplished by requiring the departments to close their accounts in sufficient time to enable the Comptroller and Auditor General to place his Report in the hands of this Committee very early in the Session.

1736. The fact is, we are examining accounts, the adjustment of which has been virtually accepted by Parliament through the Votes which have taken place?—Just so.

1737. Mr. *Pollard-Urquhart.*] If I recollect right Parliament voted the deficiencies even before the Account of Savings and Deficiencies was laid before the House of Commons?—Yes, I believe that that was the case this year, if not as regards the Army and Navy, certainly as regards the Civil Service deficiencies.

1738. Do you not conceive that to be very objectionable both in practice and in principle?—It is no doubt wrong in principle.

1739. *Chairman.*] Would there practically be very great difficulty in making a change?—There would be some difficulty.

1740. Mr. *Pollard-Urquhart.*] Would there be any difficulty in the Accounts being prepared in time for Members of Parliament to look over them. It might be difficult for this Committee to examine into them, but surely the Accounts might be in the hands of Members of Parliament before the House voted the deficiencies?—That would be very desirable, and in order to accomplish it the Naval Account should be presented, as it was formerly, without these explanations. The Admiralty could no doubt prepare the account by the time required by the Act, if the Committee would dispense with the explanations which are given at pages 4, 5, 6, and 7.

1741. *Chairman.*] You mean the explanations which are appended to the Account?—Yes, to the Navy Appropriation Account. The Account could be rendered by that time if the Committee would be satisfied without receiving those explanations which are given in greater detail in the Account of Savings and Deficiencies.

1742. (To Mr. *Beeby*). What do you say to that?—I think it would not be wise to present the Appropriation Account to Parliament even without the explanations until we had ascertained what

what were to be the explanations upon the Savings and Deficiencies Account.

1743. When practically could you make sure of being able to render the Savings and Deficiencies Account?—On the 31st of December.

1744. And when could you be certain to be able to render the Appropriation Account?—On the same day, putting them together as one account. I would suggest that they should be one account. The reason why I think we should not present the Appropriation Account on the 30th of November, and the Savings and Deficiencies Account afterwards is, that the process of ascertaining the causes of excess frequently leads to some adjustments, and therefore we might find that we had presented an Account to Parliament which we might want to alter in some respects. That might be the result of the process of ascertaining the causes of excess.

1745. (To Sir *W. Dunbar.*) Do you accede to the suggestion that these two Accounts might be rendered as one account?—Yes, I do; but I wish to make this further observation, that much of the objection as to the extension of time for the rendering of the account, would be obviated if the recommendation of the Committee, that the Comptroller and Auditor General should report direct to Parliament, were carried into effect. Under the present arrangement there is a loss of three weeks. I am obliged to send my report to the Treasury by the 15th of January.

1746. In our First Report we have recommended that you should report direct to the House; if that recommendation were adopted, it would save three weeks, would it not?—Yes. If that recommendation is adopted, all our objections to the proposed alteration of time fall to the ground.

1747. Supposing this amalgamated account is rendered to you by the 31st of December, when could you make your report upon it?—I should think in about a month from that time, so that it could be presented immediately on the meeting of Parliament.

1748. You think that, at all events, by the 20th of February you would have made your report to the House, supposing that our suggestion is adopted?—Certainly; I think there would be no difficulty in doing so.

1749. (To Mr. *Anderson.*) Supposing that to be the case, and supposing a rule was made that we should examine the Account before the vote was taken for the deficiencies, do you think that that would occasion any inconvenience as regards the public service?—None; I understand Mr. Beeby to say that he could render the Account by the 31st of December. With due diligence we might complete the examination of the Account, and our Report would be ready for presentation by the 31st of January.

1750. I am allowing you to the 20th of February, in order not to run you too close?—I think the 20th of February is too long a period to extend the presentation of the Accounts, because the Estimates are frequently brought forward in Parliament before that date; therefore, I think it would be desirable to fix the 31st of January as the date of the Comptroller and Auditor General's Report, and then the Treasury might require some time to look through the account. So far as the Comptroller and Auditor General is concerned, I think his duty might be completed by the 31st of January.

1751. Would it be wise to tie him down to that date?—I would tie him down to the beginning of February at all events.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Beeby.*
Mr. *Ryan.*
Mr. *Bathurst.*

6 July 1870.

1752. You might give him another week perhaps?—Yes, I should have no objection to that. (Sir *W. Dunbar.*) I think that that would be ample.

1753. (To Mr. *Anderson.*) Then you think that the account ought to be presented to the House, supposing it were presented direct, by the 7th of February? — That date would do very well.

1754. If that were the case, and the Committee of Public Accounts were nominated immediately upon the meeting of Parliament, they might proceed at once to examine that Account of Savings and Deficiencies?—I think they could, and probably they could make their report before a Vote was submitted to the House.

1755. Before the Estimates of the next year were taken?—Before the Estimates of the next year were begun upon.

1756. It is in your opinion desirable that the Committee should examine the account and satisfy the House of Commons as to what is the correct amount of savings and deficiencies, or surplus and excess, before the Deficiency Votes are taken?—Yes, I think that that is very desirable; it is not in every year however that deficiency votes are required; indeed, it is seldom that the aggregate of the Army and Navy Votes is exceeded.

1757. Mr. *Sclater-Booth.*] It is rather a misnomer to apply the words "Deficiency Vote" to the Army and Navy Account, is it not; it is only when there is a net deficiency that any vote is taken?—A vote is taken when the aggregate exceedings go beyond the aggregate savings. That has sometimes occurred in the Navy and the Army, though the Appropriation Act distinctly states that the total grants shall not be exceeded.

1758. But the ordinary form has been to sanction the Appropriation of Savings to meet Deficiencies which has been temporarily made by the Treasury?—That is done at the end of the Session by the Appropriation Act.

1759. Mr. *Liddell.*] Then, I presume that it is necessary that the Vote of Parliament to meet the deficiencies should be made before the expiration of the current financial year?—It would be very desirable that that should be done, because otherwise the settlement of the year's account would be extended to the third year.

1760. *Chairman.*] You could not clear your account within the financial year, unless that were done?—No; it is a matter of convenience to the Treasury as regards Ways and Means, because they have to surrender the surplus of Ways and Means in the Appropriation Act of the following year, and if it were after the 31st of March it would probably make a delay of a whole 12 months in the surrender of those Ways and Means.

1761. Mr. *Liddell.*] Upon a vote being taken, I presume the provisional arrangement by which the Treasury have sanctioned a temporary application of a saving upon a vote to meet a deficiency is cancelled?—In the case of the Army and Navy, a vote is only taken when the deficiencies exceed the savings, but for the Civil Services votes are taken for all the deficiencies without reference to savings, because no power exists in the Government of applying the savings on one civil vote to defray the deficiency on another civil

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Beeby.*
Mr. *Ryan.*
Mr. *Bathurst.*

6 July 1870.

vote, and, therefore, in that case, votes have to be taken for every deficiency; but in the case of the Army and Navy, it is only when there is a deficiency upon the aggregate of the votes that a vote is taken.

1762. Mr. *Sclater-Booth.*] And, therefore, as a matter of fact, of late years, unless there was a net deficiency upon the Army and Navy Accounts, nothing was heard of the matter until quite late in the Session, when a resolution was passed in the House of Commons sanctioning the appropriation that the Treasury had made temporarily?—Precisely so.

1763. *Chairman.*] You would apply the same rule, would you not, to the whole of the accounts, including the Civil Service, as well as the Army and Navy?—The Civil Services are never voted so early as the Army and Navy. A Vote is now taken annually "upon account."

1764. But would you not think it right that this Committee should examine the accounts of the Civil Service Votes before the deficiencies are voted?—It would be desirable, if possible, that they should do that. Undoubtedly, as a matter of principle, that is the right course to take.

1765. Mr. *Pollard-Urquhart.*] At all events, it would be desirable that the Statement of the Civil Service Savings and Deficiencies should be before Parliament before the deficiencies are voted, so that even if the Committee had not time to examine it, any Member might do so?—This being the first year of bringing the Act into operation with regard to the Civil Service Votes, there has been a delay which will not, we hope, occur in future years.

1766. (To Sir *W. Dunbar.*) If this detailed Account, called "The Statement of Savings and Deficiencies," had been before you at the time you made this Report, are there any matters into which you would have entered more fully than you have now?—No, I think not.

1767. *Chairman* (to Mr. *Anderson*).] If the Savings and Deficiencies Account and the Appropriation Account were to be amalgamated, and the time for rendering the amalgamated account was to be altered, an Act of Parliament must be passed to make the alteration, must it not?—Yes; there must be an Act passed to amend the Exchequer and Audit Act.

1768. (To Mr. *Beeby.*) You are confident that the amalgamated account could be rendered by the 31st of December?—Yes.

1769. Mr. *Liddell.*] In the event of your amalgamating the Navy Appropriation Account with the Account of Savings and Deficiencies, should you propose that the whole of the minute details contained in this present Savings and Deficiencies Account, with all the correspondence attached thereto and explanatory thereof, should be incorporated with it?—Yes; but I should propose to omit the general explanations which are now given in the Appropriation Account.

1770. That would reduce it very slightly, would it not?—Yes.

1771. *Chairman.*] The fact is, that the general explanations are a summary of the detailed explanations?—Yes, just so; and they cannot be well or satisfactorily made until we know what the detailed explanations are.

1772. What you would propose is, that what is now the Appropriation Account should be a prefix to the Savings and Deficiencies Account, and that the general explanations which are now appended to the Appropriation Account should be dispensed with?—Precisely so.

1773. (To Mr. *Anderson.*) Have you any remark to make upon that?—I think it would make the account a very perfect one, because the explanations given in the Statement of Savings and Deficiencies are much more complete than those given upon the Appropriation Account.

1774. (To Sir *W. Dunbar.*) Do you agree to that?—Yes, I concur in that view.

1775. (To Mr. *Anderson.*) Supposing that according to the recommendation contained in the First Report of this Committee, the Report was presented direct to Parliament by the Comptroller and Auditor General, if a copy of that Report was furnished to the Treasury they would be able to give all needful directions just as they can now, would they not?—Yes; that would be quite satisfactory.

1776. (To Mr. *Foster.*) In our First Report we have recommended that the law should be altered, and that the Comptroller and Auditor General should make his report direct to the House, instead of reaching the house through the medium of the Treasury. Supposing the Comptroller and Auditor General was required to send a copy of his Report to the Treasury, the Treasury would be able to give all needful directions, just as they do now, would they not?—The first point which strikes me is that which has been raised by this question, namely, who is to give directions to the accountants. The Comptroller and Auditor General is not an executive officer, and he would probably not give directions; and I presume the Committee would not undertake to give directions to the accountants. It would, therefore, be necessary that the Treasury should have the report in order to give directions upon it. It seems to me that if the Treasury is really passed over and only nominally furnished with a copy of the report, its authority to deal with the accountants will be seriously weakened. I might also say that nine-tenths of the observations of the Comptroller and Auditor General are upon points where the accountant does not comply with the Treasury directions. Those are not questions of appropriation, but questions of transgressing rules laid down by the Treasury, and regarding which instructions are sent to the Comptroller and Auditor General to report to the Treasury upon the divergencies from those rules. For the Treasury to lay down the rules to be carried out by the accountants, and to be reported upon by the Comptroller and Auditor General, and instead of the Treasury getting a reply, for the Comptroller and Auditor General to report directly to the House, passing over the Treasury, appears to me rather an anomalous arrangement.

1777. According to that view the Comptroller and Auditor General has two functions, one as regards appropriation, and the other as regards seeing that the Treasury regulations are complied with?—It is clearly laid down in the Act that there shall be those two duties.

1778. That being so, it would seem as if that part of his functions which relates to the examination as to how far the Treasury rules have been complied with, ought not to form a part of his report upon the Appropriation Account?—I think that would be the only way of dealing with it, so as to carry out the recommendation of the Committee.

1779. That is to say, the Comptroller and Auditor

Auditor General might make a report to the Treasury as to how far their regulations had been complied with, and he might also report to the House upon the Appropriation Account?—That appears to me to be the reasonable result of the recommendation of the Committee; but I think it would leave very little for his report upon the Appropriation Account.

1780. Mr. *Sclater-Booth.*] Because the sanction of the Treasury has cured the errors which there would otherwise be in the Appropriation Accounts?—Just so. The questions relating to compliance with the Appropriation Act are extremely small in number.

1781-2. Mr. *Egerton.*] Then you would propose that the report of the Comptroller and Auditor General, with regard to the matters of account not being matters of appropriation, should come, as now, to the House through the Treasury?—That appears to me to be the proper course. (Sir *W. Dunbar.*) Mr. Foster seems to have overlooked the 27th section of the Exchequer and Audit Act, which expressly provides that the Auditor General shall examine the accounts, with the object of reporting upon any expenditure which, requiring the sanction of Treasury authority, has not been so sanctioned, and is therefore not properly chargeable against the vote.

1783. *Chairman* (to Mr. *Foster*).] Is there anything in the Act beyond what is mentioned in the 27th section, to which reference has been made?—It is the 27th section which refers to the point. The Comptroller and Auditor General would, of course, be required to give in his report, which would reach Parliament, as to whether the Treasury directions had been complied with or not; so far you may say it becomes part of the Appropriation Account.

1784. Under what section is that?—Under the 27th section. But at the same time I do not think that that obviates the necessity of a report upon the non-compliance with Treasury Regulations passing through the Treasury to the House of Commons.

1785. Do you think that the Comptroller and Auditor General ought to notice any breach of Treasury Regulations other than those which are mentioned in Clause 27?—I think he is bound to notice any case where the rules and regulations laid down by the Treasury have not been carried out by the accountant, and I think it is quite proper that that Report should be laid before Parliament. But I think the rules and regulations having been laid down by the Treasury, it is proper that he should report to the Treasury if they have not been complied with.

1786. We will take the case mentioned in Section 27 of the Act, "Whenever the Comptroller and Auditor General shall be required by the Treasury to ascertain whether the expenditure included, or to be included, in an Appropriation Account, or any portion of such expenditure is supported by the authority of the Treasury, the Comptroller and Auditor General shall examine such expenditure with that object, and shall report to the Treasury any expenditure which may appear, upon such examination, to have been incurred without such authority." Supposing such a case had occurred, and the Comptroller and Auditor General reported it direct to the House, and the Treasury had a copy of that report, the Treasury then could lay a Minute upon the Table of the House, saying whether they had subsequently given their sanction or not?—I think there is a great difference between supplying the Treasury with a copy of the report, and the Comptroller and Auditor General reporting to the Treasury in accordance with the desire of the Treasury. It appears to me to follow, from the Treasury calling for such a report, that it is to the Treasury that he should report, and it is the Treasury who should lay that report before the House.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Beeby.*
Mr. *Ryan.*
Mr. *Bathurst.*

6 July 1870.

1787. (To Sir *W. Dunbar.*) What have you to say to that?—The fact is, that in all cases where there are deviations from the Treasury Regulations, we report to the Treasury that such deviations exist; but that is not the question referred to in the 27th section; that is a report properly made to Parliament, because if there be an expenditure which requires Treasury authority, but which the Treasury does not see fit to authorise, it is declared by that section to be an expenditure not properly chargeable to the Vote.

1788. But supposing there may be cases where the neglect to obtain Treasury sanction has been pointed out by the Comptroller and Auditor General in his report, the Treasury may step in and subsequently give its sanction?—We call attention, in any case where there is any deviation from Treasury authority, to the fact that the accountant has not got Treasury sanction; the Treasury either immediately acts thereupon, or does not act; if it acts we have no report to make to Parliament; on the other hand, if it does not act, and does not sanction the unauthorised expenditure, the Act requires that it shall be reported as expenditure not properly chargeable to the Vote.

1789. You consider that it would be your duty to make an immediate communication to the Treasury upon the matter?—We always do so.

1790. (To Mr. *Foster.*) Would that satisfy what is in your mind as regards the communication between the Comptroller and Auditor General and the Treasury?—I think there are various cases where a report has not been made to the Treasury, and the first knowledge we have had of the facts has been obtained from the Appropriation Account sent to us to be laid before Parliament. That that is so, will, I think, be seen by the Minute of the Treasury upon the report of the Comptroller and Auditor General. In that Minute we take up the whole subject which he has laid before us, and deal with it, giving directions to the accountants to correct errors, to pursue a different practice, and to adopt the course which the Treasury deems right. In many cases you will see that expenditure which had not Treasury authority has been sanctioned by the Treasury Minute, passed after receipt of the Report of the Comptroller and Auditor General. Had these points been settled before the Report of the Comptroller and Auditor General, they would not have been referred to in his report, and consequently the Treasury would not have had to deal with them in its subsequent Minute. (Sir *W. Dunbar.*) If there is any such case it must be owing to some oversight on the part of the Exchequer and Audit Department; but I know of no such case, and I should like Mr. Foster to state in what case the Comptroller and Auditor General has not reported to the Treasury a deviation, on the part of any particular accountant, from the

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Beeby.*
Mr. *Ryan.*
Mr. *Bathurst.*

6 July 1870.

the regulations laid down by the Treasury. I believe in every case it is the practice of the Exchequer and Audit Department immediately to call the attention of the Treasury to the fact, that the accountant has not acted up to the regulations laid down for him by the Treasury. (Mr. *Foster.*) The case that occurs to me at this moment is a case where the Home Office or the Colonial Office complained that the Comptroller and Auditor General had first queried an amount, and afterwards disallowed it without reference to the Treasury. (Sir *W. Dunbar.*) But that is not a case in point. The statement of the Treasury is based upon a false assumption in that case. The Treasury assumed that there was a difference of opinion between the Colonial Office and the Exchequer and Audit Department. Now, I admit that if there had been a difference of opinion there might have been some room for the strictures and for the observations made by the Treasury upon that head. But there was no difference of opinion between the two departments, and we did not, in fact, know that the Colonial Office had acted upon the instructions of the Treasury, and that we were required to look for Treasury authority in that special case.

1791. Mr. *Liddell* (to Mr. *Foster*).] What is the Act or what are the Acts of Parliament that constitute and regulate the functions and authority of the Treasury?—I should think that they are affected by such a variety of Acts that it would be very difficult to mention any in particular which regulate them. The Treasury is an office of very great antiquity, and I think practice is more the law than any special Act of Parliament.

1792. What I particularly wished to know was this, can you point to the Statute which clothes the Treasury inmates with the authority which they have?—I cannot quote any Act at the moment. I am not prepared to state under which Act the Board of Treasury is constituted. There is one Act which abolishes the necessity of having more than two Commissioners to give validity to Treasury Warrants, but I could not from memory quote the Act which establishes the commission of the Treasury.

1793. It has grown, then, partly out of usage?—No doubt there was originally an Act constituting the Lord High Treasurer, or giving the power of placing that office in commission, and regulating the number of commissioners who should have power to represent the Lord High Treasurer, but I do not bear in mind at the moment what that Act is.

1794. *Chairman.*] To begin with, the Treasury has authority over the subordinate departments and the officers of those departments, just the same as any other department would have, and then, in addition to that, many Acts of Parliament have given to the Treasury the power to regulate the affairs of other departments, and have required that their consent should be given in certain cases?—Almost every Act of Parliament regulating a public department gives power to the Treasury to sanction or disallow rules and regulations, and to regulate the establishment of the office.

1795. With regard to the matter we were discussing just now, you think, that even supposing the Comptroller and Auditor General reported direct to the House, it would be necessary that there should be communications from time to time, in the nature of reports or in some other shape, to the Treasury, calling attention to cases in which Treasury authority had not been given where it was required, and also to cases in which Treasury regulations had been infringed?—Yes; those two things are carried on to a considerable extent during the time of the examination of the accounts; but I am quite convinced that there are a great many instances which are not brought before the Treasury.

1796. But which might be brought before the Treasury?—Yes, which might be brought before the Treasury. The usual course is this: the Comptroller and Auditor General objects to an item of expenditure in the accounts of a department; the department then applies to the Treasury for sanction; it obtains that sanction if the Treasury will give it, and supplies the Comptroller and Auditor General with that sanction.

1797. Then, in fact, the Comptroller and Auditor General is not really in a position to make his final report until these communications have been made to the Treasury, and he has had their answer; I mean so far as regards the cases where the authority of the Treasury is required?—He does make his report before all those points are settled, and it is in consequence of his not having had satisfactory replies from the accountants that he reports upon them, and the knowledge of these objections reaches the Treasury in that way.

1798. Then, in fact, his report would be more complete if he was able to say that he had called the attention of the Treasury to those cases where their authority was required, and where it had not been given, and if he were able to say whether it had subsequently been given or not?—The report would be more perfect if that could be carried out, but in some cases I think there would be great difficulty in carrying it out in time. There are queries going on up to the last moment of the Comptroller and Auditor General's Report.

1799. (To Sir *W. Dunbar.*) What do you say to that?—The Comptroller and Auditor General has two principal duties to discharge. He is bound in the first place to see that the directions of Parliament are carried into effect; and, secondly, that the regulations established by the Treasury for the governance of the accountants are obeyed. In every case where there is a deviation from the regulations laid down by the Treasury, he calls the attention of the Treasury to the matter in the discharge of his duties in the examination of the account. That is practically a report to the Treasury, and having made that report, I cannot see any necessity for his making a second and formal report to the Treasury upon the very self-same matter.

1800. How do you suggest that the difficulty that has occurred to Mr. Foster should be got over?—The Committee will observe that the 31st section of the Exchequer and Audit Act enacts, "If, during the progress of the examination by the Comptroller and Auditor General hereinbefore directed, any objections should arise to any item to be introduced into the Appropriation Account of any grant, such objections shall, notwithstanding any account shall not have been rendered to him, be immediately communicated by him to the department concerned; and if the objections should not be answered to his satisfaction by such department, they shall be referred by him to the Treasury, and the Treasury shall determine in what manner the items in

in question shall be entered in the annual Appropriation Account." Wherever, of course, a difference occurs as between the department and the Comptroller and Auditor General, that difference is reported to the Treasury for settlement, and beyond that I do not know what other function or duty the Comptroller and Auditor General can be called upon to perform which would enable him to give a larger amount of information than he now affords to the Treasury in the daily discharge of his duties.

1801. Then your opinion is, that all these communications might be made to the Treasury during the progress of the examination of the accounts, and that the Treasury might give directions as they thought proper, and that then you might make your report upon the final state of things?—Yes; the fact is, that those communications not only might be made, but they are actually made. In the daily discharge of my duties, these representations are made from time to time when the objections occur.

1802. How would you deal with this matter in your report in future, supposing our recommendation of your reporting direct to the House were to be adopted?—Of course, in those cases where the Treasury sanction being required, and the attention of the accountant and of the Treasury having been called to the absence of such sanction, the Treasury have still not thought fit to sanction such expenditure, I should hold it to be expenditure not properly chargeable against the Vote, and report it as such to the House of Commons. It would strictly be a question of misappropriation falling within the Parliamentary functions of the Comptroller and Auditor General under the Exchequer and Audit Act.

1803. Should you mention in your report that you had called the attention of the Treasury to their authority being absent, and that it was either subsequently given or not given?—Yes, probably I should; I think I have generally done so. (Mr. *Ryan.*) If the sanction of the Treasury was given before the report was made, no mention would be made of the matter. It is only where that is not the case that any mention is made of it in the report at all.

1804. Then in the case of the regulations of the Treasury not being complied with (irrespective of the question of the authority of the Treasury being required), should you think it necessary to treat of those cases in your report?—If the regulations did not affect what we technically term the "Appropriation Accounts"; that is to say, if they had nothing to do with the Act, but were merely a sort of bye-regulation, we should in that case report to the Treasury, and not to Parliament at all.

1805. That is what you do now?—Yes. (Mr. *Foster.*) I wish to draw the attention of the Committee to the fact that, as will be seen by reference to the Treasury Minute upon the last Appropriation Account of the Civil Services, there are a very large number of directions which have to be given by the Treasury to the accountants, and not one of those directions could have been given upon previous reports of the Comptroller and Auditor General. It appears to me that this fact bears out the statement that the Treasury had not had previous information of those objections, and that the only means of dealing with these divergencies from rules and regulations is upon the report.

1806. But is there any reason why these deviations should not have been pointed out by the Comptroller and Auditor General to the Treasury previous to his report being made?—I think the difficulty would be this: There are a very large number of departments which have considerable difficulty in getting their Appropriation Accounts sent in to the Comptroller and Auditor General by the date laid down by the Act. The Comptroller and Auditor General has then to examine them and discover any divergencies from the rules and regulations. Many of these divergencies are not discovered until he has the final Appropriation Account before him. It is then too late to get the departments to apply to the Treasury, the Treasury to give its decision and inform the accountant, and the accountant to inform the Comptroller and Auditor General before he reports. There is not time enough to do it.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Beeby.*
Mr. *Ryan.*
Mr. *Bathurst.*

6 July 1870.

1807. Now it is done after the report is made?—Yes; the moment we receive the report we take it up and deal with it, giving the necessary directions. If, as the Comptroller and Auditor General represents, every question that is raised on the Appropriation Accounts had come before the Treasury previously, there would be no room left for the Treasury to give directions; they would all have been given; but that is not the fact, as appears to me to be proved by the Treasury Minute. (Sir *W. Dunbar.*) The cases we report upon to Parliament are infringements of the law, not infringements of the regulations of the Treasury. All infringements of the regulations of the Treasury are, as I said before, reported upon to the Treasury during the examination of the accounts. How far it may be necessary for the Treasury to act upon the reports of the Comptroller and Auditor General, I cannot pretend to say; but it appears to me that in some cases at least they have acted before the Committee have been enabled to express any opinion on the infringements of law pointed out by the Comptroller and Auditor General. If they consider that what has been done is wrong, they immediately take action upon it of their own accord. As far as I understand it, the intention was that the report of the Comptroller and Auditor General should be laid before a Committee of this House, and deliberated and reported upon for the guidance, not only of the Comptroller and Auditor General, but of the departments, the Treasury included. For example, take the case of the Vote for the University of London. I reported in that case that there was a saving upon that Vote. Before the Committee had an opportunity of deliberating upon the subject, which was a very important one, the Treasury acted upon their own view, and converted the saving into a deficiency. They went further, and they actually took an excess Vote in the House before the account had been laid before this Committee. Now it was certainly within the range of probability or possibility, that the Committee might have reported that the opinion of the Comptroller and Auditor General, instead of being technically wrong, was technically right, and if so, how could the action taken in the meantime by the Treasury have been rectified.

1808. I see that you state in paragraph 3 of your Report, "I have to report that the deficiency of 366,545 *l.* 5 *s.* 6 *d.* on the Account of Naval Services for the year ending the 31st of March 1868, has been voted by Parliament;"

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Beeby.*
Mr. *Ryan.*
Mr. *Bathurst.*

6 July 1870.

are you required by the Act to report that Parliament has voted the deficiency?—No, we are not called upon by the Act to do so, at least not in specific terms. We are called upon generally to report for the information of Parliament the result of our examination.

1809. (To Mr. *Foster.*) Paragraph 4 is, "The Appropriation Account for 1868-9 has been prepared according to the form laid before the Committee of Public Accounts of Session 1869, by the War Department, showing, in distinct columns, the expenditure for the ordinary service of the navy, and the extra expenditure occasioned by the expedition to Abyssinia;" that is as regards the division between the ordinary service and the extra expenditure, but as regards the form of account, you prepared a form of account for the Civil Services by the request of the Committee, which they have adopted and recommended in their First Report to be used; do you think that there ought to be any alteration in this account?—I think the same words might be used for the Army and Navy Accounts as for the Civil Service Accounts.

1810. We have put, "More than Voted," and "Less than Voted" at the head of the fourth and fifth column in that account, I think?—I think it would be better to have it uniform.

1811. It could not quite follow that form here, could it, because it is headed, "Surplus," "Excess," "As compared with Net Expenditure, Column B," and "Surplus," "Excess," "As compared with Gross Expenditure, Column A"?—It would be "Net Expenditure, as compared with Grant," and "Gross Expenditure, as compared with Grant."

1812. The form ought to follow the form laid down in the First Report of the Committee as nearly as possible, ought it not?—I think so; and I see no difficulty in making it conform to it, if not entirely yet substantially.

1813. How would you suggest that that should be done?—I think it should stand in this way, "Net Expenditure compared with Grant;" "Less than Granted," "More than Granted," and "Gross Expenditure compared with Grant;" "Less than Granted," "More than Granted."

1814. (To Mr. *Beeby.*) What have you to say to that?—I see no objection to it for the sake of uniformity.

1815. It would seem right that the accounts should correspond?—Yes. (Mr. *Foster.*) At the foot, instead of "Net Surplus," and "Net Excess," it would be "Net Surplus" and "Net Deficit." (Mr. *Anderson.*) If you look at the Appropriation Account, page 12, you will see that it is done in the Comptroller and Auditor General's Report.

1816. Mr. *Goldney.*] Only that does not show the grant?—No.

1817. The advantage in the other form is, that you see first the whole grant and then you see how it is dealt with?—Yes.

1818. *Chairman* (to Mr. *Anderson*).] The Comptroller and Auditor General says, in the sixth paragraph of his Report, "The Estimates for 1868–9, as well for Army Services as Navy Services, after stating the total amount required under the respective votes, contained lists of sub-heads under which this Vote will be accounted for; and the Appropriation Act contains also a provision that a detailed Statement of the Savings and Deficiencies shall be laid before the House of Commons not later than one month after the Appropriation Account has been rendered to this department." That we have dealt with before; there would be an alteration wanted in the annual Appropriation Act, supposing the views that have been expressed by the witnesses before the Committee were carried out, would there not?—The Appropriation Act does not mention dates.

1819. It says "not later than one month" after the rendering of the Appropriation Account?—I do not think that the Appropriation Act refers to the general Statement of Savings and Deficiencies, but only to a statement of the cases in which the Treasury may have sanctioned expenditure not provided for in the respective votes; and this Statement is usually annexed to the Appropriation Account.

1820. (To Mr. *Beeby.*) The 11th paragraph in the Report of the Comptroller and Auditor General is, "Payments, amounting to 662*l.* 10*s.* 9*d.*, made at Naval Yards Abroad in the year 1868–9, have been charged to Vote 6, Sub-head R., 'Wages;' it appears that this expenditure has been charged to this Vote provisionally, in the absence of explanations; I have therefore to notice that charges have been made against a vote which may be found to have been incorrectly classified, and to be chargeable to other votes;" have you anything to say upon that?—With the view of meeting this objection, directions have been given that in future, where there is any item, the classification of which is questionable, and we have to write for an explanation, that item shall be disallowed, and not charged to any service account, until we get the explanation from the accountant, and can make the proper charge. That will meet the Comptroller and Auditor General's objection, I think.

1821. The 12th paragraph says: "I have to notice that an expenditure of 420*l.* 12*s.* 11*d.* for repairs to certain cottages, near the extension works at Portsmouth Dockyard, has been deducted from the old store and extra receipt moneys, under the head, 'Rents of Naval Premises;' as these rents should be paid in full into the Exchequer, the sum of 420*l.* 12*s.* 11*d.* has been applied without the directions of Parliament; what have you to say about that; will it be paid into the Exchequer?—The Admiralty have concurred with the Treasury in considering that in future these sums should be paid in full into the Exchequer, and that any charge of this sort should be voted by Parliament.

1822. Paragraph 13 is the "Amount of Old Store and extra receipt moneys, after deducting the sum of 420*l.* 12*s.* 11*d.*, shown in the memorandum attached to the Account, amounted to 226,968*l.* 7*s.* 11*d*; and the following sums have been paid into the Exchequer in respect thereof, viz.:—

	£.	s.	d.
August - 1868 - -	37,064	–	–
November 1868 - -	93,390	4	10
February 1869 - -	24,450	14	10
May - 1869 - -	72,028	17	10
Together - - - £.	226,933	17	6

Leaving 34*l.* 10*s.* 5*d.* to be adjusted in a subsequent payment; how was it that the whole of that sum was not paid over?—An error was discovered in the classification after the payment had been made, and it will be adjusted in a future payment.

1823. Paragraph

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Beeby.*
Mr. *Ryan.*
Mr. *Bathurst.*

6 July 1870.

1823. Paragraph 14 is, "In accordance with directions of the Lords of the Treasury, a note has been appended to the account, showing, under each vote, the degree to which the account of the financial year has been affected by the rectification of errors or omissions in the accounts of previous years. A copy of a letter from the Admiralty respecting the amount of expenditure relating to the year 1868-69, not included in the account, is appended to the Report;" what have you to state upon that?—I would refer to the second paragraph of the Admiralty letter of the 26th February 1870, which you will find at page 14, relative to the subject.

1824. That, I suppose, was unavoidable?—That was unavoidable. The letter shows that out of our large expenditure, there is only about 800 *l.* not included in the Appropriation Account of the year.

On Vote 10.

1825. Mr. *Pollard-Urquhart.*] On Sub-head F, there is a very large excess for coals, independent of those used for the Abyssinian Expedition, amounting to 32,000 *l.* The note is, "17,500 *l.* of this excess is attributable to the fact that a portion of the coal sent out in the latter part of the year 1867-68 to the Cape of Good Hope, for transport service connected with the Abyssinian Expedition, not having been used for that service, constituted one unprovided charge against the Naval Store Vote." Will you explain that?—Coals to the extent of 17,500 *l.* were sent out to the Cape of Good Hope for the Abyssinian Expedition, but were not required for that Expedition, and therefore were not paid for out of the Vote of Credit, and fell as an unexpected charge on the Naval Votes.

1826. Then, in all probability, your vote for the expenditure for coals in the subsequent year will be diminished in proportion?—Yes, certainly.

1827. On section 2, Sub-head C, of this vote, there is a very large excess. The explanation given is, that it arises "from more work having been performed upon some of the ships than was expected when the Estimates were framed, and from payments having been made to the builders of the 'Agincourt,' 'Minotaur,' and 'Valiant,' amounting in the aggregate to 1,800 *l.* in discharge of their claims for extra votes. The sanction of the Treasury was given for 15,300 *l.* of this excess by letter of 9th March 1869." Has the sanction of the Treasury been received for the remaining part of this excess?—It would have been stated if it had.

1828. How has the remaining part of the excess been defrayed?—It was covered by the general sanction of the Treasury when the account was laid before them. It was defrayed out of the surpluses on other votes.

1829. *Chairman.*] Then the sanction has been given?—Yes. In the general sanction that is given to appropriate surpluses to meet deficiencies.

1830. Mr. *Sclater-Booth.*] The sanction alluded to in that paragraph, I apprehend, is a special sanction given at the time?—Yes, a special sanction given at the time.

1831. *Chairman.*] Has a subsequent sanction been given by the Treasury for a transfer from another vote?—Yes, in a general way; in sanctioning the appropriation of general surpluses in aid of general excesses, but not specially.

1832. Mr. *Pollard-Urquhart* (to Mr. *Anderson*).] Was your attention called to this case under section 2, Subhead C., where there was an excess of expenditure of 34,846 *l.* 14 *s.* 2 *d.*, of which excess the sanction of the Treasury was only given for 15,300 *l.*?—There is a saving upon the whole upon that vote. The excess is only on one subhead, and therefore it would not come before the Comptroller and Auditor General until the account was rendered.

1833. *Chairman.*] There is a saving upon the whole vote?—Yes. It would be within the power of the department to authorise the excesses upon some of the subheads to be applied to meet the deficiencies upon other subheads.

On Vote 11.

1834. Mr. *Pollard-Urquhart* (to Mr. *Beeby*).]—I see that several services under this vote have been deferred, and at the same time the vote on other subheads has been very considerably exceeded; sometimes it appears from the work having proceeded faster than was expected, and more having come in course of payment in the year than was anticipated; but in other cases it is uncertain whether the expenditure was for an entirely new work not contemplated in the Estimates or not; can you tell me whether services have been left unperformed in some cases, in order to provide a balance to meet deficiencies in other cases?—That is a question which it requires a professional person to answer. It is only the Director of Works who can answer that question.

1835. Mr. *Goldney.*] Does not the same question arise upon Subhead C. of Vote 10, which we have spoken of, where the ships were not built?—The same answer will apply to that.

1836. Mr. *Pollard-Urquhart.*] That does not appear to have been intentional; there was a failure on the part of the contractor to deliver the armour plates, but the saving under Subhead A, on Vote 11, New Works, Deptford, is caused "by deferring services not essentially necessary in prospect of the closing of this establishment"?—In that case, as the Admiralty expected to close Deptford Yard they would not incur this charge.

1837. It was because the establishment was about to be closed?—Yes.

1838. Mr. *Liddell.*] This is a question of accounts; it appears by a correspondence at page 63, that the sum of 8,000 *l.* was the cost of certain caissons, and that the Treasury thought that that amount ought to have been chargeable in the first instance to the vote for Bermuda Dock, and that certainly would appear to have been a sound objection, and they do not understand why it was not so charged; as it appears here it is charged against the vote for Haulbowline; has any step been taken to correct that?—It is explained in the correspondence.

1839. *Chairman.*] There is an explanation at the end of Mr. Romaine's letter of the 13th of February 1869, "My Lords would suggest that, as the cost of the permanent caissons for the Bermuda Floating Dock, now being put together at Bermuda, is chargeable to the dock; the caissons intended permanently for the Haulbowline extension, and provided for in the total estimate for that work, should be charged direct to

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Beeby.*
Mr. *Ryan.*
Mr. *Bathurst.*

6 June 1870.

that service, although made available and temporarily appropriated for the trial of the Bermuda Dock in England"?—Yes.

1840. Mr. *Liddell.*] Suppose these caissons had been lost or detained in Bermuda, or injured, or anything else, the charge would appear in the vote for Haulbowline Dockyard?—That would have been adjusted in the accounts.

1841. *Chairman.*] They were lent to Bermuda, I suppose?—Yes.

1842. Mr. *Liddell.*] But it is an entirely incorrect mode of charge?—If any circumstance had occurred to prevent their being appropriated as intended, an adjustment would have been made, and the attention of Parliament called to it.

1843. Practically have these caissons been returned, or are they still in Bermuda?—I cannot answer that question.

1844. *Chairman.*] The Treasury, in their letter of the 22nd of February 1869, ask a question to which I find no answer in the correspondence; can you answer it now. The Treasury assent to 8,000 *l.* being charged against Haulbowline, but they say that they "presume, however, that the cost of the caisson for Haulbowline was included in the original estimate of 150,000 *l.* for the extension of this yard;" do you know how that is?—No, I cannot answer that question.

1845. Supposing that it had been lost or destroyed while on loan to Bermuda, then you say that it would have been chargeable to the Bermuda Dock Vote?—Yes.

1846. Mr. *Liddell.*] Supposing these caissons to have been lost, and that the Bermuda Dock repaid Haulbowline Dockyard the original cost of these caissons, namely, 8,000 *l.*, am I right in supposing that that 8,000 *l.* would have appeared in the account of the following year as an extra receipt, and been surrendered as such to the Exchequer?—It would have appeared in the following year's account, not as an extra receipt to be surrendered to the Exchequer, but as an adjustment of subheads; the Haulbowline Head being relieved, and the Bermuda Dock Head being charged with the cost; that is what we call an adjustment.

1847. Mr. *Goldney,*] There is a large saving, or rather a postponement of payment actually contracted for, on the works at Portsmouth; you say that the contractor has not done his work sufficiently fast, and therefore an amount of 100,358 *l.* 9 *s.* 11 *d.* is stopped; your explanation is "The temporary dam over the whole area of these works being incomplete, the contractors were not paid the sums expected to be advanced to them for permanent works during the year"; consequently, you will have to pay it next year; but the whole of that 100,358 *l.* 9 *s.* 11 *d.* has been expended on other works not contemplated at all by the vote. One is 12,185 *l.* 16 *s.* 5 *d.* connected with "New Works, &c., Admiralty, Whitehall, and Somerset House;" part of which was for buying a house at Whitehall, although it is a very debateable point on the Civil Service Estimates whether those public office votes ought to be exceeded in any way. Another item is a large sum expended at Malta, amounting to 16,874 *l.* It may be very right to execute those works, but that is a very large sum not saved, but merely omitted to be paid on account of works omitted to be executed. Will you explain how the sanction was obtained for that large sum of 100,358 *l.* 9 *s.* 11 *d.* being so dealt with?—With regard to coming into possession of the 100,000 *l.* that we could not help, it was forced upon us. With regard to the appropriation of any of it to meet any other expenditure, application is made to the Treasury before any portion is so appropriated.

1848. I observe it is all sanctioned by Treasury letters?—That shows perhaps one of the advantages of the report going to the Treasury.

1849. But it is dealing in the Navy Accounts with matters which are properly considered in the Civil Service Votes, namely, public offices; you are appropriating money voted for naval services to departmental buildings?—No; the expense of buildings for the Admiralty has always been included in the Navy Estimates. (Mr. *Anderson.*) The repairs of Admiralty buildings form no part of the Civil Service Estimates; they are all included in the Navy Estimates.

1850. The other great expenditure seems to have been at Malta, amounting to 16,874 *l.*; can you give any explanation about that; has there been any special application with respect to this Malta expenditure?—Yes; the Treasury letter of the 22nd of February 1869 refers to it.

1851. Mr. *Pollard-Urquhart.*] Referring to the Admiralty letter of the 1st February 1869, I see that the contractor makes a claim for "45,823 *l.* actual cash deficiency over receipts;" is it the system of the Admiralty Department that if a contractor loses by any work, the whole amount of his loss should be made good to him?—I am not aware that it is.

1852. Do the Admiralty consider it incumbent upon them to make good any part of his loss, supposing he loses by his contract?—If he can make out a fair case, and show that he has lost by his contract, he will receive proper consideration, not necessarily to the extent of the claim he may make, but to a fair and reasonable amount.

1853. Without any extraordinary circumstances having occurred, such as a great storm or a fire, if he has simply lost by a contract, would the Admiralty consider it their business to compensate him?—Not unless he can show proper grounds for it, in something unexpected having occurred. For instance, supposing, in making excavations, the contractor had come across rock which he did not expect, that would make the work more expensive.

1854. Mr. *Seely.*] I think you are aware that, without any such peculiar circumstances, contractors have been paid extra sums by the Admiralty when they have lost by a contract?—No, I am not aware of any such case.

1855. Are you not aware that certain ships were contracted for, and payments much in excess of the contract were made for them?—Yes; but that was after a strict investigation of the contractor's accounts.

1856. Upon the contractor showing that there was a loss to him, according to his own account, of a certain sum of money?—No, we do not take his own account; gentlemen were sent from the department to investigate his books and examine his statements. I know two or three of those cases.

1857. I see it is stated in the Admiralty letter of the 1st of February, that a sum of 19,937 *l.* was recommended to be paid to Mr. Gabrielli as a final payment, in consequence of his loss upon a contract; who recommended that?—It was recommended by the Director of Works, after consultation

consultation with the professional officers of the Admiralty.

1858. *Chairman.*] But this is not a matter within your province at all, is it?—No, it is more a question for the Director of Works.

1859. Mr. *Pollard-Urquhart.*] As far as you understand, is it the system of the Admiralty that the contractor gets all the profits, supposing a job to turn out to be much easier than he expected; but if it turns out to be harder and more costly than he expected, you make good his losses to him?—I do not think that that is the practice.

1860. *Chairman.*] Have you known other instances of this practice being followed?—Not with regard to works; I am not cognisant of those matters.

1861. Mr. *Goldney* (to Sir *W. Dunbar*).] At the close of this Admiralty letter, in reply to which the Treasury give their assent, they say, "It is expected that after meeting this and all further estimated liabilities to the close of the financial year, there will remain a probable surplus of about 5,000 *l.* on this Vote." Against which they propose to set off certain sums. Now they do really meet the estimated liabilities at the close of the financial year, because 100,000 *l.* had been stopped on the works at Portsmouth. On Vote 11, the estimated liability upon the works at Portsmouth was 279,858 *l.*?—We do not see anything of that account; ours is an audit of classification.

1862. (To Mr. *Beeby.*) The Navy Department audits it own accounts, does it not?—Yes, as regards the examination of the sub-accountants.

1863. The audit of the Comptroller and Auditor General is merely to the extent of classification?—What is called appropriation.

1864. That is classification?—Yes.

1865. Then with reference to this 100,000 *l.* in the column, "Less than Estimated," for Portsmouth, that is not a saving, but a mere postponement of payment?—It is a postponement of payment in consequence of the contractor not being able to proceed with his work as fast as was expected.

1866. It was not in consequence of the contractor not being able to proceed with his work; but the note says, "The temporary dam over the whole area of these works being incomplete, the contractors were not paid the sums expected to be advanced to them for permanent works during the year?—They were not paid the sum that was anticipated.

Sir *W. Dunbar*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Beeby.*
Mr. *Ryan.*
Mr. *Bathurst.*

6 July 1870.

1867. *Chairman.*] The contractors had not got so far on with their work as was expected?—Just so.

1868. Mr. *Goldney.*] It was no saving, it was merely a postponement?—Clearly.

1869. Then if the contractors had done the work that they anticipated at that time, there would have been a deficiency of 95,000 *l.*, instead of a surplus of 5,000 *l.*?—Yes, if other things had remained the same.

1870. I am referring to the letter of the Secretary to the Admiralty, at page 71, where he says, that after meeting this and all further estimated liabilities to the close of the financial year, there will remain a probable surplus of about 5,000 *l.* on this Vote; it was only because there had been a postponement of 100,000 *l.* that there was that surplus?—Yes.

1871. That was the case even though the estimated liabilities had not been met to the extent of 100,000 *l.*?—Yes.

1872. *Chairman.*] Do I rightly understand that when Mr. Baxter's letter went to the Treasury, stating that there would probably remain a surplus of about 5,000 *l.* on this Vote, the Admiralty had taken into account that the contractor had not made such progress on the extension of the yard at Portsmouth as was originally anticipated?—Yes, I think most probably that was the case, because it was so near the termination of the financial year.

1873. The words "estimated liabilities" in that letter do not mean the liabilities estimated at the beginning of the year, but the liabilities estimated at the time the letter was written?—Yes.

On the Vote for Greenwich Hospital and School.

Mr. Charles Dilkes Loveless, called in; and Examined.

1874. Mr. *Liddell* (to Mr. *Beeby*).] I observe that under Sub-head I, there is an excess appearing in the column headed "More than Estimate on account of Provisions, Clothing, Bedding, and Stores," of 1,978 *l.* 2 *s.* 7 *d.*, which is the only excess of any magnitude. That is explained as being "caused by the average number of men borne having been greater than was estimated for." I presume that means, that a greater number of pensioners refused to leave the hospital than was expected when the Estimate was framed, is that so?—It arose from a greater number of men having been admitted into the hospital than was expected, in consequence of the recommendation of the Committee of 1868.

1875. Where is that explanation given?—It does not appear in this paper; the note says that the excess was caused by the average number of men borne having been greater than was estimated for; that arose from a greater number having been admitted than was expected in consequence of a recommendation of the Committee of 1868.

Mr. *Loveless.*

1876. (To Mr. *Loveless.*) Not from their preferring to remain in the hospital rather than accept of out pension?—No, they were admitting men under the recommendation of the Committee of 1866, with a very low service.

1877. In fact it was a relaxation of the ordinary regulations?—Yes.

1878. (To Mr. *Beeby.*) Going to the next page I find under the Head of Service of the Schools under Sub-section W. "Provisions, Clothing, Bedding, and Stores," there is an excess of 1,200 *l.* 16 *s.* 1 *d.*; I should like some explanation of that excess; the only explanation given is that a larger amount was required for boys' clothing, stores, &c., than was estimated?—It arises from

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Beeby.*
Mr. *Ryan.*
Mr. *Bathurst.*
Mr. *Loveless.*

6 July 1870.

from an increase of the contract prices on the item for provisions.

1879. That being a charge which, of course, could not be calculated for?—Just so.

On the Greenwich Hospital Capital and Income Account.

1880. Mr. *Liddell* (to Sir *W. Dunbar*).] According to the last paragraph of your Report upon the Accounts of the Capital and Income of Greenwich Hospital, a question seems to have arisen whether the cost of the audit of those Accounts should be borne by the funds of the hospital; that is your own suggestion?—Yes.

1881. Has any answer been received to that suggestion of yours?—No, not yet.

1882. Is it still pending?—I fancy it is still under consideration.

1883. (To Mr. *Foster.*) The question as to whether the cost of the audit of the Greenwich Hospital Capital and Income Accounts should be borne by the funds of the hospital is still under the consideration of the Board of Admiralty and the Treasury?—The Treasury has written to the Board of Admiralty upon the subject, but no decision has yet been come to. (Sir *W. Dunbar.*) I have made a like recommendation in other cases with reference to accounts where funds existed out of which the cost of audit could be met. For instance, in the case of the Irish Church Accounts, I suggested last year to the Government that the cost of audit should be paid out of the fund. That suggestion was adopted by the Government, and a clause was inserted in the Irish Church Act to that effect. In another case with respect to the Mercantile Marine Fund, I made a like proposal, considering that where separate funds exist which are not actually public funds, and where the duties of audit are thrown upon the Comptroller and Auditor General's Department, the expenses of the audit ought not to be met out of the sum voted by Parliament for the Exchequer and Audit Department, but out of the funds the accounts of which are brought within the duties of that Department.

1884. Mr. *Goldney* (to Mr. *Ryan*).] Are you able to state what the expenses of the audit of the Accounts now under consideration are to the Audit Department at the present time?—The audit takes up the time of one senior clerk; the expenses might be between 300*l.* and 400*l.* a year.

1885. You think 500*l.* a year in round figures would cover it?—Certainly, that would more than cover it.

1886. And there is nothing in the Acts of 1865 and 1869 dealing with that case?—Not in the least.

1887. It is left open?—It is left open.

1888. Mr. *Liddell.*] Does the Exchequer and Audit Act give an unlimited power of referring to the Department of the Comptroller and Auditor General any Accounts other than those of the public departments, strictly speaking?—The Greenwich Hospital Accounts are audited under a special Act; but there is power under the 33rd section of the Exchequer and Audit Act in the case of accounts not relating to Imperial funds, to have them referred to the Audit Department.

1889. The Greenwich Hospital Act specially takes power to refer to the Comptroller and Auditor General's Department, or rather imposes upon that department the duty of auditing those Accounts?—Yes.

1890. But my question is, whether under the Exchequer and Audit Act there is an unlimited power of referring to the Comptroller and Auditor General's Department any accounts other than those of public departments?—Yes, that may be done by a Minute of the Treasury.

1891. *Chairman* (to Sir *W. Dunbar*).] That applies to any accounts which are in the nature of Public Accounts?—Yes; accounts which, though not directly referring to public funds, are considered to be of sufficient public importance to warrant the Treasury in calling upon the Comptroller and Auditor General to audit them.

1892 Mr. *Liddell.*] Then I presume that the accounts of the Irish Church to which you have referred would come within that category?—No; the accounts of the Irish Church are referred to us by a special enactment; the audit of those accounts is a duty thrown upon the Comptroller and Auditor General by the Irish Church Act itself.

1893. Then unless the duty of auditing accounts is thrown by special Acts of Parliament upon you, I presume there is no power to refer accounts to you for audit?—Yes; by the 33rd section of the Exchequer and Audit Act, the Treasury have the power to refer to my department such accounts as they may think of sufficient public importance to warrant them in calling upon my department to audit the accounts.

1894. And you have no choice but to accept the duty?—No, I have no choice at all; but of course a very large amount of expenditure might thus be thrown upon the public which the public ought not properly to bear; and it was for that reason that I have, in the two or three instances I have referred to, made suggestions, in the one case to the Government, when the Irish Church Bill was under consideration; and in the other two cases, to the Treasury, that the expense of auditing the accounts of those funds which I mentioned should be paid, not by the public, but out of the funds to which the audit related.

1895. By the body benefiting, or supposed to benefit, by that audit?—Yes.

1896. Mr. *Goldney.*] Would the Treasury have the power to charge a specific account with the expenses of audit without an Act of Parliament?—Yes, I think they would.

1897. *Chairman.*] In that Act of Parliament which empowers the Treasury to refer to the Comptroller and Auditor General other accounts than those named in the Act itself, there is no provision with regard to charging expenses of that audit, is there?—No.

1898. In that case the expenses would not be chargeable upon the funds the accounts of which were audited?—If the accounts were referred by the Treasury to my department, the expenses of the audit would be chargeable upon the public, but I say that in those particular cases to which I have referred, I have drawn the attention of the Treasury to the matter, in order that the expenditure might be met out of the funds the accounts of which were audited.

1899. The question was whether there would not

not be an Act of Parliament required to throw the expense of the audit upon the funds; perhaps you are not prepared to answer that question?—No, I am not prepared to answer it; but I think that the Treasury have dealt more or less with similar matters connected with the Mercantile Marine Fund. (Mr. *Foster.*) There are certain funds over which the Treasury has control, and they might require that those funds should bear the charge of the audit.

1900. *Chairman* (to Mr. *Loveless*).] Could that be done in the case of the Greenwich Hospital Capital and Income Account?—No, the Treasury has no power over the Greenwich Hospital Accounts. (Sir *W. Dunbar.*) The Greenwich Hospital Capital and Income Account, the Committee will observe, comes to the Exchequer and Audit Department under a special Act, and therefore the expense would fall upon the public. (Mr. *Anderson.*) The question would be rather a large one as regards the Mercantile Marine Fund. (Mr. *Foster.*) The Treasury have stated to the Admiralty that they "concur in that suggestion, and request that the Board of Admiralty will issue instructions to that effect after communicating with the Comptroller and Auditor General as to the costs incurred."

1901. *Chairman.*] Where does that appear?—In a Treasury Minute to the Admiralty, sent within the last two or three days. (Mr. *Beeby.*) Perhaps the Committee will allow me to suggest for consideration, whether this principle will not be applicable to other departments, and whether it will not have a wider extent than it is now proposed to give to it.

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Beeby.*
Mr. *Bathurst.*
Mr. *Loveless.*

6 July 1870.

1902. You are thinking, perhaps, of the Navy?—There is work done by other departments for Greenwich Hospital. The Paymaster General does work for it as a banker; his work is increased a little by having those duties cast upon him. The War Office pays some out-pensions; they would have a claim for something in respect of that work. The Board of Trade does something also.

1903. Mr. *Goldney* (to Sir *W. Dunbar*).] Still I think we may deal with your suggestion as it comes before us at the present moment?—If the Account of the Marine Fund were sent to the Exchequer and Audit Department, a large amount of expenditure would be incurred in auditing it. I am by no means ambitious of swelling my Estimates if I can possibly avoid it, particularly in connection with accounts which I think do not properly fall within the functions of the Comptroller and Auditor General, as a Parliamentary officer.

On the Consolidated Fund Account.

Mr. Charles Mallet, called in; and Examined.

1904. *Chairman* (to Mr. *Foster*).] The first point that arises upon this Account is with regard to the payment on account of Maynooth College; have the Treasury come to any decision upon that?—The Treasury have come to the decision that, up to the date when the errors were pointed out to the college, the amount overpaid should not be recovered, but from that date they adopted the strictly legal view of the question, and have compelled the college to admit the deductions.

1905. That is to say, they accept the fact that there was an over-payment, but they do not think it right to require it to be recouped?—Exactly so. We did recover certain sums from the college, which had been paid since the date when the errors were pointed out by the Comptroller and Auditor General.

1906. But why was not the over-payment abated in the next payment?—We have done so for every over-payment since the date at which it was pointed out by the Comptroller and Auditor General that the over-payments had taken place, but we did not go back beyond the date of the Comptroller and Auditor General's Report.

1907. With regard to the compensation to officers of the Court of Exchequer in Ireland, that is to come out of the Superannuation Vote?—It has been transferred to the Superannuation Vote.

1908. (To Mr. *Mallet.*) That is subsequently?—From the 6th of January 1869.

1909. (To Mr. *Foster.*) And the "Exchequer Bonds paid off"; that has been adjusted has it?—That has been adjusted.

1910. Mr. *Goldney.*] Does that 600,000 *l.* appear in the Account which is before us now?—No; it has been struck out.

1911. *Chairman* (to Mr. *Mallet*).] I do not see the sum for "compensation to officers, Court of Exchequer, Ireland"; it is included in that grant by way of loan, I suppose?—Yes; it is included in that.

Mr. *Mallet.*

1912. (To Mr. *Foster.*) I suppose rightly that ought to have been struck out, ought it not?—No, because the payments had been made out of the Consolidated Fund; the Exchequer Bonds had not been paid out of the Consolidated Fund.

1913. In the other case it had been paid?—Yes.

1914. But wrongly paid?—Wrongly paid in principle, but the omission was in the Act itself.

1915. Then ought it not to have been returned?—Yes, it ought to have been returned; but it has been going on for so many years that I think it would hardly have been worth while to pay one year's amount back, considering the many years for which it had continued.

1916. Mr. *Liddell.*] As regards the authority to charge that payment upon the Consolidated Fund, does not it require an Act of Parliament?—It was formerly charged upon the Consolidated Fund, but an Act was passed transferring the salaries and other charges from the Consolidated Fund to the Votes, and it was a doubtful question of law whether these Exchequer Annuities were included under that Act or not. According to the strict wording of the Act, it was clear that they were not included. The Treasury acted upon that strict view of the law, and did not transfer them, but upon its being pointed out by the Comptroller and Auditor General, and the Committee seeming to be of opinion that the intention was to transfer them, the Treasury adopted that view, and did so.

1917. Was that view adopted by the Treasury, upon

Sir *W. Dunbar.*
Mr. *Foster.*
Mr. *Anderson.*
Mr. *Bathurst.*

6 July 1870.

upon consultation with the law officers of the Crown?—I think it was not referred to the law officers of the Crown. I think it most likely that the Solicitor of the Treasury was consulted upon the point. The original Act had placed the charge upon the Consolidated Fund, and the Treasury adopted the view that under the later Act we might be allowed to bring it upon the Votes. The effect of what we did was, therefore, to bring it before Parliament, instead of withdrawing it from the view of Parliament.

1918. *Chairman.*] In the Third Report of the Committee of Public Accounts, last year, in paragraph 9, there occurs this passage: "With regard to the Consolidated Fund Accounts, the only question that appeared to them to require particular attention was raised by the Comptroller and Auditor General, namely, whether there is any public advantage in subjecting the Accounts of the Bank of England for the distribution of dividends to examination in detail by his office, or whether the objects of Parliament are not sufficiently answered by the records afforded in the accounts submitted annually to the House of Commons, and the certificate required by section 21 of the Exchequer and Audit Act. A competent and experienced witness having been examined on the subject, replied that he would not like to give an opinion without looking into the mode in which the Bank of England keep their Accounts, and ascertaining what control and check there is that the right sum on Account of Unpaid Dividends reaches the Exchequer; your Committee, therefore, recommend that this inquiry should be carried out by the Comptroller and Auditor General, in conjunction with the Treasury, without further delay." Has such an inquiry been made?—That inquiry has been made by the Secretary of the Audit Board, and one of the chief clerks of the Treasury, and the Treasury has received a report from those officers, in which they show good reason why the audit should not be continued. I have not any doubt myself that the Treasury will concur in that view, and direct the Bank and the Comptroller and Auditor General to cease for the future carrying out that audit.

1919. It rests with the Treasury to dispense with the auditing of that account?—Yes, it does; I might perhaps be allowed to hand in the report of the officers appointed to inquire into this matter, and the Treasury Minute upon it. (*The same were handed in*).

On the Woods and Forests Account.

1920. Mr. *Goldney* (to Mr. *Anderson*).] The Committee in their Third Report of last year, say in paragraph 11, "The Accounts of the Commissioners of Woods and Forests contain numerous items of expenditure, of which a part are for salaries and the expenses of officers, and the rest for disbursements in improving the landed estate of the Crown; none of this expenditure is voted by Parliament, whilst at the same time a large amount is voted by Parliament for the official establishment, and expenses of the Commissioners of Woods and Forests. Your Committee were informed that this mode of dealing with the expenditure was settled in the year 1851, when the separation of the expenditure from the receipts of public moneys had not been so fully carried out as at present, and the practice of voting the public expenditure had not been so generally adopted. Your Committee therefore recommend that the present mode of dealing with the expenditure of the Department of Woods and Forests should be again considered by Her Majesty's Government." I see that the salaries and expenses of receivers and stewards, and so forth, amount to about 25,000 *l.*, and a large sum is paid out of the votes for that service?—All the expenses of management, with the exception of the Chief Department in London, are paid out of the income.

1921. (To Mr. *Foster.*) Have you considered this recommendation of the Committee of last year?—To some extent, of course it is a question connected with the rights of the Crown; my own opinion as regards the most efficient and economical mode of conducting the service is, that it would be very desirable to bring the whole of the charges upon the Votes; but other questions of policy, and questions connected with the rights of the Crown enter into it, which might militate against that course being adopted.

1922. (To Sir *W. Dunbar.*) Do you know, as a fact, from auditing these Accounts, that some of the receivers are paid by salary and some are paid by commission?—Yes, it is so.

1923. (To Mr. *Bathurst.*) Can you state the name of the party who is paid by commission: I think he is connected with the metropolitan property?—I think Mr. Clutton is paid by commission, but I cannot remember the exact names of those who are paid by commissions and those who are paid by salaries.

1924. Does it appear in these accounts who is paid by salary; I think one person has a salary of 1,200 *l.* a year?—No, they are all included in this item "Salaries," &c.

1925. In auditing the accounts, of course you would have been able to find that out?—Yes, I should have ascertained it in detail, but I cannot speak to it now from memory.

1926. (To Mr. *Anderson.*) I understand that when the payment is by salary, the gross amount of the receipts of rents equals the amount received by parties who are paid by commission?—If you were to pay them by commission in London they would receive a very large amount indeed, because the rents are large. The receiver sits in the office at Whitehall, he is paid by salary, whereas the per-centage receivers, I believe, are chiefly local receivers in the country.

1927. But that distinction still exists in the office at present, of a portion being paid by salary and a portion by commission? — Yes. (Mr. *Foster.*) I am under the impression that one receiver does receive large amounts in London, and receives a very large commission for it.

1928-9. I think you stated that, in your opinion, it is desirable that the whole of the charges should come upon the Votes?—That is my opinion, as a matter of account.

The Right Honourable JAMES STANSFELD, a Member of the Committee; Examined.

Mr. *Foster.*
Mr. *Anderson.*
Mr. *Stansfeld,* M.P.

6 July 1870.

1930. *Chairman.*] HAS the recommendation of the Committee with respect to the Woods and Forests department received the attention of Her Majesty's Government?—Yes; the recommendation has been taken into careful consideration. As the Committee are aware, the charge for the head establishment of Woods and Forests is placed upon the Vote by Act of Parliament, 14 & 15 Vict. c. 42. The other expenses are not charged upon the Estimates, but the Trust of the Commissioners of Woods is to pay over into the Exchequer the net income of the Crown Estates in their management, after deducting all the expenses of management, save only those of the Head Establishment, excepted by Act of Parliament. If the suggestion of the Committee were to be adopted it would be necessary to introduce a Bill to modify the Civil List Act and the previous legislation; and the Government came to the conclusion that such a course could not be taken without the previous full assent of the reigning monarch, and that as a matter of policy it was not advisable to raise the question.

1931. Mr. *Goldney.*] The public are entitled to the whole profits of these Land Revenues during Her Majesty's life, are they not?—After deducting the expenses of management.

1932. The public are entitled to the whole income arising from them under the Act passed at the beginning of the reign?—The whole net income.

1933. We are not now speaking of the Act of 14 & 15 Vict., but of the Act passed at the commencement of the reign?—Yes, it is the net income only that goes to the public.

1934. Still they have a control over the mode in which this income is derived?—The administration of the Crown Estates by the Woods and Forests Department is more or less under the control of the Treasury, but the trust under the Act of Parliament is to pay over to the Exchequer the net income after deducting the expenses of management.

1935. Then the 14th & 15th Victoria, by which the State takes upon itself a portion of that management, is an alteration of that original agreement?—Yes, it is.

1936. Having made that alteration, do you not think that it is competent to Parliament to consider the question whether they might proceed further, and make further alterations?—It is perfectly competent to Parliament in the full constitutional sense of that word, that is to say, the Queen, Lords, and Commons, to modify the Civil List Act.

1937. Do you agree with Mr. Foster, that as a question of economy, it would be desirable to do so?—No, I am not prepared to agree with him; but I should say that I am prepared to agree with what I imagine is implied in his opinion, namely, that economies could be effected in the administration of those estates, but I do not think the only way to effect them is by placing the charges of the administration upon the Votes.

1938. Then would you recommend anything with reference to this passage in the Report of last year?—The conclusion, as I have already intended to say, at which the Government arrived, was not based upon an exhaustive consideration of the question whether such a charge would be *per se* advantageous, and conducive to economy or not; but it was based upon the view that it would be calling upon the sovereign to assent to a serious modification of the Civil List Act, and of the terms upon which the revenues of the Crown estates have always been surrendered to the public during the life of the reigning sovereign, and that that was not an advisable proposal to make.

1939. Mr. *Liddell.*] With regard to the mode of keeping the accounts of these Crown Estates, would it be possible to comply strictly with the provisions of the Exchequer and Audit Act, in so far as those provisions require the absolute surrender at the end of the year of all those balances. You must, in the management of a landed estate, retain, as I see they do retain, very large sums. I see the very first item in the account is "To balance, 72,318 *l.*" It is necessary to keep these large balances in hand for the management of large and important estates like this, and I presume that it would be impossible, in the management of those estates, so to comply with the provisions of the Exchequer and Audit Act as to require absolutely that the balances should be surrendered at the end of the year?—It does not appear to me that that would be a practical difficulty. As I understand, the suggestion is that the expenses of management should be chargeable to the Votes. Now, a vote might easily be taken for the expenses of management, and the unexpended balance of that Vote might be surrendered. That would be a totally different question from the question as to the way in which you would deal with the revenue.

1940. But the whole balance is not surrendered, because, of course, a large balance is left annually in the hands of the Commissioners of Woods and Forests at the commencement of every financial year, for the purposes of management?—Not of paying the expenses of management, so much as of dealing with the estates.

1941. I presume no material alteration in that respect could be made?—I am not prepared at this moment to say what changes would be necessary, but certainly the decision of the Government was upon the general ground of policy. I do not apprehend that there would be any insuperable difficulty in bringing the accounts of this department under an appropriation audit.

1942. (To Mr. *Foster.*) In the first column, under the head of "Receipts," there appears to have been a balance in the hands of the Commissioners of no less a sum than 72,318 *l.* and some odd shillings; I wish to know whether that large balance is left in their hands for the purpose of management?—I imagine that that is a sum which they keep in hand to meet any expenditure which they may be called upon to incur, either on account of management, or on account of the purchase of estates which they sometimes carry out.

1943. *Chairman* (to Mr. *Anderson*).] The purchase of estates would be on the Capital Account, would it not, and this is the Income Account?—The balance of income consists partly

Mr. *Anderson.*

6 July 1870.

of cash at the bank, and partly of balances in the hands of receivers and other persons who are concerned in the management of the estates, and it is understood that the balance should not be larger than they actually require for carrying on the service. The fact is this: the income of the year was about 446,000 *l.*; the outgoings chargeable upon that income amounted to 88,000 *l.*, so that the net revenue was 358,000 *l.* payable to the Exchequer, and they paid over 360,000 *l.*

1944. Mr. *Goldney.*] The question was, what necessity is there for keeping so large a balance as 72,000 *l.* in hand?—Probably, at the beginning of the year, there are very few rents coming in, and they require a certain sum to conduct their business.

1945. *Chairman.*] If you will look at the other side of the account, you will see that the expenditure for the year was 39,000 *l.*?—No, 88,000 *l.*

1946. Mr. *Goldney.*] It comes practically to this, that they keep the whole expenditure of the year in their own hands, at the beginning of the year, without looking to any of the receipts?—Not all, because a portion of it is distributed amongst their sub-accountants; but I admit that the amount of balance necessarily retained in hand for management is a proper subject for investigation.

Wednesday, 13*th July* 1870.

MEMBERS PRESENT:

Mr. Candlish.
Lord F. Cavendish.
Mr. A. Egerton.
Mr. Goldney.
Mr. Liddell.
Mr. Pollard-Urquhart.
Mr. Sclater-Booth.
Mr. Stansfeld.

WILLIAM POLLARD-URQUHART, Esq., IN THE CHAIR.

The Hon. CHARLES A. GORE, called in; and Examined.

Hon. *C. A. Gore.*
13 July 1870.

1947. *Chairman.*] You are one of the Commissioners of Woods and Forests?—I am.

1948. Mr. *Liddell.*] Will you be kind enough to tell the Committee why so large a balance of income as 72,318 *l.* 2 *s.* 3 *d.* appears to have been in the hands of the Commissioners of Woods and Forests on the 1st of April 1868?—The rents are received half yearly, and therefore it is necessary to keep such a balance in hand as will be sufficient to meet all the contingencies until the next half yearly rents are paid.

1949. Then are we to understand that it is customary to keep a balance of or near to that amount?—No; the balance on the 31st of March 1870 was 55,000 *l.*; it was a less sum than the balance in the previous year.

1950. Then we are to understand that the balance I have referred to was an exceptionally large balance?—It was an exceptionally large balance.

1951. Are you able to explain the exceptional circumstances under which it accrued?—No, I cannot at this moment.

1952. *Chairman.*] To the best of your recollection, were there any exceptional circumstances that year that made you think it necessary to keep an exceptionally large balance in your hands?—It is two years ago; I cannot say offhand,

1953. The net income paid into the Exchequer that year was 360,000 *l.*?—Yes.

1954. Mr. *Sclater-Booth.*] Do you think it important to equalise the payments into the Exchequer from year to year, and for that purpose hold over an exceptionally large sum to meet a deficiency below the average in another year?—That is one of the reasons why it is desirable to keep a balance.

1955. Mr. *Candlish.*] Why is it of importance to pay in a uniform sum?—The sum paid in is not uniform; it is an increasing sum.

1956. Mr. *Sclater-Booth.*] My question was, whether you considered it of importance to pay in a uniform sum into the Exchequer from year to year?—Not a uniform sum; for, as I stated last year in my evidence, the amount paid into the Exchequer in 1852 was 252,000 *l.*; in the year ended 31st March 1870 the amount paid into the Exchequer was 375,000 *l.*, and the estimated payments into the Exchequer in the current year will be 385,000 *l.*; therefore it is not a uniform but an increasing sum.

1957. Mr. *Candlish.*] What is the nature of the current liabilities throughout the half year?—There are the payments to receivers; in fact, the payments for all expenditure connected with the management of the property.

1958. Could you not so arrange your proceedings as that you should be left with a much smaller sum in hand?—I think in 1868 it was an exceptionally large sum, but I stated that last year it was 55,000 *l.*

1959. What do you regard as the normal balance that you must necessarily have in your hands?—I should think 40,000 *l.* would be sufficient.

1960. Then the 59,000 *l.* will be equally exceptional, or if not equally exceptional in degree, at least of the same nature?—Yes; but I think it will be less the next year.

1961. Mr. *Liddell.*] There is nothing which strikes an observer, I may say an outside observer, so much in looking over this account as the very small amount of the net receipts from what may be called the Royal Forests, as compared with the outgoings; can you give us any explanation of that?—The Royal Forests are not under me.

1962. Could you give us some idea of the reasons for the comparatively small net receipts?—The reason is that the woods are growing, and therefore until they arrive at maturity you can no more realise profit from them than you can from a crop of corn in June, which was sown in October. It is an unripe crop. During the whole century, from the time of William III., I believe, until 1811, there was very little planting done in the Royal Forests, therefore there is no succession crop; there only remained what had been planted about the time of William III., until 1811, when the system began of planting portions of forests under an Act of Parliament.

1963. Annually?—Yes, annually; and now there are 40,000 acres of growing timber which have not arrived at maturity. When they arrive at maturity, as the trees vary from one year old to 50 or 60 years old there will be a succession of crops; there will be a portion to be cut down every year and the land as cleared to be replanted.

1964. The profits now derived from cutting down timber are very small compared with what they will be?—The profits now are only derived from the thinnings, and from the very little that

Hon. *C. A. Gore.*

13 July 1870.

remains of the old timber of 160 or 170 years' growth.

1965. For the sake of illustration, I will exemplify the question I have just asked, by referring to Windsor Parks and Woods; I find that the receipts in the year 1868-9 were something short of 7,000 *l.*; 6,925 *l.* 8 *s.* 6 *d.* as against an expenditure of 20,054 *l.* 3 *s.* 7 *d.*; is that to be accounted for by extensive plantings done in that year?—No; there was no planting there, or, if any, a very inconsiderable amount. I was asked the same question by this Committee last year. Perhaps you will let me read the answer I gave then, for I think it states all I can say upon that point. "You are aware that there are 13,000 acres of pleasure ground which cost a considerable sum to maintain. The details of this amount of expenditure will be found in the Annual Reports to Parliament of the Commissioners of Woods. This park and the pleasure grounds, with the extensive plantations surrounding it, together with Ascot racecourse, and the estate of Bagshot, Virginia Water, &c., containing altogether about 13,000 acres, are not maintained for the purposes of revenue, but as part of the domain attached to Windsor Castle, the residence of the Sovereign, and for the enjoyment and recreation of the public. It would be obviously unreasonable to consider the income arising from and the expenditure upon this property as a matter solely of profit and loss," any more than it would in the case of Hyde Park and Richmond Park, and other parks which are pleasure grounds, and not laid out for profitable investments.

1966. Now I will go to one more item; I find that the income derived from the receipts from the New Forest amounts to 15,534 *l.* 7 *s.* 5 *d.*, but the expenditure amounts to 13,766 *l.* 14 *s.* 5 *d.*; is that to be accounted for by extensive planting?—Yes.

1967. I believe I was right in saying that the plantations are very extensive, and are going on remarkably well?—Yes.

1968. Mr. *Sclater-Booth.*] They are under the charge of Mr. Howard, I believe?—Yes, they are under the charge of Mr. Howard. A few years ago the New Forest Deer Removal Act was passed, by which the Crown gave up its right of deer feed, and was allowed to take in 10,000 acres for planting, and those 10,000 acres are being taken in, and therefore since the passing of that Act the planting has been very extensive.

1969. Mr. *Candlish.*] One word more upon this question of balances; it is your rule, is it not, to retain in hand money enough for your probable disbursements until the following half year?—Yes.

1970. Have you not always money coming in from time to time, perhaps from week to week, throughout the half year?—Yes; but the two periods of the year when the money comes in more freely are the two periods when the half-yearly rents are being paid either in London or in the country.

1971. I suppose you do not get your rents when they are due; like other people, you get them when you can?—Our Lady Day rents are payable about May to July; the Michaelmas rents are payable about November to January.

1972. They are payable, but not paid then, I suppose?—They are payable at Lady Day and Michaelmas, but they are paid practically as I have stated.

1973. What is the smallest balance you may have in hand throughout the currency of any ordinary half year?—The payments are made into the Exchequer every quarter.

1974. You speak of having a balance in hand of 59,000 *l.* at the end of a given half year?—Yes.

1975. To what sum may that be reduced; what is the lowest point to which that sum will come throughout the currency of the succeeding half year?—Perhaps on or before the 24th of June there will be paid into the Exchequer nearly a fourth part of the total sum to be paid in during the year.

1976. Mr. *Sclater-Booth.*] The point is this: You had 70,000 *l.* in hand at the beginning of April; how low is that reduced before the spring rents come to be paid, in May or June?—I could not tell you offhand.

1977. Mr. *Candlish.*] You subscribe to its being a sound policy that no money should be kept in hand beyond what is necessary to meet the liabilities?—Yes; that is the intention of the Act of Parliament.

1978. Then if you never have less than 30,000 *l.* in hand, you will always have 30,000 *l.* too much?—I do not see that.

1979. Does not it follow?—I think that the Crown Account is very much like any of our own accounts. We must not exhaust our account at our bankers, because we have current payments coming upon us week after week. If on the 31st of March we were to exhaust every farthing that we had at our bankers, we should have to overdraw our account the following week in order to meet our ordinary expenditure; therefore you must keep a balance in hand, and the question is what the amount should be.

1980. Do you make an estimate of your probable receipts and expenditure; when you determined to keep the 70,000 *l.* in hand, was that dependent upon an estimate?—Yes, it depends on an estimate; because each year it is necessary to inform the Chancellor of the Exchequer, before the Budget is brought in, what will be the probable sum to be paid into the Exchequer in the coming year, and in order to arrive at that probable sum it is necessary to estimate what will be the probable outlay and what will be the probable receipts.

1981. Mr. *Sclater-Booth.*] Can you tell us how far you are able to draw upon this balance of 70,000 *l.* before the summer rents come in?—I cannot at the moment, but I will look into it.

1982. I observe that the balance at the beginning and at the end of the year 1868-9 was about the same, namely, about 70,000 *l.*?—It was.

1983. It is 72,000 *l.* odd at the beginning, and 70,000 *l.* odd at the end?—So it appears by the account.

1984. Mr. *Liddell.*] Perhaps you will have a statement prepared in the office to satisfy the Committee on that point?—I will.

1985. Mr. *Candlish.*] Is it your policy to reduce your money in hand down to your necessities, that is to say, to the minimum which your necessities require?—Yes, it is.

1986. Mr. *Goldney.*] I drew the attention of the Committee last time to this circumstance: the whole expenditure is only 88,000 *l.*, and a very large portion of that consists of salaries; it would

would be hardly necessary to keep so large a balance if the salaries were paid at the same time that the rents were received?—That is the fact.

1987. Looking at the facts of the whole expenditure being 88,000*l.*, and a large portion of that being salaries payable at intervals, could it be necessary to keep anything like 70,000*l.* in hand; I understand that this is in addition to the balance of 73,000*l.* upon the Capital Account?—That is entirely distinct from the Capital Account, because the Capital Account can only be applied to purchases or investments in Consols.

1988. It is an additional sum in the hands of the office?—In the Bank of England.

1989. Mr. *Candlish.*] Whose duty is it to determine what shall be the sum kept in hand; is it the Chief Commissioner's?—Yes.

1990. Mr. *Goldney.*] Where is the line of distinction drawn as to the Woods and Forests' management over a portion of Windsor, and the Chief Commissioner of Works' management over another portion?—The Chief Commissioner of Works has to do with what is voted by Parliament.

1991. He has to do with the whole of the palace and gardens, has he not?—No, only the palace, and whatever is maintained out of the vote of Parliament. The Commissioners of Woods have to manage all that property, the expenditure on which is defrayed out of the income of the land revenues.

1992. Is that line of demarcation defined by Act of Parliament; the Chief Commissioner of Works has all the royal parks here under his charge?—Yes, except Windsor Park.

1993. And certainly the palace of Windsor?—Yes, Windor Castle is under him.

1994. Is the line of demarcation defined by Act of Parliament, or do the Woods and Forests manage all that has not been taken away from them?—The limits of the palaces and the property maintained by the Department of Works are defined by Act of Parliament, and whatever is not defined by Act of Parliament they do not maintain. Therefore all other parts of the Crown property not defined by Act of Parliament are maintained by the Commissioners of Woods.

1995. I was not quite certain whether there was a schedule or not?—The schedule is in the Act.

1996. *Chairman.*] You practically receive the rents on the day on which they are payable, that is to say, you receive Michaelmas rents in November, and Lady-day rents in June?—Yes, about that time.

1997. Then you look upon the income arising from rents as a tolerable certainty, do you not?—Yes.

1998. It was stated by one of the witnesses last Wednesday that some of the stewards of manors were paid partly by salary and partly also by commission; can you state what amount is paid in salaries and what amount in commissions?—I thought all the stewards are paid by commission, and none by salary; I am informed, however, that what you say is quite true.

1999. Mr. *Goldney.*] You have the words "by salaries" as well as "per-centage of receivers," the two together amounting to 9,507 *l.* – *s.* 10 *d.*, this account?—There are one or two little manors in Bedfordshire in which a salary of 5 *l.* or something like that is given.

2000. Is not one of the London receivers paid by salary?—Both are paid by salary; I think the Chairman's question referred to stewards of manors. Both the London receivers are paid by salary.

2001. *Chairman.*] And all the others are paid by commission, if I understand you rightly?—Yes, all the others under me are paid by commission.

2002. "Commission" meaning a per-centage upon the rents?—Yes, it means a per-centage upon the rents.

2003. Then of course there is no necessity to keep any balance in hand to pay those who are paid by commission on the rents, because they deduct the amount due to them as they receive the rents?—Yes.

2004. Which do you think is the more satisfactory way of paying?—By per centage; but not in the case of a London property like the Crown property, because the receivers of Crown property in London have nothing to do with the management; they are mere collectors of the rents, and the collection of the Crown property in London does not cost more than 1 per cent.; but in the country districts the receivers manage the property, and therefore an entirely different principle of payment becomes necessary.

2005. Is there any principle laid down for defraying a certain portion of the expenditure from your gross receipts, and defraying a certain portion of it from the Vote for Woods and Forests?—The portion that is paid by vote of Parliament is the salaries of the Office of Woods, according to an Act of Parliament.

2006. Then, if I understand you right, no actual salaries are paid by the department of Woods and Forests out of their revenue?—Only one receiver under me is paid by salary out of revenue.

2007. Mr. *Goldney.*] All the establishment charges are paid out of the vote?—Yes, all the establishment charges are paid out of the vote.

2008. That, I think, is the distinction; all the establishment charges are paid out of vote, and all the other charges are paid either by deduction from the receipts, or by the Woods and Forests department itself?—Yes.

2009. *Chairman.*] I see an item in your account for "fixed charges, pensions, stipends, and allowances, 5,068 *l.* 13 *s.* 5 *d.*"?—Those are charges made by sovereigns when they had the power of charging the estates; they were what are called fixed pensions; they have been recently transferred to the Consolidated Fund, and they will not appear in this account any more; that was done by an Act of 1866.

2010. If by chance you were out of funds to meet any demands that came upon you, could you get credit, or what should you do?—Such a thing has not occurred. I think we should have credit.

2011. Mr. *Candlish.*] Who would trust you?—I do not know, I am sure; nobody ought to be asked to do so.

2012. In other words, where would you get the money?—Such a thing could not occur; that is one of the advantages of keeping a certain balance in hand to meet such possibilities.

2013. Would the difficulty of obtaining money be so very great as to make it necessary to keep a large balance in hand to meet such an emergency?—I do not think that a large balance need be retained.

Hon. *C. A. Gore.*
13 July 1870.

2014. Mr. *Goldney.*] Are the rents paid into the account of the Woods and Forests intact, and is the expenditure drawn by the Woods and Forests department, or do the receivers pay themselves in the first instance, and then pay in the balance?—They have the right to deduct the poundage, but no other deduction without a special authority.

2015. All the moneys due to the Woods and Forests department are paid in intact, except the poundage?—Yes.

2016. And all the expenditure is drawn by yourselves upon the account of the Woods and Forests to meet those charges?—Yes.

2017. But the poundage is not paid in, but deducted?—Yes.

2018. *Chairman.*] If all the expenses were paid by a vote of Parliament, and there was any sudden demand upon you, you would be able to get the money to meet that demand in the same way as any other department does, would you not?—If the Treasury would advance a sum for that purpose out of some general fund we could, but not otherwise.

2019. Mr. *Candlish.*] It would become a case for the Insolvency Court, would it not?—I should think so, but it has not arrived at that yet.

2020. *Chairman.*] With reference to such items as the expense of maintaining the pleasure grounds which have been referred to recently, would it not, in your opinion, be better if all such expenses were defrayed by a vote of Parliament?—I think the Secretary to the Treasury explained that matter not long ago.

2021. Would not the whole system work better if they were so defrayed?—I do not think it would.

2022. The Secretary to the Treasury explained to us why they were not, but we want your opinion as to whether it would not work better if they were?—No, I think it would not work so well.

2023. Mr. *Sclater-Booth.*] Do you consider the present system of the administration of the Crown property an economical one, on the whole?—I believe it is as economical, or almost as economical, as that of any private property in England.

2024. What do you put the per-centage of management at?—I find that "the gross revenue in the year 1868-9 from" the land revenue, that is, excluding the forests and Windsor Park, which are exceptional properties, amounted to 396,641*l.* 10*s.* 3*d.*, and the Parliamentary and other deductions imposed upon or payable out of that sum amounted to 39,443*l.* 2*s.*

2025. Mr. *Liddell.*] What is that document from which you are reading?—This is a memorandum which was prepared this year, entitled "Observations respecting the Woods, Forests, and Land Revenues of the Crown."

2026. Is it private?—Yes. The deductions for management amounted to 39,443*l.* 2*s.*; that is divided in this way: "property tax allowed to Crown tenants, and various other fixed charges, over which the Commissioners of Woods have virtually no control, 4 per cent.;" that is perpetual pensions and other such charges: "works for the improvement and preservation of the Crown property, such as repairs of farm buildings, &c., 1 per cent.: donations to churches, schools, &c., 1 per cent.: miscellaneous charges, surveys, and local agency, collection and management, 4 per cent.," making a total charge of 10 per cent.; that is, 39,000*l.* upon 390,000*l.*

2027. That charge of one per cent. from repairs of farm buildings, &c., as compared to the charge for that purpose on ordinary estates is, I should say, rather a low charge?—Yes, it is a remarkably low charge.

2028. Are your farm buildings in good order?—Yes; I really believe that the Crown property is as respectable a property as any in England.

2029. Mr. *Candlish.*] You are bad landlords, in fact, are you not; you spend very little on improvements?—No, we spend a good deal on improvements.

2030. That is out of capital?—Yes, and we get a good return for that expenditure.

2031. Mr. *Sclater-Booth.*] You get full rack rents for all the property, do you not?—We are obliged to do so; the receiver, when he certifies the value of a farm for re-letting, is obliged to make a declaration, which is equivalent to an oath, that it is the full and fair value of the property.

2032. You send in to the Chancellor of the Exchequer in the winter the sum which you estimate will be payable from your surplus revenues into the Exchequer, do you not?—Yes.

2033. Supposing you find in the course of the year that that payment may be augmented, you make the augmented payment, do you not?—Yes, an augmented payment has been repeatedly made.

2034. Mr. *Goldney.*] Is the sum of 35,000*l.* which has appeared for some years as irrecoverable rents, intended to be written off altogether, or is it supposed eventually to be recoverable?—It is thought that it is not right altogether to write it off, because at some time some of the people indebted may become possessed of money, which would then be applied to the payment of this debt.

2035. That has not been altered in amount; I mean that it has been 35,919*l.* for two years?—I do not myself believe that it ever will alter its character, but that is the reason why it is considered not to be right to strike it off altogether, because it is supposed that at some future time the debtors may become possessed of some money which would then be made applicable to the payment of this debt.

Sir WILLIAM DUNBAR, Bart., Mr. WILLIAM GEORGE ANDERSON, Mr. MORGAN HUGH FOSTER, C.B., and Mr. CHARLES LISTER RYAN, called in; and Examined.

Sir *W. Dunbar.*
Mr. *Anderson.*
Mr. *Foster.*
Mr. *Ryan.*

2036. *Chairman* (to Mr. *Anderson*).] If I recollect right, you gave evidence before the Public Moneys Committee, which sat about the year 1856 or 1857, respecting the advisability of the different departments holding separate balances in their hands, did you not?—So many questions came before that Committee, that I scarcely recollect the evidence that I gave upon that subject; but I have no doubt that that was one of the questions that was raised before the Committee.

2037. Was not one of the results of that Committee

mittee this, that instead of different balances being kept up for a variety of departments, all the balances were mixed together, and by that means a greater economy was effected in the balance?—That question had reference to the Paymaster General's balance; it had been contended that the Paymaster General should keep a separate balance upon every vote, but as there were 200 votes for the Civil Services, the Government considered that that required a very large amount of dead balance to remain in the Bank of England. The Paymaster General contended that it was desirable to place all the balances in one fund, by which a great economy would result from leaving a large amount in the Exchequer, which otherwise it would be necessary to issue to the Bank.

2038. Following out that principle, if all the expenditure of the Department of Woods and Forests was defrayed by a vote of Parliament, a very considerable economy in the balance of that department might be effected, might it not?—If the whole of the expenses of the Woods and Forests Department were defrayed by vote of Parliament, of course the revenue would be paid in in gross and the money would be drawn out of the vote from day to day to meet the ordinary expenditure.

2039. Then if it was drawn out of the same balance which was applicable to other votes, you would not recommend so large a balance as 70,000 *l.* being retained in hand just to meet the expenditure of the Woods and Forests Department alone, would you?—No; it would release nearly the whole of that balance to the Exchequer.

2040. Mr. *Goldney.*] With regard to the capital account of the Woods and Forests, they cannot expend any portion of that without an order from the Treasury, can they?—No; the capital remains there for investment.

2041. The Woods and Forests Department cannot re-invest any portion of the capital except upon an order from the Treasury?—No; because the whole department is under the control of the Treasury.

2042. As regards their revenue, they can spend that without an order from the Treasury, can they not?—The whole expenditure is authorised by the Treasury, though not specially as regards the Revenue Account. Most of the expenses are under permanent orders from the Treasury.

2043. Virtually the expenditure of the Revenue Account is under the control of the Commissioners of Woods simply?—Precisely.

2044. But the Commissioners have no power to make any expenditure or re-investment on Capital Account without a special direct order for the purpose from the Treasury?—I am not quite sure whether they require an order from the Treasury to invest their surplus cash in Consols.

2045. Except in the case of an investment in Consols, if they invest money in the purchase of estates or buying-up anything, they must have a special direct order from the Treasury?—Undoubtedly. The Treasury undertake the control of the whole department, nor can any large expenditure be made without their authority.

2046. No expenditure, either large or small, can be undertaken on the Capital Account without a special order from the Treasury?—No.

2047. If that is the case, what do you suppose is the object of keeping such a balance as 73,000 *l.* in hand?—It is frequently necessary to keep a larger balance than would otherwise be necessary upon the Capital Account; for instance, if they were contemplating a purchase, it would be necessary that they should have cash in order to complete that purchase, and the negotiations may take some time. I believe the practice is that whenever the cash balance is large, and it is not contemplated to apply it immediately in the purchase of an estate, it is invested in Government securities, and then they sell out when the money is required to complete the purchase.

2048. Does the Capital Account show the amount invested in public securities?—There does not appear to have been an investment during the year 1868–9, except a small sum.

2049. What is the total amount invested in Government securities?—£. 59,000 is the total amount of stock; that is the whole amount of balance that was held in stock.

2050. Does the account show the capital standing in stock to the credit of the Woods and Forests Department?—At pages 2 and 3 you will see the Capital Account with the balances stated. The balance is pretty nearly the same at the end of the year as at the beginning. There appears to have been only one small purchase of stock during the year, and no sale.

2051. What I wanted to get at, if the account shows it, was the total amount of stock belonging to the Woods and Forests Department?—£. 59,000 is the whole amount.

2052. Mr. *Liddell* (to Mr. *Foster*).] I presume it is by a Treasury Order alone that the accounts of the Commissioners of Woods and Forests have been referred to the Comptroller and Auditor General for the purposes of audit?—It is by Act of Parliament, not by Treasury Order.

2053. Mr. *Stansfeld* (to Mr. *Ryan*).] Does that apply to the Revenue Accounts?—Yes; both the Capital and Income Accounts of the Woods and Forests Department.

2054. Mr. *Liddell* (to Mr. *Foster*).] What is the Act of Parliament to which you just now referred?—The 14 & 15 Vict. c. 42. Under that Act the accounts were referred to the Commissioners of Audit. (Mr. *Anderson.*) There was an Appropriation Account required for the capital and income of the Land Revenue before the passing of the Exchequer and Audit Act.

2055. Mr. *Sclater-Booth.*] You mean that the Comptroller and Auditor General inherited that with his other burdens?—Yes.

2056. Mr. *Stansfeld.*] Your audit of this account is quite of the same nature as an Appropriation Audit?—It is of the same nature as an Appropriation Audit, but this is not an Appropriation Account, properly speaking.

On the Civil Contingencies Fund Account.

2057. Lord *F. Cavendish* (to Mr. *Foster*).] At page 14 of the Comptroller and Auditor General's Report, it is stated, "Your Lordships will perceive that the total amount of advances shown to have been outstanding on 31st March 1869, is 137,180 *l.* 17 *s.* 10 *d.* If from this amount the sum of the above mentioned items, viz. 440 *l.* 2 *s.* 7 *d.*, be deducted, there will remain a total of 136,740 *l.*, 15 *s.* 3 *d.* advanced from this fund during the year 1868–9, or 16,740 *l.* 15 *s.* 3 *d.*, in excess of the fund of 120,000 *l.*;" showing that the

Sir *W. Dunbar.*
Mr. *Anderson.*
Mr. *Foster.*

13 July 1870.

the fund has been overdrawn to the extent of 16,000 *l.*?—Yes.

2058. Then it goes on, "I may observe that this is the second occasion since the establishment of the Civil Contingencies Fund, in 1862, upon which the permanent balance has been exceeded. The previous instance was in the year 1866–7, and was noticed in my Report, dated 19th July 1867, upon the accounts for that year, but the evidence given before the Committee on Public Accounts, upon which their Report of 19th July 1861 was founded, shows that a sum of 120,000 *l.* was then considered as amply sufficient for the current purposes of the fund"; do you consider that the circumstances have so far changed that the sum of 120,000 *l.* is not now sufficient?—I think that this question leads up to the point which I raised once before as to the mode of meeting expenditure which must be incurred on votes which have run short. There is no other means at present of meeting such a deficiency except out of this Civil Contingencies Fund. If the proposal which I made, of exceeding the vote, and leaving it as an excess of expenditure upon the vote, were adopted, we should then not have to go to the Civil Contingencies Fund to meet all excesses of expenditure which may arise upon the several votes of Parliament. Provided we had not to meet these excesses upon votes, no doubt the Civil Contingencies Fund of 120,000 *l.* would suffice for all incidental and unforeseen expenditure which does not fairly fall under votes; and I think that in granting 120,000 *l.* as a fund to meet incidental and unforeseen expenses Parliament hardly intended that the fund should meet the excesses of expenditure upon votes.

2059. Then you consider that either there must be a change in the system of providing for excesses upon votes, or that this sum of 120,000 *l.* must be increased?—I think so, otherwise occasions will occur when the fund will be overdrawn.

2060. Was the chief cause of the excess upon this occasion due to the excesses upon votes being charged upon this fund, or was there any other large draft upon this fund?—You may say that the excess was due entirely to the excesses upon votes being met out of the fund.

2061. Mr. *Liddell.*] There is a remark in the Comptroller and Auditor General's report, that it is not known in his department when the large advance of 4,440 *l.* 17 *s.* 5 *d.*, on account of the Emigration Commissioners, took place; can you give the Committee any information upon that subject, because I cannot find that any answer was given to that *quasi* question of the Comptroller and Auditor General?—The advance took place in 1859. The circumstances were these: the Emigration Commissioners had chartered a ship to carry out emigrants, the "John and Lucy," which was wrecked off the coast near Pernambuco. Two other vessels had to be chartered to carry on the emigrants to the Cape of Good Hope, which was their destination. This involved very heavy expense, and the agreement come to with the Colony, after considerable correspondence, was that the Imperial Government would bear half, and that the Colonies would bear half. I believe, according to the view of the Colony, they have repaid their half, but we claim that they have not paid their portion by the sum of 4,440 *l.* 17 *s.* 5 *d.*, and for a long time a discussion has been going on between the Imperial Government and the Colony as to the payment of that sum, but the final decision is that the Imperial Government will surrender its claim.

2062. Then it will be wiped off as a bad debt?—Yes.

2063. There is a very large sum, amounting to 37,395 *l.* – *s.* 11 *d.*, due from the Republic of Uraguay, and the Treasury Minute raises the point "whether Lord Clarendon is of opinion that the time has arrived when steps might be taken for the recovery of the debt in question"; are you aware whether the late Lord Clarendon has expressed any opinion to that effect, after the Minute was written?—There have been several communications with the minister on the spot upon the subject. He has always urged the Government to delay taking any steps to recover the debt in consequence of the great pecuniary distress of the country; but Lord Clarendon, before his untimely death, had given directions, at the instance of the Treasury, to press for the immediate payment in very urgent terms, and that despatch is now on its way to Monte Video.

2064. Mr. *Goldney.*] Did I rightly understand you to say that there was a formal answer from the Foreign Office to the Treasury Minute on that subject?—The Foreign Office sent over a draft despatch which they proposed to write to the minister at Monte Video, and the Treasury suggested certain alterations, making it still more urgent, which were readily accepted by the Secretary of State for Foreign Affairs.

2065. Mr. *Egerton.*] You stated, as I understood, in reply to Lord Frederick Cavendish, that you thought there were objections to the system of drawing upon the Civil Contingencies Fund in aid of excesses upon votes, and that you thought a better system might be devised; I did not quite understand what you would propose instead of drawing upon the Civil Contingencies Fund?—The department would be authorised by the Treasury to overdraw the cash account of the vote, allowing the Paymaster General to meet the excess out of his general balances.

2066. Then it would be necessary to provide a Supplementary Estimate?—As soon as the Appropriation Account was made up, an excess vote would be taken if the vote had been exceeded; but it is quite possible, that although on the cash account of the vote there may be an apparent excess of drawing over the money voted, yet, when the Appropriation Account is completed, it may turn out that there is no excess at all. The first operation merely touches the cash account, and it is cash that is supplied to meet the payments, but it may turn out that large sums are in the hands of sub-accountants abroad, which have not been spent, although they were issued out of the Exchequer, and that therefore there has not really been an excess of expenditure upon the vote.

2067. Mr. *Liddell.*] Am I right in supposing that the estimate on which the votes of Parliament for the purposes of civil contingencies are taken is rather a comparison with the accounts of a previous year than a regular estimate, which, I presume, it would be impossible to frame, for the very name would suggest the difficulty of framing a correct estimate of contingencies?—There is no estimate of civil contingencies: it is a permanent fund of 120,000 *l.*; it is a deposit fund

fund, out of which we meet unforeseen expenditure, as far as it is necessary, or as far as the money goes, and whatever final expenditure has been met out of this fund appears in the following year amongst the votes; then, as soon as Parliament has granted the money, it is replaced to the credit of the Civil Contingencies Fund.

2068. Then it is exactly the reverse process of any ordinary public account; it is an account rendered after the payment is made instead of an estimate framed in anticipation of expenditure? —Yes; the portion which falls into the subsequent vote is a list of payments which have been made.

2069. Mr. *Sclater-Booth.*] Do you think it is desirable to continue the publication of the list of payments in the Estimates of the current year; we have now before the Committee of Public Accounts the account of the Civil Contingencies Fund from year to year; do you not think that it is somewhat misleading to Parliament, when they vote the sum of 120,000 *l.* for Civil Contingencies, to have before them the items which have been paid out of that fund in the previous year, and which really never may be repeated again; you are probably aware that there are constant mistakes made and difficulties arising in Parliament by reason of this account being mixed up with the Estimate, and that there is a disposition to vote against the Estimate for Civil Contingencies on account of the sums which have been spent from it in the previous year?—The sums spent in the previous year are brought into one of the votes of Parliament in Class 7.

2070. Mr. *Goldney.*] Then you get your balance of 120,000 *l.* put to your credit again?—Yes.

2071. Mr. *Liddell.*] As soon as the money is voted the Civil Contingencies Fund is recouped to that extent?—Yes.

2072. Mr. *Goldney.*] I understand that there is 120,000 *l.* voted, from which the Treasury may make certain advances at their discretion, but they have to get the sanction of Parliament to repay these advances in the next year's Estimates? —Yes.

2073. Mr. *Sclater-Booth.*] That has nothing to do with my point; is it not misleading, and incorrect in principle, to mix up the account of the previous year's Civil Contingencies with the Estimate for the current year's Civil Contingencies?—It certainly does introduce the expenditure of one year into the Estimate of the following year, but how else are you to get it voted by Parliament, if it is thought desirable that the items should receive the sanction of Parliament.

2074. Mr. *Goldney.*] Is it not rather in the nature of a supplementary vote; you require this money to repay an advance just as you would if you had had a bank to go to in the meantime? —Yes.

2075. Mr. *Sclater-Booth.*] But the balance of the Civil Contingencies Fund, if there was any balance, would be surrendered at the end of the year, just as the balance of any other vote would be surrendered?—It is not a vote.

2076. A sum is voted for Civil Contingencies, is it not?—No, it is a permanent fund.

2077. But it must be replenished if it is exhausted, I suppose?—It is replenished by the expenditure, which has been advanced out of the fund, being voted by Parliament, and repaid to the fund.

Sir *W. Dunbar.*
Mr. *Anderson.*
Mr. *Foster.*

13 July 1870.

2078. How does the vote stand in Class 7?—Under "Miscellaneous Expenses," a vote is taken for those items of expenditure which were temporarily met out of the Civil Contingencies Fund.

2079. Mr. *Goldney.*] Having that fund fixed of 120,000 *l.*, how do you account for there having been advances to the extent of about 153,000 *l.*, as you will see by pages 4 and 5, and repayments to the extent of about 163,000 *l.*?—It arises from the fact that before the whole payments of the year are made, certain repayments fall into the fund during the course of the year.

2080. So that the 120,000 *l.*, though apparently exceeded, is not really exceeded on this account? —Not to that extent. It did happen that on the last day of the year the fund was overdrawn, but not to that extent. On page 8 you will see that the balance overdrawn was 16,896 *l.* 2 *s.* 4 *d.*

2081. That, you think, would be the largest balance in the course of the year?—That was the largest balance in the course of the year, for this reason. The account of the fund is made up on the 31st of March, and it is always during the last days of the financial year that the various votes run short, and that we are compelled to make large advances from the Civil Contingencies Fund to meet the current payments upon the votes.

2082. Lord *F. Cavendish* (to Sir *W. Dunbar*).] What do you think of the suggestion made by Mr. Foster that the excesses upon votes should not be met from the Civil Contingencies, but that the votes should be allowed to be overdrawn?—It is much too large a question for me to offer an offhand opinion upon. The question was deliberately considered some years ago, and, if I mistake not, Mr. Anderson gave evidence upon that point. The Chancellor of the Exchequer of the day was examined upon it. (Mr. *Anderson.*) The Civil Contingencies Fund was established in 1862 for the purpose of preventing what was termed then the misappropriation of balances belonging to other services.

2083. Mr. *Goldney.*] Then your view is, that if 120,000 *l.* was not enough, it would be better to make it 220,000 *l.* rather than revert to the old system?—Certainly; but I think the 120,000 *l.* ought to be sufficient, that is, if supplemental votes are taken in time. If you look to these accounts before you, you will see that the sum of 14,852 *l.* 7 *s.* 10 *d.* overdrawn for "Police, Counties and Boroughs, Great Britain," it must have been known before the conclusion of the year that that sum was deficient, and a supplemental vote could have been taken before the 31st of March; and there are several other similar items, for instance, 18,409 *l.* upon temporary commissions; that sum was paid long before the conclusion of the financial year, and the money might have been voted. (Mr. *Foster.*) I may observe, with regard to the "Police, Counties and Boroughs," that it is almost impossible to tell beforehand whether we shall overdraw the vote considerably or not. They are rather slow in sending up their accounts from the counties, and those accounts require a great deal of examination, and as the vote expires on the 31st of March, it is an object to pass every account which we possibly can before the close of the year.

2084. But I think you are rather slow in payments too; at least the accounting people complain of you as being rather slower than they are?

Mr. *Anderson.*
Mr. *Foster.*

13 July 1870.

are ?—In consequence of the Exchequer and Audit Act, we have to give every account for the police a detailed examination before issuing money for it, and it is always a hard push to get the accounts furnished, and the examination completed in time.

2085. Is there not an interval of considerably more than six months between the time of your receiving the accounts, and the money being received by the county treasury?—There is an interval of six months from the date when the accounts should be closed, but still we have great difficulty in getting up the accounts from the different counties and boroughs in anything like time to give them a proper examination.

2086. The suggestion of Mr. Anderson is that you would have ample time to get a supplemental vote when you saw those accounts, if they were greatly in excess of the money granted by Parliament for the purpose?—It is only towards the end of March that we begin to see how many of these accounts we shall be able to pay within the year.

2087. There is ample time from the end of March up to the end of the Session to get a supplemental vote?—No; because if we pay all we can pay upon the 31st of March, we may by that time have exceeded the vote by a large sum, supposing we pass more accounts than we had anticipated. The moment the 31st of March is passed, it is too late to take a supplementary vote.

2088. Not to get a supplemental vote?—Yes, it is. (Mr. *Anderson.*) I would make one observation upon that, namely, that the time taken for the examination of the accounts from the counties, and boroughs is so much time which the Treasury have for submitting an estimate to Parliament. (Mr. *Foster.*) I would wish to make one observation which touches upon the point which has been under discussion, and that is this, that there are constant excesses upon the Army and Navy Votes, and there is no fund to meet these excesses from, and therefore in principle the plan which I advocate is followed as regards the Army and Navy.

2089. Mr. *Sclater-Booth.*] We quite understand that what you propose would be an analogous arrangement to that which already obtains in the case of the Army and Navy?—Yes.

TO THE

REPORTS

FROM THE

COMMITTEE

OF

PUBLIC ACCOUNTS.

Ordered, by The House of Commons, *to be Printed,*
18 *July* 1870.

I N D E X

TO THE FIRST AND SECOND REPORTS.

[*N. B.*—In this Index the *Figures* following the Names of the Witnesses refer to the Questions in the Evidence; those following *App.* to the Pages in the Appendix; and the Numerals following *First Rep.* and *Second Rep.* to the Pages in the First and Second Reports respectively.]

A.

ABYSSINIAN EXPEDITION (ARMY VOTE). Obstacles to a classification of the expenditure for the Abyssinian Expedition under the sub-heads of the Vote; immense labour required, *Whiffin* 1633. 1648–1651. 1683–1696. 1701——Several discrepancies in the account in connection with the Expedition; further explanation promised on this subject, *ib.* 1634–1647. 1680–1682.

Witness explains certain discrepancies in the Army Appropriation Account in respect of charges for the Abyssinian Expedition, *Hanley* 1675–1679.

Reference to a certain paper laid before the Abyssinian Select Committee last year, as showing in great detail the expenditure in India, *Turner* 1697–1701——Conclusion that it would be almost impracticable to classify the charges for the Expedition under the sub-heads of the Vote, *ib.* 1703.

Accounts (Public Departments). Statement as to some public departments having formerly kept no accounts at all, *Foster* 1092–1094.

Administration of Votes. Improvement if one and the same Vote or Votes for like purposes were administered by one department only; suggestion to this effect in witness's report, *Sir W. Dunbar* 407. 425–432.——*See* also *Inland Revenue (Buildings, &c.)*

Admiralty, The. See *Contracts. Convict Service. Navy Accounts.*

Advances for New Courts of Justice. Explanations in connection with this Vote or Account, *Russell* 456, 457; *Bathurst* 458. 460; *Sir W. Dunbar* 459; *Foster* 460–462.

Alston, Francis B. (Analysis of his Evidence.)—Exceptional character of an expenditure of 1,741 *l.* 6 *s.* 10 *d.* in respect of the Niger Expedition incurred by the consul without previous report to the Foreign Office; conclusion as to the account having been verified by the consul, 1527–1544.

Anderson, William George. (Analysis of his Evidence.)—Respects in which the term "savings," though not strictly inaccurate, is likely to mislead, 19–21——Several terms which might be substituted for the words "savings" and "deficiencies;" approval of the terms "less than voted," and "more than voted," 22–25——Approval also of the adoption of the words "net sum to be surrendered," or "to be voted," 26–30.

Conclusion that the Civil Contingencies Fund was not intended to meet excesses upon all the Civil Service Votes, but only unforeseen and urgent expenditure; expediency of adhering to this rule, 170–176. 184–195——Opinion adverse to extending to the Civil Service Votes the power which exists in the case of the Army and Navy Votes of applying the saving on one vote to the deficiency on another, 177–181.

Exceptional instances in which excesses upon Civil Service Votes should still be borrowed from the Civil Contingencies Fund, 186–195——Opinion that there was nothing irregular in the sanction by the Treasury of an expenditure on the Inverness Court-house, though not directly voted, 232, 233.

Statement to the effect that the present arrangements secure a perfectly independent audit of the account of the Exchequer and Audit Department, and that no change is required, 624–630. 632–635.

Suggestions for meeting the difficulty felt by the Admiralty in supplying vouchers for certain payments for the convict service; proposal that certified extracts be furnished 358. 707–710

Reports, 1870—*continued.*

Anderson, William George. (Analysis of his Evidence)—*continued.*

707–710. 717–720——Practice formerly as to the Admiralty taking taking a Vote for the convict service, 727.

Evidence in explanation and support of the view that it is the duty of the Comptroller and Auditor General, under the 27th section of the Exchequer and Audit Act, to report to Parliament when there is an excess upon the sub-heads of any Vote, involving variation from the intentions of Parliament, 1434–1466. 1480–1485. 1500.

Explanation of a certain note by the Audit Office in regard to a sum of 162*l.* 15*s.* 4*d.* surrendered last year under Vote 10, in excess of the actual saving, 1552, 1553. 1560. 1563–1568.

Consideration of the proposal for rendering only one navy account; arrangement desirable in such case so that the account might be presented to the House by the end of January or the beginning of February, 1724–1741. 1749–1760——Advantage, if it were feasible, of the statement of savings and deficiencies, not only of the army and navy, but of the civil service, being examined by Parliament before the deficiencies are voted, 1756–1765.

Necessity of an Act of Parliament if the Savings and Deficiencies Account and the Appropriation Account are to be amalgamated, and are to be rendered at a different time, 1767. 1818, 1819——Approval of the report of the Comptroller and Auditor General going direct to Parliament, a copy being furnished to the Treasury, 1775.

Advantage of a certain form of account suggested for the Civil Service Grant, 1815–1817——Authority for the transfer of a surplus to cover a deficiency upon a certain sub-head of the Navy Vote, 1832, 1833.

Exceptional instances of the Admiralty making good any losses of contractors, 1851–1860——Reference to the practice of payment of receivers under the Office of Woods, the amount not coming on the Votes, 1920. 1926, 1927——Approval of investigation in regard to the large balance retained in hand by the Commissioners of Woods, &c., 1943–1946.

Consideration of the practice as to the balance kept in hand by the Commissioners of Woods and Forests; arrangement by which it might be largely reduced, 2036–2047——Small investment in stock on account of the capital of the Land Revenue during 1868–1869; 2048–2051——Appropriation audit in the case of the Woods and Forests Account, 2054–2056.

Opinion that the Civil Contingencies Fund of 120,000*l.* should be sufficient if supplemental votes are taken in time; instances in which such votes might have been taken, 2082, 2083. 2088.

Appropriation Accounts. Statement by the Committee that in the case of every grant for the Civil Services and the Revenue Departments an Appropriation Account has been rendered and reported upon, *First Rep.* iii.

Importance of the Committee being enabled to conclude their examination of the Appropriation Accounts before the time arrives for asking Parliament to make good deficiencies upon grants of the previous year, *Second Rep.* v.

See also *Army Accounts and Estimates. Colonial Accounts and Estimates. Court of Chancery* (*Ireland*). *Exchequer and Audit Department. Form of Account. Inland Revenue. Navy Accounts. Savings and Deficiencies. Science and Art Department. Sub-heads* (*Accounts and Votes*). *Virgin Islands* (*Colonial Vote*). *Woods and Forests.*

Army Accounts and Estimates. Exceptionally heavy character of the Army Account for 1868–69, so that the delay in rendering it was unavoidable, *Whiffin* 1632——Explanation as to witness not being prepared to supply certain details; he proposes to do so on a future occasion, *ib.* 1634. 1653, 1654——Steps taken for an improved classification in the Army Estimates for next year in regard to stores, *ib.* 1704, 1705.

Reference to the Act for a reorganisation of the Reserve Forces as having necessitated an alteration in the mode of charge under different heads in the Army Account, *Foster* 1655–1660——Statement as to the practice in the Army Account of dealing with liabilities arising from the transactions of previous years, and as to the modes in which any consequent deficiency in the vote for the year may be met, *ib.* 1669–1674.

Deficit of 1,305,850*l.* 4*s.* 1*d.* on the Army Grants for the year 1868–1869; how this has been provided for, *Second Rep.* iii——Late delivery of the Appropriation Account owing to the difficulty of bringing to charge the expenditure connected with the Abyssinian Expedition, *ib.*

See also *Abyssinian Expedition.*

Audit. See *Cost of Audit. Exchequer and Audit Department. Sub-heads.*

Reports, 1870—*continued.*

B.

Balances. Surrender to the Exchequer of certain balances due in relation to different votes, *First Rep.* vi.

See also *Savings and Deficiencies.* *Secret Service Money.* *Woods and Forests.*

Bank of England. Intention of the Treasury to dispense with the detailed audit applied to the Bank of England dividend accounts, *Foster* 1918, 1919.

Statement as to directions having been given for the discontinuance of the audit of the dividend accounts, *Second Rep.* v.

Beeby, James. (Analysis of his Evidence.)—Explanation of the causes of delay in the delivery of the Appropriation Account of Navy Grants, 1708, 1709. 1712, 1713—— Statement in support of a proposal that the Appropriation Account and the Savings and Deficiencies Account should be treated as one account, and be rendered at the same time, or on the 31st December, 1714–1720. 1722, 1723. 1742–1744. 1768–1773——Approval of amending the form of the Navy and Army Accounts according to the proposed form of the Civil Service Account, 1814, 1815.

Explanations relative to certain passages in the Comptroller and Auditor General's report upon irregularities or excesses under different sub-heads of the Navy Vote, 1820–1831——Statement as to certain apparent savings on sub-heads of the Navy Vote, being really postponements of expenditure, 1834–1837. 1865–1873——Information on the subject of some caissons charged against Haulbowline Dockyard, though used for a time in Bermuda, 1838–1846.

Practice of including in the Navy Vote the expense of all Admiralty buildings, 1847–1849——Causes of the excess of estimate in the case of Greenwich Hospital and school, 1874, 1875. 1878, 1879——Remarks relative to the cost of audit in the matter of the Greenwich Hospital Capital and Income Account, 1901, 1902.

British Museum. Reference to the apparently large saving in the British Museum Vote for printing catalogues, &c., *Foster* 1173, 1174.

Buildings (*Public Departments*). See *Inland Revenue.* *Office of Works, &c.* *Post Office.*

C.

China, Japan, &c. Explanation on the subject of accumulated excesses for some years past in respect of expenditure in China, Japan, and Siam, *Vine* 1386–1393.

Civil Contingencies Fund (*Excess of Civil Service Votes*). Explanation of the rule and practice in regard to excess of expenditure on any Vote being advanced out of the Civil Contingencies Fund, an excess Vote being subsequently taken in order to repay such advance, *Foster* 124–154. 158–168——Statement as to an excess of Vote, if charged directly upon the Civil Contingencies Fund, not appearing in the Appropriation Account as an excess of expenditure, *ib.* 136–140.

Opinion that it would be better if the Treasury had authority directly to sanction an excess of expenditure in the case of the Civil Service Votes, with a view to its being shown in the Appropriation Accounts; practice as to the Army and Navy Votes adverted to hereon, *Foster* 137–154. 158–168. 196–206.

Conclusion that the Civil Contingencies Fund was not intended to meet excesses upon all the Civil Service Votes, but only unforeseen and urgent expenditure; expediency of adhering to this rule, *Anderson* 170–176. 184–195.

Similar responsibility of the department whether an excess is met out of civil contingencies, or is sanctioned directly by the Treasury, *Foster* 182——Possible difficulty in the event of the Treasury not being able to meet excess of expenditure out of civil contingencies, *ib.* 183.

Exceptional instances in which excesses upon Civil Service Votes should still be borrowed from the Civil Contingencies Fund, *Anderson* 186–195.

Numerous instances of excess in which a supplementary Vote cannot be taken in time, it being important that the Treasury should have power to act in such cases, *Foster* 196, 197——Suggestions as to the limit up to which the Treasury might be authorised to sanction excess of expenditure on any Vote, so as to obviate advances from, and repayments to, Civil Contingencies, *ib.* 198–207——Great advantage if the Civil Service excess Votes were not taken till June or July, so as to enable the Select Committee of the House to investigate the accounts and excesses before the money is voted, *ib.* 208–211.

Explanations on the subject of the excess of the Civil Contingencies Fund of 120,000*l.*;

Reports, 1870—*continued.*

Civil Contingencies Fund (*Excess of Civil Service Votes*)—continued.

suggestion hereon that the excesses upon Votes be not met from the civil contingencies, but that the Votes be allowed to be overdrawn, *Foster* 2057–2081. 2088, 2089.

Opinion that the Civil Contingencies Fund of 120,000 *l.* should be sufficient, if supplemental Votes are taken in time; instances in which such Votes might have been taken, *Anderson* 2082, 2083. 2088.

Overdrawing of the sum of 120,000 *l.* adverted to by the Committee; further consideration proposed to be given to this subject, *Second Rep.* v.

Civil Service Votes. See *Civil Contingencies Fund. Form of Account. Savings and Deficiencies.*

Cole, Henry, C.B. (Analysis of his Evidence.)—Recent reply by the Science and Art Department to a certain report upon the accounts of the department, 1084–1088——Responsibility of witness as accountant, though until lately he has had very little to do with the matter of the accounts, 1095–1097. 1168, 1169——Explanation on the mode of accounting for certain receipts and payments, and on the course pursued as regards certain fees, 1108–1112. 1114. 1122. 1144. 1146. 1150–1154——Large increase of expense for fuel and lights adverted to and explained, 1134–1143.

Cole, James Henry. (Analysis of his Evidence.)—Explanation as regards the Vote for the Tehran Mission House, that a sum of 8,000 *l.* was estimated to be expended within the year for the purchase of the site, and that no further expenditure was estimated for, 58–62. 65–67.

Colonial Accounts and Estimates. Explanation of the practice of the Colonial Office in dealing with certain extra receipts: regulation that in future all extra receipts shall be paid over to the Exchequer quarterly, *Lewes* 525–535. 537–544——Statement explanatory of the cause of an excess of estimate in respect of convicts at Gibraltar, *ib.* 983–986.

Explanation as to certain expenditure at Bermuda, the mode of charging which by the Colonial Office has been objected to by the Audit Department, *Lewes* 987–989——The Audit Office has not disallowed the sum in question, though it has called the attention of Parliament to it, *Ryan* 990——Explanation also as to a certain excess of the estimates in the case of Western Australia and Tasmania, *Lewes* 992——Difficulty of accurate estimate as regards passages of governors and other colonial officers, *ib.* 1408.

Inconvenience of the variation between the headings in the Appropriation Account of the Colonial Office and in the Vote, *Sir W. Dunbar* 1514–1520——Reference to certain variations between the headings in the Appropriation Account of the Colonial Office and the Vote: assimilation desirable, *Foster* 1521, 1522——Belief as to its being the result of accident that the headings in the Appropriation Account rendered by the Colonial Office differ from the headings in the estimate, *Lewes* 1523–1526.

Unavoidable irregularity at times as regards the payment of the salaries of colonial governors within the year, *Foster* 1406, 1407——Dissent from the statement of the Comptroller and Auditor General, that in the Colonial Vote there was a special appropriation by Parliament in the case of the salary of the Governor of Bermuda, *ib.* 1508.

Statement by the Committee as to the account of Vote 10, Class III., not being wholly satisfactory, *First Rep.* iv.

See also *Virgin Islands.*

Commission (*Public Accounts*). Explanation as to the appointment and action of Mr. Vine and witness as a Commission of Public Accounts, *Foster* 1092–1095.

Comptroller and Auditor General. See *Exchequer and Audit Department.*

Consolidated Fund. Rectification of the error of introducing into the account the 600,000 *l.* due upon Exchequer Bonds, *Foster* 1909, 1910. 1912–1917. *Second Rep.* v.

Consular Vote and Expenditure. Uncertainty concerning a small quantity of stores which prevented a separate record of the expenditure in respect of the Votes for Consular Buildings, China, and Consular Buildings, Japan, *Foster* 1. 3, 4. 6–8——Provision of some stores, on the orders of Major Crossman, whilst it was impossible to say in which consulate they would be used, *ib.* 1. 3, 4. 6–8——The separation will be complete in future, *ib.* 1.

Statement as regards some stores provided for the consulates in China and Japan, that these did not come in any way within the province of the Office of Works, *Russell* 2. 5——Further information as to the Treasury having had no knowledge whether a certain item should be charged to the China or Japan consulates, *Foster* 51–57.

Exception taken to the Consular Vote as including the military half-pay of Colonel Mansfield, consul at Warsaw, *Ryan* 1308, 1309. 1312——Particulars in connection with the charge in the Consular Vote of the military pay and the consular pay of Colonel Mansfield;

Reports, 1870—*continued.*

Consular Vote and Expenditure—continued.

Mansfield; conclusion of the Treasury that the military pay should be charged against military funds, *Foster* 1305, 1306. 1310, 1311. 1313–1325——Excess of expenditure under the sub-head "Incidental Expenses" of the Consular Vote adverted to and explained, *ib.* 1326–1329.

Explanation as to an irregularity in the payment of 26 *l.* 13 *s.* 4 *d.* as pension to Mr. Neal, consul at the Piræus, for which no receipt was procured, *Foster* 1572. 1574, 1575——Grounds for the objection by the Audit Office in regard to the sum paid as pension to Mr. Neal, consul at the Piræus, *Ryan* 1573, 1574.

See also *Niger Chiefs, &c.*

Contracts (*Admiralty*). Exceptional instances of the Admiralty making good any losses of contractors, *Anderson* 1851–1860.

Convict Service (*Admiralty*). Incorrect proceeding of the Admiralty in not furnishing the vouchers with a certain account of charges paid for the convict service, *Ryan* 700, 701. 709–712——These vouchers might be inspected at the Admiralty, *ib.* 717.

Explanation as to the Admiralty not having furnished the Directors of Convict Prisons with vouchers for certain payments for convicts; approval of an inspection of these vouchers at the Admiralty, *Edwards* 702–706. 713–716——Facility of furnishing certified extracts from the vouchers, *ib.* 721. 731.

Improvement if certain charges for convicts were estimated and accounted for by the Admiralty, *Foster* 722, 723. 725, 726. 729, 730——Suggestions for meeting the difficulty felt by the Admiralty in supplying vouchers for certain payments for the convict service; proposal that extracts be furnished, *Anderson* 707–710. 717–720——Practice formerly as to the Admiralty taking a vote for the convict service, *ib.* 727.

Statement by the Committee as to the expediency of the Admiralty suggesting some means of obviating the difficulty as to vouchers in respect of Vote 21, Class III., as to convict ships, &c., *First Rep.* v.

Cost of Audit. Evidence as to the expediency of the cost of audit of certain accounts not falling on witness's department; statement hereon as to the power of the Treasury to refer accounts to witness for audit, *Sir W. Dunbar* 1880–1882. 1883. 1891–1900. 1903.

See also *Greenwich Hospital and School.*

County Prisons, Ireland. Statement as to a saving in respect of maintenance of prisoners in county prisons, Ireland; further explanation asked for by the Treasury, *Foster* 691.

County Prisons and Reformatories, England. Explanation as to a deficiency in respect of maintenance of criminal lunatics in private lunatic asylums, *Blackwood* 674–677.

Court of Chancery, Ireland. Circumstance of no explanation having been given of the causes of variation between expenditure and grant in the case of the Court of Chancery in Ireland, *Sir W. Dunbar* 738–741.

Statement as to the Treasury having called upon the Accountant General of the Court of Chancery, Ireland, for certain explanations about the accounts, which are in a most unsatisfactory state; independent position assumed by this officer, *Foster*, 742–750——Error in the estimate as regards the salary of an officer in the Taxing Office, *ib.* 755, 756——Expediency of the Accountants General of the Court of Chancery in England and Ireland being Treasury Officers, *ib.* 1063–1075.

Witness represents the Accountant General of the Court of Chancery in Ireland, but is unable to explain the causes of variation between the expenditure and the grant, *Piggott* 998–1017——Explanations on certain specific points raised by the Committee in respect of the estimate and expenditure, *ib.* 1018 *et seq.*

Memorandum by W. Neilson Hancock, dated 22nd April 1870, in explanation of certain points raised as to Vote No. 24, Court of Chancery (Ireland) *App.* (*First Rep.*) 124, 125.

Approval by the Committee of a suggestion that in order to insure proper accountability the accountant should be an officer more or less under the control of the Treasury, *First Rep.* iii.

Court of Exchequer (*Ireland*). Explanation as to some payments out of the Consolidated Fund for compensation to officers of the Court of Exchequer in Ireland, *Foster* 1907. 1909, 1910. 1912–1917.

Curragh of Kildare Salaries. Consideration of the conclusion arrived at by the Comptroller and Auditor General that Curragh of Kildare salaries should have been charged to civil contingencies; amended arrangement contemplated, *Foster* 553. 555, 556. 560, 561——Grounds upon which the Audit Department concluded that Curragh of Kildare salaries should have been charged to Civil Contingencies, *Ryan* 554. 557–559.

Reports, 1870—*continued.*

Customs (*Collection of Duties*). Impracticability of attempting to show the real cost of the collection of customs duties in the Estimate, *Foster* 1596–1598.

Customs (*Extra Receipts*). See *Extra Receipts.*

Diplomatic and Consular Services, China. Information relative to the contribution from India revenues of a sum equal to one-third of the charge for diplomatic and consular services in China, *Foster* 1379–1384.

Dividends (*Bank of England.*) See *Bank of England.*

Dunbar, Sir William, Bart. (Analysis of his Evidence.)—Improvement if one and the same vote or votes for the like purposes were administered by one department only; suggestion to this effect in witness's report, 407. 425–432——Explanation as regards a certain expenditure on buildings by the Inland Revenue Board that witness was given to understand both by this department and by the Treasury that the latter had sanctioned a transfer of the item in question from the Inland Revenue Vote to the Office of Works Vote; hence the remarks on the subject in his report, 407, 408. 418–431.

Conclusion as to the Appropriation Act covering the expenditure which the Treasury sanctioned out of the Inland Revenue Vote by putting in an additional sub-head, 410, 411. 417–431——Rules laid down by witness in communication with the departments, showing how the audit department would be guided in dealing with payments under different circumstances, 415–417.

Statement as to witness not having made a supplementary report upon the Portland Harbour Account; question of his now doing so, 450–455——Delay in sending in the whole of the Admiralty Accounts; witness has, however, reported upon them, 451, 452.

Reference to a correspondence between the Treasury and the Exchequer and Audit Department on the subject of the audit of the accounts of the department, 595. 636——Advantage of appointing an independent auditor of this account, rather than of handing over the account to the Treasury; argument that in the latter case the independent position of witness's department would be lowered, 595–614. 622, 623. 636.

Views of Mr. Gladstone as to the great importance of witness's office, and the necessity of its entire independence, 595——Extent of control of the Treasury over the salaries in witness's department, 608–611. 614——Power of witness in regard to promotions in his department, all first appointments being made by the Treasury, 612, 613. 617–619——Conclusion as to the sufficiently independent character of the present audit of the account of the department, 631. 636.

Circumstance of no explanation having been given of the causes of variation between expenditure and grant in the case of the Court of Chancery in Ireland, 738–741.

Grounds for the conclusion that the legal opinion cited by Mr. Hammond on the question of foreign secret service expenditure is based on wrong assumptions, and that the Audit Department have a legal right to require an appropriation account, 828, 829. 903 *et seq.*——Right of the Audit Office to call for an account under their Act of 1785; error of Mr. Hammond in stating that the account is rendered under the Civil List Act, 904.

Witness contends that no inconvenience would arise from rendering an annual account; suggestions as to the form of such account, and the vouchers and affidavits to be furnished, 904–912. 915–945. 948, 949——Expediency of any balance at the end of the year being surrendered, 913–915——Comment upon the view that issues from the secret service vote are equivalent to payments, 913——Statement that the account for secret service has since 1807 been an appropriation account, 914.

Requirement by the Exchequer and Audit Act of 1785 that an account should be rendered within 20 months from the commencement of the financial year, 915. 955–957——Expediency of payments, and not issues, being included in the account, 915. 933——Statement showing that several accounts have been rendered by the Foreign Office in periods much less than 20 months, 915–920. 926, 927——Practice of ministers abroad to draw bills on the Treasury, when they have occasion to expend money for secret service, 920–924.

Explanation that, according to the plan advocated by witness, no inconvenience would arise on the score of publicity, 925–935. 938–945. 948, 949. 974–978——Exception taken to Mr. Hammond's statement, that the Secretary of State should have a half-year's balance in hand for any emergency, 934——Comparatively short periods within which the Colonial Office and Home Office render their secret service accounts, 935. 946, 947.

Further

Reports, 1870—*continued.*

Dunbar, Sir William, Bart. (Analysis of his Evidence)—*continued.*

Further statement as to the legal right of the Audit Office to call for an appropriation account of secret service payments by the Foreign Office, 972–974.

Explanation as to certain exceptions taken to the accounts of the Science and Art Department, 1118, 1119. 1121. 1146–1148. 1150. 1153.

Evidence in support of the conclusion that a greater subdivision is required of the estimate and the accounts of the Irish National Education Department, 1186–1191. 1197–1200. 1205–1207. 1215–1217. 1226–1230. 1240, 1241. 1245, 1246.

Argument as to the propriety of the course pursued by witness in reporting that certain costs incurred by the Vice Chancellor of London University as returning officer were not properly chargeable to the Parliamentary grant, 1262–1265. 1280–1284. 1288—— Expediency rather of the payment being charged, temporarily, to civil contingencies, 1280.

Question considered as to the mode of dealing with a charge for "presents to Niger chiefs," there being no sub-head to include this expenditure, 1298–1302——Opinion that certain expenditure incurred by the consul at Lukoja, on the Niger, should have been charged against the vote for extraordinary expenses for foreign missions, 1362.

Circumstance of the Audit Office not having called for any explanation of an excess of 2,769*l.* on account of legation guards in China and Japan, 1373. 1377, 1378—— Reference to a suggestion by witness as to the mode of charging freight of specie, 1394. 1397.

Exceptions taken to the conclusion arrived at by Mr. Foster, as regards witness's report upon an item of 431*l.* 7*s.* 10*d.* expended in the Virgin Islands; witness contends that he would have failed in his duty to Parliament if he had not reported that this sum was not properly chargeable to the vote, 1410, 1411. 1413, 1414. 1428–1433. 1467–1480. 1484–1499——Communications between the Colonial Office and Audit Office in reference to the foregoing matter, 1413.

Argument that it is witness's province and duty to look at the whole estimate, as laid before Parliament, including the sub-heads, in order to see that the money voted has been devoted to the purposes intended, and to report thereon; he has no power to disallow, 1428. 1467–1480. 1485–1499——Inconvenience of the variation between the headings in the appropriation account of the Colonial Office and in the vote, 1514–1520.

Suggestion as regards the account of witness's department, that the security of a certificate by the accountant be adopted, as in the case of the Army and Navy Account, 1626–1628——Efficiency of the present checks upon the expenditure of the department, 1631.

Suggestion as to the time in which witness's report upon the Navy Accounts might be ready for the House, if the accounts were rendered to him on the 31st December, and if the report did not go through the Treasury, 1721. 1745–1748. 1752——Approval of a proposal for rendering the Navy Appropriation Account and the Statement of Savings and Deficiencies as one account, 1745. 1774.

Statement as to its being the invariable rule of witness's department to report to the Treasury whenever the Treasury regulations are departed from by the accountants, 1781. 1787–1790. 1799–1801. 1807——Report by witness to the House in the event of the Treasury not sanctioning any expenditure reported upon by witness to the Treasury as irregular, 1781. 1787, 1788. 1802, 1803. 1807.

Statement as to witness not being specially called upon by Act to report that deficiencies have been voted, 1808.

Evidence as to the expediency of the cost of audit of certain accounts not falling on witness's department; statement hereon as to the power of the Treasury to refer accounts to witness for audit, 1880–1882. 1883. 1891–1900. 1903.

Dundrum Criminal Lunatic Asylum (Ireland). Unsatisfactory explanation received by the Treasury in respect of the Vote for Dundrum Criminal Lunatic Asylum, Ireland; expectation of a more satisfactory account in future, *Foster* 1624, 1625.

E.

Edwards, George M. (Analysis of his Evidence.)—Explanatory statement on the part of the Accountant General of the Navy as to the delay in rendering an Appropriation Account of the Portland Harbour Vote; this delay will not occur again, 439–449—— Desire of the Admiralty for an extension of time for preparing the Appropriation Account of Navy Services, 441.

Explanation as to the Admiralty not having furnished the Directors of Convict Prisons with vouchers for certain payments for convicts; approval of an inspection of these vouchers at the Admiralty, 702–706. 713–716——Facility of furnishing certified extracts from the vouchers, 721. 731.

Reports, 1870—*continued.*

Emigration Commissioners. Grounds for objecting to the conclusions arrived at by the Audit Office as regards a sum of 162 *l.* 15 *s.* 4 *d.*, assumed to be expended by sub-accountants of the Emigration Commissioners, and excluded from the accounts for the year 1867-68; *Vine* 1545. 1547-1550. 1561-1563.

Explanation of the course pursued by the Audit Office as regards an item of 162 *l.* 15 *s.* 4 *d.*, under Vote 10, surrendered in excess of the savings of the previous year, *Ryan* 1546-1548. 1551. 1555-1559. 1563; *Anderson* 1552, 1553. 1560. 1563-1568——Statement that the correction of the error made in the surrender of the saving on the previous year's vote was the duty of the Treasury, *Sir W. Dunbar* 1554; *Anderson* 1560.

Opinion of the Committee that the expenditure of the sum of 162 *l.* 15 *s.* 4 *d.* should have been shown in the account, *First Rep.* v.

Excess of Expenditure. See *Civil Contingencies Fund. Form of Account. Savings and Deficiencies.*

Exchequer and Audit Department:

1. *As to the Audit of the Account of the Department.*
2. *As to the Department reporting to the Treasury, or directly to Parliament.*

1. *As to the Audit of the Account of the Department:*

Exception taken to the present arrangement by which the Account of the Exchequer and Audit Department is rendered for audit by the Secretary of the Department, *Foster* 569-576. 631——Statement in favour of the Treasury conducting the expenditure and rendering the account of the department; belief that this would not lead to the impression that the department was under the control of the Treasury, *ib.* 577-594——Control by the Treasury of all original appointments in the department, the promotions being made by the Comptroller and Auditor General, and the salaries being all fixed, *ib.* 586-594. 615, 616——Doubt as to the expediency of appointing an independent officer to audit the accounts of the department, *ib.* 620, 621.

Reference to a correspondence between the Treasury and the Exchequer and Audit Department on the subject of the audit of the account of the department, *Sir W. Dunbar* 595. 636——Advantage of appointing an independent auditor of this account, rather than of handing over the account to the Treasury; argument that in the latter case the independent position of witness's department would be lowered, *ib.* 595-614. 622, 623. 636—— Extent of control of the Treasury over the salaries in witness's department, *ib.* 608-611. 614——Power of witness in regard to promotions in his department, all first appointments being made by the Treasury, *ib.* 612, 613. 617-619——Conclusion as to the sufficiently independent character of the present audit of the account of the department, *ib.* 631. 636.

Statement to the effect that the present arrangements secure a perfectly independent audit of the account of the department, and that no change is required, *Anderson* 624-630. 632-635.

Suggestion as regards the account of witness's department that the security of a certificate by the accountant be adopted, as in the case of the army and navy accountant, *Sir W. Dunbar* 1626-1628——Witness has not much faith in the practice of a certificate, as suggested by the head of the department, *Foster* 1629-1631——Efficiency of the present checks upon the expenditure of the department, *Sir W. Dunbar* 1631——Witness has the greatest confidence in certificates, *Anderson* 1631.

Letter from the Treasury to the Exchequer and Audit Department, dated 3rd March 1868, transmitting form of account to be rendered by the department, *App.* (*First Rep.*) 119.

Communication from the Treasury, dated 25th March 1870, directing that the Appropriation Account in the case of the Exchequer and Audit Department shall be prepared and rendered by the Treasury, *App.* (*First Rep.*) 119.

Letter from the Assistant Comptroller and Auditor, dated 12th April 1870, in reply to the foregoing communication; exception taken to certain passages in the latter, *App.* (*First Rep.*) 120.

Letters from the Secretary to the Treasury, dated 5th May 1870, further directing that the accounts of the department be prepared and rendered to the Comptroller and Auditor General by the Treasury, *App.* (*First Rep.*) 120, 121.

Dissent by the Committee from the decision of the Treasury, that in future the account of the Exchequer and Audit Department shall be rendered by the Treasury, *First Rep.* vi.—— Approval of the suggestion that some independent person should be employed to aid in auditing the account of the vote of the department, *ib.*

2. *As*

Reports, 1870—*continued.*

EXCHEQUER AND AUDIT DEPARTMENT—continued.

2. *As to the Department reporting to the Treasury or directly to Parliament.*

Approval of the report of the Comptroller and Auditor General going direct to Parliament, a copy being furnished to the Treasury, *Anderson* 1775——Practice of the Audit Department as to reporting to the Treasury, and not to Parliament in certain cases of non-compliance with the Treasury regulations, *Ryan* 1803–1805.

Grounds for objecting to the proposals that the report of the Comptroller and Auditor General should not go through the Treasury to Parliament, *Foster* 1776–1786. 1790. 1795–1798. 1805–1807.

Statement as to its being the invariable rule of witness's department to report to the Treasury whenever the Treasury regulations are departed from by the accountants, *Sir W. Dunbar* 1781. 1787–1790. 1799–1801. 1807——Report by witness to the House in the event of the Treasury not sanctioning any expenditure reported upon by witness to the Treasury as irregular, *ib.* 1781. 1787, 1788. 1802, 1803. 1807.

Expediency of the Comptroller and Auditor General reporting to the Treasury in all cases of non-compliance with their regulations; instances of the Treasury not being informed as to such non-compliance until they have had the Appropriation Account for presentation to Parliament, *Foster* 1785, 1786. 1790. 1795–1797. 1805–1807.

Opinion of the Committee that the Comptroller and Auditor General would have a higher and more independent position if his reports were presented by him directly to the House, instead of through the medium of the Treasury, *First Rep.* vi.

See also *Army Accounts and Estimates. Colonial Accounts and Estimates. Cost of Audit. Extra Receipts. Gladstone, Right Honourable Mr. London University. Navy Accounts. Secret Service Money. Sub-heads (Accounts and Votes).*

Extra Receipts. Statement as to the Inland Revenue Extra Receipts not having been paid over to the Exchequer for the month of March, or the last month of the financial year, *Foster* 649–653——Great difficulty of laying down an invariable rule with regard to extra receipts; suggestions on the subject, *ib.* 1580. 1583–1595——Opinion in favour of the Customs and Excise, as well as all the departments paying all their extra receipts into the Exchequer, and of the total expenditure for each department being voted, *ib.* 1580. 1583–1595.

Concurrence in the view of the Audit Office that the Customs Extra Receipts should be paid in as such in aid of the Vote, and not as revenue, *Dick* 1581–1583.

Further reference to the mode of dealing with extra receipts, or of repayments from one department to another, *Foster* 1614–1616. 1618–1623——Decision of the Treasury in conformity with the views of the Audit Office on the questions arising out of extra receipts *ib.* 1662, 1663.

Necessity of discrepancy in the case of the Inland Revenue by reason of the extra receipts for March not being paid over till April, *First Rep.* iv.——Concurrence of the Committee on the suggestion that the mode of recording extra receipts in the accounts of the three Revenue Departments should be uniform, *ib.* v.

See also *Colonial Accounts and Estimates. Office of Works, &c.*

F.

Fees on Assessment of Arms, &c. (Canada). Concurrence of the Treasury in the view of the Comptroller and Auditor General in favour of transferring to the Civil Contingencies Fund a payment for fees on assignment of arms, &c. for Canada, *Foster* 522–524.

Fines on Pensioners. Explanation on the subject of excess of fines levied upon pensioners, and the mode of dealing with such fines by the War Office, *Foster* 1664–1668.

Fisheries (Ireland). Statement as to the proper mode of charging certain expenditure in respect of the inspectors of Irish fisheries, *Foster* 562, 563. 566——The inspectors are now under the Irish Office, but used to be under the Home Office, *Pennefather* 564, 565.

Foreign Minister. Obligation upon foreign Ministers to surrender any balance they may have within a year after their return to England; very small amount of such balances, *Right Hon. E. Hammond* 807–810. 872, 873.

Foreign Office. See *Secret Service Money.*

Form of Account (Expenditure and Grant). Exception taken to the proposed adoption of the words "net balance to be surrendered," or "net balance to be voted," *Foster* 13–18——Approval on the whole of the terms "less than voted," and "more than voted," in lieu of the terms "savings and deficiencies, *ib.* 14–16. 18.

Reports, 1870—*continued.*

Form of Account (*Expenditure and Grant*)—continued.

Several terms which might be substituted for the words "savings" and "deficiencies"; approval of the terms "less than voted" and "more than voted," *Anderson* 22–25——Approval also of the adoption of the words "net sum to be surrendered" or "to be voted," *ib.* 26–30.

Obstacle to separating the expenditure, as compared with the grant, under the heads "postponed," "saving," and "deficiency," *Foster* 31, 32——Approval of the words "surplus" and "deficit" being substituted for "saving" and "excess," at the foot of the form of account, *ib.* 39, 40.

Suggestions as to the form of the Army and Navy Accounts corresponding to the amended form laid down for the Civil Service Accounts, *Foster* 1809–1815.

Approval of amending the form of the Navy and Army Accounts according to the proposed form of the Civil Service Account, *Beeby* 1814.1815——Advantage of a certain form of account suggested for the Civil Service Grant, *Anderson* 1815–1817.

Conclusion of the Committee that the terms "savings" and "deficiencies" are liable to be misunderstood, *First Rep.* iii——Amended form of account recommended for adoption, *ib.* iii. vii.

Recommended application to the Army and Navy Appropriation Accounts of the same form as has been recommended for the Civil Service, *Second Rep.* v.

Foster, Morgan Hugh, C. B. (Analysis of his Evidence.)—Uncertainty concerning a small quantity of stores which prevented a separate record of the expenditure in respect of the Votes for Consular Buildings, China, and Consular Buildings, Japan, 1. 3. 4. 6–8.

Great difficulty of such a separation, by the Treasury, of the accounts as would show whether a "saving" was owing to the work not having been performed, or to its having been performed more cheaply than was anticipated, 9, 10——Admission that the terms "savings" and "deficiencies" do not exactly convey the fact, a real saving not being necessarily effected because the expenditure within the year is less than the sum voted, 11–17——Exception taken to the proposed adoption of the words "net balance to be surrendered" or "net balance to be voted," 13–18—— Approval, on the whole, of the terms "less than voted" and "more than voted," in lieu of the terms "savings" and "deficiencies," 14–16. 18.

Obstacle to separating the expenditure, as compared with the grant, under the heads "postponed," "saving," and "deficiency," 31, 32——Approval of the words "surplus" and "deficit" being substituted for "saving" and "excess," at the foot of the form of account, 39, 40——Explanation as to the order of the votes in the account not strictly following the order in the Estimates; arrangement desirable in future on this point, 41–50.

Reference to the vote for the Tehran Mission House as being now combined with another vote; explanation as to this vote coming between two English votes, 42. 47—— Further statement as to the Treasury having had no knowledge whether a certain item should be charged to the China or the Japan consulates, 51–57——Explanation as to certain expenditure in respect of the Tehran Mission having been charged to Civil Contingencies; exceptional circumstances under which this was done by the Treasury, 63, 64. 68–70. 73–77. 79–88.

Statement showing that there was nothing irregular in the sanction by the Treasury of certain expenditure out of the Vote for Lighthouses Abroad, on Works at Sombrero and Castle Island, and at Dellamara, 91–104.

Wrong principle pursued by the Office of Works as regards the postponement of a payment in respect of police in the Parks in 1867–68; 118, 119. 123–125——Explanation of the rule and practice in regard to excess of expenditure on any vote being advanced out of the Civil Contingencies Fund, an excess vote being subsequently taken in order to repay such advance, 124–154. 158–168——Statement as to an excess of vote, if charged directly upon the Civil Contingencies Fund, not appearing in the Appropriation Account as an excess of expenditure, 136–140.

Opinion that it would be better if the Treasury had authority directly to sanction an excess of expenditure in the case of the Civil Service Votes, with a view to its being shown in the Appropriation Accounts; practice as to the Army and Navy Votes adverted to hereon, 137–154. 158–168. 196–206——Similar responsibility of the department whether an excess is met out of Civil Contingencies or is sanctioned directly by the Treasury, 182——Possible difficulty in the event of the Treasury not being able to meet excess of expenditure out of Civil Contingencies, 183.

Numerous instances of excess in which a supplementary vote cannot be taken in time, it being important that the Treasury should have power to act in such cases, 196, 197 ——Suggestions as to the limit up to which the Treasury might be authorised to sanction excess of expenditure on any vote, so as to obviate advances from and repayments to Civil Contingencies, 198–207.

Reports, 1870—*continued.*

Foster, Morgan Hugh, C. B. (Analysis of his Evidence)—*continued.*

Great advantage if the Civil Service Excess Votes were not taken till June or July, so as to enable the Select Committee of the House to investigate the accounts and excesses before the money is voted, 208-211——Explanation as to certain expenditure incurred by Mr. Pulman on Treasury business having been charged as a payment out of the Treasury Vote for 1869-70; 212-216——Necessity of application to the Treasury in the matter of expenditure on the Court-house at Inverness which was not directly voted, 236.

Consideration of the present system by which the estimates for rates on Government property contain no contributions except for the Army and Navy; amended arrangement suggested, 264-279.

Explanatory statement relative to an item of 3,000 *l.*, struck out, in error, from the Inland Revenue Estimates, on account of buildings, a similar item having happened to be in the Office of Works Estimates; sanction by the Treasury of the re-insertion of the amount, 296-320——Facility of preventing confusion in future by specifying in the Office of Works Vote the localities in which it superintends the expenditure on buildings, 321-327——Doubt as to there having been any Treasury letter on the subject of the Inland Revenue buildings being placed in the Office of Works Vote, 328, 329. 334. 433.

Examination to the effect that the same work or the same furniture could not be charged both to the Office of Works and the Inland Revenue Department without detection, but that it would be more satisfactory to confine the work in each locality to one department or the other, 343-367. 370, 371. 388. 401, 402. 405, 406. 432.

Question considered as to the Appropriation Act allowing the expenditure of 3,000 *l.* sanctioned by the Treasury out of the Inland Revenue Vote, 409. 411-414.

Statement of the practice of the Office of Works as to paying extra receipts into the Exchequer; intention to pay over quarterly in future, 463-465.

Incorrect proceeding if the War Office had paid over to the Home Office an item of 40 *l.* not expended by the former in respect of the pay of the Inspector of Military Prisons, 478, 479. 484.

Copy of Treasury Minute, dated 22nd November 1867, relative to the administration of the expenditure on repairs and maintenance of Inland Revenue buildings; amended regulations contemplated with a view to the matter resting entirely, instead of partially, with the Office of Works, 485-493. 496-498——Facility in any case of determining upon which department should devolve the duty of accounting for the charge in respect of buildings, 494.

Question considered as to the expediency of a supplementary estimate in order to meet the appointment of a Third Lord of the Treasury at an increased salary, and the pay of two additional supplementary clerks, 499-512.

Consideration of the conclusion arrived at by the Comptroller and Auditor General, that the Curragh of Kildale salaries should have been charged to Civil Contingencies; amended arrangement contemplated, 553. 555, 556. 560, 561.

Exception taken to the present arrangement, by which the account of the Exchequer and Audit Department is rendered for audit by the Secretary of the Department, 569-576. 631—— Statement in favour of the Treasury conducting the expenditure and rendering the account of the Exchequer and Audit Department; belief that this would not lead to the impression that the department was under the control of the Treasury, 577-594——Control by the Treasury of all original appointments in the department, the promotions being made by the Comptroller and Auditor General; and the salaries being all fixed, 588-594. 615, 616.

Doubt as to the expediency of appointing an independent officer to audit the account of the Exchequer and Audit Department, 620, 621.

Probable cause of a material reduction in the charge of travelling expenses of Poor Law Inspectors, 637-640——Explanation as to the expenses being recovered in the case of the Inclosure and Drainage Vote, and as to certain charges being overestimated, 641-644.

Statement as to the Inland Revenue extra receipts not having been paid over to the Exchequer for the month of March, or the last month of the financial year, 649-653 —— Explanations in detail relative to sundry other accounts and votes, 655 *et seq.*

Practice generally for the Treasury to avoid sanctioning increases of salaries during the currency of the financial year; authority to depart from this rule, 661-671.

Improvement if certain charges for convicts were estimated and accounted for by the Admiralty, 722, 723. 725, 726. 729. 733.

Statement as to the Treasury having called upon the Accountant General of the Court of Chancery, Ireland, for certain explanations about the accounts, which are in a most unsatisfactory state; independent position assumed by this officer, 742-750——Necessity of sanction by the Treasury before the saving on one sub-head of a vote can be applied

Reports, 1870—*continued.*

Foster, Morgan Hugh, C. B. (Analysis of his Evidence)—*continued.*

to the deficiency on another, 751-754——Explanation relative to sundry other accounts and votes with reference to statements thereon in the report of the Comptroller and Auditor General, 755, 756. 758, 759. 761-776.

Conclusion that an issue of secret service money to a Secretary of State is an imprest or advance, the Treasury being the accounting department, 950-953—— Explanation as to the distribution by the Treasury, to the several departments, of the Vote for Foreign Secret Service Money, 961-971.

Doubt as to the Government having yet taken into consideration the mode of dealing with the expenditure of the Office of Woods, &c., 979-981.

Statement in favour of the Accountants General of the Courts of Chancery in England and Ireland being Treasury Officers, 1063-1075.

Explanation as to the appointment and action of Mr. Vine and witness as a Commission of Public Accounts, 1092-1095.

Reference to the apparently large saving in the British Museum Vote for printing catalogues, &c., 1173, 1174.

Explanation by the National Education Department of Ireland as to an excess of 15,863 *l.*; 1178-1180——Supply of a complete form of accounts to this Department, the office having complied with such form, though it has not taken sufficient care about the division of the sub-heads, 1182, 1183. 1239——Province of the Treasury to design the form of account in which the payment of each vote shall be shown; dissent from certain views expressed by Sir William Dunbar on this point in reference to the sub-division of the National Education Accounts and Estimates, 1197. 1208-1215. 1218, 1219. 1222-1224. 1231-1239. 1242-1244.

Grounds for dissenting from the views of the Comptroller and Auditor General in disapproval of certain election expenses of London University being charged against the Vote; objection to the amount being charged to civil contingencies, 1275-1279. 1285-1288.

Explanation of the principle upon which the tonnage bounty upon slavers is based; precautions against abuse in respect of payments under this head, 1290-1293—— Information as to the mode of dealing with payments in respect of presents to Niger chiefs; objection to this item being placed under incidental expenses, 1294-1297. 1303, 1304.

Particulars in connection with the charge in the Consular Vote of the military pay, and the consular pay of Colonel Mansfield, consul at Warsaw; conclusion of the Treasury that the military pay should be charged against military funds, 1305, 1306. 1310, 1311. 1313-1325.

Excess of expenditure under the sub-head "Incidental Expenses," of the Consular Vote, adverted to and explained, 1326-1329——Explanatory statement on the subject of certain expenditure incurred by Consul Macleod in defending the Consulate at Lukoja against the attacks of Niger chiefs; circumstances under which the Foreign Office felt constrained to pay these expenses, 1329. 1332-1336. 1343-1351. 1357-1361. 1363, 1364——Abolition of this consulate so as to avoid a similar expenditure in future, 1356. 1358.

Explanatory statement on the subject of a deficiency of 2,769 *l.* in respect of Legation Guards in China and Japan, 1369-1372. 1374-1376.——Information relative to the contribution from Indian revenues of a sum equal to one-third of the charge for diplomatic and consular services in China, 1379-1384——Explanation as to the practice of the Treasury in remitting specie for the Treasury chests, and in charging the cost of freight, 1395, 1396. 1399, 1400.

Dissent from a suggestion by the Comptroller and Auditor General relative to the mode of account in the case of certain pensions payable at foreign Courts by officers abroad, 1401——Approval of the practice of sometimes introducing a sub-head not included in the original vote, 1402-1405——Unavoidable irregularity at times as regards the payment of the salaries of Colonial Governors within the year, 1406, 1407.

Argument that the Comptroller and Auditor General was not justified in reporting that an expenditure of 431 *l.* 7 *s.* 10 *d.*, in respect of damages caused by a hurricane in the Virgin Islands, was not properly chargeable to the vote, 1409. 1412, 1413. 1505-1507——Duty of the Comptroller and Auditor General to ascertain the intention of Parliament as to the appropriation of the money voted, it being, however, very inexpedient for him to go into the details of the sub-heads, 1501-1504. 1509, 1510——Dissent from the statement of the Comptroller and Auditor General, that there was a special appropriation of the salary of the Governor of Bermuda, 1508——Reference to certain variations between the headings in the appropriation account of the Colonial Office and the vote; assimilation desirable, 1521, 1522.

Explanation as to an irregularity in the payment of 26 *l.* 13 *s.* 4 *d.* as pension to Mr. Neal, Consul at the Piræus, for which no receipt was procured, 1572. 1574, 1575——Opinion

Reports, 1870—*continued.*

Foster, Morgan Hugh, C. B. (Analysis of his Evidence.)—continued.

——Opinion in favour of the Customs and Excise, as well as all the departments, paying all their extra receipts into the Exchequer, and of the total expenditure for each department being voted, 1580. 1583-1595——Impracticability of attempting to show the real cost of the collection of customs duties in the estimate, 1596-1598.

Statement to the effect that the Treasury have decided to carry out the recommendation of the Committee of 1869 in regard to the mode of dealing with the Post Office void money orders; objections by the Postmaster General to any alteration, 1608-1612—— Further reference to the mode of dealing with extra receipts, or of repayments from one department to another, 1614-1616. 1618-1623.

Unsatisfactory explanation received by the Treasury in respect of the Vote for Dundrum Criminal Lunatic Asylum, Ireland; expectation of a more satisfactory account in future, 1624, 1625.

With regard to the account of the Exchequer and Audit Department, and the question of an independent audit, witness has not much faith in the practice of a certificate, as suggested by the head of the department, 1629-1631.

Reference to the Act for a re-organisation of the reserve forces as having necessitated an alteration in the mode of charge under different heads in the Army Account, 1655-1660—— Decision of the Treasury in conformity with the views of the Audit Office on the questions arising out of extra receipts, 1662, 1663.

Explanation on the subject of excess of fines levied upon pensioners, and the mode of dealing with such fines by the War Office, 1664-1668——Statement as to the practice in the Army Account of dealing with liabilities arising from the transactions of previous years, and as to the modes in which any consequent deficiency in the Vote for the year may be met, 1669-1674.

Grounds for objecting to the proposal that the Report of the Comptroller and Auditor General should not go through the Treasury to Parliament, 1776-1786. 1790. 1795-1798. 1805-1807——Expediency of the Comptroller and Auditor General reporting to the Treasury in all cases of non-compliance with their regulations; instances of the Treasury not being informed as to such non-compliance until they have had the Appropriation Account for presentation to Parliament, 1785, 1786. 1790. 1795-1797. 1805-1807.

Great variety of Acts by which the powers of the Treasury over the Departments are regulated, 1791-1794——Suggestions as to the form of the Army and Navy Accounts corresponding to the amended form laid down for the Civil Service Accounts, 1809-1815.

Statement on the subject of the recovery of overpayments to Maynooth College, in respect of the Consolidated Fund Account, 1904-1906——Explanation as to some payments out of the Consolidated Fund for compensation to officers of the Court of Exchequer in Ireland, 1907. 1909, 1910. 1912-1917.

Intention of the Treasury to dispense with the detailed audit applied to the Bank of England Dividend Accounts, 1918, 1919——Opinion favourable to the whole of the charges of the Office of Woods, &c., coming upon the Votes, 1921. 1927, 1928—— Object of the large balance kept in hand by the Commissioners of Woods, &c., 1942.

Explanations on the subject of the excess of the Civil Contingencies Fund of 120,000 *l.*; suggestion hereon that the excesses upon Votes be not met from the Civil Contingencies, but that the Votes be allowed to be overdrawn, 2057-2081. 2088, 2089 ——Obstacle to ascertaining beforehand whether the Vote for "Police, counties and boroughs" shall be overdrawn, so as to take a Supplementary Vote, 2083-2087.

G.

Gladstone, Right Hon. W. E. Views of Mr. Gladstone as to the great importance of witness's office, and the necessity of its entire independence, *Sir W. Dunbar* 565.

Gore, the Hon. Charles A. (Analysis of his Evidence.) Submits explanations relative to the large balance (72,318 *l.*) in the hands of the Commissioners of Woods, &c., on the 1st April 1868; sufficiency of a balance of about 40,000 *l.*, 1947-1960. 1969-1989. 2010-2013——Increasing sum paid over to the Exchequer as surplus income, 1954-1956. 2032, 2033——Reasons for the small net receipts from the Royal Forests, as well as for the large excess of expenditure in respect of Windsor Parks and Woods, 1961-1968—— Clear distinction between the management vested in the Office of Woods and in the Office of Works in regard to Windsor, &c., 1990-1995.

Practice as to the receipt of rents by the Office of Woods, and as to the payment of the receivers and stewards of manors chiefly by commission, 1996-2004——Payment of the establishment charges out of the Vote; objection to all the expenses being charged upon the Vote, 2005-2022——Economy and efficiency of the management of the Crown estates,

Reports, 1870—*continued.*

Gore, The Hon. Charles A. (Analysis of his Evidence)—*continued.*

estates, 2023–2031——Objection to writing off altogether an item of 35,919 *l.*, which appears in the accounts as irrecoverable, 2034, 2035.

Greenwich Hospital and School. Causes of the excess of estimate in the case of Greenwich Hospital and School, *Beeby* 1874, 1875. 1878, 1879——Greater number of men borne on the books of the Hospital than was estimated for, *Beeby* 1874, 1875; *Loveless* 1876, 1877.

Steps being taken with a view to the cost of audit falling on the funds of the Hospital, *Sir W. Dunbar* 1880–1882; *Foster* 1883. 1900, 1901——Probable cost of auditing the Greenwich Hospital Capital Account, which is audited under a special Act, *Ryan* 1884–1889——Remarks relative to the cost of audit in the matter of the Greenwich Hospital Capital and Income Account, *Beeby* 1901, 1902.

Approval by the Committee of the suggestion that the cost of auditing the Greenwich Hospital accounts should be borne upon the funds of the Hospital, *Second Rep. iv.*

Griffiths, Vincent. (Analysis of his Evidence.)—As inspector of rates at the Treasury, explains an excess of expenditure to the extent of 3,802 *l.* on Vote 22, as arising chiefly from the conversion of a large number of payments of rates into contributions by way of bounty; advantages of this arrangement, which leads to a practical saving upon the rates, 237–263. 280–282. 286, 287——Explanation as to an unexpended balance of the Vote "Rates for Government Property" for the year 1867-68 not having been surrendered to the Exchequer till March 1870; 283–285.

H.

Hammond, The Right Honourable Edmund. (Analysis of his Evidence.)—Explanation as regards the Secret Service money expended by the Foreign Office, that legal opinion has been taken, and that the Civil List Act, 22 Geo. 3, c. 82, is still operative, and has not been overruled by the Exchequer and Audit Act, 777–785. 819–827. 829–833. 880–893——Summary of the conclusions arrived at by the Law Officers of the Crown; information as to the case submitted for their opinion, 777-779. 829–833. 885–889.

Suggestion by the Law Officers, that the receipt given by the Secretary of State for for the lump sum issued should be remitted to the Audit Office, and should be accepted as a discharge to the Treasury; concurrence in this view, 777–784. 787——Conclusion that the issue to the Secretary of State is a payment, and not an imprest or advance, 784–785——Circumstance of the Foreign Office not being obliged to render an account of the Secret Service money until three years after its issue, there being, moreover, no power of surrendering the balances, 789–799. 806, 807. 811. 894-898.

Regulation of the applications so as to have about half a year's expenditure in hand; expediency of this arrangement, 794–805. 857–860——Obligation upon foreign ministers to surrender any balance they may have within a year after their return to England; very small amount of such balances, 807–810. 872, 873——Periodical account rendered to the Audit Office under the Civil List Act, showing in lump sums the moneys received and expended, 811–820. 900.

Considerable inconvenience if it were necessary to close every year the Secretary of State's account of Secret Service disbursements, and to surrender the balance, 834, 835. 861–870. 898. 899——Statement as to the Secret Service money not having being voted by Parliament when the Civil List Act was passed, 836——Argument that the question lies between the Treasury and Audit Office, rather than between the Foreign Office and the latter, 837–850.

Similar procedure now adopted by the Foreign Office as for many years past, 851–856——Practice of the foreign ministers abroad as to drawing upon the Secretary of State for the sum required for secret service, their receipt being a discharge to the Secretary of State, 871, 872——Doubt as to any sums being now charged for foreign secret service upon the Civil List Revenues, 873-884. 890–892.

Further objection to the Foreign Office being required to account to the Treasury, as contended by the Audit Office, 900, 901——Conclusion as to the sufficiency of the audit hitherto practised, 901——Inexpediency of separating the Secret Service Vote into specific sums, for the different departments, 902.

Harwich Harbour. Concurrence of the Treasury in the proposal to transfer from the Board of Trade Vote to the Civil Contingencies Fund a sum for expenses in connection with the works of Harwich Harbour, *Foster* 547.

Hawker, Francis Alfred. (Analysis of his Evidence.)—Instances of expenditure on the same building out of the Inland Revenue Vote and the Office of Works Vote, 338–342——Way in which it might happen that bills for the same furniture, &c., might be paid both by the Inland Revenue Department and the Office of Works, 372–378. 389–400. 405.

Reports, 1870—*continued.*

Home Office. Explanation as to the insufficiency of certain estimates prepared by the Home Office, the Treasury having control of the expenditure; new arrangement now in force, *Pennefather* 513-521.

I.

Improvement of Defences at Quebec. Explanation that an excess of expenditure in the case of this vote is not an excess upon the work, *Knox* 1706, 1707.

Inclosure and Drainage Vote. Explanation as to the expenses being recovered in the case of the Inclosure and Drainage Vote, and as to certain charges being over estimated, *Foster* 641-644.

Income Tax Collection. Explanation on the subject of an excess of expenditure on account of extra remuneration to the clerks to the Commissioners of Income Tax for additional labour, resulting from the imposition of an additional income tax of 1 *d.* in the pound, *Gripper* 1600-1604.

Inland Revenue (Buildings, &c.) Explanatory statement relative to an item of 3,000 *l.*, struck out in error from the Inland Revenue Estimates on account of buildings, a similar item having happened to be in the Office of Works Estimates; sanction by the Treasury of the re-insertion of the amount, *Foster* 296-320——Doubt as to there having been any Treasury Letter on the subject of the Inland Revenue buildings being placed on the Office of Works Vote, *ib.* 328, 329. 334. 433.

Instances of expenditure on the same building out of the Inland Revenue Vote and the Office of Works Vote, *Hawker* 338-342——Way in which it might happen that bills for the same furniture, &c., might be paid both by the Inland Revenue Department and the Office of Works, *ib.* 372-378. 389-400. 405.

Examination to the effect that the same work or the same furniture could not be charged both to the Office of Works and the Inland Revenue Department, without detection, but that it would be more satisfactory to confine the work in each locality to one department or the other, *Foster* 343-367. 370, 371. 388. 401, 402. 405, 406. 432—— Explanation as to the check upon fraud or double payment, in the case of furniture or of work, paid for out of the Vote of the Office of Works, *ib.* 368, 369. 379-387.

Explanation, as regards a certain expenditure on buildings by the Inland Revenue Board, that witness was given to understand, both by this department and by the Treasury, that the latter have sanctioned a transfer of the item in question from the Inland Revenue Vote to the Office of Works Vote; hence the remarks on the subject in his report, *Sir W. Dunbar* 407, 408. 418-431.

Question considered as to the Appropriation Act allowing the expenditure of 3,000 *l.*, sanctioned by the Treasury, out of the Inland Revenue Vote, *Foster* 409. 411-414—— Conclusion as to the Appropriation Act covering expenditure which the Treasury sanctioned out of the Inland Revenue Vote by putting in an additional sub-head, *Sir W. Dunbar* 410, 411. 417-431.

Copy of Treasury Minute, dated 22nd November 1867, relative to the administration of the expenditure on repairs and maintenance of Inland Revenue buildings; amended regulations contemplated with a view to the matter resting entirely, instead of partially, with the Office of Works, *Foster* 485-493. 496-498——Facility in any case of determining upon which department should devolve the duty of accounting for the charge in respect of buildings, *ib.* 494.

Views of the Committee as to the practice desirable in regard to administering and accounting for structural expenditure, *First Rep.* iv. vi.——Conclusion that a certain sum of 5,803 *l.* 14 *s.* 5 *d.* must be left as a charge upon the Inland Revenue Vote, *ib.* iv.

See also *Extra Receipts.*

Inspector of Military Prisons. Explanation, on the part of the War Department, relative to an item or saving of 40 *l.* in respect of the pay of the Inspector of Military Prisons; conclusion as to the War Office handing over this sum to the Home Office, if the latter had applied for it, as undertaking the duty, *Whiffin* 469-474. 476, 477. 480-483.

Incorrect proceeding if the War Office had paid over to the Home Office an item of 40 *l.* not expended by the former in respect of the pay of the Inspector of Military Prisons, *Foster* 478, 479. 484.

Inverness Court-House. Necessity of application to the Treasury in the matter of expenditure on the court-house at Inverness, which was not directly voted, *Foster* 236—— Opinion that there was nothing irregular in the sanction of the Treasury of an expenditure on the Inverness court-house, though not directly voted, *Anderson* 232, 233—— Statement in explanation of certain expenditure in respect of court-houses in Scotland; obstacle to any estimate in the case of an item of 919 *l.* expended on Inverness court-house, *Russell* 234, 255.

Reports, 1870—*continued.*

Inverness Court-House—continued.

Statement by the Committee as to the expenditure in this case being covered by the terms of the Appropriation Act; suggested explanation in future, *First Rep.* iv.

Irish Railways Commission. Explanation of a large excess in respect of the inquiry into Irish railways, *Foster* 1578, 1579.

L.

Legation Guards (China and Japan). Belief that the Legation Guards in China and Japan consist of a distinct police force sent out from England, *Blackwood* 1365-1368——Explanatory statement on the subject of a deficiency of 2,769*l.* in respect of Legation Guards in China and Japan, *Foster* 1369-1372. 1374-1376——Circumstance of the Audit Office not having called for any explanation of an excess of 2,769*l.* on account of Legation Guards in China and Japan, *Sir W. Dunbar* 1373. 1377, 1378.

Lewes, John Sayer. (Analysis of his Evidence.)—Explanation of the practice of the Colonial Office in dealing with certain extra receipts; regulation that in future all extra receipts shall be paid over to the Exchequer quarterly, 525-535. 537-546.

Statement explanatory of the cause of an excess of estimate in respect of convicts at Gibraltar, 983-986——Explanation also as to certain expenditure at Bermuda, the mode of charging which by the Colonial Office has been objected to, 987-989——Also as to a certain excess of the Estimates in the case of Western Australia and Tasmania, 992.

Difficulty of accurate estimate as regards passages of governors and other Colonial officers, 1408.

Statement to the effect that the Colonial Office have been desirous of meeting the views of the Audit Office as regards vouchers for certain Colonial expenditure, and had no reason to suspect that a sum of 431*l.* 7*s.* 10*d.* expended in the Virgin Islands would be disallowed, 1415-1427.

Belief as to its being the result of accident that the headings in the Appropriation Account rendered by the Colonial Office differ from the headings in the Estimate, 1523-1526.

Lighthouses. Statement showing that there was nothing irregular in the sanction by the Treasury of certain expenditure out of the Vote for Lighthouses Abroad on works at Sombrero and Castle Island, and at Dellamara, *Foster* 91-104.

London University. Evidence in detail in support of the conclusion arrived at by the Treasury, that certain election expenses in the case of London University were properly chargeable against the University Vote, *Right Honourable J. Stansfeld,* 1249-1261. 1266-1274. 1278.

Agreement as to the propriety of the course pursued by witness in reporting that certain costs incurred by the Vice Chancellor of London University as returning officer were not properly chargeable to the Parliamentary Grant, *Sir W. Dunbar* 1262-1265. 1280-1284. 1288——Expediency rather of the payment being charged temporarily to Civil Contingencies, *ib.* 1280.

Grounds for dissenting from the views of the Comptroller and Auditor General in disapproval of certain election expenses of London University being charged against the Vote; objection to the amount being charged to Civil Contingencies, *Foster* 1275-1279. 1285-1288.

Conclusion of the Committee as to the propriety of the report made by the Audit Department, *First Rep.* v.

Lukoja Consulate. See *Niger Chiefs, &c.*

M.

Maynooth College. Statement on the subject of the recovery of overpayments to Maynooth College in respect of the Consolidated Fund Account, *Foster* 1904-1909.

Money Orders. See *Post Office.*

N.

National Education Office (Ireland). Excess of 15,863*l.* in the case of the Vote for the National Education Office, Dublin, adverted to, *Cocks* 1178——Explanation by the National Education Department in reference to this excess, *Foster* 1178-1180.

Reports, 1870—*continued.*

National Education Office (*Ireland*)—continued.

Reference to a letter from the National Education Office, Dublin, dated 3rd March 1870, submitting sundry objections to alteration of the present system of rendering the accounts of the office in relation to the Estimate, *Ryan* 1181–1184——Supply of a complete form of accounts to this department, the office having complied with such form though it has not taken sufficient care about the division of the sub-heads, *Foster* 1182, 1183. 1239.

Statement on the question of a further sub-division of the accounts; deficient check of the Audit Department under the present practice, *Ryan* 1185, 1186. 1204. 1220. 1221. 1225——Evidence in support of the conclusion that a greater sub-division is required of the Estimate and the accounts of Department, *Sir W. Dunbar* 1186–1191, 1197–1200. 1205–1207. 1215–1217. 1226–1230. 1240, 1241. 1245, 1246——Exception taken to the conclusions of the Comptroller and Auditor General upon the subject of a more numerous sub-division in the case of the Estimate and accounts of the National Education Office, *Vine* 1194–1196. 1201–1204.

Province of the Treasury to design the form of account with which the payment of each vote shall be shown; dissent from certain views expressed by Sir William Dunbar on this point in reference to the sub-division of the National Education Accounts and Estimates, *Foster* 1197. 1208–1215. 1218, 1219. 1222–1224. 1231–1239. 1242–1244.

Letter from the Secretaries of the National Education Office, dated 2nd June 1870, explaining the causes of a certain excess on one of the sub-heads of the vote, *App.* (1st *Rep.*) 125.

Advantage if the Treasury were to require that more principal sub-heads should be shown upon the Estimate, *First Rep.* v.

National Portrait Exhibition. Evidence relative to the mode of account of the Science and Art Department as regards expenditure for the National Portrait Exhibition, with reference more especially to the mode of dealing with the fees received, *Cole* 1144. 1146. 1150–1154; *Simkins* 1145. 1148, 1149. 1153. 1155–1160; *Sir W. Dunbar* 1146–1148. 1150. 1153; *Ryan* 1161, 1162.

Navy Accounts. Desire of the Admiralty for an extension of time for preparing the appropriation account of Navy Services, *Edwards* 441—— Delay in sending in the whole of the Admiralty accounts; witness has, however, reported upon them, *Sir W. Dunbar* 451, 452——Explanation of the causes of delay in the delivery of the appropriation account of navy grants, *Beeby* 1708, 1709. 1712, 1713.

Statement in support of a proposal that the appropriation account and the savings and deficiencies account should be treated as one account, and be rendered at the same time, or on the 31st December, *Beeby* 1714–1720. 1722, 1723. 1742–1744. 1768–1773—— Suggestion as to the time in which witness's report upon the Navy accounts might be ready for the House if the accounts were rendered to him on the 31st December, and if the report did not go through the Treasury, *Sir W. Dunbar* 1721. 1745–1748. 1752—— Consideration of the proposal for rendering only one Navy account; arrangement desirable in such case so that the account might be presented to the House by the end of January or the beginning of February, *Anderson* 1724–1741. 1749–1760——Approval of the proposal for rendering the Navy appropriation account and the statement of savings and deficiencies as one account, *Sir W. Dunbar* 1745. 1774.

Explanations relative to certain passages in the Comptroller and Auditor General's report upon irregularities or excesses under different sub-heads of the Navy Vote, *Beeby* 1820–1831——Authority for the transfer of a surplus to cover a deficiency upon a certain sub-head of the Navy Vote, *Anderson* 1832, 1833—— Statement as to certain apparent savings on sub-heads of the Navy Vote being really postponements of expenditure, *Beeby* 1834–1837. 1865–1873.

Information on the subject of some caissons charged against Haulbowline Dockyard, though used for a time in Bermuda, *Beeby* 1838–1846——Practice of including in the Navy Vote the expense of all Admiralty buildings, *ib.* 1847–1849.

Explanation that the audit of the Navy account by the Exchequer and Audit Department is merely an audit of classification, *Sir W. Dunbar* 1861; *Beeby* 1862–1864.

Deficiency of 2,912,094*l.* 6*s.* 10*d.* upon the Navy grants for 1868-69, which has been met out of the votes of credit for the Abyssinian war, *Second Rep.* iv——Suggestion for amalgamating into one account the statement of savings and deficiencies, and the appropriation account, *ib.*——Advantage of the account being rendered by the 31st December in each year, *ib.*

See also *Convict Service.*

Niger Chiefs (*Lukoja Consulate*). Information as to the mode of dealing with payments in respect of presents to Niger chiefs; objection to this item being placed under incidental expenses, *Foster* 1294–1297. 1303, 1304——Question considered as to the mode

Reports, 1870—*continued.*

Niger Chiefs (*Lukoja Consulate*)—continued.

of dealing with a charge for "Presents to Niger Chiefs," there having been no sub-head to include this expenditure, *Sir W. Dunbar* 1298–1302.

Explanatory statement on the subject of certain expenditure incurred by Consul Macleod in defending the Consulate at Lukoja against the attacks of Niger chiefs; circumstances under which the Foreign Office felt constrained to pay these expenses, *Foster* 1329. 1332–1336. 1343–1351. 1357–1361. 1363, 1364—— Grounds upon which the Audit Department objected to certain excess of expenditure, as sanctioned by the Foreign Office, which was incurred by Colonel Macleod in the Niger districts, *Ryan* 1330–1332. 1337–1342. 1352–1355——Abolition of this consulate, so as to avoid a similar expenditure in future, *Foster* 1356. 1358.

Opinion that certain expenditure incurred by the Consul at Lukoja, on the Niger, should have been charged against the vote for extraordinary expenses for foreign missions, *Sir W. Dunbar* 1362——Dissent from the foregoing view; there was no mission in the case, *Foster* 1363.

Exceptional character of an expenditure of 1,741 *l.* 6 *s.* 10 *d.*, in respect of the Niger Expedition, incurred by the consul without previous report to the Foreign Office; conclusion as to the account having been verified by the consul, *Alston* 1527–1544.

Reference by the Committee to the exceptional character of the expenditure in the case of Vote 10, Class IV., *First Rep.* v.

Nomination of Committee. Advantage to be derived from nominating the Committee on Public Accounts as soon as possible after the meeting of Parliament in the spring, *Second Rep.* v.

O.

Office of Woods, &c. See *Woods and Forests.*

Office of Works, &c. Doubt as to the necessity of previous estimate in the case of a small payment, sanctioned by the Treasury, to the consul at Paris for services rendered to the Department of Works, *Russell* 222–228——Facility of preventing confusion in future by specifying in the Office of Works Vote the localities in which it superintends the expenditure on buildings, *Foster* 321–327.

Statement of the practice of the Office of Works as to paying extra receipts into the Exchequer; intention to pay over quarterly in future, *Foster* 463–465——Sufficiency of quarterly payment of the balances, *Sir W. Dunbar* 466——Practice of the Office of Works to retain extra receipts until after the receipt of the report of the Comptroller and Auditor General, *Russell* 467.

Doubt as to the Office of Works being responsible for an alleged delay in auditing the accounts sent up from Scotland in respect of new buildings and alterations, *Vine* 732–737——Explanation that the postponement of a certain account was an irregularity, which will not occur again, *Bedder* 993–997——Clear distinction between the management vested in the Office of Woods and in the Office of Works in regard to Windsor, &c., *Right Honourable C. A. Gore* 1990–1995.

Conclusion of the Committee as to the expediency of the Office of Works undertaking the administration of all structural expenditure, *First Rep.* iv. vi.

See also *Inland Revenue* (*Buildings, &c.*). *Police* (*Royal Parks*).

Order of Votes and Estimates. Explanation as to the order of the votes in the accounts not strictly following the order in the estimates; arrangement desirable in future on this point, *Foster* 41–50.

P.

Pensions (*Foreign Courts*). Dissent from a suggestion by the Comptroller and Auditor General relative to the mode of account in the case of certain pensions payable at foreign courts by officers abroad, *Foster* 1401.

Pigott, George. (Analysis of his Evidence.)—Represents the Accountant General of the Court of Chancery in Ireland, but is unable to explain the causes of variation between the expenditure and the grant, 998–1017——Submits explanations on certain specific points raised by the Committee in respect of the estimate and expenditure, 1018 *et seq.*

Police, Counties and Boroughs. Obstacle to ascertaining beforehand whether the Vote for "Police, Counties and Boroughs," shall be overdrawn so as to take a supplementary vote, *Foster* 2083–2087——Conclusion that the deficiency of this vote must have been known in time for a supplementary vote to be taken, *Anderson* 2083.

Reports, 1870—*continued.*

Police (*Royal Parks*). Statement relative to an excess of expenditure under Vote 9 on account of the police for Royal parks, *Russell* 105-110——Insufficiency of the balance at the end of the year 1867-68 for meeting the charges for the police, so that the payment was deferred till 1868-69, *ib.* 110-117. 120-122——Difficulty of knowing what the balance will be because of the delay in receiving the sub-accountants' accounts, *ib.* 112-116.

Wrong principle pursued by the Office of Works as regards the postponement of a payment in respect of police in the parks in 1867-68, *Foster* 118, 119. 123-125.

Further explanation on the subject of the Accounts of the Royal Parks, and the delay in getting in the sub-accountants' accounts, *Russell* 217-221.

Poor Law Inspectors. Probable cause of a material reduction in the charge for travelling expenses of Poor Law Inspectors, *Foster* 637-640.

Portland Harbour. Explanatory statement on the part of the Accountant General of the Navy as to the delay in rendering an Appropriation Account of the Portland Harbour Vote; this delay will not occur again, *Edwards* 439-449——Statement as to witness not having made a supplementary report upon the Portland Harbour Account; question of his now doing so, *Sir W. Dunbar* 450-455.

Post Office (*Buildings*). Statement as regards an excess on the Office of Works Vote for Maintenance and Repairs, in respect of Post Office buildings, that the estimate is one which is very liable to be exceeded, *Russell* 288-294——Charge in the Office of Works Estimates for the first time in 1868-69 in respect of Post Office and Inland Revenue buildings; doubt as to there having been any written sanction from the Treasury on the subject, *ib.* 330-333. 335-337.

Post Office (*Void Money Orders*). Reference to the question of the void money order fund as being now under the consideration of the Postmaster General and the Treasury, *Chetwynd* 1605. 1607——Statement to the effect that the Treasury have decided to carry out the recommendation of the Committee of 1869 in regard to the mode of dealing with the post office void money orders; objections by the Postmaster General to any alteration, *Foster* 1608-1613——Understanding as to the acceptance by the Post Office of the recommendation by the Committee in 1869 as to void money orders, *First Rep.* vi.

Postponement of Expenditure. Several instances of sums having been brought to charge in the year 1868-69, which should legitimately have come in course of payment during the preceding year, *First Rep.* iii.—— *See* also *Savings and Deficiencies.*

Pulman, Mr. Explanation as to certain expenditure incurred by Mr. Pulman on Treasury business having been charged as a payment out of the Treasury Vote for 1869-70; *Foster* 212-216.

R.

Rates (*Government Property*). As inspector of rates at the Treasury, witness explains an excess of expenditure to the extent of 3,802 *l.* on Vote 22, as arising chiefly from the conversion of a large number of rates into contributions by way of bounty, advantages of this arrangement, which leads to a practical saving upon the rates, *Griffiths* 237-263. 280-282. 286, 287——Explanation as to an unexpended balance of the Vote "Rates for Government Property," for the year 1867-68, not having been surrendered to the Exchequer till March 1870, *ib.* 283-285.

Consideration of the present system by which the estimates for rates on Government property contain no contributions except for the Army and Navy; amended arrangement suggested, *Foster* 264-279.

Russell, George. (Analysis of his Evidence.)—Statement as regards some stores provided for the consulates in China and Japan, that these did not come in any way within the province of the Office of Works, 2. 5.

Impracticability in many cases of stating how much of the unexpended amount of any Vote was due to mere postponement, and how much to actual saving, 33-38.

Statement relative to an excess of expenditure under Vote 9, on account of the police for Royal parks, 105-110——Insufficiency of the balance at the end of the year 1867-68 for meeting the charges for the police, so that the payment was deferred till 1868-69; 110-117. 120-122——Difficulty of knowing what the balance will be, because of the delay in receiving the sub-accountants' accounts, 112-116.

Further explanation on the subject of the accounts of the Royal parks, and the delay in getting in the sub-accountants' accounts, 217-221——Doubt as to the necessity of previous estimate in the case of a small payment, sanctioned by the Treasury, to the Consul at Paris, for services rendered to the Department of Works, 222-228——Statement in explanation of certain expenditure in respect of court-houses in Scotland;

Reports, 1870—*continued.*

Russell, George. (Analysis of his Evidence)—*continued.*

obstacle to any estimate in the case of an item of 919 *l.* expended on Inverness court-house, 234, 235.

Statement as regards an excess on the Vote for Maintenance and Repairs, in respect of Post Office buildings, that the estimate is one which is very liable to be exceeded, 288-294.

Charge in the Office of Works Estimates for the first time in 1868-69 in respect of Post Office and Inland Revenue buildings; doubt as to there having been any written sanction from the Treasury on the subject, 330-333. 335-337.

Explanation as to the check upon fraud or double payment in the case of furniture or of work, paid for out of the Vote of the Office of Works, 368, 369. 379-387.

Practice of the Office of Works to retain extra receipts until after the receipt of the report of the Comptroller and Auditor General, 467.

Ryan, Charles Lister. (Analysis of his Evidence.)—Grounds for adhering to the opinion expressed by the Audit Office that certain final payments made from Civil Contingencies should have been charged to and included in the account of the Tehran Mission House for 1868-69; 71-73. 78. 89, 90.

Explanation that every case of a deficiency upon a Vote appears upon the Appropriation Accounts, 155-157.

Grounds upon which the Audit Department concluded that Curragh of Kildare salaries should have been charged to Civil Contingencies, 554. 557-559.

Incorrect proceeding of the Admiralty in not furnishing the vouchers with a certain account of charges paid for the convict service, 700, 701. 709-712——These vouchers might be inspected at the Admiralty, 717.

Comment upon the very confused manner in which the account of the Science and Art Department was rendered, 1076——Statement as to there being several imprests of the Department still unaccounted for, 1101-1103——Explanation as regards certain expenditure of the Department in respect of the School of Naval Architecture, that the account should have been rendered to the Admiralty, 1114-1120. 1123-1126. 1129-1133——Explanation as regards extra receipts paid by the Department to the Exchequer, 1161, 1162.

Reference to a letter from the National Education Office, Dublin, dated 3rd March 1870, submitting sundry objections to an alteration of the present system of rendering the accounts of the office in relation to the Estimate, 1181. 1184——Evidence on the question of a further sub-division of the accounts; deficient check of the Audit Department under the present practice, 1185, 1186. 1204. 1220, 1221. 1225.

Exception taken to the Consular Vote as including the military half-pay of Colonel Mansfield, Consul at Warsaw, 1308, 1309. 1312——Grounds upon which the Audit Department objected to certain excess of expenditure as sanctioned by the Foreign Office, which was incurred by Consul Macleod in the Niger districts, 1330-1332. 1337-1342. 1352-1355.

Statement in explanation of the course pursued by the Audit Office as regards an item of 162 *l.* 15 *s.* 4 *d.*, under Vote 10, surrendered in excess of the savings of the previous year, 1546-1548. 1551. 1555-1559. 1563.

Grounds for the objection by the Audit Office in regard to a sum of 26 *l.* 13 *s.* 4 *d.*, paid as pension to Mr. Neal, Consul at the Piræus, 1573, 1574.

Practice of the Audit Department as to reporting to the Treasury, and not to Parliament, in certain cases of non-compliance with the Treasury regulations, 1803-1805.

Cost of audit of the Greenwich Hospital capital and income account, which is audited under a special Act, 1884-1889——Power of the Treasury to refer accounts to the Audit Office, 1888. 1890.

S.

Salaries, Increase of. Practice generally for the Treasury to avoid sanctioning increases of salaries during the currency of the financial year; authority to depart from this rule, *Foster* 661-674.

Savings and Deficiencies. Great difficulty of such a separation by the Treasury of the accounts as would show whether a "saving" was owing to the work not having been performed, or to its having been performed more cheaply than was anticipated, *Foster* 9, 10——Admission that the terms "savings" and "deficiencies" do not exactly convey the fact, a real saving not being necessarily effected, because the expenditure within the year is less than the sum voted, *ib.* 11-17.

Respects in which the term "savings," though not strictly inaccurate, is likely to mislead, *Anderson* 19-21——Impractibility in many cases of stating how much of the unexpended

Reports, 1870—*continued.*

Savings and Deficiencies—continued.

unexpended amount of any Vote is due to mere postponement, and how much to actual saving, *Russell* 33–38——Explanation that every case of a deficiency upon a Vote appears upon the Appropriation Accounts, *Ryan* 155–157.

Opinion adverse to extending to the Civil Service Votes the power which exists in the case of the Army and Navy Votes of applying the saving on one Vote to the deficiency on another, *Anderson* 177–181——Necessity of sanction by the Treasury before the saving on one sub-head of a Vote can be applied to the deficiency on another, *Foster* 751–754.

Advantage, if it were feasible, of the statement of savings and deficieneies, not only of the Army and Navy, but of the Civil Service, being examined by Parliament before the deficiencies are voted, *Anderson* 1756–1765—— Necessity of an Act of Parliament if the Savings and Deficiencies Account and the Appropriation Account are to be amalgamated, and are to be rendered at a different time, *ib.* 1767. 1818, 1819.

Statement as to witness not being specially called upon by Act to report that deficiencies have been voted, *Sir W. Dunbar* 1808——Misunderstanding likely to arise from the terms "savings" and "deficiencies;" amended terms suggested, *First Rep.* iii. vii.

Explanation that the less expenditure than was voted in the case of the Civil Services and Revenue Departments does not necessarily imply a saving to that extent, *First Rep.* vi.

See also *Army Accounts and Estimates. Civil Contingencies Fund. Form of Account. Navy Accounts.*

School of Naval Architecture. Explanations submitted on the subject of payments by the Science and Art Department for the Admiralty in respect of the School of Naval Architecture, *McLeod* 1111, 1112. 1114–1117. 1123. 1127; *Simkins* 1113. 1128——Irregular course pursued as regards payments by the Department on behalf of the Admiralty for the School of Naval Architecture, *Sir W. Dunbar* 1118, 1119. 1121; *Ryan* 1120. 1123–1126. 1129–1133.

Schools of Art. Excess of payments to Schools of Art under the system of payment on results, *Cole* 1108–1110.

Science and Art Department. Comment upon the very confused manner in which the account of the Science and Art Department has been rendered, *Ryan* 1076—— Inquiry made by Mr. Foster and witness in 1868 and 1869 into the accounts of the Science and Art Department; reports subsequently made to the Treasury, showing the several oints requiring explanation and amendment, *Vine* 1077–1083. 1099, 1100——Long periods for which several imprests have been outstanding, *ib.* 1079. 1099, 1100.

Recent reply by the Science and Art Department to a certain Report upon the accounts of the Department, *Cole* 1084–1088——Responsibility of witness as accountant, though until lately he had very little to do with the matter of the accounts, *ib.* 1095–1097. 1168, 1169.

Witness lays before the Committee the reply of the Department to the Report of the Commissioners of Public Accounts, *McLeod* 1098——Explanation offered on the subject of outstanding imprests, *ib.* 1098. 1104–1107——Statement as to there being several imprests of the Department still unaccounted for, *Ryan* 1101–1103.

Information as to the mode of accounting for certain receipts and payments, and as to the course pursued as regards certain fees, *Cole* 1108–1112. 1114. 1122. 1144. 1146. 1150–1154——Large increase of expense for fuel and lights adverted to and explained, *ib.* 1134–1143——Statement on the subject of extra receipts paid over by the Department to the Treasury, *Simkins* 1155–1160.

Explanation as to certain exceptions taken to the accounts of the Science and Art Department, *Sir W. Dunbar* 1118, 1119. 1121. 1146–1148. 1150. 1153—— Statement as regards extra receipts paid by the Department to the Exchequer, *Ryan* 1161, 1162.

Communication from the Secretary of the Exchequer and Audit Department, dated 6th April 1869, relative to certain discrepancies and irregularities in the account of the Science and Art Department, *App.* (*First Rep.*) 126, 127.

Expediency of steps being taken to prevent a recurrence of the irregularities in respect of Vote 9, Class IV. *First Rep.* iii.

See also *School of Naval Architecture. Schools of Art.*

Reports, 1870—*continued.*

SECRET SERVICE MONEY:

1. *Representations on the part of the Foreign Office with reference more especially to the non-surrender of Balances.*
2. *Explanations on the part of the Audit Department, exceptions being taken to the Practice of the Foreign Office, and an amended System being suggested.*
3. *Question as to Issues from the Secret Service Vote being Payments or Imprests.*
4. *Distribution of the Vote by the Treasury.*
5. *Foreign Office Account for* 1869-70.
6. *Periods of Account of the different Departments.*
7. *Views of the Committee as to the Surrender of Balances.*

1. *Representations on the part of the Foreign Office with reference more especially to the non-surrender of Balances:*

Explanation as regards the Secret Service money expended by the Foreign Office, that legal opinion has been taken, and that the Civil List Act, 22 Geo. 3. c. 82, is still operative and has not been overruled by the Exchequer and Audit Act, *Right Hon. E. Hammond* 777-785. 819-827. 829-833, 880-893——Summary of the conclusions arrived at by the law officers of the Crown; information as to the case submitted for their opinion, *ib.* 777-779. 829-833. 885-889.

Suggestion by the law officers that the receipt given by the Secretary of State for the lump sum issued should be remitted to the Audit Office, and should be accepted as a discharge to the Treasury; concurrence in this view, *Right Hon. E. Hammond* 777-784. 787 ——Circumstance of the Foreign Office not being obliged to render an account of the Secret Service until three years after its issue, there being moreover no power of surrendering the balances, *ib.* 786-799. 806, 807. 811. 894-898——Regulation of the applications so as to leave about half a year's expenditure in hand; expediency of this arrangement *ib.* 794-805. 857-860.

Periodical account rendered to the Audit Office under the Civil List Act showing in lump sums the moneys received and expended, *Right Hon. E. Hammond* 811-820. 900 —— Considerable inconvenience if it were necessary to close every year the Secretary of State's accounts of Secret Service disbursements and to surrender the balance, *ib.* 834, 835. 861-870. 898, 899—— Statement as to the Secret Service money not having been voted by Parliament when the Civil List Act was passed, *ib.* 836.

Argument that the question lies between the Treasury and Audit Office rather than between the Foreign Office and the latter, *Right Hon. E. Hammond* 837-850—— Similar procedure now adopted by the Foreign Office as for many years past, *ib.* 851-856 —— Practice of the Foreign Ministers abroad as to drawing upon the Secretary of State for the sum required for Secret Service, their receipt being a discharge to the Secretary of State, *ib.* 871, 872.

Doubt as to any sums being now charged for the Foreign Secret Service upon the Civil List Revenues, *Right Hon. E. Hammond* 873-884. 890-892——Further objection to the Foreign Office being required to account to the Treasury, as contended by the Audit Office, *ib.* 900, 901——Conclusion as to the sufficiency of the audit hitherto practised, *ib.* 901——Inexpediency of separating the Secret Service Vote into specific sums for the different departments, *ib.* 902.

2. *Explanations on the part of the Audit Department, exceptions being taken to the Practice of the Foreign Office, and an amended System being suggested:*

Grounds for the conclusion that the legal opinion cited by Mr. Hammond on the question of Foreign Secret Service expenditure is based on wrong assumptions, and that the Audit Department have a legal right to require an appropriation account, *Sir W. Dunbar* 828, 829. 903 *et seq.*—— Right of the Audit Office to call for an account under the Act of 1785; error of Mr. Hammond in stating that the account is rendered under the Civil List Act, *ib.* 904.

Witness contends that no inconvenience would arise from rendering an annual account; suggestions as to the form of such account and the vouchers and affidavits to be furnished, *Sir W. Dunbar* 904-912. 915-945. 948, 949——Expediency of any balance at the end of the year being surrendered, *ib.* 913-915——Statement that the account for Secret Service has since 1807 been an appropriation account, *ib.* 914.

Requirement by the Exchequer and Audit Act of 1785 that an account should be rendered within twenty months from the commencement of the financial year, *Sir W. Dunbar* 915. 955-957——Expediency of payments and not issues, being included in the account, *ib.* 915. 933——Statement showing that several accounts have been rendered by the Foreign Office in periods much less than twenty months, *ib.* 915-920. 926, 927.

Practice of Ministers abroad to draw bills on the Treasury, when they have occasion to expend money for Secret Service, *Sir W. Dunbar* 920-924——Explanation that according to the plan advocated by witness no inconvenience would arise on the score of publicity, *ib.* 925-935. 938-945. 948, 949. 974-978 ——Exception taken to Mr. Hammond's

Reports, 1870—*continued.*

SECRET SERVICE MONEY—continued.

2. *Explanations on the part of the Audit Department, &c.*—continued.

mond's statement that the Secretary of State should have a half year's balance in hand for any emergency, *Sir W. Dunbar* 934——Further statement as to the legal right of the Audit Office to call for an appropriation account of Secret Service payments by the Foreign Office, *ib.* 972–974.

3. *Question as to Issues from the Secret Service Vote being Payments or Imprests:*

Conclusion that the issue to the Secretary of State is a payment and not an imprest or advance, *Right Hon. E. Hammond* 784, 785——Comment upon the view that issues from the Secret Service Vote are epuivalent to payments, *Sir W. Dunbar* 913——Conclusion that an issue of Secret Service money to a Secretary of State is an imprest or advance, the Treasury being the accounting department, *Foster* 953.

4. *Distribution of the Vote by the Treasury:*

Explanation as to the distribution by the Treasury, to the several departments, of the Vote for Foreign Secret Service money, *Foster* 961–971.

5. *Foreign Office Account for* 1869-70:

Account of the Secretary of State for Foreign Affairs in respect of Secret Service money for the year ended 31st March 1870, *App.* (*First Rep.*) 122.

6. *Periods of Account of the different Departments:*

Comparatively short periods within which the Colonial Office and Home Office rendered their Secret Service accounts, *Sir W. Dunbar* 936. 946, 947.

Statement of the period of account and date of delivery since 1846, in respect of the Foreign Office, Home Office, and Colonial Office, *App.* (*First Rep.*) 122, 123.

7. *Views of the Committee as to the Surrender of Balances:*

Conclusions of the Committee adverse to the views of the Foreign Office as to the surrender of balances, *First Rep.* iv.

Specie, Freight of (*Treasury Chest*). Reference to a suggestion by witness as to the mode of charging freight of specie, *Sir W. Dunbar* 1394. 1397——Explanation as to the practice of the Treasury in remitting specie for the Treasury chests, and in charging the cost of freight, *Foster* 1395, 1396. 1399, 1400——Doubt as to the expediency of any change of system in regard to the charge for freight of specie, *Anderson* 1398.

Stansfeld, Right Honourable James (Member of the Committee). Analysis of his Evidence.—Statement as to the Government not being favourable to the change of system proposed by the Public Accounts Committee of 1869, as regards the accounts of the Department of Woods and Forests; hope expressed that the question will be re-considered by the present Committee, 982.

Evidence in detail in support of the conclusion arrived at by the Treasury, that certain election expenses in the case of London University, were properly chargeable against the University Vote, 1249–1261. 1266–1274. 1278.

Further explanation as to Government not being prepared to sanction certain proposed changes in the mode of dealing with the revenues of the Woods and Forests, 1930–1941——Further explanation as to Government not being prepared to sanction certain proposed changes in the mode of dealing with the revenues of the Woods and Forests, 1930–1941——Facility of dealing by Vote with the management expenses of the Department, 1939–1941.

Sub-heads (*Accounts and Votes*). Rules laid down by witness in communication with the Departments, showing how the Exchequer and Audit Department would be guided in dealing with payments under different circumstances, and in reporting whether expenditure under sub-heads was properly chargeable to the Vote, *Sir W. Dunbar* 415–417.

Approval of the practice of sometimes introducing a sub-head not included in the original Vote, *Foster* 1402–1405——Duty of the Comptroller and Auditor General to ascertain the intention of Parliament as to the appropriation of the money voted, it being however very inexpedient for him to go into the details of the sub-heads, *ib.* 1501–1504. 1509, 1510.

Argument, that it is witness's province and duty to look at the whole Estimate, as laid before Parliament, including the sub-heads, in order to see that the money voted has been devoted to the purposes intended, and to report thereon; he has no power to disallow, *Sir W. Dunbar* 1428. 1467–1480. 1485–1499.

Evidence in explanation and support of the view that it is the duty of the Comptroller and Auditor General, under the 27th section of the Exchequer and Audit Act to report to Parliament when there is an excess upon the sub-heads of any Vote, involving variation from the intentions of Parliament, *Anderson* 1434–1466. 1480–1485. 1500.

Supplementary Votes. See *Civil Contingencies Fund.*

Reports, 1870—*continued.*

T.

Tehran Mission House. Reference to the vote for the Tehran Mission House as being now combined with another vote; explanation as to this vote coming between two English votes, *Foster* 42–47——Statement as to certain expenditure in respect of the Tehran Mission having been charged to Civil Contingencies; exceptional circumstances under which this was done by the Treasury, *ib.* 63, 64. 68–70. 73–77. 79–88.

Explanation as regards the vote for the Tehran Mission House, that a sum of 8,000 *l.* was estimated to be expended within the year for the purchase of the site, and that no further expenditure was estimated for, *J. H. Cole* 58–62. 65–67.

Grounds for adhering to the opinion expressed by the Audit Office that certain final payments made from Civil Contingencies should have been charged to and included in the Account of the Tehran Mission House for 1868–69, *Ryan* 71–73. 78. 89, 90.

Concurrence of the Committee in the view of the Audit Department as to this vote, *First Rep.* iv.

Tonnage Bounty (*Slavers*). Explanation of the principle upon which the tonnage bounty upon slavers is based; precautions against abuse in respect of payments under this head, *Foster* 1290–1293.

Treasury, The. Question considered as to the expediency of a Supplementary Estimate in order to meet the appointment of a Third Lord of the Treasury at an increased salary, and the pay of two additional supplementary clerks, *Foster* 499–512.

Great variety of Acts by which the powers of the Treasury over the Departments are regulated, *Foster* 1791–1794——Power of the Treasury to refer accounts to the Audit Office, *Ryan* 1888. 1890.

See also *Civil Contingencies Fund.* *Exchequer and Audit Department.* *Savings and Deficiencies.* *Specie, Freight of.* *Sub-heads* (*Accounts and Votes*).

U.

Uraguay Republic. Explanation on the subject of a sum of 37,395 *l.* due from the Republic of Uraguay, *Foster* 2063, 2064.

V.

Vine, Charles. (Analysis of his Evidence.)—Doubt as to the Office of Works being responsible for an alleged delay in auditing the accounts sent up from Scotland in respect of New Buildings and Alterations, 732–737.

Inquiry made by Mr. Foster and witness in 1868 and 1869, into the accounts of the Science and Art Department; reports subsequently made to the Treasury, showing the several points requiring explanation and amendment, 1077–1083. 1099, 1100.

Exception taken to the conclusions of the Comptroller and Auditor General upon the subject of a more numerous sub-division in the case of the Estimate and Accounts of the National Education Office, Dublin, 1194–1196. 1201–1204.

Explanation on the subject of accumulated excesses for some years past in respect of expenditure in China, Japan, and Siam, 1386–1393.

Grounds for objecting to the conclusions arrived at by the Audit Office, as regards a sum of 162 *l.* 15 *s.* 4 *d.*, assumed to be expended by sub-accountants of the Emigration Commissioners, and excluded from the accounts for the year 1867–68; 1545. 1547–1550. 1561–1563.

Virgin Islands (*Colonial Vote*). Argument that the Comptroller and Auditor General was not justified in reporting that an expenditure of 431 *l.* 7 *s.* 10 *d.* in respect of damages caused by a hurricane in the Virgin Islands, was not properly chargeable to the Vote, *Foster* 1409. 1412, 1413. 1505–1507.

Exceptions taken to the conclusion arrived at by Mr. Foster as regards witness's report upon an item of 431 *l.* 7 *s.* 10 *d.*, expended in the Virgin Islands; witness contends that he would have failed in his duty to Parliament if he had not reported that this sum was not properly chargeable to the Vote, *Sir W. Dunbar* 1410, 1411. 1413, 1414. 1428–1433. 1467–1480. 1484–1490——Witness rejected the sum on the ground of its not being properly vouched, *ib.* 1411. 1413, 1414——Communications between the Colonial Office and Audit Office, in reference to the foregoing matter, *ib.* 1413.

Statement to the effect that the Colonial Office have been desirous of meeting the views of the Audit Office, as regards vouchers for certain colonial expenditure, and had no reason to suspect that a sum of 371 *l.* 7 *s.* 10 *d.*, expended in the Virgin Islands, would be disallowed, *Lewes* 1415–1417.

Reports, 1870—*continued.*

W.

Whiffin, Henry, W. S. (Analysis of his Evidence.)—Explanation, on the part of the War Department, relative to an item or saving of 40 *l.* in respect of the pay of the inspector of military prisons; conclusion as to the War Office handing over this sum to the Home Office, if the latter had applied for it, as undertaking the duty, 469–474. 476, 477. 480–483.

Exceptionally heavy character of the Army Account for 1868-69, so that the delay in rendering it was unavoidable, 1632——Obstacles to a classification of the expenditure for the Abyssinian Expedition, under the sub-heads of the Vote; immense labour required, 1633. 1648–1651. 1683–1696. 1701——Explanation as to witness not being prepared to supply certain details; he proposes to do so on a future occasion, 1634. 1653, 1654——Several discrepancies in the account in connection with the Abyssinian Expedition; further explanation promised on this subject, 1634–1647. 1680–1682.

Steps taken for an improved classification in the Army Estimates for next year, in regard to stores, 1704, 1705.

Woods and Forests. Doubt as the Government having yet taken into consideration the mode of dealing with the expenditure of the Office of Woods, &c., *Foster* 979–981—— Statement as the Government not being favourable to the change of system proposed by the Public Accounts Committee of 1869, as regards the accounts of the Department of Woods and Forests; hope expressed that the question will be reconsidered by the present Committee, *Right Hon. J. Stansfeld* 982.

Reference to the practice of payment of receivers under the Office of Woods, the amount not coming on the Votes, *Anderson* 1920. 1926, 1927——Opinion favourable to the whole of the charges of the Office of Woods, &c. coming upon the Votes, *Foster* 1921. 1927, 1928——Payment of some of the receivers by salary, and of some by commission, *Sir W. Dunbar* 1922; *Bathurst* 1923–1925; *Anderson* 1926, 1927.

Further explanation as to Government not being prepared to sanction certain proposed changes in the mode of dealing with the revenues of the Woods and Forests, *Right Hon. J. Stansfeld* 1930–1941——Facility of dealing by vote with the management expenses of the department, *ib.* 1939–1941.

Object of the large balance kept in hand by the Commissioners of Woods, &c., *Foster* 1942——Approval of investigation in regard to the large balance retained in hand by the Commissioners, *Anderson* 1943–1946.

Explanation relative to the large balance (72,318 *l.*) in the hands of the Commissioners of Woods, &c., on the 1st April 1868; sufficiency of a balance of about 40,000 *l.*; *Right Hon. A. Gore* 1947–1960. 1969–1989——Increasing sum paid over to the Exchequer as surplus income, *ib.* 1954–1956. 2032, 2033. 2010–2013—— Reasons for the small net receipts from the Royal Forests, as well as for the large excess of expenditure in respect of Windsor Parks and Woods, *ib.* 1961–1968.

Practice as to the receipt of rents by the Office of Woods, and as to the payment of the receivers and stewards of manors chiefly by commission, *Right Hon. C. A. Gore* 1996–2004——Payment of the establishment charges out of the Vote; objection to all the expenses being charged upon the Vote, *ib.* 2005–2022——Economy and efficiency of the management of the Crown estates, *ib.* 2023–2031——Objection to writing off altogether an item of 35,919 *l.*, which appears in the accounts as irrecoverable, *ib.* 2034, 2035.

Consideration of the practice as to the balance kept in hand by the Commissioners of Woods and Forests; arrangement by which it might be largely reduced, *Anderson* 2036–2047——Small investment in stock on account of the capital of the Land Revenue during 1868–69; *ib.* 2048–2051.

Reference of the accounts to the Audit Department, under Act of Parliament, *Foster* 2052. 2054; *Ryan* 2053——Appropriation audit in the case of the Woods and Forests Account, *Anderson* 2054–2056.

Obstacles to an alteration of the present mode of dealing with the expenditure of the Woods and Forests Department, *Second Rep.* iv.——Attention of the Treasury called to the very large balance kept in hand on the Land Revenue (Income) Account, *ib.*

REFORM CLUB
PALL MALL

SELECT COMMITTEE

ON

RAILWAY COMPANIES;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND APPENDIX.

Ordered, by The House of Commons, *to be Printed,*
7 *July* 1870.

Wednesday, 26th April 1870.

Ordered, THAT a Select Committee be appointed to inquire into the Law and the Administration of the Law of Compensation for Accidents as applied to Railway Companies; and also to inquire whether any and what precautions ought to be adopted by Railway Companies with a view to prevent Accidents.

Tuesday, 24th May 1870.

Ordered, THAT the following Members be nominated:—

Mr. Mowbray.
Mr. Shaw Lefevre.
Mr. Sclater-Booth.
Mr. Headlam.
Sir Henry Selwin-Ibbetson.
Mr. Davison.
Mr. Lopes.
Mr. Sherriff.
Mr. James Lowther.
Mr. Charles Reed.
Mr. Plunket.
Mr. Price.
Mr. Dalglish.
Mr. Hinde Palmer.
Mr. Denison.

Ordered, THAT the Committee have power to send for Persons, Papers, and Records.

Ordered, THAT Five be the Quorum of the Committee.

Thursday, 16th June 1870.

Ordered, THAT Mr. *James Lowther* be discharged from further attendance on the Committee, and that Mr. *Rowland Winn* be added thereto.

Monday, 4th July 1870.

Ordered, THAT the Report of the Commissioners on Railways [presented 7th May 1867] be referred to the Select Committee.

Thursday, 7th July 1870.

Ordered, THAT the Committee have power to report their Observations, together with the Minutes of Evidence taken before them, to The House.

PROCEEDINGS OF THE COMMITTEE - - - - - - vii
MINUTES OF EVIDENCE - - - - - - - - - - 1
APPENDIX - - - - - - - - - - - - - 180

REPORT.

THE SELECT COMMITTEE appointed to inquire into the LAW and the Administration of the LAW of COMPENSATION for ACCIDENTS as applied to RAILWAY COMPANIES; and also to inquire whether any and what Precautions ought to be adopted by RAILWAY COMPANIES with a view to prevent ACCIDENTS;——HAVE considered the matters to them referred, and have agreed to the following REPORT:—

YOUR Committee commenced the inquiry entrusted to them by receiving the evidence of several gentlemen acting in different capacities in the management of railways, and hearing from them the defects in the law of which they considered that the railway companies had reason to complain. The Committee also, through their Chairman, addressed a communication to the Chiefs of the Courts of Common Law, requesting the advice and assistance of the judges in the prosecution of the inquiry, and the result is that four judges have given to the Committee the benefit of their knowledge and experience.

Application was also made to the Board of Trade, and, in consequence, two of the Inspectors who are in the habit of investigating the causes of railway accidents, were deputed by the office, and have given evidence.

It will be convenient, in the first place, to refer to the law upon the subject. The legal liabilities of railway companies for accidents may be divided into two heads. First, the liability to persons who are not passengers, with whom the railway companies have not entered into anything in the nature of a contract; and secondly, the liability of the companies to passengers who have paid for their tickets, and with whom consequently the companies have entered into a contract.

It may, however, be observed, that though the liability in the two cases depends upon a different principle of law, the difference in practice as the law is now administered is not great, for in each case the liability of companies for injuries caused by the negligence of their servants is unlimited, and in each case the damages (if not made the subject of an agreement) are assessed by a jury. In the case of the person, not a passenger, with whom there is no contract, the liability rests upon the general law, which law is applicable to private individuals as well as to companies, though the railway companies complain that it is administered against them, by the intervention of juries, with much greater severity than it is administered against private individuals.

Under this law a master or employer, whatever care he may have taken in the selection of his servant, is liable to the full extent of any injury done by such servant within the line of his duty. This unlimited liability was until recent times considerably modified by another somewhat technical rule of law, to the effect that no action for damages could be maintained after death for an injury done during life, or as the rule was expressed, *actio personalis moritur cum personâ*.

This modification was abolished in the year 1846 by Stat. 9 & 10 Vict. c. 93, commonly called Lord Campbell's Act. And it may be observed that this change did not arise from anything connected with railway accidents in particular, but probably from a feeling that the rule rested upon no sound foundation.

One of Her Majesty's counsel, examined before the Committee, has expressed a strong opinion concerning the injustice of the general law; and submitted that the master ought not to be mulcted in civil damages to any extent for the negli-

gence of a servant except in the same case as that in which he would now be liable criminally, that is to say, when he himself has, by his own negligence or default, contributed to the injury. This view has not, however, been confirmed by the opinion of other witnesses; and though there is some difficulty in giving a reason why a perfectly innocent person should be liable to an unlimited extent for an accident caused by the negligence of his servant acting (as it might be urged) contrary to his orders, yet your Committee do not feel themselves in a position to recommend such an alteration of the law.

The liability, however, of a railway company with respect to passengers, rests upon an implied contract, and it is well worth the consideration of the House whether the present interpretation of this contract is fair to the railway companies or beneficial to the public.

The Railway Commissioners of 1867 thus express themselves on this part of the subject: "On the other hand, it should not be forgotten that there is an important distinction between damages for injuries inflicted by a mere wrong-doer, and for contingencies resulting from the failure to perform a contract which the person injured willingly entered into, knowing that it was attended with a certain risk."

The railway companies complain of the interpretation put by the law upon these contracts with their passengers, and say that the liability imposed upon them bears no relation to the sums paid to them, and that they have no power of charging a higher fare to a passenger, with respect to whom they incur a great risk than to a passenger with respect to whom the risk is comparatively small.

It does not seem clear whether a railway company could legally by notice given to a passenger, affect the interpretation the law now puts upon the contract, and thus diminish their liability; but the practical difficulties incident to such a step would probably be found insuperable. The railway companies complain as much (if not more) of the administration of the present law as of the alleged injustice of the law itself. They say that unreasonable and excessive damages are awarded against them by juries, that great frauds are constantly practised upon them, that the costs incident to the settlement of claims are made extravagantly high, and that of the very large sums paid by them, partly for costs and partly for damages, a large portion is dissipated, and does no good to the claimants. They say that in the arrangement of claims without the aid of the court, they are prejudiced, and compelled to pay much more than is fair and reasonable by the power which the claimants possess of forcing the company into court, and compelling them to pay the costs on both sides.

Although the evidence given by the judges fails to bear out these complaints to the full extent, your Committee are of opinion that many of these complaints are well founded, and that there are objections to the present administration of the law, of which the companies have reason to complain.

The railway companies suggest as a remedy for these evils, that a fixed limit upon the extent of their liability should be imposed by the Legislature, and that persons estimating the risk at a higher sum than that for which the companies are made liable, should be entitled to insure on reasonable terms made obligatory upon the company. The companies further suggest that some change should be made in the nature of the tribunal to adjudicate upon claims, and that the assessment of damages should not be left as at present to the decision of a jury.

In support of the suggestion, that a limit should be placed upon the liability, it may be mentioned, in the first place, that in the year 1830, by Statute 11 Geo. 4 and 1 Will. 4, c. 8, commonly called the "Carriers Act," the Legislature fixed the sum of 10 *l.* as the liability of carriers for the conveyance of goods and parcels, and imposed, when persons who wished to hold the carrier liable for a larger sum, the necessity of paying an additional sum for the conveyance.

Also, in the year 1854, by the Railway and Canal Traffic Act, 17 & 18 Vict. c. 31, the liability of railway companies for the carriage of horses, cattle, and sheep was limited, so that a company is now liable only to the extent of 50 *l.* for a horse; but the owner of the horse may, if he think fit, increase the liability by declaring the value he puts upon the horse, and paying an additional sum. The two principles contended for by the railway companies, namely, the limit of the liability, and the decision of disputed claims by arbitration, have been adopted by the Legislature in the case of what are called workmen's trains.

The

The history of these workmen's trains has been given in evidence before the Committee, and it would appear that the experiment has been satisfactory. The theory was, that as the railway companies disturbed a certain number of working people, who were obliged to remove into suburban districts, it was right that the railway companies should place these people in as good a condition as that in which they had formerly been in by giving them the advantage of very cheap conveyance to and from their work.

The railway companies, in accepting this obligation, stipulated in return that the liability with respect to these trains should be limited, and that claims arising in respect of accidents occurring upon these trains should be settled by arbitration. This stipulation was assented to, and it was accordingly enacted, "That the liability of the company under any claim to compensation for injury or "otherwise in respect of each passenger travelling with such ticket as aforesaid, "shall be limited to a sum not exceeding 100 *l.*, and the amount of compensa- "tion payable in respect of any passenger so injured shall be determined by "an arbitrator to be appointed by the Board of Trade, and not otherwise."

The Royal Commissioners in their Report recommend that workmen's trains on this principle of limited liability should run in and out of every manufacturing town.

Your Committee recommend that facilities should be given for the extension of the system, and that provision should be made to enable railway companies to establish workmen's trains without the necessity of applying to Parliament for the purpose.

With respect to the ordinary traffic of passengers, the recommendation of the Royal Commissioners is in the following terms:—

We recommend that, on the one hand, railway companies should be absolutely responsible for all injuries arising in the conveyance of passengers, except those due to their own negligence; and that, on the other hand, the liability of the railway companies be limited within a maximum amount of compensation for each class of fares.

With respect to these recommendations, your Committee propose an alteration in the tribunal before which cases of railway accidents for the future should be heard. They are of opinion that trial by jury does not in these cases work satisfactorily; and they recommend that for the future a court should be established for the trial of these cases without a jury, which would be sufficiently strong to secure the confidence of the public, and which should possess adequate legal experience, and be assisted by engineering and medical advice. They recommend to the careful consideration of Her Majesty's Government the best mode of constituting such a tribunal.

All disputed claims for damages arising out of railway accidents should be made to this court, which should have power, if it thinks fit, to institute an inquiry on the spot.

The costs should in all cases, when the claimant recovers damages, be borne by the company, except when the company should have tendered a sum equal to, or larger than, the sum recovered, in which case the costs should be in the discretion of the court.

Notices of possible or probable claims shall be given to the company within a limited specified time from the date of the accident; in default thereof no claim shall be established.

Should this tribunal be established, your Committee see no reason for altering the present system of unlimited liability.

In the event of the tribunal remaining as at present constituted, your Committee are of opinion that the liability should be limited as follows, viz., in the case of

	£.
1st Class Passengers - - - - - - -	1,000
2nd „ „ - - - - - - -	500
3rd „ „ - - - - - - -	300

Your Committee further think that if this limitation is conceded, the public should have power of insuring with the company, for an additional sum of 3,000 *l.* in a 1st class, 2,000 *l.* in the 2nd class, 900 *l.* in a 3rd class, at a reasonable charge not exceeding 3 *d.* a 1,000 *l.* for the 1st class, 2 *d.* for 500 *l.* in the 2nd class, and 1 *d.* for 300 *l.* in the 3rd class, for the journey.

Your Committee have received evidence in favour of the block system, and it has been shown before them, that where it has been adopted it has materially conduced to the safety of the public.

Your Committee have also received evidence in favour of the principle of the interlocking of signals and points, and concerning continuous breaks.

They recommend the evidence on these subjects to the careful consideration of boards of directors.

7 July 1870.

PROCEEDINGS OF THE COMMITTEE.

Monday, 30*th May* 1860.

MEMBERS PRESENT:

Mr. Davison.	Mr. Dalglish.
Mr. Denison.	Mr. Sclater-Booth.
Mr. Hinde Palmer.	Mr. Reed.
Mr. Mowbray.	Mr. Plunket.
Sir Henry Selwin-Ibbetson.	

Mr. HEADLAM was called to the Chair.

[Adjourned till Monday, the 13th June, at Twelve o'clock.

Monday, 13*th June* 1870.

MEMBERS PRESENT:

Mr. HEADLAM in the Chair.

Mr. Sherriff.	Mr. Davison.
Mr. Reed.	Mr. Sclater-Booth.
Mr. Price.	Mr. Mowbray.
Mr. Denison.	Mr. Dalglish.
Sir Henry Selwin-Ibbetson.	Mr. Hinde Palmer.

Mr. *James Blenkinsop*, Mr. *Henry Oakley*, and Captain *William O'Brien*, were severally examined.

[Adjourned till Thursday next, at Twelve o'clock.

Thursday, 16*th June* 1870.

MEMBERS PRESENT:

Mr. HEADLAM in the Chair.

Mr. Lopes.	Mr. Sclater-Booth.
Mr. Sherriff.	Mr. Shaw Lefevre.
Mr. Price.	Mr. Reed.
Mr. Denison	Mr. Mowbray.
Mr. Plunket.	Mr. Dalglish.
Mr. Hinde Palmer.	Mr. Davison.

Captain *O'Brien* further examined.

Mr. *Robert Stanley Mansel* and Mr. *James Allport* were severally examined.

[Adjourned till Monday next, at Twelve o'clock.

Monday, 20th June 1870.

MEMBERS PRESENT:

Mr. HEADLAM in the Chair.

Mr. Davison.	Mr. Plunket.
Sir Henry Selwin-Ibbetson.	Mr. Hinde Palmer.
Mr. Rowland Winn.	Mr. Sclater-Booth.
Mr. Denison.	Mr. Reed.
Mr. Lopes.	Mr. Sherriff.
Mr. Price.	Mr. Dalglish.

Mr. Baron *Martin*, Mr. Baron *Bramwell*, Sir *Edward Watkin*, and Mr. *Samuel Laing*, were severally examined.

[Adjourned till Thursday next, at Twelve o'clock.

Thursday, 23rd June 1870.

MEMBERS PRESENT:

Mr. HEADLAM in the Chair.

Mr. Sherriff.	Mr. Rowland Winn.
Sir Henry Selwin-Ibbetson.	Mr. Price.
Mr. Reed.	Mr. Hinde Palmer.
Mr. Plunket.	Mr. Dalglish.
Mr. Davison.	Mr. Lopes.
Mr. Denison.	

Mr. *J. Brown*, Q.C., Mr. *J. S. Forbes*, and Mr. *S. L. Mason*, were severally examined.

[Adjourned till Monday next, at Twelve o'clock.

Monday, 27th June 1870.

MEMBERS PRESENT:

Mr. HEADLAM in the Chair.

Mr. Sherriff.	Mr. Mowbray.
Mr. Denison.	Mr. Sclater-Booth.
Sir Henry Selwin-Ibbetson.	Mr. Rowland Winn.
Mr. Plunket.	Mr. Dalglish.

Dr. *Pemberton*, Colonel *Yolland*, C.E., Mr. Justice *Hannen*, Mr. *W. J. Vian*, and Captain *H. W. Tyler*, were severally examined.

[Adjourned till Thursday next, at Twelve o'clock.

Thursday, 30th June 1870.

MEMBERS PRESENT:

Mr. HEADLAM in the Chair.

Sir Henry Selwin-Ibbetson.	Mr. Hinde Palmer.
Mr. Sherriff.	Mr. Mowbray.
Mr. Davison.	Mr. Sclater-Booth.
Mr. Denison.	Mr. Lopes.
Mr. Rowland Winn.	

Captain *H. W. Tyler* further examined.

Mr. *Charles S. Whitmore*, Q.C., Mr. *J. Grierson*, and Mr. *C. W. Eborall*, were severally examined.

[Adjourned till Monday next, at Twelve o'clock.

Monday, 4th July 1870.

MEMBERS PRESENT:

Mr. HEADLAM, in the Chair.

Sir H. Selwin-Ibbetson.	Mr. Dalglish.
Mr. Sherriff.	Mr. Sclater-Booth.
Mr. Denison.	Mr. Davison.
Mr. Rowland Winn.	Mr. Plunket.
Mr. Mowbray.	Mr. Hinde Palmer.
Mr. Reed.	

Mr. Justice *Willes*, Mr. *George Pattison Elderton*, Mr. *Frederick Rose*, Mr. *Henry Blackmore*, and Mr. *John Peake Knight*, were severally examined.

The Committee deliberated.

Adjourned till To morrow, at Two o'clock.

Tuesday 5th July 1870.

MEMBERS PRESENT:

Mr. HEADLAM, in the Chair.

Mr. Denison.	Mr. Plunket.
Sir Henry Selwin-Ibbetson.	Mr. Sclater-Booth.
Mr. Sherriff.	Mr. Davison.
Mr. Hinde Palmer.	Mr. Reed.
Mr. Rowland Winn.	Mr. Dalglish.
Mr. Price.	Mr. Mowbray.

DRAFT REPORT proposed by the Chairman, read a first time, as follows:—

"1. The Committee commenced the inquiry entrusted to it by receiving the evidence of several gentlemen acting in different capacities in the management of railways, and hearing from them the defects on the law on which they considered that the railway companies had reason to complain. The Committee also, through their Chairman, addressed a communication to the Chief Justices of the Courts of Common Law, requesting the advice and assistance of the judges in the prosecution of the inquiry, and the result is that four judges have given to the Committee the benefit of their knowledge and experience.

"2. Application was also made to the Board of Trade, and, in consequence, two of the Inspectors who are in the habit of investigating the causes of railway accidents, were deputed by the office, and have given evidence.

"3. It will be convenient, in the first place, to give a summary of the law upon the subject. The legal liabilities of railway companies for accidents must be divided into two heads. First, the liabilities to persons who are not passengers, with whom the railway companies have not entered into anything in the nature of a contract; and secondly, the liability of the companies to passengers who have paid for their tickets, and with whom consequently the companies have entered into a contract.

"4. It may, however, be observed, that though the liability in the two cases depends upon a different principle of law, the difference in practice as the law is now administered is not great, for in each case the liability of the company for an injury in any manner caused by the negligence of one of their servants is unlimited, and in each case the damages (if not made the subject of an agreement) are assessed by a jury. In the case of the person not a passenger with whom there is no contract, the liability of the company rests upon the general law, which law is applicable to private individuals as well as to companies, though the railway companies complain that it is administered against them by the intervention of juries with much greater severity than it is administered against private individuals.

"5. Under this law, a master or employer, whatever care he may have taken in the selection of the servant, is liable to the full extent of his means for any injury done by the servant within the line of his duty. *Qui facit per alium facit per se*, is the short legal maxim on the subject. This unlimited liability resulting from the law of master and servant, was until recent times considerably modified by another somewhat technical rule of law, to the effect that no action for damages could be maintained after death for an injury done during life, or as the rule was expressed, *actio personalis moritur cum personâ.*

"6. This modification was abolished in the year 1846 by stat. 9 & 10 Vict. c. 93, commonly called Lord Campbell's Act. And it may be observed that this change did not arise from anything connected with railway accidents in particular, but probably from a feeling that the rule rested upon no sound foundation.

"7. One of Her Majesty's Counsel examined before the Committee, has expressed a strong opinion concerning the injustice of this general law; and submitted that the master ought not to be mulcted in civil damages to any extent for the negligence of a servant, except in the same case as that in which he would now be liable criminally, that is to say, when he himself has, by his own negligence or default, contributed to the injury. This view has not, however, been confirmed by the opinion of other witnesses, and though there is some difficulty in giving a reason why a perfectly innocent person should be liable to the full extent of his means for an accident by a servant, committed (as it might fairly be urged) contrary to his orders, yet your Committee do not feel themselves in a position to recommend a general alteration of the law.

"8. The liability, however, of a railway company, with respect to passengers with whom they have entered into a contract, rests upon the interpretation put upon the contract, and it is well worth the consideration of the House whether the present interpretation of the contract is fair to the railway companies or beneficial to the public.

"9. The Railway Commissioners of 1867 thus express themselves on this part of the subject: "On the other hand, it should not be forgotten that there is an important distinction between damages for injuries inflicted by a mere wrongdoer, and for contingencies resulting from the failure to perform a contract which the person injured willingly entered into, knowing that it was attended with a certain risk.

"10. The railway companies complain of the interpretation put by the law upon these contracts with their passengers, and say that the liability imposed upon them, bears no relation to the sums paid to them, and that they have no power of charging a higher fare to a passenger, with respect to whom they incur a great risk than to a passenger with respect to whom the risk is comparatively small.

"11. It does not seem clear whether a railway company could legally by notice given to such passenger, affect the interpretation the law now puts upon the contract, and thus diminish their liability; but the practical difficulties incident to such a step would probably be found insuperable. The railway companies complain as much (if not more) of the administration of the present law as of the alleged injustice of the principles. They say that unreasonable and excessive damages are awarded against them by juries, that great frauds are constantly practised upon them, that the cost incident to the settlement of claims are made extravagantly high, and that of the very large sums paid by them, partly for costs, and partly for damages, a large portion is dissipated, and does no good to the claimants. They say that in the arrangement of claims without the aid of the court, they are prejudiced, and compelled to pay much more than is fair and reasonable by the power which the claimants possess of forcing the company into court, and compelling them to pay the costs on both sides.

"12. The Committee are of opinion that many of these complaints are well founded, and that there are serious objections to the present administration of the law, of which the companies have good reason to complain.

"13. The railway companies suggest, as a remedy for these evils, that a fixed limit upon the extent of their liability should be imposed by the Legislature, and that persons estimating the risk at a higher sum than that for which the companies are made liable, should be entitled to insure on reasonable terms made obligatory upon the company. The companies further suggest that some change should be made in the nature of the tribunal to adjudicate upon claims, and that the assessment of damages should not be left as at present to the decision of a jury, but that it should either be placed under a county court judge, or that some form of arbitration should be established.

"14. In support of the suggestion that a limit should be placed upon the liability, it may be mentioned, in the first place, that in the year 1830, by Statute 11, Geo. 4 & 1 Will. 4, c. 8, commonly called the "Carriers Act," the Legislature made a fixed limit of 10*l.* as the liability of carriers for the conveyance of parcels, and imposed, when persons who wished to hold the carrier liable for a larger sum, the necessity of paying an additional sum for the conveyance. So, also, in the year 1854, by the Railway and Canal Traffic Act, 17 & 18 Vict. c. 31, the liabilities of companies for the carriage of horses, cattle, and sheep was limited, so that a railway company is now liable only to the extent of 50*l.* for a horse; but the owner of the horse may, if he think fit, increase the liability by declaring the value he puts upon the horse, and paying an additional sum.

"15. The two principles contended for by the railway companies, namely, the limit of the liability, and the decision of disputed claims by arbitration, have been adopted by the Legislature in the case of what are called workmen's trains. The history of these workmen's trains has been given in evidence before the Committee, and it would appear that the experiment has been successful. The theory was, that as the railway companies disturbed a certain number of working people, who were obliged to remove into suburban districts, it was right that the railway companies should place those people in as good a condition

condition as they had formerly been in by giving them the advantage of very cheap conveyance to and from their work.

"16. The railway companies, in accepting this obligation, stipulates in return that the liability with respect to these trains should be limited and that claims arising in respect of accidents occurring upon these trains should be settled by arbitration. This stipulation was assented to, and it was accordingly enacted, 'That the liability of the company 'under any claim to compensation for injury or otherwise in respect of each passenger 'travelling with such ticket aforesaid, shall be limited to a sum not exceeding 100 *l.*, and 'the amount of compensation payable in respect of any passenger so injured shall be 'determined by an arbitrator to be appointed by the Board of Trade, and not otherwise.'

"17. The Royal Commissioners in their Report recommend that workmen's trains on this principle of limited liability should run in or out of every manufacturing town.

"18. Your Committee concur with the recommendation of the Royal Commissioners, and recommend the extension of the system.

"19. With respect to the ordinary traffic of passengers, the recommendation of the Royal Commissioners is in the following terms:—

"'We recommend that, on the one hand. railway companies should be absolutely responsible for all injuries arising in the conveyance of passengers, except those due to their own negligence, and that, on the other hand, the liability of the railway companies be limited within a maximum amount of compensation for each class of fares.'

"20. With this recommendation your Committee concur. It may be observed that, in accordance with this resolution, the liability of the companies would, on the one hand, be extended, and they would be made liable for any accident occurring without negligence or default of themselves or their servants, in cases where the passenger had not himself contributed to the accident; on the other hand, there would be a clear limit as to the amount for which they would be liable.

"21. The Royal Commissioners also recommend that 'any passenger should be entitled 'to require from the company any additional amount of insurance he may desire, on pay-'ing for it according to a fixed tariff.'

"22. With this recommendation also your Committee concurs; but your Committee cannot help expressing their opinion that the difficulties incident to the establisment of proper and authorised rates of premium would be great, and that it may probably be found necessary to leave the matter, as at present, to independent companies.

"23. If the liability were limited in amount, with or without a system of insurance, your Committee are of opinion that many of the objections now urged against the trial by jury would either cease to exist, or be materially diminished.

"24. They would recommend that a railway company should be at liberty to tender to a claimant a certain amount for his claim; that the amount so tendered should not be disclosed to the jury, and without suggesting a precise rule on the subject, and that the costs of the trial should in some measure depend upon the question whether the verdict was for more or less than the sum tendered.

"Subject to this alteration of the law, your Committee recommend that the trial by jury should continue for claims against the company within the limit of their liability in respect of accidents occurring on their ordinary trains. With respect, however, to claims arising out of insurance, it appears that the clauses contained in the Railway Passengers Act are reasonable, and have answered well for all parties; so that your Committee recommend that clauses to the same effect should be made part of any established system of insurance.

"25. Your Committee have received evidence concerning the block system, concerning continuous breaks, and the interlocking of signals and points.

"26. They recommend the evidence on these subjects to the careful consideration of boards of directors; but the Committee feels itself incompetent to express an opinion upon mechanical improvements. And it is, moreover, deeply impressed with a sense of the great difficulties incident to any interference with the responsibility and discretion of the boards of directors."

HEADS of DRAFT REPORT proposed by Sir *H. Selwin-Ibbetson* read a first time, as follows:

"The evidence is very conflicting as to excessive damages and fraudulent cases, on which grounds the Companies claim limitation of liability both in amount and (the necessity of a limit) as to the time of application for damages. For, whereas the different managers and directors who have been examined have adduced many cases in which they believe excessive damages have been given, the judges do not seem prepared to support that view.

"At the same time the evidence clearly shows that the present mode of assessing damages is a very considerable safeguard to the public.

" If, then, a limitation of liability is agreed to, the public have a right to some equivalent, as a check upon directors and railway managers.

" Should, then, trial by jury be done away with in cases of railway accidents, and a limitation be fixed, a court should be established, composed of an officer of the Board of Trade, with a medical assessor, and legal assessor if required, with an absolute right to inquire into all accidents where life is lost or injury takes place.

" This court should hold its inquiry in public, and its reprot in every instance should be published. The inquiry should embrace the inspection by the medical officer of all cases of injury, as far as practicable, on the spot.

" All claims for damages arising out of an accident should be made to the same court which held the inquiry, who shall have power to examine the medical or other evidence of the plaintiff and defendant, and assess the damages.

" Notices of possible or probable claims to be made within a month from the date of the inquiry being held, or not to be entertained.

" Under this court the limitation of liability might be—

" 1,000 *l.* in a 1st class.
" 500 *l.* in a 2nd class.
" 300 *l.* in a 3rd class.

" With power of insuring for a further sum, up to 3,000 *l.* in a 1st class; 2,000 *l.* in a 2nd class; 1,000 *l.* in a 3rd class; at an additional charge of 3 *d.* a 1,000 *l.* for the 1st class; 2 *d.* per 500 *l.* in the 2nd class, and 1 *d.* for 300 *l.* in the 3rd class, for the journey.

" Very strong evidence has come before us that the absolute block system, when adopted through a line, materially adds to the safety of the public.

" It has been constantly recommended by the Inspectors of the Board of Trade, who, in the last two years, have on 28 occasions, reported that the accident would not have occurred if the line had been worked under this system.

" Accidents are shown by the returns to be much less frequent on lines when it is in operation, for in the years 1867, 1868, and 1869, on 12 lines conducted on absolute block over 1,559 miles, there were 27 accidents, with four killed and 106 injured: whilst on eight lines on absolute block, number of miles not returned, there were no accidents at all.

" On the other hand, on 26 lines on the whole system, over 4,334 miles, there were 83 accidents, with 18 killed and 669 injured.

" The system of interlocking points and signals, and the necessity for all facing points being protected by signals, is also constantly recommended by the Inspectors in the interest of the public; and though one witness expressed a disbelief in the advantages to be derived from these changes, several witnesses have strongly corroborated the Inspector's reports.

" Continuous breaks, from the additional power they give to servants in charge of trains, add much to the safety of travelling, enabling guards to check more rapidly the speed of trains, and thus prevent collisions, whilst they materially diminish the risk of carriages running over each other, should an accident happen to any carriage in the front of the train.

" They are shown to be worked with facility and advantage on many of the lines in England and abroad, and ought to be adopted more generally throughout the country.

" Whilst therefore suggesting this change in the question of the limitation of liability of Railway Companies, and the tribunal before which all cases for compensation arising out of accidents on their lines, should be tried, we feel justified, in the interests and for the better protection of the public, in recommending to Railway Companies throughout the country—

" The adoption of the absolute block system.

" The interlocking everywhere of points and signals.

" The necessity of protecting all facing points by signals; and

" The application of continuous break powe rto trains upon their lines.

The Committee deliberated.

Motion made, and Question proposed, " That the Draft Report proposed by the Chairman be read a second time, paragraph by paragraph,"—Amendment proposed, to leave out the words " the Chairman," in order to insert the words " Sir H. Selwin-Ibbetson"—(Sir *H. Selwin-Ibbetson*)—instead thereof.—Question put, That the words, " the Chairman," stand part of the Question:—The Committee divided:

Ayes, 6.	Noes, 3.
Mr. Davison.	Sir H. Selwin-Ibbetson.
Mr. Denison.	Mr. Hinde Palmer.
Mr. Plunket.	Mr. Rowland Winn.
Mr. Price.	
Mr. Sclater-Booth	
Mr. Sherriff.	

Main Question put, and *agreed to.*

Paragraphs 1 to 14 inclusive, amended, and *agreed to.*

Paragraphs

Paragraphs 15 to 18 postponed.

Paragraph 19 *agreed to.*

[Adjourned till One o'clock on Thursday next.

Thursday, 7th July 1870.

MEMBERS PRESENT:

Mr. HEADLAM, in the Chair.

Sir Henry Selwin-Ibbetson.	Mr. Mowbray.
Mr. Sherriff.	Mr. Hinde Palmer.
Mr. Plunket.	Mr. Rowland Winn.
Mr. Davison.	Mr. Price.
Mr. Denison.	Mr. Dalglish.
Mr. Reed.	Mr. Sclater-Booth.

Paragraph 20.—Amendment proposed, to leave out from the word "with," to the end of the paragraph, in order to add the words, "respect to these recommendations, your Committee propose an alteration in the tribunal before which cases of railway accidents for the future should be heard. They are of opinion that trial by jury does not in these cases work satisfactorily, and they recommend that, for the future, a Court should be established" (Sir *Henry Selwyn-Ibbetson*)—instead thereof.—Question, That the words proposed to be left out stand part of the paragraph, put, and *negatived.* Words added.

Another Amendment proposed, after the last Amendment, to add the words, "composed of an officer of the Board of Trade, with a medical and legal assessor, or either of them, if required"—(Sir *H. Selwin-Ibbetson*).—Question, That those words be there added.—The Committee divided:

Ayes, 4.	Noes, 7.
Sir Henry Selwin-Ibbetson.	Mr. Dalglish.
Mr. Hinde Palmer.	Mr. Davison.
Mr. Sherriff.	Mr. Denison.
Mr. Winn.	Mr. Mowbray.
	Mr. Plunket.
	Mr. Price.
	Mr. Reed.

Another Amendment proposed, after the last Amendment, to add the words:—"For the trial of these cases without a jury which would be sufficiently strong to to secure the confidence of the public, and which should possess adequate legal experience, and be assisted by engineering and medical advice. They recommend to the careful consideration of Her Majesty's Government the best mode of constituting such a tribunal"—(Mr. *Mowbray*).—Question proposed, That those words be there added.—Amendment proposed to the said proposed Amendment, after the word "jury" to insert the words "by one of Her Majesty's Counsel, appointed by the Board of Trade, assisted by medical and engineering assessors"—(Sir *H. Selwin-Ibbetson*).—Question, That those words be there inserted.—The Committee divided:

Ayes, 4.	Noes, 7.
Sir H. Selwin-Ibbetson.	Mr. Dalglish.
Mr. Hinde Palmer.	Mr. Denison.
Mr. Sherriff.	Mr. Davison.
Mr. Winn.	Mr. Mowbray.
	Mr. Plunket.
	Mr. Price.
	Mr. Reed.

Amendment *agreed to,* and added to the paragraph.

Further Amendments made.—Another Amendment proposed, after the last Amendment, to add the words: "The Committee concur with the recommendation hereinbefore contained of the Royal Commissioners of 1867, concerning the limitation of the liability of Railway Companies"—(*The Chairman*).—Question put, That those words be there added.—The Committee divided:

Ayes, 5.	Noes, 6.
Mr. Dalglish.	Mr. Denison.
Mr. Davison.	Sir H. Selwin-Ibbetson.
Mr. Price.	Mr. Mowbray.
Mr. Sclater-Booth.	Mr. Plunket.
Mr. Sherriff.	Mr. Reed
	Mr. Winn.

Another Amendment proposed, after the last Amendment, to add the words, "Should this tribunal be established, your Committee see no reason for altering the present system of unlimited liability"—(Sir *H. Selwin-Ibbetson*).—Question, That those words be there added.—The Committee divided:

Ayes, 7.	Noes, 4.
Mr. Davison.	Mr. Dalglish.
Mr. Denison.	Mr. Price.
Sir H. Selwin-Ibbetson.	Mr. Sclater-Booth.
Mr. Mowbray.	Mr. Sherriff.
Mr. Plunket.	
Mr. Reed.	
Mr. Winn.	

Another Amendment proposed, after the last Amendment, to add the words, "in the event of the tribunal remaining as now, your Committee are of opinion that the liability should be limited as follows: viz., in the case of—

	£.
"1st class passengers - - - - -	1,000
"2nd class ,, - - - - - -	500
"3rd class ,, - - - - - -	300"

(Mr. *Sclater-Booth*).—Question put, That those words be there added.—The Committee divided:

Ayes, 8.	Noes, 3.
Mr. Dalglish.	Mr. Denison.
Mr. Davison.	Mr. Plunket.
Sir H. Selwin-Ibbetson.	Mr. Reed.
Mr. Mowbray.	
Mr. Price.	
Mr. Sclater-Booth.	
Mr. Sherriff.	
Mr. Winn.	

Another Amendment proposed, after the last Amendment, to add the words:—"Your Committee further think that if this limitation is conceded, the public should have power of insuring with the company for an additional sum, of 3,000*l.* in a 1st class, 2,000*l.* in a 2nd class, 900*l.* in a 3rd class, at a reasonable charge, not exceeding 3*d.* per 1,000*l.* for the 1st class, 2*d.* per 500*l.* in the 2nd class, and 1*d.* per 300*l.* in the 3rd class, for the journey."—(Sir *H. Selwin-Ibbetson*).—Question put, That those words be there added.—The Committee divided:

Ayes, 6.	Noes, 4.
Mr. Davison.	Mr. Denison.
Sir H. Selwin-Ibbetson.	Mr. Plunket.
Mr. Mowbray.	Mr. Reed.
Mr. Price.	Mr. Sclater-Booth.
Mr. Sherriff.	
Mr. Winn.	

Paragraph, as amended, *agreed to.*

Paragraphs 21, 22, 23, 24, *disagreed to.*

Postponed paragraph 15, *agreed to.*

Postponed paragraphs 16 and 17, *agreed to.*

Postponed paragraph 18.—Amendment made.

Another Amendment proposed, at the end of the paragraph, to add the words, "And that provision should be made to enable railway companies to establish workmen's trains, without the necessity of applying to Parliament for the purpose"—(*The Chairman*).—Question, That those words be there added.—The Committee divided:

Ayes, 6.	Noes, 3.
Mr. Davison.	Sir H. Selwin-Ibbetson.
Mr. Denison.	Mr. Reed.
Mr. Mowbray.	Mr. Winn.
Mr. Price.	
Mr. Sclater-Booth.	
Mr. Sherriff.	

Paragraph, as amended, *agreed to.*

Paragraph 25.—Amendment proposed, after the word "received," to insert the word "strong"

"strong"—(Sir *H. Selwin-Ibbetson*).—Question put, That the word "strong" be there inserted.—The Committee divided:

Ayes, 4.	Noes, 4.
Mr. Davison.	Mr. Denison.
Sir H. Selwin-Ibbetson.	Mr. Mowbray.
Mr. Sherriff.	Mr. Price.
Mr. Winn.	Mr. Sclater-Booth.

Whereupon the Chairman declared himself with the Noes.

Amendments made.

Paragraph, as amended, *agreed to.*

Paragraph 26, amended, and *agreed to.*

Question, That the Draft Report, as amended, be the Report of the Committee to the House, put, and *agreed to.*

Ordered, To Report.

EXPENSES OF WITNESSES.

Name of Witness.	Profession or Condition.	From whence Summoned.	Number of Days Absent from Home, under Orders of Committee.	Expenses of Journey to London and back.	Allowance during Absence from Home.	Total Expenses allowed to Witness.

REFORM CLUB
PALL MALL

MINUTES OF EVIDENCE.

Monday, 13th June 1870.

MEMBERS PRESENT:

Mr. Dalglish.
Mr. Davison.
Mr. Denison.
Mr. Headlam.
Mr. Mowbray.
Mr. Hinde Palmer.
Mr. Price.
Mr. Charles Reed.
Mr. Sclater-Booth.
Sir Henry Selwin-Ibbetson.
Mr. Sherriff.

THE RIGHT HONOURABLE T. C. HEADLAM, IN THE CHAIR.

Mr. JAMES BLENKINSOP, called in; and Examined.

Mr. *Blenkinsop.*
13 June 1870.

1. *Chairman.*] YOU are Solicitor, are you not, to the London and North Western Railway Company?—I am.

2. How long have you acted in that capacity?—I have been connected with the London and North Western Company all my life, either as clerk to their solicitor or as partner to their solicitor. I have been 33 years in fact connected with the London and North Western Company.

3. Do you recollect the state of the law before Lord Campbell's Act?—Yes.

4. Can you tell the Committee what were the circumstances which gave rise to Lord Campbell's Act?—It was an anomaly that you might kill a man outright altogether and would not be liable for compensation, but if you injured him, that is, if you half killed him, you were liable for compensation, that was the broad distinction.

5. The practical effect of Lord Campbell's Act was that it did away with the common law doctrine, "*actio personalis moritur cum personâ*"?—Yes.

6. But it had no other effect?—I think not; that was the main distinction.

7. Was that Act called into existence with respect to railways especially?—My impression is that it was railway accidents that brought the thing prominently before the public.

8. Can you speak of that within your own knowledge?—I cannot say positively, because nobody knows what was in Lord Campbell's mind, but I think railway accidents brought the anomaly which existed prominently before the public mind, namely, that if you killed a passenger you would not be liable at all, but if you broke his leg you would be liable.

9. Will you explain to the Committee the practical working of the present law?—I had better mention at the outset that I represent not merely the London and North Western Company, but, I think, all the companies, with the exception of the Sheffield Company, north of the Thames, which form a railway association, of which I am the honorary solicitor. I, therefore, speak for all the large companies north of the Thames (with the exception of the Sheffield Company and the Great Eastern Company); and for the Scotch companies also, or at least the main companies, the North British, the Glasgow and South Western, and the Caledonian. I am honorary solicitor to the association, and in the evidence that I am going to give (of course without pledging them to the details of what I may state) that they authorise me to give the substance of that evidence. I do not represent the metropolitan railways. The experience which I have had of the working of the existing system is, in the first instance, that juries have given very excessive damages. Where a passenger is injured they are led away very much by their feelings, and they have given very excessive damages in many cases to my knowledge, and their feelings are worked upon a great deal by the passenger being produced in court. What is called a kind of sensation scene is almost always got up; the man is brought into court very ill, and, of course, if he is injured, and appears very ill, it so works upon the feelings of juries that judges have great difficulty in restraining them from giving very excessive damages. I may state in connection with that, that there is a class now grown up of medical men, and I am sorry to say also a class of my own profession, attorneys, who lay themselves out for those compensation cases. They work up the case to fleece the railway companies; and, also, the same class of men, I am bound

Mr. *Blenkinsop.*

13 June 1870.

bound to say, have also taken money from their clients which, probably, they ought not to have done; that is to say, the whole of the compensation very rarely gets into the pocket of the passenger. I can give the Committee just a few instances of the cases which have happened. The class of cases which we have most difficulty to deal with are what are called nervous shocks; that is to say, a man gets a knock, and what is called a nervous shock, and he says that he feels so-and-so to the medical attendant, and it is utterly impossible, of course, to contradict him. The man says he has a particular pain internally, or he describes his feelings about the injury, and the doctors have told me that it is utterly impossible for them to say whether it is true or not, so that we are very much at the mercy of the passenger who has received those nervous shocks; and the result has been that we have frequently had to pay very large compensation indeed. In one case we paid 3,500 *l.* to a gentleman who had received a nervous shock, and I am told that he has got practically better, and is doing his work again, although it was supposed that he never would get better, and would be unable to do his work any more. I had another case where a commercial traveller (and that was one of the scenes in court) was brought in upon a litter, and he got first of all 2,000 *l.* against us, which the judge reduced to 1,500 *l.* In about 12 months he was at work again, and in about two years afterwards he was unfortunately injured again, and he got 1,500 *l.* more. That was a case, as I have said, of a commercial traveller, and he is now at work. There is a recent case of a gentleman who was supposed to be so seriously injured that he became almost insane, and was supposed to be in an asylum; he got 1,500 *l.*, and I believe now is entirely restored to health. There is a class of cases with respect to which we have been very much, I will not say fleeced, but we have had a good deal of money to pay to Post Office clerks; they are very liable of course to accident; they stand up in the Post Office vans, and a very slight accident will throw them down, and they are very liable to get injured; but, certainly, we have had an immense amount of money to pay to Post Office clerks, and we have a strong impression that the claims have been very much exaggerated; indeed, I had recently a case where a man was supposed to be injured in his spine, and he got 1,600 *l.*, but I think in about three months he was back again to work. A very recent case, indeed, which brings us to another point about the principle of compensation, was that of a young clergyman, who was undoubtedly very badly hurt; he was then getting 250 *l.* a year, and the jury gave him what we thought a very extravagant sum, namely, 5,250 *l.*; they gave him the fee simple for ever of his salary; that is to say, the interest upon the 5,250 *l.* would be the amount of his salary, and they actually gave him the fee simple of his then income for ever. When we applied to the court it was laid down broadly, you must look to the future prospects of a man; this young clergyman might be a bishop, in the same way as they say a young barrister may be a judge, and so on, and therefore it is not merely the present income, but in this case they actually gave those large excessive damages, 5,250 *l.*, and the court would not disturb it. There are cases of fraud which I do not know that we need go into it; but there is one case which I had under my hand the other day of a man who said he was injured, and he deceived our doctors, for they thought he was injured, and he alleged that he was at the Abergele accident in Wales. I had as nearly as possible given him 1,000 *l.*; but in looking over some letters that I got hold of I thought there was some suspicion about the matter, and I followed it up, and I found that the man had never been at the accident at all. I prosecuted him, and I got evidence against him, and got him 18 months' imprisonment. I proved in fact that it was a conspiracy. Another man gave evidence that he was there; but we brought evidence to show to the contrary, and ultimately we succeeded in getting sufficient evidence to convict the man, and to prove that he was not there at all.

10. You prosecuted him, I presume, for endeavouring to obtain money by false pretences?—Yes; those cases arise on the London and North Western, and the other managers that will come will give the Committee instances on their own railways; Mr. Allport for the Midland, for instance, and they have all got a very large list of very important cases to show excessive damages undoubtedly, if not fraud, and my impression is that it goes very nearly to fraud in many cases.

11. When you speak of excessive damages, on what principle, in point of fact, are the damages calculated, or are they calculated upon any principle at all?—There is really no principle; with juries you are never certain; some juries in some towns, for we have cases all over the country, will give much higher damages than juries in other towns under the same circumstances.

12. Do the damages depend upon the degree of the fault of the company, or upon the degree of injuries to the person affected?—I think it is the injury to the person solely, for, as a rule, we generally admit the liability, and therefore it is not very often that the details of the accident are gone into very much.

13. Would you admit your liability, supposing it was an accident over which you can scarcely be said to have any power or control whatever?—The only cases that we have fought have been cases of this description, such as the breaking of an axle, an internal flaw in the axle which could not by any prudence be discovered. I have fought cases of that sort and succeeded; but the fact is, if your servant has mistaken a signal, or anything of that sort, you are clearly liable, and we admit the liability at once.

14. Supposing a flash of lightning struck a train, you would not admit your liability, would you?—No, of course we are not liable for that; and we have fought cases of snow; that is also an exception where there has been an accident by a heavy snow storm.

15. If there be an accident to a person within your premises independently of the train, and the person not travelling on a train, would you admit the liability under those circumstances?—We have had to pay frequently for a passenger stumbling on a platform and getting injured, though he ought not to have stumbled at all. Supposing a barrow happened to be standing in a station and he tumbled over the barrow, we have been held liable, because they say we ought not to have had it in the way; and sometimes they make us liable at the stations because there is not sufficient light, and so on; so that we are liable inside our premises though the passenger may not be travelling.

16. The

16. The liability has been enforced upon you, has it not, in many cases?—Yes.

17. When a liability of that kind once is established, then the amount of damages depends simply upon the circumstances of the person affected?—Simply upon the injury to the person. In fact, there are scarcely two cases alike; it depends upon what a man is, what his station in life is, what his income is, and so on; there are scarcely two cases alike as regards the amount of damages.

18. Supposing a man in receipt of a very large life income, dependent upon his exertions, received an injury to the extent of preventing him making his income, what would be the principle which the judges would lay down with reference to the amount of damages?—That depends upon what judge is trying the cause; I do not think that the judges as a rule, have laid down any principle as to the amount; I think they say you must take the circumstances of the case into your consideration, and give the claimant reasonable damages; he was earning so much, and he may get better, or he may not get better, just according to the case, and you must take all the facts into your consideration, and award him reasonable damages; I believe that is about the sum and substance of most charges to juries.

19. I think you said that some of those legal practitioners take money from their clients?—There are bad cases of that sort; of course I cannot give the details of that kind of thing, but I know cases where a class of low attorneys have not merely got money out of us for compensation, but taken a good share of it for themselves, besides making us pay the taxed costs.

20. Do those attorneys, whoever they may be, themselves communicate with the party injured, or do the parties injured seek them?—The moment an accident happens, there are a certain class of attorneys who go touting for the work.

21. By whom are those cases tried; are they tried before the judges of the land chiefly—Yes, always except when we admit our liability, it may go to the sheriff or the under sheriff, to assess the damages merely, but as a rule those cases are tried I think, before the judges of the land.

22. Is there any difference in the law with respect to railway companies, and to other bodies of a similar description?—No; but I think Lord Campbell's Act made a distinction in this way, that he lays down who shall recover, and I think you will find by clause 5 of 9 & 10 Vict. c. 93, it says, "The word parent shall include father and mother, and grandfather and grandmother, and stepfather and stepmother; and the word child shall include son and daughter, and grandson and granddaughter, and stepson and stepdaughter."

23. Lord Campbell's Act affects all bodies equally in that way; it does not apply to railway companies specially; it does away with the general principle of common law, that a personal action could not lie after the death of the person injured?—That is so; that is the great distinction; in fact, it puts me in mind of the well-known anecdote told of the celebrated coach proprietor Bartholomew B——, who used to have coaches from London to Liverpool, when he heard of an accident; on their telling him who was killed, he used to say, "Bother the killed; how many are injured; never mind the killed;" he not being liable for the killed but for those that were injured; and it was that kind of feeling that brought about an alteration in the law.

24. Is there any difference in the law at the present moment with respect to a public company and a private individual; supposing the carriage of a private individual runs over somebody in the street, would the gentleman be liable in the same way as a railway company?—He would; but you find this in experience and practice, that in the case of a private individual, the jury always give very moderate damages indeed; in my opinion they never assess the damages to a private individual to the same extent as they do to a railway company, and, therefore, though the law is practically the same, that though you are liable for the negligence of your servant, though you are sitting at your own fireside, yet we find in practice that juries are very moderate indeed in the case of private individuals.

25. There must be many cases where omnibuses injure people?—Yes, in cases of omnibuses again the feeling creeps in of the company, and they give larger damages against an omnibus company than they do against a private individual, simply because they are a company, and are supposed to be powerful and rich.

26. Do you know the law with respect to shipping?—Not a great deal; I do know a little. There is a limitation of liability with regard to shipping; you are not liable beyond the value of the ship and the cargo to begin with, and there are very few actions, indeed I scarcely recollect one brought against a shipowner for the death of a passenger; it is generally brought about so much by the act of God; probably a storm or something of that sort; there are very few actions indeed, but there have been cases, and we have had to pay, I think, compensation for injuries. There was a running down case the other day, in going across the channel, in which the Board of Trade found that there was negligence on the part of the captain in not sounding, which he ought to have done, and we were obliged to pay; none of the passengers were killed, but some of them were slightly injured, and I think we had to pay for the goods that were injured.

27. You consider the risk to be unequal?—Yes; this is the reason why I think that the law is hard upon the railway companies; we are bound if a passenger tenders himself to carry him. We receive the fare from some two dozen, or probably three dozen men going from London to Liverpool, and there are not two of those men whose lives will be of the same value, and probably every man will differ in the value of his life; it depends a great deal upon whether he is married or not; a married man we have to pay more for; if we have the misfortune to kill a married man we have to compensate his family, than if he is a bachelor and has no relations within Lord Campbell's Act, we have to pay nothing at all. Therefore, although we get the same consideration for carrying a dozen individuals, the risk is entirely different for the same money; and I think in that respect the law is not fair. If a man is a valuable man and worth a great deal, if he is a rising young clergyman, or a rising young barrister, earning a large sum of money, the risk with him may perhaps be 10,000 *l.*, and I get 30 *s.* to carry him; whereas the risk of carrying another man may not be 1-50th part of that amount, and yet I get 30 *s.* from him. I say, therefore, that the present condition of things is

Mr. *Blenkinsop.*

13 June 1870.

not satisfactory, because the consideration does not bear any proportion to the risk.

28. You think that if a man should receive a larger sum he should pay a larger fare?—I was going to explain the Bill which I have prepared; I would say this, that we should be liable up to a certain amount for an injury, and that the passengers should have the right to compel the railway companies, on payment of a moderate premium, to ensure them. We propose the limit to be 500 *l.*, first class; 300 *l.*, second class; 200 *l.*, third class; and the insurance 3,000 *l.*, first class; 2,000 *l.*, second class; and 1,000 *l.*, third class; but we are not, of course, wedded to the amounts. But, as regards insurance, you will find that there is some difficulty with all insurance companies in having more than a certain amount; they do not like an unlimited risk, but up to 3,000 *l.*, or any other reasonable sum, the railway companies are prepared to have a compulsory clause put upon them to insure any passenger who wishes it, upon payment of a moderate sum.

29. Of course, that would be contingent upon death or accident?—Yes, death or accident; of course, in the case of death the minimum would be absolute, and we should pay it at once; and, in case of injury, it would be dependent upon the amount of injury.

30. Of course, at present the sum paid does not depend at all upon the amount paid for the ticket?—Not the slightest.

31. Nor does it depend upon whether the passenger is first, second, or third class?—Not the slightest, except so far as it is an indication of the station in life; but I may observe that, probably, we pay more for third class-passengers than for any other class, as a rule. Perhaps I may be allowed to mention a striking case where the consideration was inadequate to the risk. It was a case which occurred on the North London line, where I know that the proportion of the fare to the North London line was less than one penny, and yet they had to pay 2,300 *l.* compensation. That is an extreme case, but it is a striking case, to show that there is no relation between the consideration and the risk of carrying passengers.

32. Supposing a person got into a station, and stumbled, before he could get his ticket, the company would have to pay, though they did not even get the three-fourths of a penny, would they not?—That would depend upon whether he was inside the station, or whether we had been negligent inside our station, by having anything improperly in the way; of course, if he stumbled from his own fault we are not liable.

33. With respect to the Carriers' Act, what is the state of the law?—The Carriers' Act is a very well known Act about merchandise, which lays down the principle that we are contending for, namely, that for valuable articles, gold, silver, china, and other valuable articles; companies are not liable if they exceed the value of 10 *l.*, unless they are insured; it is very much the principle that we are contending for, that whenever valuable merchandise is to be carried the companies are not liable unless the party insures; and I think the companies are bound to insure if asked.

34. That is the principle of the Carriers' Act, that they are liable for a small amount without notice, and are liable for a larger amount upon the payment of an insurance fee, and it is compulsory upon the company to accept the insurance?—Yes, they are bound by the Act to take it.

35. There is an Act, is there not, with regard to horses, and cattle, and sheep?—Yes, that is an Act which commonly goes by the name of Cardwell's Act; it was passed by Mr. Cardwell about the year 1854, and there we got a limitation as regards horses; I think it is 50 *l.*; that whatever the value of the horse might be we are not liable for more than 50 *l.*, and then, I think, as regards cattle the limitation is 15 *l.* a head, and sheep, I think, 2 *l.* a head; there again, following pretty much the principle of the Carriers' Act, and you can insure cattle in the same way beyond 50 *l.*

36. Under this Act if you destroy the winner of the Derby you would not be liable for more than 50 *l.*?—That is so; it is much the same principle as we are contending for under the Carriers' Act. There is a special provision which I ought to call the attention of the Committee to as a matter of fairness. You will find a special clause in Mr. Cardwell's Act, that you will be liable, unless you get the man to sign what is called a risk note, that is, unless he makes a contract with you, which you get done whenever you can, but that has led to a great deal of litigation. The question is, whether the conditions of the contract are reasonable or not. The judges have had several cases upon the conditions whether they are reasonable or not; but the Act admits the principle which I am contending for, namely, that valuable articles, worth more than a certain amount, should be insured, and that companies are not liable beyond the limit of that Act, unless they are insured. It is the same principle as that of the old Carriers' Act applied to cattle, instead of goods, and we now wish to get a step further, and to apply it to human beings.

37. Now, about workmen's trains; what have you to state with regard to them?—There is a limit of liability already admitted in the case of workmen's trains in two or three Metropolitan companies. If you run workmen's trains at low fares, at certain times, you are not liable beyond 100 *l.* They have admitted the limitation of liability in those cases. I think the companies that have got the limit are the Metropolitan, the Metropolitan District, the London, Chatham, and Dover, and, I think, the North London, under their private Acts. I think the London, Chatham, and Dover Company put clauses in voluntarily; but, in the case of the other companies, I think they were got in at the instance of the Board of Trade; and the companies got that limitation put in on the condition that they ran those cheap trains.

38. It was a stipulation between the companies on the one side, and the Board of Trade on the other?—I think so; I think that the London, Chatham, and Dover Company volunteered in their Act to run workmen's trains.

39. Then they had given to them the limitation of their liability?—Yes.

40. Mr. *Davison.*] It was owing, was it not, to the large displacement of the poorer classes of the population by the Bill in which that stipulation was first put?—Yes, that was the reason of workmen's trains being run, no doubt.

41. Mr. *Reed.*] I think you said that you do not represent the Metropolitan lines here?—I do not.

42. *Chairman.*] Can you tell us what the American law upon that subject is?—I do not profess

profess to have any intimate knowledge of it, but I believe that in some of the States of America there is a limitation of liability in the case of passengers, and I believe in New York there is such a limit. I believe the limit to be 5,000 dollars, which is practically 1,000 *l.*; and I think in Massachusetts too there is a limit.

43. Are there many cases in America of a similar description to what occur here?—Yes, I think there is just the same amount of accidents on American railways, and they are of the same kind. There is a distinction on the Continent. I think there is no limitation of liability on the Continent by law, but there is this practical limitation, that the cases on the Continent I believe are all tried by judges without juries, and therefore much more moderate damages are given on the Continent than in England.

44. Have you any information to give the Committee about the American law?—I got it from a case that I had before the court. My authority for it I may mention at once, is Mr. Vernon Harcourt; he was arguing the question before the Court of Queen's Bench for me the other day, and in his argument he said, "In America the necessity of so dealing with it has been so strongly felt that in most, I do not know whether in all the States, they have fixed that the amount recovered shall not exceed 5,000 dollars; that is so in the State of New York and in Massachusetts."

45. You take that from Mr. Vernon Harcourt's argument?—Only from his authority, although I believe I have seen some American law books which would show it to be so.

46. What recommendations have been made by Royal Commissions upon the subject?—This was the final recommendation of the Royal Commission which sat in 1866 and 1867, and this is the conclusion that they came to about the compensation, at page 80 of their Report: "We therefore recommend, that on the one hand railway companies should be absolutely responsible for all injuries arising in the conveyance of passengers, except those due to their own negligence, and that, on the other hand, the liability of the railway companies be limited within a maximum amount of compensation for each class of fares; but that any passenger should be entitled to require from the company any additional amount of insurance he may desire, on paying for it according to a fixed tariff. To prevent the frauds which appear to have arisen upon the railway companies under the present law, we further recommend that claims for compensation should not be admitted unless made within a certain period, and that the railway companies should have the right of medical examination of the claimant." In fact, the proposal which I have been just stating to the Committee, of limiting the liability with compulsory insurance, is based upon that report of the Royal Commission.

47. Was that recommendation unanimously agreed to?—I think Mr. Monsell dissented and made a separate report. I do not know whether he dissented from this particular thing, but he did generally. I can tell the Committee the names of the Royal Commissioners who signed this recommendation: they were the Duke of Devonshire, the Earl of Belmore, Mr. Leveson Gower, Mr. Lowe, Mr. Horsfall, the Member for Liverpool, Mr. Dalglish, Mr. G. Carr Glynn, Mr. Ayrton, Captain Galton, Mr. Hamilton, and Mr. M'Clean. I think the only dissentient was Mr. Monsell.

48. And, as far as you know, he does not dissent from that principle?—No, I think he seems rather to want some lower rates and fares, if I recollect, and confined to Irish railways. You will find that Sir Rowland Hill made a separate report too; but he did not, I believe, dissent from the report upon railway compensation, but agreed to it.

49. Have you anything to observe upon the charges given by any of the judges?—I believe that some of the judges have expressed, in cases which they have been trying, an opinion in favour of limitation; in fact, in that very case of the young clergyman, where they gave such excessive damages and which was my own case, the Lord Chief Justice of the Queen's Bench was strongly against us, and would not alter the verdict; but Mr. Justice Mellor (and I will read this extract from his judgment) said, "With reference to whether or not it is reasonable that the Legislature should interfere, I confess I do not altogether think they ought not; I think they ought, but then it is only upon this principle: Mr. Harcourt has said that in the present state of things railway companies may run the risk for the same fare of having to pay 100,000 *l.* or 100 *l.* I agree that it is a hardship to a certain extent; I think if there was a limitation such as those referred to, and which have been enacted in the various States of America, with this, that the railway company or the Legislature should fix upon some average sum to be paid to a person in case of accident without a declaration, as in the case of horses and other things that have been referred to, and that unless a particular declaration is made to show how much the risk is increased, they should be bound to recover only and be satisfied with a certain sum. Now, it appears to me that the principle might be applied, but that is a matter entirely for the consideration of the Legislature, accompanied with the power to the individual who is not content with the statutory limit to require the company to ensure him for a larger sum. Whether that will ever be the case or not I do not know, but certainly I have often thought there might be introduced, wisely to some extent, such a rule as that. That is a matter purely for the Legislature, and not for us. We are here to judge of a question which is within our discretion; it is, therefore, impossible for me to say in this case that there ought to be a new trial." Then Mr. Justice Hannen said, "I am also of the same opinion, and I would only add that I entirely concur with the observations made by my brother Mellor as to the reasonableness of limiting railway companies with reference to their liability; that is, of course, a matter for the Legislature." That is in a very recent case, in November last year.

50. Would you suggest any alteration in the form of the jurisdiction?—The question of jurisdiction is a very difficult question; but if the amount was limited to the sums that we mention, or any moderate sum, I do not see at all why there should not be some summary process for the passengers to recover the money from us. The companies that I represent would not object to leave the cases of compensation, for instance to the county court judges. If you leave them to the judge without a jury we should be content, and they might have the administration of

Mr. *Blenkinsop.*

13 June 1870.

the law in each county. We should not object to a medical arbitration (if it was considered a fair thing) at the request of either party; I mean that where it is purely a question to what extent a man is injured, and it depends entirely upon medical testimony and medical testimony solely. We think that it would not be an unreasonable thing to the parties and to the company to have a medical arbitration in those cases if either party so requested it; but we do not object to the county court judges. Probably it would facilitate the recovery of the money, and do away, to a great extent, with the practice of that class of attorneys, of whom I have been speaking, of taking money from their clients improperly. I think, probably, it would prevent that class of cases if there was a summary remedy by going to the county court judges.

51. There is a separate report, I see, by Sir Rowland Hill of the Post Office, and I observe that he says that his views accord generally with those of the majority of the Commissioners upon the subject of compensation; that is the case, is it not?—Yes, that is so; and you will see there is this passage, as to compensation for injury on insurance: "Under this head I am happy to say my views accord generally with those of the majority of the Commissioners." That is as regards railway compensation.

52. As far as you know, there is no dissent on the part of any of the Commissioners in their Report with reference to that recommendation?—I am not sure about Mr. Monsell; but I am not aware of any.

53. Will you tell us what sum you would suggest as the limitation of liability?—I would just tell the Committee that the Railway Association, of which I am honorary solicitor, instructed me to prepare a Bill, which we intended to introduce to the House of Commons, and indeed I think I did introduce a similar Bill into the House of Commons some four or five years ago, and I think it was lost on the second reading by a not very large majority; my impression is that it was something in the proportion of 80 to 60.

54. Who introduced the Bill?—The railway companies; in fact, I did it on their behalf.

55. What Member of the House of Commons introduced it?—Mr. Leeman introduced it.

56. It was not taken up by the Government, was it?—No; the Government opposed it, and that is the reason we lost it. This is a somewhat similar Bill that we have prepared this year, and we propose to limit the liability in the way I have stated by compulsory insurance. The minimum amount that we should like to have the limit at would be, we thought, first class 500 *l.*, second class 300 *l.*, and third class 200 *l.*, with compulsory insurance against us; a first-class passenger could be insured for 1,000 *l.* for 3 *d.*, for 2,000 *l.* for 6 *d.*, and for 3,000 *l.* for 9 *d.*; at the last meeting of the railway companies they were all prepared, I think, to insure up to, as I mention 3,000 *l.* first class, for 3 *d.* per 1,000 *l.*

57. Does that depend at all upon the length of the journey?—We discussed that question, and there is great difficulty about it; you will see in a moment that there is very considerable difficulty; some of the Railway Association thought that there should be some sliding scale, say, so much up to 50 miles, so much up to 100, so much up to 150, and so much up to 200; but after a long discussion we thought it would be very complicated, and we did not quite see our way to meet it, but we are not wedded to any particular view.

58. Your Bill says, "for any distance which a man goes over by one ticket"?—Yes, and also for short-fare omnibus traffic; a man travelling every day, we should issue an annual insurance ticket for a small sum; we are quite willing to become an insurance company, and for 20 *s.* to give an annual insurance of 1,000 *l.*

59. How are your suggestions in amount, as compared with the premiums charged by the Accidental Insurance Company?—I think they are the same, but I have seen the Accidental Insurance Company, and they do not much like taking so high a risk; they would not certainly go beyond 3,000 *l.*; I pressed them and said, "Why can you not insure for 5,000 *l*," and they said, "We do not like taking such a risk as that, it is too much."

60. Mr. *Reed.*] You would start an insurance company, and make everybody subscribe?—When a passenger got his ticket, if he chose to ask for an insurance, we would give it to him, and the passenger would have to pay this moderate insurance of 3 *d.* per 1,000 *l.*

61. Mr. *Mowbray.*] In reality the company would have no liability whatever?—Yes, we would be absolutely liable as regards a first-class passenger for 500 *l.* in case of death, 300 *l.* for a second-class passenger, and 200 *l.* for a third-class passenger, and we should be bound to insure a passenger if he wishes to be insured for 3 *d.* per 1,000 *l.* up to 3,000 *l.* first class, 2,000 *l.* second, and 1,000 *l.* third.

62. *Chairman.*] The rates of premium being 3 *d.* per 1,000 *l.* in each of the cases?—Yes. The Bill which we have prepared contains some other things, but you will find it in the schedule.

63. Sir *H. Selwin-Ibbetson.*] Are you prepared to speak as to the management of the London and North Western Railway?—No; you will have an opportunity I believe of hearing the general manager, but not to-day, for he is not able to come, but he will be here as a witness; I do not know much about the management.

64. You are only prepared to speak upon the points which have been mentioned in your examination in chief?—Yes, that is all; you will observe I am the solicitor to the company.

65. In your present mode of the treatment of accidents you rely very much upon the medical evidence of your own people, do you not?—Yes, of course we are obliged to do that; but, as I have explained to the Committee, our doctor comes to me repeatedly, and when I ask him what is the amount of injury, he says, I cannot tell, I cannot find beyond what the man tells me, that he feels certain pains, and that he has had some nervous shock, but I cannot test it.

66. But you complained in your evidence, I think, that the companies were liable to the medical evidence being prejudiced against them; who gets up the cases?—There are a class of doctors now who lay themselves out for giving evidence on those railway compensation cases.

67. But your own medical evidence, contradicting it, would be received by the jury, would it not?—I am sorry to say that, where there is any doubt, they always give it against the railway companies; supposing you go to a jury in a railway case, there are two sets of witnesses, and they invariably decide against the railway company's witnesses.

68. There would be still trials before a jury necessary

necessary if the law remained as it is at present, even if your Bill passed, because, in all cases of injury, the amount of damages for that injury would have to be decided by a jury, would it not?—That would be so; it would be only cases of death that there would be no action about. In cases of injury, if there is a difference of opinion, it would still have to be decided by some tribunal; and what I propose is, that the county court judges should decide it, or a medical arbitration.

69. Otherwise, unless some alteration in the law took place, people would be liable to just the same amount of trouble and expense with regard to the trial as they are at present?—There would be, probably, this qualification, that when the amount is limited to those small sums, I think the railway companies would probably settle the great bulk of them. It would not be such a wide difference, when it is a question of limitation of 300 *l.*, for a second-class passenger; the chances are, that they would always settle, because it would be cheaper for us to do that than to go into court.

70. Practically, that is very much the case at the present moment, is it not?—Yes, but when it comes to be a large amount, there is such a large difference now, one medical man may say 5,000 *l.*, another may say 1,000 *l.*, and then we are obliged to go into court; but that would not happen, I think, with a limitation of liability, because the amounts are so small.

71. The companies consider that a limitation according to this scale of 500 *l.*, 300 *l.*, and 200 *l.* in case of death ought to cover entirely their liability?—We think so.

72. Whatever may be the position of the person travelling?—I think so, if we are bound to insure him, if he is a valuable life, and, therefore, more risky to carry.

73. That is to say, a man who considered himself worth more than 500 *l.*, would have to pay a larger fare for his journey?—Yes, he would have to pay 3 *d.* per 1,000 *l.*

74. At present those verdicts of juries in compensation for accidents are the only protection that the public have as against irresponsible management on the part of the directors?—No; I believe myself that the element of compensation has very little, indeed, to do in the minds of directors. What is a far larger question to them is, whether the public will come and travel by their railway, and also the injury to their stock in the case of an accident, with the very fact of an accident on the London and North Western, the company may lose ten times the amount than regards compensation, because people get timid and frightened; and there are competitors to every place, and the people would go by those competitors; so that they have every motive to prevent accidents.

75. Practically, you have the whole travelling system of that part of the country in your own hands, and, therefore, the public who must travel are obliged to go by you, are they not?—No, on the contrary, there is not a town in England now of any importance which has not competition against the London and North Western. The Midland go everywhere to the same places; there are two routes to Scotland, there are two routes to Liverpool, Manchester, Birmingham, and all South Wales; in fact, there is not a single town of importance where there are not two lines.

76. Do you think that there is sufficient inducement to oblige directors for their own interest to conduct their lines as free as possible from accidents, even if you take away the additional weight of compensation?—I do; I say again that I am certain from my experience of the London and North Western Board that the compensation for accidents does not make them at all more careful; the fact is that you increase your passenger traffic by making the line safe and working it well, and that is the important consideration for them, not the sum paid in compensation.

77. That is in direct contradiction to statements made upon the subject in the House of Commons in which railways were defended, and it was said that this question of compensation was quite sufficient to ensure the proper working of the lines by the companies?—I have heard that stated in the House of Commons repeatedly, but in my judgment very erroneously, because I am quite sure that there is a higher question, namely, safety to the line and prosperity in their trade, which is far more important than the question of compensation.

78. Mr. *Sclater-Booth.*] You stated in the outset of your examination that judges have a difficulty in restraining juries from giving excessive damages, do you think that you may say that of the judges generally?—Of course I must not mention the judges by name, but there are some judges who are led away by their feelings along with juries, where very excessive damages are given; there are another set of judges who do what you have just mentioned, namely, they do all they can to keep juries moderate.

79. It is very well known, I suppose, where judges have a propensity on one side or the other?—I think so.

80. You stated that you have particular difficulty in dealing with post office clerks; do you find that the post office clerks are assisted by the Government authorities, that is to say, the solicitor of the Post Office in prosecuting their claims?—I think not; I think in my experience the solicitor of the Post Office has always given me every fair information when he properly could.

81. And the medical officer of the Post Office likewise?—I should not like to express an opinion with regard to him.

82. They have a paid medical officer, have they not?—Yes.

83. You would take it that such a thing was never heard of till recent years as compensation being asked for by parties, or by their representatives, not as compensation for the accident done, but as compensation for the loss of emolument which might hereafter be acquired by the parties; that is a new principle, is it not?—That is rather a new doctrine; hitherto, we have always considered that the man's present position was the proper criterion; it is a new element that has sprung up, and it is likely to be very serious indeed to us, because it may be said that a clergyman may become a bishop.

84. In point of fact, the liabilities of railway companies towards the passengers they carry have never been considered as a question deserving attention upon its separate merits as differing altogether from the ordinary liability of masters for the acts of their servants as regards outsiders, for instance?—It differs essentially in amount, for the reason I have given you, that in the case of a private individual, juries are always very

Mr. *Blenkinsop.*

13 June 1870.

moderate indeed, but in the case of railway companies they are very immoderate.

85. But there is this distinction, is there not, that a gentleman's carriage driving over a person in the street, drives over a stranger, a person with whom he had no contract existing, whereas a railway company causing an accident to a passenger is causing an accident to a person with regard to whom there is some special responsibility?—There is a difference no doubt; in the one case there is a contract to carry safely, and in the other there is not.

86. In cases of contracts to carry goods, and in cases of contracts to carry persons, there is a limitation by law now established?—As regards merchandise and cattle, it is so.

87. But the question as between the carrying company and the passenger has never been considered in that point of view?—No; not with the exception of the workmen's trains that I have mentioned.

88. When you propose in your Bill to charge 3 *d.* per 1,000 *l.* for insurance, is that calculation based upon the hypothesis that everybody will insure, or that nobody will insure?—It is arrived at as well as we can; we do not know to what extent the insurance would be, whether people would insure or not; we fancy that probably one-half might insure, but it is a mere guess, and we wish to put it moderately. I know that the Accidental Insurance Company will not insure at those prices, and therefore we shall have to do it ourselves. They want a much higher figure. We wished them to take the risk, and we would give them the premiums, but they declined two three years ago to take the risk.

89. Do not you think it is probable that they will oppose your Bill in Parliament?—I think not; at least I have had no intimation of it.

90. Mr. *Denison.*] Have you any statistics to hand in to the Committee of the number of accidents and the amount of compensation?—No, I have not; bnt I may mention generally as regards the London and North Western Company, that last year, 1869, we paid for compensation, 73,000 *l.*

91. That was including the Abergele accident, was it not?—Yes; but I am sorry to say it is not much above the average.

92. You are not prepared at this time with statistics?—Except for that one year.

93. If the Committee desired them, could you get them out?—Yes.

94. What per-centage of your net revenue does the compensation amount to on your line; we know that on the general lines in the kingdom it amounts to something like 2 per cent.?—I think our net revenue for the year 1869 would be 2½ million pounds, and we paid 73,000 *l.*; that will give the figure.

95. Mr. *Sherriff.*] Is that an average year?—Yes, I think it is; the compensation varies from about 60,000 *l.* to about 80,000 *l.*

96. Mr. *Denison.*] Is that compensation for injuries, or does it include compensation for goods and merchandise?—Exclusive of merchandise; it is passenger compensation purely.

97. Can you tell the Committee what is the average cost of an ordinary action on both sides?—Of course it varies, but I would say from 150 *l.* to 200 *l.* each party, and occasionally much larger, but it will average about 150 *l.* to 200*l.* on each side.

98. As far as your experience goes, are the costs ordinarily awarded against railway companies, or not?—Invariably, for this reason, that if a passenger recovers 5 *l.* he gets his costs; we have always the costs to pay.

99. Have you been in the habit of depositing what you consider a fair compensation in court?—I have, for the express purpose of trying to save the costs, frequently paid money into court, but from long experience I find the jury invariably give more than I pay into court; they merely take that as the starting point, and therefore I have ceased in recent years, unless it is a very bad case, paying money into court.

100. Therefore the provision of the law, which allows the defendants to deposit the amount in court, is no protection at all?—Not the slightest to railway companies.

101. Are not the costs often very much greater than the compensation claimed or given?—Yes; frequently the costs on both sides are larger than the amount of compensation.

102. And to that extent they are a direct inducement to the gentlemen whom you have spoken of to foster those cases?—Yes; no doubt the attorney is safe of getting his costs from the railway company.

103. Are not the fees of witnesses, both medical and others, very much larger in those railway compensation cases than they are in ordinary cases?—Yes, they are; the medical gentlemen that I am alluding to have made professional witnesses of themselves, and will not come and give evidence unless they are paid a very much higher fee than you generally pay medical men. They charge very large sums. I may mention, that although the railway companies are protected by taxation, and do not pay the whole of the medical witnesses expenses, and the court will not allow them to charge beyond a certain sum, the passenger has to pay those very heavy fees above the taxed costs.

104. With regard to the evidence of medical witnesses, are not the medical witnesses of railway companies at a great disadvantage as compared with the plaintiffs' witnesses?—Yes; where there are two classes of witnesses, one for the railway company and one for the claimant, of course the jury very naturally give way to their feelings and lean to the latter witnesses.

105. But they have not the right of personal examination, except by consent, have they?—I think they have now by a judge's order, by the Act of 1868. I may just mention that in that Act of 1868, though you can get a medical man to examine a person, yet you cannot call him as a witness.

106. Have you formed any opinion as to whether the amount of compensation yearly payable by railway companies does, in fact, act as a preventive against the lowering of fares; Sir Rowland Hill seems to be of this opinion, because he says, "It is obvious that all such payments, seeing that they increase the expenses of the company, must consequently tend to augment the fares charged to passengers"?—There is no doubt that to a certain extent that is so. As regards the London and North Western Company, I believe we are pretty much charging the maximum fares to passengers, because when the amalgamations took place we submitted to a very low class of fares, I believe to the lowest in the kingdom, and I think the Great Northern the same; I am not sure about the Midland; but when we got our Amalgamation Bills we submitted

mitted to a very low class of fares indeed, and we are therefore charging our maximum.

107. Have you, in considering the clauses of the Bill to which you have alluded, taken into consideration the objection which has been urged in the Report of the Royal Commission and in other places besides, that, "If the rich man's life is treated as more highly insured than that of the poor man, while his payment of fares is, conveniences equal, the same, the poor man must, in effect, help to pay the insurance of his richer fellow-passengers"?—That is not so; because what I propose to do is to let all classes insure, if they think fit, upon payment of a certain amount, 3 *d.* per 1,000 *l.*, and therefore a third-class passenger would insure his own life, but would not, of course, pay anything for the rich.

108. Mr. *Sherriff.*] Do you mean that a third-class passenger can insure his life for 3,000 *l.* if he choose?—We limit the third-class passenger to 1,000 *l.*, but we are not wedded to those figures; we propose them because we think 1,000 *l.* for third class, 2,000 *l.* for second class, and 3,000 *l.* for first class, would be a fair amount.

109. Mr. *Denison.*] Have you any knowledge to what extent passengers do insure now with the Accidental Assurance Company?—I have not; but you will have an opportunity, at all events, of hearing the evidence, I hope, of the medical man of the Accidental Insurance Company, and he will tell you. My present impression is that it is not increasing.

110. Have you reason to believe that, if there were the power of compulsory insurance, it would be very largely availed of?—I think that on long journeys it would, and also I think omnibus passengers, that is the short traffic, would probably take from us an annual ticket at 20 *s.*, or whatever the proper figure may be, and would insure annually. A passenger going a long journey would probably think it worth his while to insure if he was a valuable life.

111. Is it not quite possible that a general lowering of fares might amount to a very much larger sum than any amount you might receive for insurance?—I can hardly express an opinion upon that; I would rather that you would ask the managers of the companies.

112. Mr. *Davison.*] You gave an answer about Post Office clerks, to which I daresay you would like to add something; the Post Office arrange with you, do they not, that they should pay one-half of any sum recovered by the clerks?—Yes, that is so. The Post Office are under contract to carry the mails and pay half of the compensation.

113. As regards your statistics, you have given the amount which you paid in 1869; can you tell the Committee at all what proportion of those cases were tried?—I should think we settle at least three-fourths of the claims.

114. As regards those that you do not settle, are there not several courses; first, you need not plead; then it goes to the sheriff, and there is an inquiry made before a sheriff and a jury?—Yes.

115. Another course is that you should plead simply not guilty, and give notice that you do not mean to contest the negligence?—Yes, and that is the course we generally adopt.

116. Then it becomes a question of damages only?—Yes.

117. The other course is that you should plead not guilty, and stand at your guns as regards negligence?—Yes, but that is very unusual.

118. Notwithstanding all those courses, you still think you have not quite as good chances as private individuals have?—I think not. My experience is, and I am sure the honourable Member has a larger experience himself at the bar, and he probably knows as well as I do, that railway companies certainly have damages to a greater extent awarded against them than any other class of people.

119. Have you yourself known cases where an action has been going on in one court against a private individual, and in another against a railway company, in which the results of the inquiry were not very dissimilar, but there have been very dissimilar verdicts?—I cannot recollect that I have.

120. As regards the question of inspection, you have not found any difficulty, have you, in getting the medical inspection of any persons with whom you have to deal; but have you applied for it?—Not as a rule; they have generally permitted an examination without a judge's order.

121. Will you refer to the 26th section of the Railway Clauses Act of 1868, and does not that relate only to arbitrations?—"Whenever any person injured by an accident on a railway claims compensation on account of the injury, any judge of the court in which proceedings to recover such compensation are taken, or any person who by the consent of the parties or otherwise, has power to fix the amount of compensation, may order that the person injured be examined by some duly qualified medical practitioner named in the order, and not being a witness on either side, and may make such order with respect to the costs of such examination as he may think fit." I think the clause itself includes an action in the superior courts.

122. The 25th clause is that where a person has been injured or killed, the Board of Trade, on application made jointly by the company and the person, if he is injured, or his representatives if he is killed, may appoint an arbitrator?—Yes; that is clearly arbitration.

123. The next clause, the 26th, is: "Whenever any person injured by an accident on a railway claims compensation on account of the injury, any judge of the court in which proceedings to recover compensation are taken"?—That means an action.

124. "Or any person who, by the consent of the parties or otherwise, has power to fix the amount of compensation?"—That would mean the arbitrator.

125. "May order that the persons injured be examined by some duly qualified medical practitioner named in the order, and not being a witness on either side." That does not preclude him from being made a witness, does it?—It has been so held.

126. You find that of no practical use?—Of no practical use, but we have very rarely any difficulty in getting a medical examination.

127. But you do not set any great store upon this recommemdation, at page 81 of the Report of the Royal Commission, that there should be the right of medical examination, because you find you get it as a matter of course?—Very rarely; I have had perhaps one or two cases in ten years where it has been refused.

128. In some cases they would prefer being subject to the observation that they would not allow you to examine, rather than have an examination?—

Mr. *Blenkinsop.*

13 June 1870.

amination?—Of course it is always open to that observation, and they do not like to refuse.

129. Another recommendation in the same page is that the time for bringing an action should be limited; do you see any advantage in that?—I have had cases of hardship; I have received no claim and no notice of claim for probably three or six months after the accident; of course, the longer the delay, the more difficult it is to know the facts, and to that extent it might be valuable; they ought to bring it within some reasonable time.

130. The usual limit is six years, I suppose?—Yes, but it is impossible to get up the facts as to an accident after six years.

131. Do you find that they are delayed continually?—I do not say so; we have had one or two cases in which we have had some difficulty in ascertaining the facts, because they have delayed 12 months in giving us notice.

132. It is very important, is it not, in those cases of spinal accidents, that the passenger and the medical man should have an opportunity of judging what the result is likely to be?—Yes, only I think they might write and say that there will be a claim without naming the amount.

133. A man need not commence his action till he knows he has received a real injury?—I am speaking rather of a notice to the company, telling them that the man is injured.

134. That you receive almost as a matter of course, immediately after the accident, do you not?—We do generally, no doubt; I do not attach any very great importance to that recommendation.

135. Mr. *Sherriff.*] Has the tendency of juries to give large damages increased of late years?—It has increased; that is to say, it increased very much, probably five years ago, and it has continued so for a long time; I cannot say that the tendency is increasing now, because I have explained my impression that the judges have done a good deal to keep them moderate; the fact is, that the judges have seen that excessive damages have been given, and a good many of them have set their minds to keep them down, and that is the reason, but juries I think are, in most cases, quite as willing as ever to give excessive damages.

136. I think you stated that the liability of a company to large damages for the death of, or injury to, passengers really formed a very small element in the desire of railway companies to prevent accidents?—I think so; I think that the much more important element which I mentioned, namely, the keeping up of the prestige of their own railway, and keeping their trade from their rivals, is a far greater inducement to them, apart from humanity altogether, than the mere compensation.

137. Have you not found after all great accidents on railways that there has been an immediate lessening of the traffic, not only on the railway system upon which the accident occurred, but generally?—I have no doubt from my own experience that an accident happening deters many timid people from travelling for a time.

138. For instance, after the Abergele accident did you find any great difference in your passenger receipts upon that or any other portion of your line arising in your opinion from that accident?—I think so; it prevented timid people from travelling for some time.

139. So that that, as well as many other internal reasons amongst officers and directors, is always a preventive of companies from carelessness which results in accident or death to passengers?—Certainly; there is, first of all, the character of the general manager, who naturally likes to have a character for safety, and besides that, there is the money consideration which you have just mentioned of keeping up the returns of the company.

140. In case of insurance on goods, the amount is left to the discretion of the company, is it not?—No; if a man comes and makes a declaration and offers to pay you the insurance under the Carriers' Act, you are bound to insure him.

141. But who fixes the amount of insurance?—The railway company themselves have fixed it; I believe it must be a reasonable thing, but they fix it themselves.

142. But in case any person is injured or killed under the proposed Act, the amount of insurance per cent. will be fixed by law?—Yes.

143. Mr. *Reed.*] Do you produce any return of the accidents on the different lines that you represent here to-day?—No, I have not any statistics with me, but I could easily provide the Committee with statistics if they wish it.

144. Could you furnish a statement of the number of instances in which the companies have been successful in proving their case?—I will do so.

145. I understood you to say that the chief claims numerically arise from people in humble circumstances?—I did not say that exactly, but I said that I thought you would find that the proportion of compensation is greater to third-class passengers; that may arise from the third-class travellers being more numerous.

146. I suppose third-class passengers are chiefly artizans and people of limited incomes?—That is not so; nearly all clergymen travel third class.

147. That depends upon your fares, does it not?—No, a clergyman thinks that he can travel third class.

148. Supposing those people to be poor persons, is it likely that they could readily get the assistance of lawyers and doctors upon an accident occurring?—I am sorry to say that there is never any difficulty in their getting lawyers.

149. I mean in the usual course of things, are they such clients as an ordinarily professional man would care to have, if they are poor people?—Yes, because the railway company invariably pays the costs.

150. That is supposing the issue is of a certain character?—In compensation cases it is very rarely that the liability is disputed at all; it is only a question of amount, and then if they get 10*l.* they get their costs.

151. If the persons were poor would they not have a difficulty in getting anyone to take up their cause?—I do not think so in railway compensation cases. Generally, no doubt, you are right; but in case of railway compensations, seeing that they are safe of getting paid their costs, there is no difficulty in getting attorneys.

152. Am I right in supposing that a man who sustained an injury in a railway collision might have to deposit a sum equal to 50*l.* before any lawyer would take up his case?—My experience is quite the reverse.

153. But if he had to pay such an amount, it would be a hardship upon a poor man?—That would be a very great difficulty with a poor man of course.

154. If therefore those lawyers and doctors made

made application to persons to take up the cause free, and to repay themselves their costs for which they are not covered, supposing the action is unsuccessful, there can be no blame to them, and it may be part of the bargain, that if the case is successful they will repay themselves in that way?—Yes, of course; but what I rather meant was this. I put this case. There are a certain class of attornies who will do the work, and get compensation for their clients, and who will take a considerable portion of the compensation, but other attornies, who are first-class men, will not do anything of the sort, they will take their chance.

155. I might put it in this way. A large number of those persons, being very poor people, and having no attorney and no doctor of their own, would naturally accept the services offered to them in the hope that they might get some compensation out of the company?—Yes, that may be so.

156. When you speak about medical men, do not the companies immediately send down one of their own medical men to get evidence as to an accident?—Our system is this, we keep a medical superintendent for the whole line, and then we have retained certain local medical men who, when an accident happens in their district, go immediately to relieve the passengers and to attend to their injuries at once. Of course those gentlemen ascertain the amount of injury, and report to me, so that we have our own medical man, no doubt, to tell us, whenever an accident occurs, what the injuries amount to.

157. Do I understand you to say that it is impossible for a medical man of ordinary capacity and standing to ascertain whether there has been a serious nervous shock, or an injury sustained by what you call a nervous shock?—All I can say is this, that our medical man has repeatedly told me in cases of nervous shocks that the patient described his symptoms, and that he could not contradict him; he has often told me that he did not believe it, that the man was exaggerating his case very much, and he could not say in some cases whether he had been hurt at all.

158. But in the cases where you have been defendants, have you not tendered to the jury positive medical evidence as to the state of the man's health?—Yes, repeatedly.

159. In your opinion, are not juries composed of the middle class, fairly likely to recognise the precise claims for damages, specially of people in humble life?—My experience of juries is this, that they let their compassion flow very freely at other people's expense as against railway companies.

160. Have not railway companies in some of those cases been thought to have dealt very harshly with applicants for compensation?—There have been no doubt such cases, but I should hope they are solitary cases.

161. Is not the opinion of the class from which juries are drawn been formed very much by the action during past years of railway companies, with reference to those claims?—The honourable Member knows better than I do, no doubt, but I daresay there is this kind of feeling in the minds of juries, that they would punish a railway company where it is a very gross and bad accident; their feeling is rather, besides the injury to the passenger, to put in the element of punishment to the company.

162. You speak of being subject to competition, but, actually, you are masters of your own rates and fares, are you not?—No, the rates and fares are prescribed by Act of Parliament.

163. But within the maximum amount?—Yes, but that is subject to this qualification, which the general manager will explain better than I can do. We are all competing at the same rates and fares; there cannot be a different rate and fare to the same place; we are all competing, but we have been, rather foolishly, in some instances, competing so keenly that the tendency of rates and fares for the last five or ten years has been to go down gradually.

164. But, practically, people who have to travel must travel, must they not, by your line, or those associated with you?—No, just the reverse; for instance, if you wish to go to Manchester you can go by the Midland line, who are competing very keenly with us; or you can go by us or by the Great Northern; there are three routes to Manchester, all competing against each other to get the trade.

165. But when there was an understanding between the South Eastern and the London, Chatham and Dover Companies, we were obliged to pay the same price whichever line we went by?—It may be that you would have to pay the same price; the fares must be the same; you cannot have a different fare.

166. As I understand your proposal, it is, that you will form, in fact, an insurance company within yourselves, and that the public shall be required to pay a certain fixed amount if they wish to insure against accidents?—If they wish to insure beyond the 500 *l.* for first-class passengers, 300 *l.* for second-class, and 200 *l.* for third class; but, if a passenger wishes to have himself insured above 500 *l.* for a first-class passenger, 300 *l.* for a second, and 200 *l.* for a third, then we ask him to pay a reasonable premium, and we will insure him.

167. Do you not suppose that that would be a successful speculation on the part of the railway company?—I think it would be a loss; in fact, the Accidental Insurance Company will not undertake the business at the figure I mention.

168. I think I understood you to say that if the amount that you pay a man was fixed at a maximum of 1,000 *l.*, all claims would be readily settled?—No, I am bound to insure a poor man for 1,000 *l.* if he pays me 3 *d.*, but, in case of death, I should be bound to pay his representatives, at once, 200 *l.*, by the Bill; and, in the case of a first-class passenger, 500 *l.*; and 300 *l.* in the case of second-class passengers; therefore, there would be no litigation in the case of death.

169. If a man took a ticket at Ludgate Hill Station, and that ticket carried him to Blackfriars Station, he would have to pay 2 *d.* or 3 *d.* would he not, for his insurance for that short distance?—There is that difficulty, I admit, where the fares are very low, and very short journeys, that he might double his fare, as you put it; but we thought for that kind of traffic, where a man is a frequent traveller, to give him a very low annual ticket; say, insure him for the year round at 5 *s.* or 10 *s.* If he is a constant traveller, if he comes to his business and goes back again, we thought of giving him an annual ticket at a very low fare, and insuring him the whole year, and thereby the anomaly which you have mentioned would not accrue.

170. I want to know whether if you only assured

Mr. *Blenkinsop.*

13 June 1870.

sured up to the average loss upon accidents, that would not lead to a diminution in the care exercised in the management of the railway?—I think not; I have a very strong opinion upon that, but I say that the far higher considerations of the safety of the line, and the retaining of the traffic, would come to ten times the amount of compensation, and I do not think that that at all enters to any extent into the management of the concern, but you had better ask the managers upon that subject.

171. With regard to America and the Continent you have stated your opinion, but do you not know that the rates of carriage are very much lower both in the United States and on the Continent; I mean the rates to which working men are liable?—I know, generally, that the rates are lower both on the Continent and in America, but with this difference on the Continent, that railway companies there are practically a monopoly; there is only one line of railway allowed to a district, and, therefore, the condition attached is that they are to charge low rates and fares. If that system had been adopted in this country people would be carried at one-third less than they are; it is the competition, and the double capital, that has kept the fares up.

172. Are there not a great number of persons who suffer from accidents, but from whom no claim comes, and therefore the company is released from obligation?—My own impression is, that unless it is some very slight injury they all make claims. I have known one or two gentlemen high in station, who although injured have not made claims.

173. I am speaking now of poor people who have no opportunity of making their claims?—My impression is that whenever there is any serious injury a claim is always made.

174. With regard to the notice of claim, is it not within your knowledge that the symptoms of disease very frequently are of that subtle character (spinal affection, for instance) that they do not show themselves for many months after the accident?—That is so. I have known cases where a passenger has considered himself very slightly injured, and it turned out to be of very serious importance.

175. And yet you demand a limit of six months?—The Royal Commission recommend it. I do not mean to bring the action, but merely to tell us that we may have a claim from the person injured, that is all I want.

176. Mr. *Sherriff.*] I understood you to say, in reply to an honourable Member, that the chance of accident had not prevented cheap trains being run by railway companies?—I do not think I mentioned that; if I did say so I was under a misapprehension.

177. Is it within your knowledge that excursion and other cheap trains have been given up by railway companies, merely on account of the chance of accident, and the claims which would be made afterwards?—I know that at our board we have frequently discussed the question of excursion trains, and we are limiting them as much as we possibly can on account of the liability to accident. For instance, I recollect an excursion train accident two years ago, at Watford, in the tunnel near where I live, and I believe it cost us more than the Abergele accident; I think we paid about 35,000 *l.*

178. It is within your experience that cheap travelling has been prevented by the liability attached, in case of accident, to railway companies?—Certainly; excursion trains have been diminished on that account.

179. Mr. *Price.*] Do you know whether, prior to Lord Campbell's Act, damages in case of accident were awarded in respect of injuries suffered by a passenger, or the loss of income sustained by him, or both?—Under the old law I do not think that the element which has sprung up recently, that you must look to the future prospects of a man, existed. I think the actual injury to the body was calculated, and then the actual injury as regards pecuniary loss; in fact, I think that both were elements of consideration.

180. The alteration which has been made in the law by Lord Campbell's Act is that whereas before a man could only claim for himself, whether for injuries that he suffered, or for loss of income which he sustained, now his representatives may claim for any loss of income which they sustain in consequence of his death?—That is so; you have under Lord Campbell's Act to pay the person's relatives when he is dead.

181. You do not complain of that alteration of the law as I understand you, but what you complain of is that the principle of the law is not fairly applied?—I do not complain of that, because I think it was an anomaly that you could kill a man and pay him no compensation; what I complain of is this, that an excessive amount of compensation is given for unequal consideration; we only get the same money from two individuals, and we sometimes have to run 10 times the amount of risk in one case as compared with the other, and I think that it ought to be a moderate risk in all cases.

182. Is it the practice generally of judges in charging juries in cases of this kind to indicate at all the extent of the damages to be awarded, or to foreshadow it in any way?—Some of the judges have let their feelings go with the sufferers, and by language which they use, which you can hardly describe, do increase the damages, so that there is no doubt about it in the mind of the jury. Some judges will tell them that it is a case for full and ample damages, and use words of that sort, whereas other judges will tell them it is a case for moderate damages; to that extent the judges do influence the minds of juries no doubt.

183. But they do not indicate the amount of damage so definitely as to enable you to say that the juries have gone beyond what the judges have indicated?—No, we find it in this way: we have had cases recently where the moment the verdict was given the judge has intimated that he did not think that the verdict was a just one, and he would give us leave to move for a new trial; we had a case of that kind the other day in Wales.

184. Clearly showing that in the mind of the judge there is an impression that juries sometimes go beyond the justice of the case?—Yes; I had a case the other day before Mr. Baron Channell, in Wales, when immediately after the verdict was given he told our counsel that he did give our counsel leave to move for a new trial.

185. Do you know, as a matter of fact, whether that has taken place in other cases excepting those under your own management?—I have no doubt of it; I have seen such cases frequently in the papers.

186. You have spoken of the practice which has grown up, of persons taking up those cases upon speculation; is that an impression, or do you

you know it as a fact?—I know it as a fact. I have had a good deal to do with them. Probably with a large class of attorneys in our large towns, if the case gets into a respectable man's hands, we can settle the matter without difficulty; it is very rarely that one has to fight when there is a respectable man on the other side; but when it gets into the hands of the other class of practitioners, I know that there is no chance of settling it.

187. Then a new class of business has sprung up, has there not, under Lord Campbell's Act?—Yes, it is altogether by a class of attorneys whom I would not call first-class professional men.

188. In those cases, do the clients seek the solicitors, or the solicitors seek the clients?—Those kind of solicitors I know have sought the clients.

189. You spoke, did you not, of those medical witnesses as requiring in most cases larger fees than they would in ordinary practice?—Medical witnesses of a certain class, men who have laid themselves out as professional witnesses, will not come at the ordinary per diem charge; they always charge more.

190. That is to say, they charge more than they would charge if they were engaged in their ordinary profession during the same time?—Yes, I think they do even more than that.

191. In those cases where men are known to have that high scale of charges, do you look upon them as medical witnesses or medical advocates?—A great number of them have become practically now medical advocates; they take the strongest view on the particular side for which they are employed.

192. I presume that practically, in that case, they would range themselves on the one side or the other, and you would generally find that a man would be a witness for or against heavy damages, would you not?—No doubt.

193. If that were not so, would not the evidence that a man gave in one case be very often found to be conflicting with the evidence that he gave in another case?—No doubt.

194. That is to say as a matter of fact, there are certain men that you would know at once to be witnesses or advocates, whatever you like to call them, for heavy damages?—No doubt.

195. I think you stated that in the case of those accidents, which you characterise as nervous shocks, you have great difficulty because you have nothing to go by but the description which the sufferer gives of his own sensations?—Quite so; there is no outward appearance of injury, but still he says he is suffering from this nervous shock, and then he describes what he feels, and the medical men frequently tell me that they cannot deny the man's statement, but they believe from all that they can see about him that he has grossly exaggerated the injury, or probably is not injured at all; I have had cases where they thoroughly believed that he was not injured at all; but it is more exaggeration I think of the symptoms that they suffer from than actual fraud, or a man telling really what is not true.

196. Do you generally find that those sensations and symptoms are described in a sort of stereotyped language?—Yes, the doctors come and give the same kind of evidence and they bring their clients into court.

197. Do you remember any case in which damages have been awarded and paid, and fraud detected and punished after payment?—Yes, there have been one or two cases on our own line of railway, and on the Midland line there was a case where they did detect a man and he was punished afterwards.

198. You mentioned a case yourself in which you detected a man just as he was upon the point of getting damages; do you happen to know any cases in which a man was detected after damages had been awarded?—No, I have found that a man was not injured to half the extent that was stated, and he got better immediately after the damages were paid; there are many cases of that sort, but not cases where they have actually not suffered at all.

199. I think you said that you would give in a statement of cases which had occurred within your own knowledge; would you be able to distinguish those cases where as you contend the accident had happened not from the neglect of the company but from the neglect of the passenger himself?—It would be a little difficult to do that unless the verdict had been for the company; that is very likely the case wherever we get a verdict where probably contributory negligence on the part of the passenger existed; I could tell it in that way, because no doubt in almost every case the accident would have arisen from the want of care on the part of the passenger himself where we did succeed.

200. I asked that because you mentioned the case of some man who had (I do not know whether it was hypothetical or not) recovered damages in consequence of an injury which he had sustained by tumbling over a wheelbarrow?—I gave that merely as an illustration.

201. That being an illustration of a class of cases, have you within your knowledge any such cases of which you could give us the details?—Yes; I have got several cases. We had a case in a station on the Shrewsbury and Hereford line, where a little boy began swinging, I think, on a chimney mantel which did not stand his weight, and came down and injured him, and there we had to pay compensation.

202. Then the neglect of the company in that cas was in not providing a chimney piece which would be available for swings?—Yes.

203. Mr. *Denison.*] Was the compensation by award of court, or by consent?—We were advised that we were liable, and we paid the money, 100 *l.* I thought it a very extreme case, and I doubted the liability myself, but we were so advised. There was also a case of very extreme hardship which I might mention. A blind man was coming down our stairs, nobody being with him to lead him, and he tumbled in consequence of a nail being up in the stairs, not quite driven home; his foot caught the nail, he tumbled down, and we were held liable.

204. Mr. *Price.*] That was held, was it not, as an act of negligence on the part of the company?—The nail seemed a very small one, and we thought that the negligence was on the part of the poor blind man who had no one to lead him. We have also had this class of station accidents. You will probably recollect that in some stations the platform goes down a little, and sometimes a train stops outside it, and a man gets out, and on account of the extra distance tumbles and is injured, and we are held liable for that, although a little care would have prevented it on the part of the passenger.

205. You were asked by an honourable Mem-

Mr. *Blenkinsop.* 13 June 1870.

ber whether there was any other restraint upon the irresponsible management of directors than this liability to pay damages, and I think you said generally, that you do not think that that liability to pay damages weighed at all, but that there were other and higher considerations which acted as a restraint upon them?—Yes, certainly. My impression is, that the liability is a very small element indeed in the management. First of all, there is the character of the manager and the directors themselves, and then there is the money consideration in making people timid to come by your railway, which comes to ten times what the money compensation would be.

206. Is there not also generally a very heavy loss and damage caused to the stock by one of those accidents?—Yes, many thousands of pounds of damage to the stock occasionally.

207. And the directors themselves travel about as much as other people, do they not?—Yes, I think so; and I know they look very seriously at the manager whenever any great accident occurs.

208. The idea that railway directors are utterly indifferent to accidents, and manage their railways with recklessness, as it is commonly put, is a popular delusion, is it not?—Yes; they are men, as a rule, of good standing and character; they are quite as humane as other people, and they do not wish to kill people if they can help it.

209. You have indicated 3,000*l.*, 2,000*l.* and 1,000*l.* as the limits of what I may call the compulsory insurance, and you have put it at the rate of 3*d.* per 1,000*l.*, but does not it occur to you that there is a greater risk in carrying a passenger 100 miles than in carrying him 10 miles?—Yes, we considered that question, and no doubt it is a very difficult one; but, on the whole, although I mentioned, I think, that some of the companies' managers wish a sliding scale of charge for 50 miles, for 100 miles, and for 150, and so on according to the distance, the majority of the companies think that it would lead to complication, and they prefer one uniform thing, although there is greater risk of course; but at the same time you must bear in mind there is the risk of getting in and getting out whether the journey is long or short, and many accidents occur in getting in and getting out.

210. So that the risk would not be directly in the ratio of the distance?—You could not fix it directly in the ratio of the distance; there is some risk in getting in and getting out, and we have many accidents on that account. Then there is the difference, of course, of the time that you are on the railway, and we came to the conclusion that we had better propose the simple plan of a uniform thing, whether for a short or a long journey; only as regards short passengers, who travel frequently, who take season tickets on the railway, that is to say, on omnibus traffic, we would give them an annual insurance ticket for a small sum, say, of 10*s.* or 15*s.* or 20*s.* a year, which would do away with the objection very much for short traffic.

211. But, in some way or other, you think that the principle which now applies to goods and animals should also be applied to passengers?—Yes, I think that the principle is the same, that where the article is more than usually risky (the same as in goods, merchandise, and cattle), companies ought not to be held liable for more than a limited amount.

212. Mr. *Sherriff.*] You think that the principle should be extended as regards passengers?—Yes, it should be extended to passengers practically, because there is just the same inequality as regards passengers, in the value of a man's life as there is in merchandise.

213. Mr. *Price.*] When you have to consider the question of damages in respect of goods, do you find the same tendency on the part of juries to exaggerate claims as in the case of passengers?—No, not so much; and that just shows what the feelings of juries are. They look upon a poor man that is suffering, and want to give him heavy compensation. In the case of goods, as a rule, we get the fair value assessed. In the case of goods the feeling does not come in, and we do not find ourselves suffering at all, or at least very little.

214. There is no sentimental sympathy?—No, there is no sympathy or feeling in the matter.

Mr. Henry Oakley, called in; and Examined.

Mr. *H. Oakley.*

215. *Chairman.*] You are the Secretary, I think, to the Great Northern Railway Company?—Yes.

216. For what length of time have you filled that office?—I have been secretary 10 years, and assistant secretary about five years longer, 15 years altogether.

217. During that time you have had considerable experience of the working of the principle of compensation, have you not?—Yes, it has fallen to my lot to have the inquiry and negociation of those cases before they reach the directors, and the duty, of course, of carrying out the directors' orders.

218. What conclusions, which you have formed upon the subject, can you give to the Committee?—They are manifold; I would first of all say that there is very great difficulty in really ascertaining the merits of the claims that are put before us; the usual course of procedure is this: a claim is made, either personally or by letter, and sometimes it is through a lawyer that we first hear of it; I generally send some one to inquire as to what is the nature of the claim, and if it is a mere bruise or contusion we do not trouble the doctors, but if it is alleged to be serious, we send our own doctor first of all to see what the case is, and report upon it; if, then, it is found to be within his scope, and if we can manage it, we probably arrange with the opposite doctor, if it is a fair case; or if we cannot, if it threatens to be serious, we then select the very best man in London for that class of cases, without regard to whom he may be; for instance, in a surgical case we used to send to Dr. Hancock or Mr. Erichsen; Mr. Paget used to act for us, but now he will not go into court; on the other hand, if it is a physician's case, a shock to the system, we send to the best physician that we think will advise us, and we ask him to give an honest opinion of the state of the patient; in most cases, in fact in 95 per cent., we arrive at a settlement, not, of course, always very cheerfully, because the amounts claimed appear

appear to be very much larger than we think the people are entitled to; but the risks and expenses of contesting are so great, that as a rule the directors prefer, if they can get within anything like a reasonable amount, to settle privately, rather than incur the risk of a jury, although they are advised, and are satisfied that the claim made is very much too large.

219. Have you experience of any class of attorneys or doctors who deal with persons who are injured?—Yes, I am sorry to say that I have; I have at this moment in hand two cases arising out of an accident down the line, in which a lawyer from London was telegraphed for by one of the reporters, and he went down and attended the inquest (one of our drivers was killed), and he picked up two of the cases of parties who were injured, although he had no connection with the town, and I am told he had never seen the parties before; and he has commenced an action in each of those cases.

220. Do you think that he applied to the parties, or that the parties applied to him?—I cannot, of course, say the actual *modus operandi* on the spot, but he was sent for by a reporter, and we know that he was telegraphed for; he was then introduced by, I believe, the reporter, but I should not like to be positive about that; but he was introduced by somebody to the persons who were attending the inquest.

221. Had he been engaged in business of this description before?—Not with us.

222. What do you find the expense of contesting a case?—It varies; I should explain, first of all, that we pay our solicitor by an annual salary, and therefore our expenses are only those out of pocket; but the expenses of the medical witnesses and the lawyers, and the other side, when we fight, seldom come to less than between 300 *l.* and 400 *l.*

223. Is that the expense of both sides?—Yes; I have had one or two cases, of which I will tell the Committee presently, where we contested a case with nothing extraordinary in it, and the bill sent in by the lawyers after the jury was 570 *l.*; it was taxed down to 318 *l.*, but we had to pay it in addition to the damages and our own costs as well, and, of course, our own medical witnesses. In fact, putting that point shortly, the known expense of contesting cases often induces the directors to settle rather than incur what they know is practically a fixed sum.

224. Is it in accord with your experience that the company has always to pay the cost?—Yes; just let me mention a case in point. A woman in rather an ordinary condition in life, in fact a washerwoman, commenced an action against us through her attorney, and we paid 100 *l.* into court, which we thought amply covered her case, and the jury said that the company had behaved very properly, and gave a verdict for the company, but they accompanied it with the recommendation that as the woman was a poor woman we should pay her lawyer's costs, which, of course, was all he wanted, and we had to pay his costs; and I heard afterwards, as rather a sequel to the case, that he had kept the greater part of the 100 *l.* to repay himself the costs between attorney and client.

225. Do you think that great opportunities under the present practice are given for exaggerating claims?—Yes. A claim is always divisible practically under three heads. There is first of all the solatium for personal injury; there is, secondly, the loss of business, or loss of income; and there is, thirdly, the expenses. Every claim can be divided under those heads, and we always try to deal with them in that way. Let me also say that there are many cases where we find the parties honest and straightforward, and willing to submit themselves to examination, and where we are enabled to settle without difficulty; but in cases where there is an evident desire to make the most of them from the beginning they have ample opportunity of doing so. In what Mr. Blenkinsop described as shocks to the system, or what our doctors more learnedly call subjective injuries, that is, injuries that they cannot see, they can only depend upon the patient's statement of what he suffered. A passenger, as many men are, of course, is of a highly nervous temperament; he receives a shock to his nervous system; he is frightened, and he details all sorts of horrible feelings, and suspicions, and fears that he entertains; his doctor, on the other side, if he wants to make the most of it, looks grave, and says, "This may lead to something very serious;" while on the other hand our doctors advise us that the man only wants a little rest, and in two or three months he will be all right. We cannot convince him, and seeing generally what we have to deal with, we practically get out of it the best way we can, unless it looks rather too strong, and like a case of simulation; then we always fight it. You may take it for granted that, as far as we are concerned, no case has been fought for years, unless there has been in our minds some notion that the man was either grossly exaggerating or simulating, or that we declined the liability on some other ground, some broad ground. It is practically impossible for us to tell what a man's business is, and it is rather interesting to find the very large profits that people apparently in a very humble way are making when they are injured in a railway accident; their business has collapsed, and the whole thing has gone to ruin, and that is always a very large item in their claim. Then, with regard to expenses in the same way, if they are injured they want a little rest, and they go out of town, they go to Brighton, or to Eastbourne, or to some of those places, and they live very comfortably during the time of their absence, and they call upon us to pay them their expenses. There is a tone of exaggeration throughout.

226. Your practice is, in short, to get off as cheaply as you can?—Yes; except in the cases as I say where we believe, I do not say where there is, but where we believe there is simulation, or where we deny the liability on broad grounds.

227. Are there many cases where you deny the liability?—Yes; I could give a very striking case. We had nine actions commenced against us some few years ago, on account of what you will remember as the Carlton floods, in the mid district of Lincolnshire, when a flood came and washed away part of the railway; all those actions got into the hands of one attorney. It was alleged that the night was so bad, that the lightning, thunder, and rain were so fierce that we ought not to have started our train from Grantham; the cause of the accident was, that the flood, after being blocked up by some obstacle or rising ground, came down with a huge volume, and washed away about 70 yards of railway, and the train unfortunately went in one end of it. Nobody was killed; but several were

Mr. *H. Oakley.*

13 June 1870.

were hurt. It was tried six times, and we lost one of the six cases; but we won the next, and in the other four cases the jury could not agree; by that time they got tired, and the thing was never finally settled.

228. Have you had any cases of absolute fraud; that is to say, of any person injuring himself for the purpose of getting compensation?—Yes; but they have not been successful; we have generally tripped them up before they have succeeded. I have in my mind the case of a man who alleged that he had tetanus, from his thumb or wrist being caught in the door of a carriage, when the guard was shutting it; he got a solicitor to take up his case; he said that he was a merchant in a large way, and he claimed 5,000 *l.* damages. We wanted to see him; but we were refused to see him unless we first of all admitted the liability. In a case of that description, of course we could not do that, and therefore we were obliged to be content with not seeing him. We made the best inquiries we could into the case, and we found that instead of being a merchant in a large way of business, he was in effect one of a body who, in some small street out of Thames-street, lived by getting goods from people, and representing themselves to be a firm, and I was also told (but this I do not know personally) that the police were inquiring after him. However, his lawyers took the case into court; we were in court, but the plaintiff never appeared, and therefore we paid no damages, but of course we had our own expenses to pay. I believe that the lawyers did not know the sort of man whose case they had undertaken.

229. Do you complain of the present state of the law generally?—Yes; I think we have a fair right to complain, because we do not know really where we stand when we book a traveller. At the time of the man making the contract, as the lawyers term it, we do not know what obligation we undertake. In the case of a gentleman who was killed on our line a good many years ago, he was a man of very good property, but he had, unfortunately, a very large family; a rail broke, and we were held liable for the consequences, and the jury returned a verdict in that case against us of 13,000 *l.* The large amount was due only because he had not taken the ordinary precaution of insuring his life, so as to provide for his young children. We appealed against the verdict, and it was eventually reduced to 9,000 *l.*, and we had to pay 9,000 *l.* and the costs, which made it about 11,000 *l.* There is another point which we think rather hard. I need not go into the question of the absence of relation between the fare and the obligation, because Mr. Blenkinsop has done that, but no consideration is given when the company has done its best, when it has got the best materials, when it has got the best men, and when an accident has occurred only from a mistake of probably as good a man as could be got. I have a case in my mind which will illustrate that. We had an accident at Hitchen by the default of the signalman, and it was admitted that it was his mistake, but the man had been nine years as signalman; he had been three years in that post, and he was so good a man that he had received 10 or a dozen half-yearly bonuses. Because he had never misconducted himself during the whole time, and had signalled trains with perfect accuracy, we encouraged him by giving him a bonus every half year; but yet we were held responsible, in fact, to the extent, in that case, of 20,000 *l.* There were two or three cases tried, and, in fact, the mistake of that signalman cost us about 20,000 *l.*

230. You do not find the sum which you have to pay dependent at all, do you, upon the degree of negligence of the company?—No, there is no relation at all of that kind.

231. Consequently, it does not operate much as a stimulus upon the railway companies to very great care?—No; that is one way of looking at it, but that is not the way in which I should put it to you, because, as far as our railway goes, the question of loss by an accident of this description has nothing whatever to do with it. We simply try to do the best we can, and I may say so far we have been successful; but, do what we can, we cannot avoid accidents by the failure of men, the best that we employ.

232. Do you think that it has the effect of preventing your lowering your fares?—Yes; I think that it may have; of course it is not quite clear. I see that the amount that we paid for compensation represents something like 2 per cent. on the working expenses, and, of course, everything that increases our working expenses tends to prevent a reduction in the fare. The logical sequence, as it appears to me, is this, that the rich travellers, who get large compensation from us, help to keep up the working expenses, and that, therefore, the poorer man practicably pays a portion of this compensation, in any increased fare that he has to pay. I think it will fairly work out in that way.

233. The 2 per cent. that you have to pay frequently is in respect of injuries done to the rich man?—Yes, clearly so.

234. Consequently, if that increases the fare it would rather increase the fare of the poor man than of the rich man?—Yes, it would increase the general fare, but the poorer people being the majority of the travellers may practically pay a portion of the rich man's compensation.

235. Do you think that the working of the present law is to encourage unscrupulous persons to demand compensation?—I think so; that has been my observation of it, that a man who has made up his mind, I will not say to cheat us, but to extract as much as he can from us, is really encouraged to go on by the hope of reward. All he has got to do is to stick to his statement. I could tell the Committee the case of a man who said he was earning 1,300 *l.* a year, and that he had received a shock in rather an unusual way. A goods truck was attached to a passenger train on a branch line; at starting, the passenger carriage received an extra shake, because of the long coupling between the goods truck and the carriage; he said that he had received a shock to his system, and he retired from his business, intimating that his eyesight was affected, and that his hearing was affected, and that he had pains down his limbs. He had no bruise, or any external injury whatever; and, on hunting him up, I found out that instead of his income being 1,300 *l.* a year, he had been bankrupt, or insolvent, the year before, and that his goods had been seized by the county court bailiff. He was, no doubt, in the business that he said he followed, but from his surroundings we should think about 200 *l.* or 300 *l.* a year would be the outside of his earnings. When we let him know how much we knew about him, we were able to settle with him without fighting, but his lawyer's costs amounted, I think, to 226 *l.*, which we had to pay.

236. That

236. That was part of the arrangement, I presume?—Yes.

237. You heard the suggestions that were made by Mr. Blenkinsopp for an alteration in the law; are those suggestions in accordance with the view of yourself and your directors?—Yes; the subject has had a great deal of consideration, I may say, for two years, and the conclusion that we have unanimously arrived at is, to present those views to Parliament through the medium of this Committee, and we hope so to impress the Committee that we shall induce them to adopt them.

238. That is to say, limiting the liability without any consideration to pay compulsorily, and leaving it to persons travelling to insure for a larger amount, if they so think fit?—Yes.

239. Have you any suggestion to make as to any alterations in the mode of determining cases?—My directors have felt that in asking you to limit the damages, it was necessary to meet the case of the poor man who might be supposed to be unable to find a lawyer and a medical man to take his case up, though that has not happened in our experience, the shortest way would be to submit the case to the county court judge of the district in which the accident happened, or in the district where the chief offices of the company are situate, and let that be the tribunal to try those cases.

240. Have you any other recommendation to make?—No, I think not; at present that is all I have to put before the Committee.

241. Mr. *Davison.*] In making that recommendation, did you mean with or without the assistance of the medical assessors?—We hardly presumed to say precisely what the court should be; that was to be thrown out as a suggestion for the consideration of the Committee. In some cases, no doubt, a medical assessor would be advisable; but that recommendation would be practically in the discretion of the Committee, and not for us.

242. Sir *H. Selwyn-Ibbetson.*] One of the principal objections that you take to the present system is, the apparent unnecessary legal expense, if I may call it so, which is incurred by persons who are not over-scrupulous?—Yes.

243. But would not the system be still liable to that in all cases of injuries, even if the Bill submitted to the Committee were adopted?—No. First of all there would be the same inducement; there would not be the same margin for them to get, and if you adopt the other suggestion of a county court, it would be very easily settled.

244. But that is not in the Bill?—The Bill is only to be taken for what it is worth; the county court is the result of more mature consideration.

245. I imagine from that Bill, that you have a limited sum fixed, which is payable to somebody in the case, but not in all cases, and even then it would be a question of how much of that limited sum in cases of injury would meet the actual case?—Yes.

246. In every one of those instances, some sharp practitioner would see his way to come in with the view of getting his legal expenses out of the company?—No; the only effect of it would be, that we should know the expenses of the trial, and supposing a man wanted 300 *l.*, and we offered him 200 *l.*, we should rather pay 300 *l.*, than go on with the trial, because we should know the result.

247. It would be diminished merely by the companies acceding to the man's demands?—Yes; practically it would be so.

248. You mentioned one other point with reference to the professional profits of a man often being exaggerated, but you have no practical means of arriving at them?—No practical means; we could get a judge's order to inspect the books, but the inspection is always limited.

249. You could not get at the returns of the income tax?—No, they will not admit them; nor will the judge allow a man to be asked how much he returns, and if he is asked, the jury generally laugh.

250. What year was that accident at Hitchin to which you referred?—It was about 1859 or 1860.

251. You say it was entirely arising out of the fault of the signalman?—Yes.

252. At that time was the system of interlocking points and signals on the line at work at that particular point?—Yes, it was at that particular point.

253. You are aware that a good deal of attention has been called on several railroads, and the Great Northern, among others, by the Government inspector to the subject of interlocking points?—Yes.

254. Are you in a position to speak at all, or will the traffic manager speak as to the working of the line?—Our traffic manager is, unluckily, seriously ill; therefore I must undertake the duty, whatever it may be.

255. Are you able to speak with regard to the system which has been very much talked of, the block system, and its application to railway working?—Yes, I think I am in a position to give you all the information that you may require upon that subject.

256. You are aware, I suppose, that in a very large number of instances of accidents under the head of collisions they have been reported by the Government inspectors as preventable, and as certain almost to have been prevented, had the block system been in operation?—Yes, but I do not think that applies to the Great Northern Railway,

257. In several instances, I think, it has been recommended, if I mistake not?—I rather fancy that we were ahead of the world generally in the adoption of the block system, but we do not think it necessary to adopt it everywhere.

258. I think I am not mistaken in saying that, in several instances, within the last two years, the Government inspectors have reported in favour of the block system being adopted?—I think you will find that they have reported in favour of the alteration of the locking apparatus. From London to Hitchin we have the block system in operation; but there are three systems of train telegraph in operation on our line suitable to the state of the traffic of each. Between Hitchin and London we have the block system, and in Yorkshire we have the block system entirely, and the reason for that is this, that the trains do not start from end to end; but near London, one train is coming from Hitchin, another train will be starting from Barnet, and one from Hatfield, so that there are a series of commencing trains within that area; and in that condition of things the block system is very useful.

259. You always preserve a certain space between

Mr. *H. Oakley.*

13 June 1870.

tween the trains by telegraph, do you not?—Yes, over that area and in Yorkshire.

260. What is the reason for not adopting the same system with regard to the rest of your line?—Because the distances between the stations in the country are greater, and it would seriously impede the traffic.

261. You admit, do you not, that under the block system you are less liable to those accidents of collision properly so called?—Yes, I admit that as to collisions between stations the block system, no doubt, is very useful, and almost a preventative; but the fact is, that the majority of the accidents happen at stations. I do not know whether the Committee have seen the returns made to the Board of Trade, which are every now and then applied for; but you will find that the block system is by no means exempt from accidents.

262. Are you speaking now of cases where the block system is absolutely carried out, or of any modified system?—I speak of our own, where it is absolutely carried out.

263. Accidents have happened, you say, on portions of a line where the block system has been at work?—Yes; but accidents between stations are entirely prevented.

264. Therefore to that extent it would be a protection as against collision if the block system were universal?—Yes, of course, bearing in mind that running collisions form but a very comparatively small proportion of the number of accidents; accidents chiefly occur at stations.

265. But I look upon it that collisions proper are collisions where one train runs into another; not from any fault of the alteration of the points, or anything of that sort, or a mistake as to those, but directly running into another train on the same line?—That, of course, would be obviated by the block system.

266. What system of breaks have you on the Great Northern line in general use?—We have the ordinary weighted break, a four-wheel break; we generally run three breaks to a train of 12 carriages, and two breaks to a smaller number.

267. Do you imagine that by adopting any system which would at once apply a break generally throughout the train, you could reduce the number of accidents?—No, I do not think so; the experience of our people on that point is certainly antagonistic to what are called continuous breaks; at the time that they are most required, they are found to fail, especially in long trains that are made up of carriages put on at various stations. In short trains where the train is one continuous piece, and always a fixed body, they can be worked much more readily, but for long distances, and where you have to attach and detach carriages, the system of continuous breaks has never been found to answer.

268. That disadvantage, I suppose, would apply only to cases where you have constantly to be detaching and altering carriages?—Yes, but that happens practically to every train that goes beyond Hitchin.

269. Otherwise, on lines where one train ran through without any great change of carriages, that system would give much greater power to the people in charge of the train, and enable you to prevent a great many accidents that now occur; would you not be able to check the speed much more readily?—I do not think that any accident practically occurs now in express trains for want of break power; it is a very rare thing indeed.

270. Have you ever tried the system of continuous breaks on your line?—No, we have watched the experience on the Lancashire and Yorkshire Railway, as well as on the North London, and we find that it answers very well indeed for short trains, but it is not only our opinion, but I believe it is the opinion of all managers, that it will not do for long trains.

271. Where accidents occur from foggy weather, or from short trains in the road, where the present system of break is perfectly inefficient, as far as we read, the accidents occur in bringing up the trains within a short space, because the driver perceives the obstruction, but is not able to avoid the collision?—I have not in my mind at present any case on our line where an accident was caused by insufficient break power.

272. But you admit that it would be very desirable, if it could be accomplished, that continuous break power should be applied with the power working rapidly?—Of course the greater power that you can put into the guard's hands practically is an advantage, but I do not think we have arrived at that yet.

273. You do not think that the specimens that have been submitted to the trade are satisfactory?—No.

274. Mr. *Sherriff.*] Have you any account of the average number of railway accidents yearly on the Great Northern Railway?—I do not know that I have an account of the number of accidents; I have an account of the amount of money that we have paid.

275. How do you arrive at the 500 *l.*, the 300 *l.*, and the 200 *l.* which you propose to adopt as the future amount?—That has not resulted from the limited experience of the Great Northern Company, but has been the result of the consideration and the aggregate experience of all the companies.

276. And would your own experience be the same in that respect?—Taking the average amount paid and the number of cases, large and small, it comes to about from, say, 200 *l.* to 300 *l.* all round, costs included.

277. Does not the real working of the block system consist in preventing the departure of any train from a station until the station in advance has been telegraphed as clear?—Yes.

278. If the train has left a station, does not that system protect that station, inasmuch as the next station does not send any train forward until the station is clear?—The next station is receiving a train on the opposite line at one and the same time, and the accident at the station is not caused probably by the train proceeding from A. to B., but by some work at the station being wrongly performed at the moment that the train is arriving.

279. You mean that shunting is going on?—Yes.

280. When people at the station are going on with the operation of shunting, do you not block that station from the approaching train?—Yes, taking the up or the down line, we block that particular line. Just let me illustrate it. A short time ago, a train had arrived on the up line, and a fast train was going through, and the guard, instead of shunting the train into the siding, turned it on to the wrong line in the face of the approaching train. No block system would have prevented that.

281. But

281. But it would have protected you on the same line of railway, from accidents in the shunting operations?—Yes, no doubt as a rule, but accidents are really caused by neglect or misconduct of some sort; there has something gone wrong or there would not have been an accident.

282. Did I rightly understand you to tell the honourable Member that the block system did not protect stations, and that it only protected the line between the stations?—Pardon me, what I intended to convey was this; that the block system would prevent collisions happening by one train overtaking another between two stations, but that the majority of accidents happened at stations, for example, such a one as I have instanced.

283. But would you not say that accidents would be prevented by the block system, inasmuch as when you commence the operation of shunting in a station you block that station for all approaching trains on both sides?—Yes, but it does not make any real difference; an accident is only caused when somebody makes a blunder or neglects his duty at the station.

284. Mr. *Reed.*] You have referred, have you not, to mixed trains?—Yes; on small branch lines, where there are probably half-a-dozen trains run a day of goods and passengers of all sorts together, because there are only perhaps two or three passenger carriages and two or three goods trucks in the train.

285. There is always a certain risk, is there not, where goods and passengers are in the same train?—Where the trains run at high speed, with goods in them.

286. Just referring to that washerwoman's case; she had awarded to her 100 *l.*, I think you say?—We paid 100 *l.* into court.

287. Was she not proved to be incapacitated for future work?—No.

288. With regard to the county court judge, do you mean that those cases should be referred to the judge alone, without a jury?—Yes.

289. Then your objection is to juries?—Yes.

290. Do you think that juries deal unfairly with railway companies?—No, I do not think that they deal unfairly; I should be very sorry to put it as high as that, but all juries are railway passengers, and they are influenced, we think, a good deal by the more positive evidence of the plaintiff as compared with the negative evidence of the company's. A man says, "I have been hurt," I have got a pain in my back, or a pain in my head, and the doctor on his side says, "If he has got that pain in his back, and that pain in his head, it indicates something that is very serious." Our doctors get up and say, "There are other symptoms which usually accompany such a state of the body which are not present in this man, and therefore we think that the pains are merely passing pains, and that his doctor is mistaken," but practically, the jury generally believe the man who says he has the pain, and the doctor who says it is serious.

291. Do you not think that a jury would be very quick to detect a case of simulation?—No, not in court.

292. You would do your best to expose it, would you not?—Yes, but our best is but very little.

293. Mr. *Price.*] You consider that the block system is a great protection against accidents, do you not?—Yes.

294. But not an absolute immunity against accident, not even within the range of its own operation?—Quite so.

295. A man may neglect his duty, may he not, at the block telegraph?—Yes.

296. And if he neglects his duty an accident may happen just the same as if he neglected his duty at a point?—Yes, precisely.

297. Do you not think it possible that if a man were to neglect his duty at a block signal the accident which would result would be a more serious accident than one under ordinary circumstances?—Yes, I do; I have a somewhat similar case in my mind. But the Committee should understand that the engine driver is not supposed to know anything of the block system, it is one that is used merely as a protection and a guide for the stations in working the traffic; it is the engine drivers' duty to run by signals and depend upon them only. I have in my mind a case in which a signalman at the station had received a signal of the approach of a train, and in going out to put up the signal, he raised the wrong one; and a train that ought to have been stopped, was permitted to come on. In our mind it had this worse effect, that inasmuch as the driver had received a notice that he was all right at the previous station, he was going as fast as he could, thinking at all events that he was safe to the next station, but at that station in consequence of the mistake of the signalman he came to grief.

298. Mr. *Sherriff.*] Then he did know about the signal?—He is supposed not to know about the block system; he only knows the signals.

299. Mr. *Price.*] He does not know what takes place at the telegraph itself?—No.

300. But supposing the block system were not adopted upon the line, the driver would exercise a certain amount of precaution of his own, which he fails to exercise entirely when he thinks that he is protected by the block system?—We say that he ought not to do so; I cannot say that he does, but we are rather afraid that the tendency is to induce him to be less vigilant on the portions of the line where there is the block system, than where there is not; still the advantages of the block, no doubt, overpower that disadvantage where it is used.

301. But still, is it not according to human nature that if a man conceives that he is assured that between the station which he is passing, and the next station, no train can by any possibility be running, he would fail to take as much precaution as if it were a matter of uncertainty?—Yes.

302. So that an accident may happen where the block system is at work, as well as under ordinary conditions?—Yes, of course, it is open to that observation, but at the same time it is fair to say that it should not be so.

303. But even where the company has taken the precaution and gone to the very great expense of setting up the block apparatus, still they are at the mercy of any man's carelessness or neglect of duty?—Certainly.

304. And it always comes to that, does it not, in the long run, that accidents do arise from the neglect or carelessness of somebody; it may be at one part or it may be at the block station, or it may be at the point of crossing, or it may be at the station?—Yes.

Mr. *H. Oakley.*

13 June 1870.

305. That is a thing which it is impossible altogether to guard against?—Quite so.

306. We have discovered no system, neither the block nor any other, that will give us complete immunity against accidents?—No.

307. I presume you heard the evidence of Mr. Blenkinsop?—Yes.

308. Do you agree generally in what he stated?—Yes, quite so.

309. Is it within your experience that you may trust a jury with safety to do justice in the case of damage arising to goods, but you could not trust them quite as well in the case of injury to passengers?—Yes; but one ought not to lay the blame too much on the juries themselves, but rather on the evidence submitted to them. On the evidence submitted to them, I do not know that I can find very much fault with their verdict. No doubt, even allowing that they are influenced by the evidence with which I find fault, they give a very liberal consideration to that liberality, being almost always against the company.

310. Whoever may be to blame for it, it is the fact still, that you do discern a difference in the mode in which those cases are treated where they apply to goods and where they apply to passengers?—No doubt a very marked difference does exist.

311. You would not be, perhaps, very much discontented with the condition of things if they applied the law to the case of passengers that they do apply to the case of goods?—No, because that application of the law would influence the parties in dealing with us.

312. But, therefore, you think it would be to some extent a check to the way in which the sympathies of juries are excited and awaken in the case of passenger traffic?—Precisely.

313. Do you confirm Mr. Blenkinsop in what he stated as to the professional witnesses or advocates in case of railway accidents?—Yes; I could give numberless instances of cases where the professional charges have been outrageous and beyond bearing.

314. And also where those cases have been taken up as speculations?—Yes, I have that within my own knowledge too, certainly.

315. Have you also had any cases within your own observation where the neglect, in your judgment, was due rather to the sufferer himself than to the company which was ultimately made the victim?—Yes, in special cases that principally arises. There is a very prominent case of a lady who tumbled over a hole in the carpet, to whom we had to pay 1,500 *l.*; that was at Spalding, in Lincolnshire.

316. Mr. *Sherriff.*] Was that case settled out of court?—No, it was not settled out of court, it was settled in court after the judge had decided that the company were guilty of negligence in allowing the hole to remain in the carpet, although it was proved that there was no hole in the carpet early in the morning, from which I conclude that being in Lincolnshire, in a farming district, some gentleman with thick boots had kicked a hole in it as he went out, and this lady had unfortunately caught her foot in it as she came in or went out afterwards.

317. Mr. *Price.*] Do you think that if the accident in that case had been one to goods and not to a passenger the hole in the carpet would have been held to be neglect on the part of the company?—I do not quite see how it could apply.

318. However, that is the general tendency, at least, with respect to railway companies, and you think that railway companies require some protection?—The conviction in my mind comes almost to this, that the moment a man gets into a railway station he is at liberty to disregard every rule of common sense, and rely upon the company to keep everything out of his way through which he could possibly come to grief.

319. You also agree with Mr. Blenkinsop that it is not the principle of the law that you object to, but the mode in which the law is applied and interpreted?—Yes, to the result.

320. Mr. *Sherriff.*] Sometimes, in settling cases with solicitors, have they, as a preliminary, suggested that the costs should be paid without taxation?—I would rather put it in another way, which would answer your question, and that is, that we very often agree on a fixed sum for costs; it may be, perhaps, not quite moral, but we are not very particular about the amount of them, if we see our way to settling the case.

321. Any excess of them does not, I presume, go into the plaintiff's pocket?—No, it comes out of ours.

322. Sir *H. Selwyn-Ibbetson.*] Juries are apt to think, are they not, that human life is a little more valuable than merchandise?—Yes, and so they ought.

323. And yet railway companies seem to wish to reduce them to the same system?—No; pardon me, if any such idea has been conveyed it is entirely wrong.

324. The present action of the Board of Trade is merely an action of recommendation; they have no power of enforcing any of their recommendations on the different companies, have they?—No.

325. Would the companies object, do you suppose, to an extension of the powers of the Board of Trade, in the way of giving them authority for enforcing the recommendations of their officials?—I should like to know what the suggested powers are before giving an answer.

326. There are Government inspectors who visit the lines after every accident has occurred, and those inspectors are constantly making reports, many of them in one direction, with reference to the administration of the different lines throughout the country, but the Board of Trade say that they have no power to enforce their recommendations; do you suppose that the companies would object to an increase of the powers of the Board of Trade in that direction?—Yes, I think they would; because I think the experience of the managers, who will come after me, will be found to be this, that the inspectors of the Board of Trade have different ideas on the subject, and that what one man thinks highly of another does not.

327. Practically then the public would be given up this safeguard, if it is one (and practically I think it is), of the damages that may be assessed by a jury, and they will not get any further restrictions on the working of the different companies?—The answer which I should venture to make to that, is that any restraint which could be put by the Board of Trade, or indeed by anybody but the workers of the line, would turn out to be a mere sham. The limiting the penalty on a company is, in my opinion, only doing what is just; and

nd I say that we are in an unfair position at resent, and that we ought to be put right.

328. Mr. *Price.*] You would not object to that power on the part of the Board of Trade so much, if you were relieved of responsibility *pro tanto?* —If I get a *quid pro quo* for anything, of course I would not mind.

329. Sir *H. Selwyn-Ibbetson.*] If the liability to compensation were to be limited, would it not be wise to get some other supposed security, and that the Board of Trade should have greater powers given to it?—Coupling the two things together is erroneous; it is not quite correct to say that the companies are influenced in the slightest degree in the working of their line by the amount of compensation which they have to pay; I honestly believe, speaking within my own knowledge, that we all do our best with a view to the comfort and safety of the public; of course we cannot meet everybody's views.

330. Mr. *Sclater-Booth.*] Do you think that the experience of the officials at the Board of Trade is at all to be compared to the experience of the officials of those great railway companies? —No, of course it cannot be; still the gentlemen who represent the Board of Trade are intelligent men, and when they get a case put before them, they can give an opinion, but they are not conversant with the every-day working of a line, and it is on that, and on that only, that managers must depend as a guide as to how the thing is to be carried on.

331. Mr. *Denison.*] Is it not the fact that the Board of Trade inspectors occasionally suggest the adoption of improvements to railway companies, which they are not prepared to take the responsibility upon themselves, and notably in the case of the connection between passengers and guards for a long time there was a controversy went on?—Yes, that is so; but that was not by the Board of Trade inspectors, it was practically the action of the Board of Trade itself.

332. But on the suggestion of the inspectors? —Yes.

333. Whilst they were urging upon the railway companies the adoption of a means of communication between passengers and guards, they refused to take the responsibility of pointing out which should be the particular mode of communication?—Yes, that is the fact.

334. With regard to that particular accident at Spalding with the lady, have you any knowledge since acquired regarding her condition?—Yes, I heard that she was mistress of the ceremonies at a large ball given in her district a short time ago. That lady, it was said, would never be able to resume her occupation as dancing-mistress.

335. In that particular case, had you any information acquired through the solicitor, or any means of obtaining a knowledge of the objections which were raised to the cross-examination of the lady?—No, I was not present at the trial, and I have not heard that.

336. I mean as bearing upon the difficulty of the company's advocates having a fair right of cross-examination?—I think there was some objection made to the questions that were proposed to be put by the Solicitor General relative to her earnings.

337. Not with regard to her previous physical condition, or anything of that sort?—No, I think not.

Captain WILLIAM O'BRIEN, called in; and Examined.

338. *Chairman.*] YOU have been a Railway Manager for a considerable number of years, have you not?—About 30 years.

339. During that time you have been general manager of the North Eastern Railway Company? —I have been their general manager and secretary for about 20 years.

340. I will ask you first, generally, have you heard the evidence of Mr. Blenkinsop and Mr. Oakley?—I have.

341. Do you concur in their evidence?—On the whole I concur with those gentlemen.

342. Is that the opinion, so far as you know, of your directors?—I think it is.

343. Have you had many cases of compensation in the case of the North Eastern Railway?—Of course we have. It is a very large company. We have 1,275 miles of railway, and, of course, we have had a great number of compensation cases.

344. Do you think that you have reason to complain of the verdicts that have been given against you?—I think we have. I think that the working of the system, somehow or other, tells very hardly upon railway companies.

345. Can you tell the Committee what is the amount of compensation in the year, and what proportion it bears to your working expenses?— I have not thought so much of the working expenses. I can tell you the proportion it bears to the fund out of which it is paid; that is to say, the amount which we pay in our ordinary unguaranteed dividends; it comes to about 2 per cent. upon that, that being the fund out of which, necessarily, any excess of payments for compensation beyond what are properly due must be paid.

346. So that it constitutes a large item in your annual expenditure?—Yes, to that extent.

347. Does it amount to pretty nearly a fixed sum every year?—No, it varies a good deal.

348. It is not sufficient to make a regular average?—Of course you could take an average; but it would vary, I dare say, from $2\frac{1}{2}$ to $3\frac{1}{2}$; in a heavy year it might come to three times as much as in a light year.

349. Do you think that a heavy year shows any negligence on the part of your servants?— The fluctuation in the amount paid does not prove anything. As, of course, all the members of the Committee are aware, the amount of negligence may be excessively small; the fault may be really hardly appreciable, and it may be committed by a most excellent servant, and then it is a perfect chance whether it results in no accident at all, or in a very heavy accident that may cost 20,000 *l.* or 30,000 *l.*

350. It depends rather upon the chance of the particular passengers who are injured than upon the degree of negligence of the company?—Yes, entirely so. I should say distinctly it really has no appreciable reference to the negligence of the company. The amount depends entirely upon what we call the chances of the accident.

351. Do you think that if your liability was limited in the manner proposed by the Bill suggested by Mr. Blenkinsop, it would make any difference as to the degree of care taken by the

Captain *W. O'Brien.*

13 June 1870.

directors and their servants?—It would have no effect upon that part of the question in any way whatsoever.

352. You think that there is sufficient pressure upon the directors to work their line securely without it?—The amount that the company would have to pay under any circumstances of fair limitation, is quite sufficient to induce every precaution. My own feeling is, that in the end, penalties and unfair damages have rather a mischievous effect, so far as they have any effect upon the Board.

353. That is to say, do they make them feel that it is a perfect chapter of accidents?—Partly so, and partly this, that an excessive compensation creates a feeling of irritation; an irritation against a particular individual who may not be much to blame, and leads rather to uncertainty of opinion about the default of a man, than to a regular idea prevailing practically that the fault of the man should be punished according to the fault, and not according to the accidental consequences that follow it.

354. Do you think that the verdicts that are given by juries are given by them with any idea of punishing the company?—I think they are; I think that juries are a good deal misled by what is technically called negligence. In the first place, they are more led away by their feelings than by anything else, and by what a railway company admits, as they almost always do in every case, as technical negligence; and juries are led away by the idea, and assume that technical negligence means culpable negligence; and when their feelings are excited they give verdicts which, I believe, are intended to punish the company, and, I think that they have a kind of fancy that the more they punish the company, the greater will be the precaution taken.

355. Have you had any cases that you consider a great hardship upon the North Eastern Company?—We have had a great many cases in which we think we are hardly treated.

356. Upon the ground that you ought not to have been liable at all?—No; I really do not think that there are many cases in which something might not fairly have been given; but what we feel more is the exaggerated amount of damages given than the actual fact of some damages have been given. The only case I recollect that perhaps meets your question was that of a woman who was in an excursion train. Before the train came up to the place where it ought to have stopped, there was another train before it, and it stopped a little outside, and the passengers opened the doors in a hurry and this woman got out, not at the right place, put her foot upon a bit of coke and twisted her ankle, and I think we had to pay 200 *l.* where, really, I can hardly say that the company were to blame at all; still, I believe it might have been held that there had been some technical negligence in the bit of coke being upon the road.

357. Mr. *Reed.*] Was it at night?—No, it was in the day time.

358. *Chairman.*] Did the jury consider it a case of negligence?—It did not go to a jury; we fully believed that if it had gone to a jury she would have got something; they would have thought it a hard case that the poor woman should have been laid up, and they would have given something that would have carried costs, and the costs would have been a great deal more than what we actually paid.

359. What is about the amount of costs when you do contest a case?—We find, as a rule, that, taking both sides together, a jury case in our district costs about 300 *l.* on the average; that is to say, the expenses on both sides come to 300 *l.* I believe other companies more to the south find it comes rather larger.

360. Is it within your experience that the company has invariably to pay the costs of both sides?—We have had cases where we paid so large a sum of money into court (and we did it intentionally that it would carry costs), that the jury could hardly go beyond it; so that in those cases we have not paid costs; but, as a rule, we always do pay the costs of both sides. We find, moreover, that when we pay money into court, somehow it is contrived to be brought to the knowledge of the jury, and they will give a little more than what we paid in, intending that their verdict should carry costs.

361. Have you had any case before you in which the jury seem to have been actuated by a vindictive feeling against the company?—We have no doubt in our own minds, although it is not a thing which admits of proof; but a case occurred the other day, it was not a serious case, and the question really was whether any damages should be given at all, and therefore if they had given moderate damages I should never have complained; but we were told afterwards that one of the jury had some grievance, and he told the others openly that he had been disappointed about a horsebox in his own business, and he declared that he would sit all night rather than not give 1,000 *l.*, with a view of punishing the company; and the jury settled the matter by each man putting down what he thought was a fair thing and then they divided it by 12, and it worked out, I think, to 250 *l.* or 300 *l.*; this man's 1,000 *l.* distinctly and avowedly was given from a vindictive motive to swell our damages; we hear it is a common topic of conversation that a man has been disappointed about something or other, and he says, "Only wait till I catch the company in court, and I will make them pay for this."

362. What do you think is the best mode of ensuring safety to the public?—Purely confining myself to the safety of the public, I really do not think that you can improve much upon the present mode of insuring the safety of the public.

363. Do you think that everything is done now that could really be done to ensure the safety of the public?—No, I do not think that; I think that companies are now under the heavy pressure of public opinion, to say nothing of damages, and also a very strong feeling on the part of boards of directors that every accident is a discredit, and they have also the natural feelings of humanity about it. The real difficulty is to ascertain what is the best mode of securing the safety of the public; under our present system companies under that pressure are trying what they can do, and they go on improving in every possible way; then the Board of Trade gives what, I think, is very wholesome publicity to their faults, and I think that under that pressure we are going on steadily improving, and I have never heard yet of any suggestion that would tend to accelerate the rate of improvement. I think, on the whole, what has been chiefly suggested would rather damage it, and I think that great weight should be paid to the opinion of the Royal Commission, who pointed out that no mode of locomotion

motion had ever been invented that could in any way be compared for safety to the existing system, and they declined to recommend any alteration.

364. You do not think that it would be prejudicial to justice by limiting the liability, as Mr. Blenkinsop has proposed?—Not the least; I am quite clear upon that point.

365. The practical effect would be, that you would have a less sum to pay in the course of the year for compensation?—I believe that in many cases persons injured would get more. When it comes to a matter of compensation, the first feeling on the part of the directors and their officers is to ask, "Into whose hands has this case got?" If it is in the hands of respectable people there is no further question about it; the medical men meet and settle it; but if it gets into the hands of a particular class of practitioners we know what is coming, and then of course there is a feeling of antagonism got up, and we know it is to end in a fight, and we begin from the beginning directly to take every precaution to protect ourselves, first, against gross fraud, and, secondly, against extreme exaggeration. I would not characterise it as fraud, but still as excessive exaggeration. I can also say that there is a large part of what we pay which really does not finds its way into the pockets of the sufferers. To take a particular case: there were seven cases arising out of one accident, and the company paid 3,300 *l.* We inquired privately afterward amongst the people what they got, and we found that they had got 2,500 *l.*; the difference of 800 *l.* represented the mere costs of arriving at a settlement. None of those cases went to a jury; one, however, went as far as just before the briefs were delivered, but none went beyond that; so that 33 per cent. of what the people got was paid to professional men.

366. Have you reason to suppose that professional men trade upon those cases?—There can be no question that a certain class of professional men do so. We had an accident last year to an excursion train, and a good many people were hurt; of course, the excursion train came from one town, and almost all the persons were inhabitants of that town; the next day, or the day after, the whole place was full of solicitors and medical men, who came from Leeds and Sheffield, and they went about canvassing for business amongst the people that were hurt; others came later, and one told one of our own agents that he was very sorry that he had not been quick about it; there were six cases that we had settled, and he said that if he had only been there in good time he knew he could have stopped any settlement. I would further beg to say that the system of this class of men taking up those cases and extorting large damages is growing very fast; people are beginning to understand it, and it is becoming a very profitable business to those men who are not ashamed to take it up.

367. Mr. *Sherriff.*] Extorting large costs, or large damages?—They make no secret in talking over what their object is.

368. *Chairman.*] Do you think that any good would be done by altering the tribunal that tried those cases?—It has occurred to us that if it was possible to get a tribunal of rather, perhaps, a better character than the mixed tribunal of a jury, it would be an advantage; what we want also is, a cheaper tribunal. I think it is very hard for a poor man, if he has to put himself into the hands of a solicitor, who may be of the class mentioned, and on the other hand it is very hard upon the company. Most of those cases really do not involve any very great difficulty in arriving at a settlement; and therefore, it has occurred to us, that if some public functionary, such as a county court judge, would take the case and decide it, taking such evidence as he thought proper, there would be a great deal of money saved on both sides, and it would be settled more quickly, and I believe that the people that ultimately get the money would probably get more than they get now, and certainly the company would pay less.

369. What do you think would be the working of a system of insurance such as has been suggested?—My impression as to a system of insurance, if the liability was limited and insurance was made compulsory upon the company, is, that people would habitually insure to a great extent; not so much in single journeys, unless they were going long distances, as that they would take out annual tickets. A vast number of those men who travel frequently would take out annual tickets if they were granted at a low rate.

370. Would the sum that you receive upon those insurances be sufficient to meet the claims for accidents?—I am hardly a judge of that; but I think that we should be disposed to follow, as near as we can, the insurance companies..

371. Mr. *Hinde Palmer.*] Do you mean that the railway companies themselves should insure?—Yes; that it should be made compulsory for a railway company, whenever a passenger took a ticket, to insure his life up to a certain sum.

372. *Chairman.*] You do not mean compulsory upon the man, but upon the railway company?—Yes, compulsory upon the railway company, supposing the man wished it.

373. You have had some cases of extreme damages, have you not?—Yes, we have had cases of extreme damages.

374. Could you give us an instance of one?—The first I have got is a case where a person in Orders, a clergyman, paid us 1 *s.* 6 *d.*; he said he was shaken. It was rather a remarkable thing that there were 200 or 300 other people in the train, and not one of them was shaken; but he said he was very much shaken, and he laid his damages at 3,000 *l.* The case was exceedingly well got up, and we found that a scene was going to be made in court, and we settled it in court for 1,800 *l.* I am glad to say that the man lives where we are quite able to know how he has gone on since, and he certainly recovered exceedingly well, and does not appear to have had any difficulty in carrying on his occupation as before.

375. You did not see any difference in him before and after the accident?—Not at all. It is one of those cases that there is no dealing with, which I have been mentioning to-day. Now-a-days everybody gets a nervous shock, or a man's spine is injured in some way, and he complains of all those kind of feelings which no medical man can test; and this was one of those cases.

376. Can you mention a case of a third-class passenger?—Yes; one third-class passenger paid us 4 *d.*; he was a sailor, and his hand was contracted, and he made out that it was all in consequence of an accident on our line. Of course everybody who knows the habits of that particular class of sailors, knows that it is frequently the

Captain *W. O'Brien.*

13 June 1870.

case that a finger becomes a little contracted; still, he was a poor man, and the jury gave him 400 *l.*

377. What was the nature of the accident?—It was a collision, and no doubt the arm of the man was hurt.

378. You think that the contraction had nothing to do with the injury?—Our medical men were quite sure that it had nothing at all to do with it, but at the same time it was one of those cases which it was impossible to prove.

379. Mr. *Reed.*] Was it a personal award, or was it on account of his family?—It was for himself; for his personal injury; it had nothing to do with his family.

380. *Chairman.*] Could you also mention the case of another third-class passenger who paid 4 *d.*?—In another case a man paid 4 *d.*, and he asked 1,000 *l.*, and the jury gave him 600 *l.*, but the judge reduced it to 300 *l.* Then there was another jury who gave him another 100 *l.* It so happened as to this person, that we had the means of knowing how he got on afterwards in his trade, and we could not make out that he really had suffered anything worth claiming much money for. A very small sum of money undoubtedly ought to have settled it. I have a case of fraud, and I do not mention it so much from anything in it, except that fraud is one of those things that takes place and we are seldom able detect it, but because this was such a gross case we could detect it. The man was a doctor; he was upset in a train, a window broke, and his face was cut a little. He wanted compensation, and he said that his eyesight was injured. Of course we met this in the usual way, and had him examined by a medical man; we had him taken to London and examined by an oculist, who pronounced that his sight was not in the slightest degree injured. He then changed his tactics; he went down into another part of the country, and he said that he had got a nervous shock, and that his spine was injured. The man, being a doctor, managed it so well that he imposed upon a most respectable medical man. We happened by accident to hear of what was coming. He was talking of claiming 8,000 *l.*, and in this way he familiarised the minds of his friends and others, that he was very much injured and would make a great claim; when we heard this we were quite sure there was something wrong, and we were obliged to look after the case. It afterwards went to trial, and fortunately, having looked after it, we had evidence to show that it was an absolute and entire fraud, and nothing but a fraud. He claimed 8,000 *l.*; he laid his damages at 3,000 *l.*, and at the trial he offered to take 1,750 *l.* We paid, or rather we did not pay, we made what is a very general plan in Scotland, a judicial tender of 250 *l.*, and the jury gave him 88 *l.*, because he certainly had got his face a little cut. That was a case where the man attempted a fraud of a very gross character, which set us on our guard, and we found it out. This was a mere chance. If he had laid his damages at 1,000 *l.* we should have never run over all the country to find out that he was at hotels playing billiards and looking after his horses, and all that kind of thing; we should undoubtedly have paid it. But I wish to say this; that I do not think we suffer nearly so much from gross cases of fraud as we do from great exaggeration, and in cases where it is impossible to say the exact line where the naturally exaggerated feeling of a man and his friends passes into fraud. It is the minor cases that we suffer most from. They all know perfectly well that if we go to a jury, somehow or other we have to pay 300 *l.*, and therefore that 300 *l.* is a lever by which they compel us to pay something less than 300 *l.* beyond what we ought to pay for the whole compensation. Perhaps I should say, in reference to our experience of the proportion of heavier cases to minor, I have taken out the cases for one year, a pretty heavy one, and it happened we had 100 cases of compensation that we settled; five went to a jury, 95 were settled out of court; and in every one of those 95 cases unscrupulous practitioners could have put us to the expense of 200 *l.* or 300 *l.* in legal costs, and therefore they had the means of forcing us to pay double what we actually did pay; what we did pay was under 200 *l.* a piece.

381. Have you anything else to suggest to the Committee?—We had a case where a man paid 4*d.* and we had to pay 650 *l.*; it is the same sort of case exactly.

382. Sir *H. Selwyn-Ibbetson.*] Do you agree with the other witnesses in recommending the Bill, a copy of which has been put in for the direction of future legislation?—I agree with them as far as the principles of the Bill are concerned, which I take to be a limitation of the compensation and the company to be compelled to insure.

383. Do you think that under it those professional harpies would not make the same harvest, and would not exist in the same way?—That is my opinion, because we should know that the utmost we could pay was 500 *l.*

384. And yet in cases of injury there would always be a dispute between the parties and the railway company as to what proportion of that 500 *l.* was to be paid?—Yes, that would be so; but still we should know the maximum.

385. Would not those same people still exist under the hope of getting what are understood as the costs from railway companies, who always do pay them?—To some extent they would exist; but our difficulty is this, that when we would gladly settle for 300 *l.* they put the damages at 1,500 *l.*, and we must go to a jury about it.

386. You think that the public would get larger compensations under the limit of 500 *l.*, 300 *l.*, and 200 *l.*, than they do under the present system?—Including their insurance, certainly they would.

387. That is supposing you compel them to insure?—Yes, they would get much more if there was any insurance.

388. I think you said that the present system was, in your opinion, the best mode of securing the public safety in railway travelling?—Yes.

389. Do you think that all the recommendations that have been from time to time made by officers appointed by the Board of Trade are of no practical value?—On the contrary, I think them of great practical value.

390. They constantly recommend a totally different system to that which you at present adopt, and you say that that system which you have is the best that could be secured?—No. By system, I do not mean mere mechanical precautions; by system, I mean the system of publicity of trial in open court, of Government inspection, and of their doing no more than recommending. I think it would be a great mistake if the Board of Trade had the power of ordering actually what was to be done. I think that that would create evil rather than good.

391. Recommendations which they imagine to be

be for the public safety, you would allow to go year after year without being taken notice of, and you do not think that that suggests the idea that the Board of Trade ought to have the power to enforce suggestions of that sort?—Allow me to say that it is not an exact expression to say that they are not taken notice of; they are taken notice of, and great weight is given to them. I understand that if the Board of Trade had actual power, if that is what is suggested, you get into this difficulty, and it is a fundamental objection; you separate the power from the responsibility; you place the power also in one man's hand, and the mode of carrying it out you place in another man's hand, which is essentially wrong. You have further the fact, that the officers of the Board of Trade have given different recommendations as to what ought to be done, and you have another fact that if they once say that something ought to be done on their recommendation, their mouths are shut up from improvement. My view is that the companies do give great weight to the suggestions of the Board of Trade, and they carry them out where they find them to be right, and they do not carry them out where they think them to be wrong. In that way I think the present system has worked well.

392. With respect to this very recommendation which has been so frequently made to the railway companies throughout the country of adopting the block system, I believe with regard to the North Eastern Railway it has been so suggested?—It has been suggested.

393. In the case of the Castle Howard accident, I think that Captain Tyler made a report strongly in favour of the block system, which has not been adopted, I believe, on the North Eastern Railway?—Not at Castle Howard; it is adopted partially on the North Eastern system, but there is this difficulty, that nobody knows exactly what the block system is. The Board of Trade have used the phrase (I think you will find it in the Castle Howard accident) that they ought to adopt a good block system. There is the whole difficulty; you may adopt a block system that is bad, or you may adopt one that is good. The real meaning of the Board of Trade recommending a good block system is simply recommending something so vague that whatever turns up they have the advantage of saying that their recommendation was not attended to.

394. Is not the block system generally understood to be the preserving of a space of time between trains?—It is a great deal more than that.

395. That one station shall be telegraphed clear before the train starts from the other one?—Yes, precisely.

396. That is leaving an interval of space between two following trains?—Yes; then you have the essential difficulty of the machinery by which that is to be done. It is a very easy thing to lay down the principle that there is to be nothing in the way, because that is what practically it is; but the whole difficulty is in contriving the machinery that shall carry that out. You see there are many things to be taken into account: first, there must be physically nothing in the way; secondly, you must bring it home to the signalman, which is not so easy; thirdly, there must be no neglect on the part of the signalman; fourthly, there must be no defect in the transmission of the signal to the station two or three miles off by electricity; and fifthly, you must secure that the engine-driver shall obey his signal. We find that almost all accidents arise from one of those difficulties; not from the principle, but from the difficulties; the station master makes a mistake; the signalman makes a mistake; the signal does not work, and the driver disobeys.

397. I understand you to say that you have not adopted the block system?—We have adopted it partially.

398. Are you aware that on different lines where it has been adopted the number of accidents and collisions have diminished?—I am not aware of that, and, as far as our experience goes, it is not so.

399. I understand you only adopt it partially?—Precisely; and it so happens that, taking the distance over which the block system exists, the accidents per mile have been greater than where it does not exist, and you will find the same thing on the Great Northern Railway.

400. Has the system which you have adopted been what you have called a good or complete block system; namely, that an interval has always intervened between the trains?—Yes.

401. It is not the system which has been called the block system on certain railways where two trains are at the same time within the distance?—No, this is really what I understand to be an absolute block system; I wish to put it a little stronger than, I think, Mr. Oakley mentioned: that a vast number of accidents occur at stations. The block system is merely substituting or adding a back signal two or three miles off for the back signal that is now at the station; the signal now at the station is a better thing than the block system, because it is within sight of the man; he knows whether it is working or not; it is worked by a wheel, and not by electricity; and, therefore, every station under that system has a perfect means of protecting itself from accident at the station.

402. On the block system an answer comes that a telegram has been received, stopping the line; when you telegraph to a man that the line is blocked he answers you that he has received it, and therefore you are aware that your system is working?—That is all exact in theory, but those are the very things that men make mistakes about; they do not wait; they take for granted that all is right; and that is exactly what would happen under the block system.

403. I do not imagine that you could make men perfect by any Act certainly, but what I rather lay stress upon, as far as I have read evidence upon the subject, is, that it does reduce the possibility of mistakes?—It is a question of degree; and when so much weight is attached to the opinion of the Board of Trade officers, I take one case where they recommended the block system to be introduced, an accident having happened through the breaking of the draw-bar, and therefore the Board of Trade officer must have known that the block system could have had no reference to the accident, but still it comes in as one of his recommendations. In order to test what I believe is the real point which the Committee would like to know, namely, what is the additional safety that the block system would be likely to give. I analysed all the accidents on the North Eastern Railway to passenger trains from collision for 13½ years, and in those cases the block system would have had no effect, good, bad, or indifferent, on any but two, and those two cases were in a dense fog and a heavy snow storm, and I think it is very doubtful whether the

Captain *W. O'Brien.*

13 June 1870.

the block system would have been either good or bad.

404. Then you think that the inspectors of the Board of Trade in their recommendations have not been cognisant of all the bearings of the case, and have not reported accurately, in fact, upon it, because they state that in almost all those instances if the block system had been at work the particular collision, the evidence of which they had before them, would not have happened?—I do not say that they were not cognisant of it, nor that they had not reported accurately, but I say that the conclusion is clearly inaccurate; it is quite clear that the breaking of the draw-bar and the train running back into another train could not have been remedied by the block system; and yet in that particular case the block system was recommended. Again, in a case which occurred at Athington, the Board of Trade inspector pointed out very distinctly that the cause of the accident was not due to anything that would have been remedied by the block system, but, nevertheless, he recommended the block system. Again, I would say that my evidence is not against the block system, but it would go to this extent, that the block system does introduce dangers of its own, and one very serious danger is, that the substitution of the principle that the driver is to think that the way is perfectly clear, for the present system that he has nothing to think about at all, except to look at his signal, induces a habit of mind which leads to the neglect of signals, and that eventually will produce danger.

405. It leads to carelessness in the staff, you mean?—It leads to the driver thinking that the way ought to be kept clear for him; and I say that even with our system of express trains, we find that it does affect the driver of an express train more than the driver of an ordinary train, and will make him argue that everything was wrong, because the way was not kept clear for him, whereas, he had nothing to do but to obey the signal. I do think, looking at the reports of the Board of Trade, that that idea has to some extent biassed the minds of even the inspectors.

406. Then you differ to a certain extent from the gentleman who was last examined, who stated that the block system, he believed, did give great security on the lines where it was at work?—I can only speak from experience, and as far as my own experience goes, it is that, theoretically, it is certain; but, practically, it is not certain; still I am by no means an opponent of the block system at all; what I say about the block system is, that it is in some degree doubtful what you actually mean by the block system; it is immature, it is only experimental, and it is well known that opinions differ as to the best way of carrying it out; if it is a good thing, undeniably it will make its way over the railway system; if any part of the recommendation is not good it will be found out upon trial, and it will be remedied; and my own opinion is, that if you leave it alone it will make its way, but if you attempt to enforce it by legislation you will do mischief by enforcing upon the whole community a system that has not yet been sufficiently tried; I may say, as far as we are concerned, that the directors asked my opinion, and I said that I thought the better way would be to take one or two sections, and have it fairly worked out and tried; and I did that very much, because there are subsidiary arrangements in connection with it, which I think infinitely more important than the principle itself.

407. Would you mind stating what those are to the Committee?—The difficulty, as I said before, is getting the station clear and keeping it clear, and letting the signalman know it. Now a station is not a point, there is that difficulty; if you take the centre of a station, you must have shunting going on on both sides of it, and till all that shunting is done, you keep a train far off; to do that would involve the remodelling of probably a very great number of stations, so that the shunting of a train going in one direction shall be done on the opposite side of the station, and at many stations that will lead to at least three signal stations, because I am quite sure unless the system is carried out rigidly and effectually, you will introduce a danger rather than cure one.

408. You would object, I think, that it would be unadvisable to extend the powers of the Board of Trade in any way with regard to their recommendations?—I should object to their having compulsory powers of any kind, and I do so not as a railway man, but with regard to what in my judgment, is best for the country.

409. For the good of the country you do not think that occasionally the necessity of securing a good dividend on anything of that kind, works against the introduction of a system which might be beneficial to the public, on account of the expense?—I venture to speak of the company which I have been so long connected with, and I am quite sure that it never weighs with them for one moment.

410. You mentioned one case of compensation which arose out of a passenger getting out of a carriage before it came to the platform; recommendations on the subject of locking and unlocking of doors by the Board of Trade have been made occasionally to railway companies; would not it be an advantage to the public if some power of the Board of Trade had existed which would have enabled it to give, first, the safety of an unlocked door to the public generally, and then the security such as exists on foreign railroads, of a hasp or some invention of that sort on the carriage which would protect passengers from accident and yet leave the door open; if the Board of Trade had the power of enforcing their rules probably they would have enforced some such regulation as that upon the different companies?—I can hardly give an opinion about a rule that I have not seen or heard of, but of course the locking of the doors, as is well known, is a matter on which very different opinions prevail.

411. I presume you know that on the Continent they universally leave the door unlocked?—I believe so.

412. And that the door is secured by a hasp, out of the immediate reach of a passenger, which he must take some trouble to arrive at by which he can get out in case of accident at the open door?—I do not see how that could have prevented this accident.

413. Probably the very fact of having to reach out of the carriage to arrive at the hasp would have led persons to see that they had not arrived at the platform?—Those were excursion people, and if there was any possibility of getting out they would have got out.

414. That is one point upon which the Board of Trade have recommended that the doors should be unlocked; but the companies generally do continue

continue to lock the doors on one side of the carriages, very much in the opinion of many people to the prejudice of the safety of the public?—That is one of the cases I mentioned where there are differences of opinion, and who shall say whether the Board of Trade are right or wrong in their opinion? It so happens that I agree with the Board of Trade, and we do not lock our doors; but still other gentlemen whose experience is quite as great as mine, and much greater, have a different opinion.

415. Of course if it was not that this would be a check upon passengers getting out at the wrong moment from the carriage; nobody would dispute that having the doors unlocked was for the benefit and safety of the passengers?—I think that a great many railway men dispute that.

416. Such an accident as that, in which I was myself, at Abergele, was an accident where, if the doors had been all open, greater facilities would have been given to the people to get out of the carriages on that occasion?—Very likely. I have expressed my own opinion; but then, I say, other people think differently, and I think it would be a great mistake in the Government to force a system upon all railways upon which a widely different opinion prevails.

417. You would leave any system upon which the evidence was very strong merely to the management and opinion of the directors, and would not allow the Government to enforce its adoption for the public safety?—It is a question as to what you call very strong. I do not mean to say that one company should stand out against the whole world; but where there is a wide difference of opinion, I think it is better to allow a variety of experiments, and the general opinion of the country ultimately to prevail.

418. There is one other point which has been strongly recommended also, which is the locking of points and signals, and I believe in almost half the accidents of the last few years that has been strongly pointed out as being a great cause of danger where it does not exist. If the Government had had the power, probably it would have been enforced?—That is what I have said. From the moment the system was tried, and carefully tried, it has been making its way all over the country. The engineer of the North Eastern Railway, Mr. Harrison, has just invented a system of wedging facing points, the best thing, I think, of late years that has been invented for railway companies, and that is one of the advantages of leaving a company to do as they think best. I would not be prepared to say that all railways at once ought to be compelled by law to adopt that system. We say ourselves, try it, and perhaps some improvement can be made, and if it is good it will make its way.

419. Even though it is good you would not adopt it until each company found out its merits by working?—No doubt that would be by far the better way.

420. Mr. *Sclater-Booth.*] Do you not think that if the Board of Trade were sufficiently well founded in their desire to introduce an improvement to justify the result of the introduction of that improvement, it would be more satisfactory to you than to do it by an Act of the Legislature?—I do not think that the desire of the Board of Trade to introduce an improvement is any guarantee that it is an improvement.

421. If they were sufficiently well founded in their desire to introduce an improvement, if they had sufficient grounds for compelling the introduction of the improvement, it would be better, would it not, that the Legislature should enforce that introduction than the Board of Trade?—No doubt, if a thing is beyond all question an improvement, the companies will adopt it voluntarily, and there is no necessity for compulsion, but if it is not well founded, that is the whole point, and then, I think, compulsion is a mistake.

422. Do not you see any difference between the arbitrary action of the Board of Trade in the matter, and action after a Bill has passed through Parliament, when the pros and cons have been debated?—No doubt; and of course the advantage is this, that an Act of Parliament would not be passed until the necessity for the invention, and the advantage of the invention is rendered so clear, that nobody will object to it; then the companies will do it, and it will not require an Act of Parliament.

423. Mr. *Denison.*] Have you directed your attention to the Report of the Royal Commission of 1867?—Yes, I have.

424. You are no doubt familiar with these passages: "But it is impossible to form any reliable opinion upon questions as to the relative merits of appliances for safety on railways, without a long course of trial on a railway, and a full knowledge of all the circumstances attending their use. A Government department can only acquire such knowledge through the evidence of the railway managers, and thus practically the responsibility of adoption, or non-adoption, must finally rest upon the managers. Any attempt to regulate such matters by authority would necessarily tend to check all efforts on the part of the railway companies themselves, to improve these details of working"; is that pretty much your opinion?—That is entirely my own opinion, and it was those passages that I referred to, when I said that the authority which I quoted, speaking of the excellent means of locomotion and its safety, had distinctly refrained from altering our present system.

425. With reference to the answer just now, about the locking of doors, in which you say that you yourself are favourable to the unlocking of them, is it not the fact that excursionists generally are an unruly set, and not people who are very much in the habit of travelling?—They are not very amenable to discipline; they are in great numbers, and they can practically do pretty much as they like.

426. Is there not very considerable danger of people rushing out on the wrong side of the train; that is to say, on the six foot, between the up and the down line?—That is one of the evils of my plan of leaving the doors unlocked, and it does happen sometimes.

427. But dismissing that altogether, there comes the advantages which they would have to defraud the company by getting away without showing their tickets?—Yes; but we think very little of that.

428. Mr. *Hinde-Palmer.*] As to the block system, are you not aware that for a great number of years, not merely on one occasion, but for many years the block system has been recommended by the inspectors of the Board of Trade?—I am quite aware of that.

429. Have the railway companies themselves, in pursuance of those recommendations, voluntarily adopted the system anywhere?—To a certain extent they have.

Captain *W. O'Brien.*

13 June 1870.

430. But have they done so effectually?—I have no doubt that where it has been done they have found that it is an effectual system; that is to say, they have made the system as good as they can, but it is not effectual against preventing accidents.

431. But have they adopted the system which has been recommended year after year by the inspectors?—Some of them have, and some of them have partially.

432. You say that the objection to the system is, that it is liable not to be worked effectually, by reason of the carelessness of the servants and various other things; would not that apply to every system of signalling that is used on a railway?—Yes, but that introduces a principle that underlies all those arrangements; you may introduce a system which is very irksome in its working, and does not present at the moment a manifest utility to the man who is working it, and human nature is such that he will not work it regularly, whereas if you introduce a more simple and comprehensible system such as the present one is, although it is inferior, theoretically, but one that he sees has a good effect, he will use the inferior system more regularly, and therefore more safely than a theoretically better system.

433. You are aware, are you not, that communication between passenger and guard was enacted expressly by Act of Parliament?—I am.

434. Do you think that railway companies would ever have adopted that system if it had not been for that Statute?—I cannot say what they would have done. All I can say of it is, that since it has been adopted on our railway we have never had it used once; but that bears distinctly upon my statement that any system of clear utility would be adopted by the railway companies. It was not the Board of Trade that brought upon the railway companies communication between guard and driver.

435. Mr. *Price.*] Some one company adopted it, setting the example?—It sprung up out of the exigencies of railway working; one company adopted it, and the others followed.

436. Mr. *Sherriff.*] You are now speaking of communication between driver and guard, and not between passenger and guard?—Yes; that between passenger and guard has never been used on our line at all.

437. Mr. *Price.*] If all the railway companies were simultaneously to set to work to lay down the block system, you would not be able to get the instruments, would you?—It would take some time, I suppose.

Thursday, 16*th June* 1870.

MEMBERS PRESENT:

Mr. Dalglish.
Mr. Davison.
Mr. Denison.
Mr. Headlam.
Mr. Shaw Lefevre.
Mr. Lopes.
Mr. Mowbray.
Mr. Hinde Palmer.
Mr. Plunket.
Mr. Price.
Mr. Charles Reed.
Mr. Sclater-Booth.
Mr. Sherriff.

THE RIGHT HONOURABLE E. T. HEADLAM, IN THE CHAIR.

Captain WILLIAM O'BRIEN, called in: and further Examined.

Captain *W. O'Brien*. 16 June 1870.

438. Mr. *Sherriff*.] I THINK you stated in your former examination, that you considered the reports of the inspectors of the Board of Trade very valuable in their way; I want to know, from you, how you deal with those reports when they are the subject of inquiry by the officers, and by the directors, and in what manner you dispose of them; how are they dealt with when they arrive?—Perhaps it would make it clearer if I explain to the Committee the mode in which we deal with accidents, and the precautions that are taken against them. Whenever an accident occurs, or there is great risk of an accident, the case is fully investigated by the representatives of the various departments concerned; the evidence is all taken down in writing, and a joint report is made; the object of that being to obtain every view of the circumstances. Every one of those reports I examine myself with the greatest care, and I never delegate that duty to anybody else.

439. Are you now speaking of the action taken by the railway company before the report of the Board of Trade has been received?—Precisely so. Then periodical meetings of all the chief officers of the company are held, at which all these accidents are inquired into, and the reports considered, and the matter again fully investigated and discussed. Their opinion then goes to the directors, by whom the matters are again considered. In a case where a report is made by the officer of the Board of Trade, it is first carefully considered by the officers into whose hands it gets; it then goes to those meetings of officers, and is again considered; and it goes before the committee of the directors, who themselves inquire carefully into it; and finally, it comes before the Board. And I may add to that that there is naturally a strong bias on the part of the officers of the company, and of the directors, to carry into effect any recommendation of the Board of Trade, because that at once relieves them from a very serious responsibility; and, therefore, when those recommendations are not implicitly obeyed, the cause is that after all this investigation the officers of the company, and the directors, have come to a somewhat different conclusion from the conclusion come to by the officers of the Board of Trade.

440. Does any further communication take place between the Board of Trade and the railway authorities when you have come to a decision, that it is expedient to carry out the recommendation of the inspector?—I do not remember any case in which that has happened; but it may have happened. My memory does not serve me exactly; but I do not remember a case.

441. May I take it that the first wish of the railway authorities would be to carry out the recommendation of the Board of Trade, if it were possible, and that you only arrive at a contrary conclusion after having investigated the matter thoroughly, both directors and officers?—That is exactly so; our wish is to carry out the recommendation, and in a number of minor cases we do so without any question being raised at all. In those cases where we have come to an opposite conclusion, we think it is our duty to avoid giving effect to that recommendation.

442. With regard to the block system, about which some questions were asked you in your former examination, do you know the block system which is in operation on the Metropolitan Railway?—Yes.

443. Has the Metropolitan Railway Company any peculiar facilities beyond other railway companies for carrying out a complete block system on their line?—I think it has. I think its circumstances are peculiarly favourable for a block system. The traffic is not of a varied character; almost all the trains are passenger trains running at the same speed, running with extraordinary punctuality, and stopping at every station, and all the stations are somewhat of the same character; that is to say, when a passenger train has started, the station is really clear, and there is no risk in the following passenger train running right on into the station. I need not say that those are circumstances which do not occur on the great proportion of country stations.

444. Do I rightly understand you, that the difficulty of adopting what is called the block system, as it existed on the Metropolitan Railway, arises at the various stations throughout the country from the diversity of the character of the trains, and from the action at stations, such as shunting of goods, minerals, and the like?—The diversity of the character of the train and the uncertainty as to the hour; and of course, taking the North Eastern system, when a train starts from Aberdeen to London, you cannot say exactly, as they can on the Metropolitan system, the

Captain *W. O'Brien.*

16 June 1870.

the hour at which it will come to a station. Then, between passenger trains, we have in the country a vast number of goods trains, and coal trains, all running at different speeds and following in such a stream that really it is a point of safety to avoid, if possible, an accumulation of trains at any place. Then the stations are wholly different from the Metropolitan stations; the interruption to the line is by no means over when the running train has left the station. You have sidings and junctions at both sides of the stations for business of all kinds and description; and therefore the real danger begins as soon as the running train has got out of the way, for some operations have to be done at the stations, and that must necessarily obstruct the main line, unless, I should say, nine-tenths of the stations were remodelled, and a vast expense gone to, for that particular object, and therefore the advantage of the block system would not apply in 99 cases out of 100 at our stations.

445. But does not that diversity of the traffic, and the danger which arises from it, bring you to the conclusion that, if you could adopt a block system, it would be a most desirable thing to avoid accident, if it could be applied?—I think I said before that in principle the block system is quite perfect; the whole difficulty is the application of the principle, and there, I think, to apply it indiscriminately will cause it to break down, and in many cases produce accident. I am clearly for applying it under certain circumstances, but not for applying it indiscriminately and generally without reference to the circumstances. And we do attempt it at stations in this sense, that every station, by means of its back signals, has a perfect means of protecting itself, if people will only put the signals on, and the drivers will attend to them; and they have this advantage, that they see the signal. A man looking before him can see whether he is protected or not, and that is the essential principle of safety. Our orders are, for instance, that a driver is not to obstruct the main line at a station until he sees the signal turned on; and if people would only obey these orders very few of those accidents would occur, whereas, if you adopt the block system, you are only blocking the station rather further off; you are doing it in a less perfect way, and you are conveying, and this I think a great deal of, to the mind of the driver the notion that the way is to be kept clear for him; and whatever your rules may be, if once a man gets that thought into his head he will disregard the signals more than he does now.

446. But you have another element of safety in the block signal, have you not, that you have a return message that the signal has been received that a station is clear, and that a train may come on?—It is so, and that is a very valuable point indeed, but it is an additional signal given, and it again complicates still more what is quite complicated enough; and I may say that it is not so easy a thing as some gentlemen think, in the first place, to get the line always clear; and, secondly, to bring the knowledge of the fact that it is clear on all sides of the station and to any distance, home to the knowledge of the one man who has control of the signals, and it is not very easy to bring to that one man the power of manipulating the points, because they are spread over a wide extent; therefore, the difficulty of the block system is very much in the complexity of the station arrangements; and the more complex they are, the more certainly they will be neglected or misunderstood, and therefore I hesitate to substitute a system of this kind untried, notwithstanding its advantages, for another system which we have tried for a very long time, which our men thoroughly understand, and which proceeds on a radically different principle, that the drivers are not to assume that the way is to be kept clear for them, but that they are to use their eyes, and especially look out for signals.

447. I suppose, in carrying out the block system perfectly, the whole of the operations at a station in shunting, and in showing signals, ought to be in the power of one man?—Yes; if there is any mistake as to that one man, it is a source of extreme danger.

448. Then in the case of a station, which has a variety of operations, such as shunting minerals, goods, and the like, you would have to communicate to this one man, and if he could not carry out the system of signalling, and moving the points himself, others would have to convey to him the information that on that particular section of the station the line is clear?—That is so.

449. And he, on his part, on receiving that from the different points at the station, would communicate it to the station in the rear, that trains might come on?—Yes.

450. And you apprehend danger from the variety of signals which would be necessary to bring that about?—I do; and there is a further signalling system that you have not mentioned, but which must follow; the shunter at a particular end of a station must signal to the signal box that the way is clear, and the signal box must signal back to him when he may begin shunting again; and there is a feeling growing up in the railway world that already we are getting perhaps rather too many signals; and if we have so many more, I think it is an additional complexity. Whether that can be got over or not, I will not say, but it is a thing to be kept very carefully in view, as undoubtedly an element of danger.

451. Then is your attention, at all events, and that of the directors of the company that you represent, devoted to carrying out this block system, wherever it is practicable to carry it out?—We are introducing it gradually. There are certain places where the officers had no doubt at all that it was the right thing to do, and there it has been done, and there are other parts where I think it may be introduced without any difficulty, but where the actual safety is so great no accident having occurred for a vast number of years that it does not seem necessary. There are other cases in which I have suggested to the directors that it would be advisable to try it only as an experiment, because it involves a great many of what I call subsidiary arrangements which chiefly refer to the remodelling of the stations, removing colliery junctions to different places, and works of considerable difficulty. I have suggested that it should be tried, and if we find that they can be remodelled and everything made to work right, it would be additional evidence in favour of the system, and an additional inducement for us to extend it still further.

452. Mr. *Hinde Palmer.*] If it were possible to make the block system perfect, as far as perfection can go, would it not be the greatest security which you could have against accidents?—I do not wish to raise any question about words, but I was going to say that the possibility

bility of making it perfect assumes the whole question. What I say is, that it brings necessarily with it its own dangers.

453. You say that the danger is of lapsing into too many signals; if the block system could be adopted, would not it be the means of doing away with a great many other signals if it could be made to act?—Many people think so.

454. Is it not obvious?—I think not obvious, because on that I have asked managers, who have a better opinion of it than I have, the very question. Are you going to do away with the back signals at the stations? and the answer is, certainly not on any account whatever; the block system is to be in addition, and not in substitution; and I may say now my own opinion is, that if you did away with those back danger signals you would be introducing a very great element of danger. If those are done away with, I should feel on our line that I would rather not undertake the working. I would rather give up my situation than undertake it, as far as any responsibility was laid upon me.

455. Mr. *Sherriff.*] At what distance on each side are those back danger signals generally from the station?—They used to be 600 yards, but of late years the weight of the trains, and the speed of the trains, have so much increased that we now lengthen them to 800 and 1,000 yards; and great pains are taken, or at all events ought to be taken, that they are put in such a position as to be visible, if possible, 800 or 1,000 yards further.

456. So that the man who used the lever shall see that the lever acts?—It is a very essential point that the man who uses the lever shall actually see that the signal is turned on, and at night that it is actually lighted, because occasionally signals go out.

457. Mr. *H. Palmer.*] Mr. Oakley told us that the adoption of the block signal system would effectually prevent accidents between stations, although, as you say, accidents may happen by shunting at stations, but he said that accidents between stations are entirely prevented by the block system; do you agree with that?—I do not think that Mr. Oakley himself would say that he meant that literally. I can say exactly what I believe to be his meaning, and what is my view also: in the first place it cannot possibly be true that it provides a perfect immunity from danger, because in our own case on one of the short bits of line where we established the block system, an accident did occur out of a misapprehension and disobedience of orders; but an accident did occur, and it was by no means clear but that the block system did, in that particular case, rather tend to the accident than not. But what I understood Mr. Oakley to wish to convey to the Committee was this, that in the first place, setting aside accidents at stations, it would really be of use in preventing one passenger train overtaking and running into another passenger train, and to that extent I, in some degree, agree with him.

458. And that would be a great advantage, would it not?—The point of your question is in the word "great;" I tried to convey to the Committee the other day, not so much my opinion as the facts, namely, that in almost all such accidents for 13½ years, the accidents would have been prevented if people had only obeyed their orders, and if, under the present system, people had worked properly. I could only find two cases where the block system would apparently have been of use, and those not very distinct.

459. The accidents which chiefly occur when the block system is at all in force, are chiefly at the stations, are they not, from shunting badly, and so on?—Accidents chiefly occur at stations, whether the block system is in force or not.

460. Mr. *Price.*] Supposing that the North Eastern Company were to lay down the block system over the whole of their line, and then, after so laying it down, an accident happened, do you think that the fact that they had incurred the very great expense of laying it down would, in the smallest degree, influence a jury in the amount of damages that they would award?—Not the slightest.

461. They would not consider, in mitigation of damages, that you had taken so much extra pains or care to avoid accident?—Not the slightest; I think there is this difficulty in laying it down partially, which your question suggests, that if it is laid down partially, a jury would be apt to jump to the conclusion that it was admitted by the directors to be a proper thing, and that therefore the not laying it down universally, even in branches where there is next to no traffic, was a piece of culpable negligence on their part, and ought to be punished very heavily.

462. But the laying of it down over the whole line, and taking all additional precaution that could be taken, would in no way affect the jury in the mode in which they dealt with the damages?—Certainly not, because a man has to be compensated for injury done to him, and it is nothing to the jury how it happens to be done.

463. And the company can afford to pay?—Of course that is their great feeling, that it is a rich company and a poor man, and therefore the company ought to be made to pay.

464. Mr. *S. Lefevre*] Could you provide the Committee with a list of the accidents which have occurred on your line during the last two years, with the number of persons compensated, and the particular facts of each case; showing the number of persons injured in each case, the amount paid in each case claimed, and also the law costs?—Yes, we will furnish it as near as we can in the way which you put it; but very often the law costs are mixed up with the sum paid, and we cannot separate them. Of course our own law costs come in a different way, and I do not know how we could include them.

465. At all events, the costs that you paid to the other side would have some relation to your own costs probably?—Yes, they would have some relation.

466. I presume that the greatest quantity that you pay away is for accidents not resulting in death, but in injury?—Very much the greater part.

467. Therefore Lord Campbell's Act had comparatively a small bearing upon the case?—Very small; it has a very important bearing upon a particular case, but it has a very small bearing upon the greater number of cases.

468. It only added somewhat to the amount; you have to pay more in those cases where death occurs, but death occurs in comparatively few cases as compared with injuries?—It occurs in few cases, but the cases in which it occurs are serious cases.

469. Still very large amounts are paid for injuries done in individual cases?—Yes, very large amounts.

470. Mr. *Sclater-Booth.*] When you make out that return, will you add a column showing the difference

Captain *W. O'Brien*. — 16 June 1870.

difference between the amount claimed and the amount paid?—Yes, as far as I can.

471. Mr. *S. Lefevre.*] Will you also add the number of your own servants who are injured or killed by railway accidents. I do not think you return that to the Board of Trade at present?—I think the idea was that we should make a return to the Board of Trade of servants killed by running trains; but if a man is shunting waggons about with a horse, and he trips and a waggon goes over his foot, I do not think that that was intended to be sent to them, and those form a large proportion of the accidents. If you will take 1867 and 1868, I think I could give the cases more completely, because a number of cases have occurred in 1869 which are not yet settled; 1867 was a heavy year; 1868 was, I think, comparatively light, and 1869 was rather heavy again.

472. Does your company pay any compensation to their servants when an injury occurs to them through an accident?—If it is an injury, and if a man is fit for work, we try to keep him in our service, but if it is death, we pay a certain sum of money, in proportion, to his relatives. We treat it as a case of charity; the man has no legal claim upon us. The directors endeavour to provide for the man and his family as far as they properly can.

473. In fact, if the man himself has in no way contributed to the accident, his relatives have no claim?—The directors do not look to that; they look rather to the case of the family and the hardship. There is no legal claim at all, even although the man has not contributed to the accident. We are on the footing of all other employers of labour; the man voluntarily undertakes a dangerous service, and I suppose that there are no employers of labour whose servants are hired on any different principle.

474. What kind of sums do you pay to the relatives when death occurs?—It varies in every case.

475. Can you give at all an idea of what the amount is?—It has grown up without any question at all. A sum of 10 *l.* is given where there is no particular case of distress; where there is a case of a family it rather comes to this, that we employ the children, and put them into our service, and give them employment rather than a sum of money.

476. But otherwise it is a small gratuity?—Yes.

477. Could you say in your experience that the railway company has adopted any improvements with the view of preventing accidents, owing specially to the heavy compensations which have been brought to bear upon them?—No; we are always improving as far as we see the way to improve, but that of course has no reference to any particular amount that we have to pay in a particular case.

478. I presume that the inquiries sometimes bring out particular causes of accident which might be removed by a different system of management?—All inquiries to a certain extent bring out points capable of amelioration; but some of the most valuable inquiries are those where there has been merely a very narrow risk of collision, and nothing has happened; but, in truth, almost all cases arise out of negligence by servants, or imperfection of the signal, or something of that kind.

479. Do you think that a great number occur owing to the negligence of servants rather than to a bad system of management?—Beyond all question; I have no doubt at all upon that point. My own belief is, that what you call the system has very little to do with it; but I believe that a very great deal depends upon a careful and exact system of discipline, and the punishment of all faults, whatever the consequences, with great certainty, but with moderation.

480. Mr. *H. Palmer.*] You say that accidents often occur from the negligence of the servants; is it not very often the case that the servants are employed a great number of hours, almost beyond what their physical strength can bear?—Of course speaking only of my own company, I say distinctly that it is not so.

481. But there has been, I believe, a distinct report that such is the case with reference to some companies; how many hours should you consider to be the limit during which a man's attention could be kept alive in any responsible position; take a pointsman, for instance?—That would depend upon the amount of duties that he has to do. There are some pointsmen that might go on 24 hours' round, their duty is so slight; but if you take a case such as perhaps you are aware of, the Great Northern Station and the entrance to the tunnel, I should think that if a man was kept there from six to eight hours, it would be quite as much as he ought to be.

482. You think that for such a post as that 15 hours would be rather too great a strain?—Yes, for such a post as that, certainly; we endeavour to regulate the hours according to the amount of duty.

483. Can you give any sort of average of the number of hours that they are engaged in actual employment?—It does not admit of an average.

484. Mr. *Reed.*] Have you had any experience with reference to workmen's trains specially for the working classes?—We are entirely in the country, so that question does not affect us in any way whatever.

485. I thought you had them on one part of your line?—No, there is no place on our line where they would be of the least use.

486. Mr. *Lopes.*] Is it the fact that every care is taken in the selection of servants by railway companies?—There is great care taken, but it is a difficult thing to do; and we find, as a rule, that cases of negligence occur, not from the man being a bad man, but in doing those duties over and over and over again; he some day makes a slip and a miss, and all he can say is, "I am very sorry for it, it never occurred for the last 15 years, and I do not know what I was thinking about at the moment."

487. Do you know, as a fact, that those accidents have frequently occurred in the case where the servants have had charge of a train who have been a great many years in the service, and have borne good characters?—That constantly occurs.

488. With regard to Lord Campbell's Act, do you know whether it is a fact that the verdicts of juries are more reasonable and fair in cases under that Act than in the ordinary case?—I have not had that before me, and I am hardly prepared to give an opinion upon it.

489. There is a limit in the case of Lord Campbell's Act; are you aware that a claim can only be made to the extent of the interest of the parties who make the claim?—Yes, but the jury are the judge of the extent.

490. But they are limited to that, and the inquiry

quiry is not so broad?—I doubt if it is any practical limit.

491. Has your attention been drawn to the difficulty which railway companies have in settling those cases where the claim is a fair one to a certain extent?—There is no very great difficulty in settling a fair claim; that is, of course, what we think fair.

492. But after it has reached the hands of the professional gentlemen, is the difficulty increased then?—That depends upon the class of professional gentlemen. We sometimes get most respectable solicitors and medical men, and then we never have real difficulty except from exceptional cases. Our great difficulties are with the other class.

Captain *W. O'Brien.* 16 June 1870.

493. Those cases very often, I believe, fall to the lot of professional men who are not very high in their profession?—That is so, and that system is growing very fast, which is the reason why we look at it with great apprehension.

Mr. Robert Stanley Mansel, called in; and Examined.

494. *Chairman.*] You are the manager of the North London Railway Company, are you not?—I am.

495. How long have you performed that duty?—I have been with the company about eight years.

496. Are you cognisant of the number of accidents and claims that have occurred against that railway company?—I made out a return a short time since of the number of accidents on our line.

497. Will you provide the Committee with such a return as was suggested just now by the Secretary to the Board of Trade?—The return that I have in my hand would give that information. This return is made out for the four years, 1866, 1867, 1868, and 1869; and I find that during those four years we had 11 accidents. I am now leaving out all cases of parties getting slight injury, such as pinched fingers, and so forth; but those were the number of accidents arising from accidents to the trains. There were 121 claimants, and the amounts paid, including medical and legal expenses, were 18,196 *l.*; the total fare received from the claimants amounted to 3 *l.* 0 *s.* 6 *d.*, being an average of 6 *d.* per head. With the permission of the Committee, I will hand in this return.

[*The same was delivered in, and is as follows*:—]

North London Railway.

Summary of Claims for Compensation for Accidents, 1866, 1867, 1868, and 1869.

Date.	Total Number of Accidents.	Number of Claimants (deducting single cases).	Claims Paid.	Medical and Legal Expenses.			Total Payments.		
			£.	£.	*s.*	*d.*	£.	*s.*	*d.*
1866	4	74	7,078	1,516	10	1	8,594	10	1
1867	3	29	4,155	605	19	8	4,760	19	8
1868	3	11	536	1,442	4	2	1,978	4	2
1869	1	7	2,749	114	5	10	2,863	5	10
Total -	11	121	14,518	3,678	19	9	18,196	19	9

Average fare received per passenger, 6 *d.*
Total receipt, 3 *l.* 0 *s.* 6 *d.*
The expenses are 25 per cent. of the claims.
Average payment per passenger, 150 *l.* 7 *s.* 9 *d.*
Total payment, 18,196 *l.* 19 *s.* 9 *d.*

498. What is the length of your railroad?—The whole length worked over is about 20 miles; the actual length of the North London proper is about 10 miles.

499. Your fares are very low, upon the average, are they not?—They are very low.

Mr. *R. S. Mansel.*

500. What is the first-class fare for the whole length?—The first-class fare for the whole length worked over is about 1 *s.* 3 *d.*

501. What is the third-class fare for the whole length?—We have no third-class; we only run two classes, first and second; the second class fare for the whole length is 1 *s.*

502. Is your railway worked upon the block system?—Yes, it is a metropolitan line.

503. And are the trains all supplied with continuous breaks?—Yes, the trains are all supplied with a very powerful continuous break.

504. Before you were employed on the North London Railway, you were employed on the Chester and Holyhead Railway, were you not?—I was with the Chester and Holyhead Company for 10 years, and subsequently with the London and North Western, in charge of the Northern division of their line.

505. What capacity did you fill there?—I was the traffic superintendent for the northern division.

506. Had you any opportunity of knowing about the compensations they had to pay?—Yes; all those for my division passed through my hands at that time.

507. Will you give the Committee your general opinion upon the subject as regards compensation?—We found there, and since, I have found the same thing, that there are two classes of accidents that we have to deal with. The first class is where there is an amount of injury at once apparent. We may take, for instance, the case of a man who shows some external mark of having been injured; but there are a great number of cases, and they are a very great majority, where there is no external mark at all; but a complaint is made of an internal shock of some kind (something of which there is no external sign); and those are the cases which we have the greatest difficulty in dealing with, because there is a very great difference of medical opinion about them; and many of those cases we find are fought up to a certain time, that is to say, until a certain amount of costs are incurred, and when the utmost amount of costs are incurred the case will be compromised. But in almost all cases we are very much in the hands of the advisers of the claimant; very much depends upon the character of the party who advises him.

508. Mr. *Lopes.*] A claim generally divides itself into two heads, does it not, namely, what may be called the personal injury, and the expenses?—That is so.

509. To say nothing about the personal injury, what has been your observation with reference to the amount and character of the expenses claimed,

Mr. *R.S. Mansel.*

16 June 1870.

such as medical men, and going to the sea-side, and matters of that kind?—In the case which I was speaking of just now, the return of accidents on the North London Line, the medical aid and legal expenses amounted to 25 per cent. of the total amount paid.

510. Does that include miscellaneous expenses, such as going to the sea-side, and matters of that kind?—Yes, that would include the whole of them. The sea-side expenses would be included in the amount of compensation paid to the man; the medical and legal include simply what is implied by the terms.

511. Of course, in those cases particulars are always applied for, and the particulars of claim are delivered; has your attention been drawn to those particulars, as to their amount and character?—Yes, very frequently.

512. Have you observed that they are honest, or fraudulent, or what?—In very many cases it is a question rather of whether anything was necessary to be incurred at all. I could better give an illustration as to what I mean by mentioning a case. A man, having travelled by a railway train to which there was an extremely slight accident on a Saturday, made no complaint whatever, nor did he find himself any worse till the Tuesday following, when he went to a medical man, and, stating that he had met with an accident, asked him what he advised him to do. The medical man at once, without going very deeply into the case, said "Go away for a little rest and change;" which he took at once as an authority to him to go away for three months. We heard nothing of this case till three months afterwards, and then heard that he had been away by the sea-side.

513. Has your attention been drawn to a case about a fortnight ago, the case of Statham against the London and Brighton Railway?—I have seen the report of a case.

514. Did you observe that it was a case where 500 *l.* was originally claimed, and six months afterwards it was raised to 3,000 *l.*, and that the jury returned a verdict for one farthing, which was afterwards supported on appeal in the Court of Common Pleas?—Yes, I observed that case.

515. Mr. *Sclater-Booth*] You spoke just now of the disproportion between the sums that you had paid in compensation, and the amount that you had received in fares from the persons compensated within four years; there was one case, was there not, which particularly went to aggravate that discrepancy; would you mention that one case?—We have had several cases where there has been a very great disproportion; but the most aggravated case was one where a party, having paid a fare of 4 *d.*, which had to be divided with another company, the North London Company's proportion being three-eighths of a penny, recovered 2,300 *l.* There is another feature about those cases, which is, that very frequently when you are enabled to trace them afterwards, you find that there is a very speedy recovery after the compensation is paid.

516. Mr. *Reed.*] Referring to the North London Railway Act of 1861, clause 45, you came under conditions, did you not, to run trains for the labouring classes?—We did so.

517. How do you fulfil that condition?—I think we were bound to run one train each way daily, if I recollect the terms of the Act, and we made the workmen's tickets available by all trains up to a certain hour in the morning.

518. Could you name those hours?—I think, speaking now off-hand, the trains begin about a quarter past six, and run every quarter of an hour up to seven o'clock. The Act provides that they are to be run before seven o'clock in the morning.

519. To what points of the line do you run those trains?—The points prescribed by the Act, between Dalston and Broad-street.

520. In the formation of your railway a large number of the labouring class were displaced from their dwellings in the city, were they not?—Not a very large number.

521. Was it not to meet that want that this clause, 45, was inserted in the Act?—It was to meet some supposed want of the kind.

522. That those who had been displaced from the district of Bishopsgate, and other parts of Norton Folgate, should have an opportunity of coming in to their labour upon cheap terms?—I am not aware that we displaced any number of that class in that particular neighbourhood. A great number of artizans, who are the parties contemplated in the Act, resided in the neighbourhood of Dalston, Homerton, and Haggerstone.

523. There is a very much larger number of working men residing at Homerton than at Haggerstone or Kingsland-road?—I am not aware that there is. I know that it is a very populous district, and there may be a very large number of that class there.

524. Have you given the advantage of the workmen's tickets to anybody living in Homerton?—No; for this simple reason, that by a subsequent Act the liability of the company in case of accident is limited to 100 *l.*, but that extends only to those trains run between Dalston and Broad-street; and if the trains were extended beyond that distance we should become liable under the general Act for any compensation.

525. What distance is Homerton from your city station?—It would be between 3½ and 4 miles, nearly 4 miles.

526. What is the fare for a return ticket to a working man?—Sixpence.

527. Can he avail himself of the benefit of the workmen's ticket near his residence, for instance, at Victoria Park, or at Homerton, or at Old Ford?—The workmen's tickets are only issued, as I stated just now, between Dalston and intermediate stations, and Broad-street, but by coming across, from Homerton to Haggerstone, which is a direct route across, he would get the benefit of the workman's ticket.

528. Are you aware of the distance from the station at Victoria Park to the station at Kingsland, where he can get a workman's ticket?—Yes, it would be about three miles.

529. And, therefore, a man must walk from his house three miles to enable him to take advantage of your workman's train?—There are very few parties of that character resident in the neighbourhood of Victoria Park. Homerton is considerably on this side of Victoria Park, and there is a direct route, and a much shorter one, from Homerton to Haggerstone.

530. Then a man living at Homerton, two miles from Kingsland, must walk that two miles when he comes to town to entitle him to have a workman's ticket?—He would be able to get his workman's ticket as between Broad-street and Dalston.

531. He can only go by your railway by paying 6 *d.* fare?—That is so.

532. You

532. You have made some recent provisions in favour of the working classes by running more frequent trains, I believe?—We run an earlier train, at half-past five in the morning.

533. Are you not aware that there is great dissatisfaction on the part of a large body of the labouring population who have been displaced from their dwellings and living upon your line, and have no means of coming to their work in London and returning, except at the rate of 6*d.* a day?—No, I am not aware of anything of the kind. On the contrary, I know that when the working poor themselves were asked about the subject, they did not express any wish for the trains.

534. Have your company had no remonstrances on the part of such persons, living in Homerton, for instance?—None on the part of the working men themselves. We have had some communications from an association called the Metropolitan Association for promoting cheap travelling for the working classes.

535. Composed of working men?—It was composed of a committee who were acting on their behalf, but I have not found that the working men showed their appreciation of it.

536. You showed your appreciation of the movement by making alterations, did you not?—We did not make them in consequence of the representations of the association, because the trains which were then asked for fell through altogether. But it was represented by some parties living in the neighbourhood of Dalston, who were chiefly salesmen at the markets, that they wanted to be in town early, and that an early train would be convenient to them, and we put it on, and workmen's tickets were made available by that train; but the result has been that the number of working men is very few indeed; they do not constitute one-half of the train as a rule, and the whole number generally carried is not above 60 in a train.

537. Do you run third-class carriages at all upon your line?—We have no third-class carriages. We have but two classes, but we run at third-class fares.

538. This is 6*d.* a return ticket?—Yes, for the distance you mentioned; but you must bear in mind that that is a distance of four miles, therefore it is less than the Parliamentary third-class rate.

539. Do you allow women, who are engaged in work in London, to travel at the same rate from Dalston to London, as men, upon a certified knowledge that they are working women?—There would be no objection to their travelling the same way, but I am not aware that there has been any application made on behalf of them.

540. What is your reason then for refusing to a working man at Homerton on the same line, just beyond Dalston, the privilege given to the man who lives at Dalston?—I stated just now, because in the one case we are protected by the limit of liability under the Act, and in the other case we are not.

541. Then it is a question of your liability for accidents?—There are two questions involved, namely, that of liability, but there is also the question of expense of running those trains, whether they would be remunerative or not. Our present experience is that those trains have never been remunerative, and we have tried them upon several occasions.

542. Do you suppose that they ever will be remunerative at the cost to a working man of 6*d.* for a return ticket each day?—But the cost to a working man is not that; by the trains that I am referring to he travels for 1*d.*, and they are not remunerative.

543. Do you consider that there is any importance in the fact that working men will not walk two or three miles to avail themselves of those tickets?—I do not think there is a great deal in that; I think you will find that the difficulty exists in this way, that a working man's work does not always lie in the same direction. For instance, a man employed in any large works is sent out to work to-day at one place, and another day he is at another place; and there are no great number of them coming direct into the City daily for their work.

544. Can a working man take a ticket at Dalston for a day on the reduced terms, the workmen's train terms?—Not now.

545. You oblige him to take a weekly ticket, do you not?—Yes.

546. And yet I understand you now to say that his work is so varied and lies in such different parts that it is difficult for him to avail himself of the ticket?—I say this, that a man whose work lies regularly in the City takes a ticket out for a week, but the other man whose work lies in other directions does not get the same advantage.

547. Could you not give a return ticket daily on the reduced terms?—There is no impossibility about giving a return ticket; but we did for a long time issue those penny tickets, and we found that they were not in any request; there were very few issued. I was surprised when I saw the return of the very small number that were issued.

548. Do you only run first and second-class carriages on your line?—Only first and second-class.

549. So that the poor have no chance of going third class if they wish?—That is not so, properly speaking, because the fares for the first class are third class fares in many cases, and in no case are the fares more, unless for intermediate stations, than the parliamentary third-class rate.

550. Mr. *H. Palmer.*] Your railway is worked on the block system is it not?—It is.

551. Have you any other signals whatever besides the block signals?—We have the ordinary signals, main and distance signals.

552. Do you find that using the block system induces any carelessness in the servants in observing the other signals?—Yes, to a very great extent that is so.

553. Can you give any instance of it?—I can give an instance in this way; the ordinary regulations of railways provide that in the event of any accident happening to a train between stations, the guards are required to go back with the signals, but it is not a thing that the men are very fond of doing generally, because they run the risk of being left behind; and in that case, by relying upon the block system, the line being blocked back at the station in the rear, the men are very apt to neglect going back at all with any signals.

554. But you say that they could go back when an accident occurs between the stations?—But I say it frequently happens between the stations.

555. Mr. *Sherriff.*] Although you do use the block system on your railway, yet I gather from your

Mr. *R. S. Mansel.* 16 June 1870.

your evidence that you have had numerous accidents?—We have had several accidents; in fact, I have just mentioned the number that we have had, and the claims that we have paid, although the line is worked on the block system.

556. Mr. *Reed.*] In arriving at the London station, have you a sufficient number of porters to attend to the doors of the carriages, or have the passengers to open the doors for themselves?—We have quite a sufficient number of men to attend to the trains, but the passengers as a rule are so impatient to get out, that they open the doors, and are out before the train stops in nine cases out of 10.

557. Do you know how many men are on the platform unengaged to receive a train?—That varies according to the number of trains that are coming in; there are sometimes a number of trains coming in at the same time, and the men are more dispersed than they otherwise would be.

558. Is it a fact within your knowledge that no porters ever open the doors of a North London train upon its arrival at Dalston, and that all the carriages are opened by the passengers?—No; on the contrary, I think you will see the porters opening the doors every day.

559. Mr. *H. Palmer.*] Are the platforms on your line level with the carriage-door?—At the stations now in course of rebuilding they are; at one or two of the old stations there is a difference between the level of the floor of the carriage and the platform; but at the new stations the platforms are built level with the floor of the carriage or slightly below the level.

560. Do you think that an improvement and a precaution against accidents?—We have had accidents where claims have been made; in one case we had to pay compensation for a person whose injury was stated to be caused by the platform being too high, and in another case by its being too low.

561. Then the safest thing is to have them level with the platform where it can be done so?—That is what is termed a high platform, and we have had to pay compensation for injury in the case of a high platform.

562. Is it not safer to have the door of the carriage level with the platform?—I should think so, as a matter of opinion, no doubt.

563. Is there any very great difficulty or expense in making the platform level with the carriages?—It would be a matter of expense, of course.

564. But would it be considerable?—In some cases it would be difficult, because where the station buildings have been constructed, if you raised the level of the platform, it would make an alteration in the level of the floor of the station, and you would make steps, up and down which would be objectionable, where you have a number of passengers to deal with.

565. Mr. *Shaw Lefevre.*] Do I rightly understand you to say that the workman's trains do not pay now?—They do not pay at all.

566. Have you made a calculation as to what the loss to your company is by the workman's trains?—I have not worked it out in that way; but the receipts by the workmen's train that is run specially for that purpose, amount to something like from 3 *s.* up to 5 *s.* as the maximum. I do not think we have ever had more than 5 *s.* for the whole distance.

567. What should you say was the expense of running such a train?—I could not tell that offhand, because there is some expense incurred in this way, that having earlier trains we are obliged to have men earlier on duty, and that implies a greater staff.

568. Could you give the Committee an idea what the loss is?—Yes, I will do so.

569. Do I rightly understand you to say that your company is ready to extend the principle of workmen's trains to the whole of your line, providing the clause limiting the liability was extended also to those trains?—Yes, provided it could be shown that any necessity existed for it. Of course, if there was a large number of workmen requiring those trains they would be remunerative, and, therefore, it would be the interest of the company to run them. But the only difficulty at present is, first, that we are not exempt from this liability, and in the next place, that they really would not be remunerative, unless there were a very large number of passengers by them if they ran at very low rates indeed.

570. Do you say that there is not a sufficient number of working people living in the remoter parts of your line to make it worth your while, under any circumstances, to run cheap trains?—I should not be disposed to go so far as that, because the main objection hitherto has been this question of liability, and we have not been disposed to try the experiment.

Mr. James Allport, called in; and Examined.

Mr. *J. Allport.*

571. *Chairman.*] You are the general manager of the Midland Railway Company, are you not?—Yes.

572. How long have you been acting in the capacity of general manager of a railway?—Very nearly 30 years. I have been on the Midland Railway now altogether from first to last about 23 years, and 17 since my last connection with the Midland Railway.

573. During that time have you had a large experience in dealing with compensation cases?—Yes, I have.

574. Have you had the management of those cases entrusted to you?—Yes, I have had the chief management of them.

575. Will you inform the Committee why you consider the existing law to bear very harshly and unfairly upon the railway companies?—In a variety of ways it does so; in the first place we carry, as has been stated by the former witnesses, passengers in a very different position of life for the same money, and we have no means of knowing what that difference is. One man's life may be worth comparatively nothing, while another man's may be worth 20,000 *l.*, and yet we may receive but a few shillings in both cases. I think that that is a very unfair position for companies to be placed in. Parliament has thought proper to limit the liability in a variety of cases; that is to say, in the cases of valuable goods, and in the case of cattle and horses, and other animals, and I think it would only be equitable to limit the liability of companies in the case of passengers. It has frequently been a matter of consideration with

with us how to deal with those cases, but, of course, without Parliamentary powers, we are not in a position to do so.

576. Your fares are limited by Act of Parliament, I presume?—Yes, our fares are limited by Act of Parliament; and even in many cases limited by the circumstances of the case; for instance, in suburban districts we do not charge our maximum fares by any means, but although we give the public great advantages in the reduction of our fares, our liability still remains to the fullest extent.

577. Do you consider it a hardship that you should be compelled to take passengers whose lives are of a very great value at the same fares as those whose lives are of a much lower value?—Yes, I do; we think that there really ought to be some limit to that, and the proposition which has been made to the Committee by Mr. Blenkinsop certainly receives my fullest concurrence, that our liabilities should be limited in the case of first, second, and third-class passengers, varying the amount according to the class, and that passengers should have the option of insuring their lives up to a certain limited sum, which might be agreed upon, the company then being compelled to insure.

578. Have you considered how that law would work with respect to other carrying companies than railway companies?—I have not considered that question, because, in my experience, I do not think that any other companies are treated in the same unfair way that railway companies are. In the case of steamboats, and in the case of omnibuses, and in the case of public conveyances generally, I do not find that there is a disposition on the part of juries to inflict such heavy damages as they do in the case of railways; and I think that is the universal experience of railway companies.

579. Does the Legislature interfere to control the fares paid to omnibus companies?—No, they do not; they charge what they please. I am not aware of any mode of conveyance, either by land or water, where the Legislature has interfered to limit or control the charges, except in the case of railways.

580. Could you limit your liability by any special contract made by taking the ticket?—I do not think we could. I think that the Act of Parliament is compulsory upon the railway companies to carry passengers who present themselves, so long as there is room in the train, and if a passenger refused a special contract you have no means of enforcing it; it would certainly be no plea in bar to any claim, the statement that you had offered to make a contract. I do not think there is anything in the present law that would do that.

581. For instance, if you printed upon your ticket that you were only liable for a certain sum, in your opinion, that would not, in fact, limit your legal liability?—I think not, under the present state of the law.

582. You heard the evidence of Mr. Blenkinsop, did you not?—The greater part of it I did.

583. You know the nature of the proposal which he suggested to the Committee?—I do.

584. Is that proposal of his in agreement with your opinion, and with the opinion of your directors?—Yes, it is.

585. As far as you are carriers of goods, you are at this present moment protected, are you not?—Yes, we are in certain cases, under what is commonly called the Carriers' Act, protected for all goods beyond 10 *l.* in the carriage of certain valuable commodities, such as jewels, money, bank notes, pictures, silk, lace, and a variety of things; but in the case of ordinary goods traffic we are not protected at all; but I do not remember a case of anything unfair occurring in settling claims for the loss of, or damage to, goods. Whether you settle it by private arrangement, or through the intervention of a jury, it generally resolves itself into the real loss, and at the present moment I do not recollect any case of what I might term exorbitant charges or fraud.

586. Mr. *S. Lefevre.*] In the case of goods you are bound to carry safely, are you not?—Yes, we are bound to carry safely.

587. It is not a question of negligence for a jury?—Of course not, excepting in the cases I stated; and admitting even negligence we are not liable.

588. *Chairman.*] I suppose the question of the value of the goods is not a very difficult one, as a general rule?—No, it is not. We generally ask the parties to produce their invoices of the goods, and in, I may say, 99 cases out of 100 that is sufficient; we pay the amount, and there is an end of it.

589. Of course the degree of injury to an individual, on the value of the life of a person, is a very difficult question?—No doubt it is. I may state that, although the claims in number paid for loss or damage to goods is infinitely greater than the cases of compensation for passengers, it is a rare thing that you see a case tried in the event of loss of goods, compared with the cases of injury to passengers.

590. Can you tell what is the average amount of compensation that your company pays, and the average proportion that it bears to the expenses of the company?—No, I have not taken it out with that view, but I could give you the total amount paid by the company during the last five years.

591. Mr. *Sheriff.*] How many accidents have you had?—I have not got the number of accidents; I have got the cost here. The total amount that we have paid in that period is 143,000 *l.* for personal injury, and law and medical expenses in connection with these cases, for the five years.

592. Have you the number of cases?—They are very numerous; those sheets before me represent the cases, and I find that out of that 143,000 *l.*, 113,000 *l.* has been paid for compensation, 10,000 *l.* has been paid for medical attendance, 8,000 *l.* has been paid for plaintiffs' cost, and between 10,000 *l.* and 11,000 *l.* the company's costs, making altogether a total of nearly 19,000 *l.* for costs.

593. Can you tell what you paid during the same period in respect of losses to goods?—No, I cannot.

594. What sort of proportion does it bear to the compensation to individuals?—I really am not in a position to state that, but inasmuch as goods are very liable to damage by being wet, and by breakage, and a variety of things, there is no doubt that the compensation we pay for goods is very large, but I am not prepared to state the per-centage. There is this difficulty also in stating it, that we are carriers to all parts of the kingdom, and the amount paid by ourselves does not at all represent precisely what has been the ultimate loss to the company, because in many

Mr. *J. Allport.*

16 June 1870.

cases goods are stolen, and we do not know where they are stolen, and assuming the case that a package of goods is invoiced from London to Aberdeen, all the companies between London and Aberdeen partake, in proportion according to their mileage, so that it would be a very difficult return to get out. I may state further, that I find in many cases that the legal expenses have exceeded considerably the sum paid in compensation for personal injuries.

595. As a general rule, does your company pay without bringing the matter before the court?—As a rule we settle all we possibly can, and on this ground, that if we once admit the liability, we know that if we paid anything into court, for instance if our own judgment would dictate to us to pay 100 *l.* into court, or if we paid 200 *l.* into court, a jury would almost invariably give a larger sum to carry costs, so that I have long ceased to advocate the principle of paying money into court, because it invariably results in a larger sum being given, and we pay great numbers of claims, contrary to our judgment, because we know that they get into the hands of a certain class of solicitors, and they generally refuse to settle until the case is pretty ripe for trial, when there are no further expenses to be incurred, and then we can settle, but by that time we have perhaps 200 *l.* or 300 *l.* expenses of our own, and a couple of hundred pounds expenses of the plaintiff, in addition to the sum paid.

596. So that you would be ready to settle any case by giving a much larger sum than that to which you think the person is strictly entitled?—Yes, that is the fact.

597. And you do give that larger sum because you know the risk and liability that you would be subject to in respect to the payment of costs if you disputed it?—Yes, that we do; we pay very large sums which we know at the time are unfair.

598. Do you find, as a matter of fact, that claimants act upon this power that they possess over companies to compel them to pay costs?—That unfortunately is our experience. When an accident occurs, we have generally in the course of a very few hours a certain class of solicitors on the spot; touting and persuading people not to settle, and in a great number of instances when we could settle with them, we are prevented by those solicitors; and in a great number of cases we ultimately pay perhaps less, certainly not more than we should have been prepared to pay at the time; but in addition to that, we have to pay the costs.

599. Could you give the Committee any cases in illustration of what you have stated?—Yes; unfortunately it has been my duty to pay attention to those cases for many years past, and I have felt so strongly upon the subject that I have from time to time made myself acquainted with the particulars, and I have a list here of some of the worst cases. Perhaps it is not necessary to mention names; the first case on my list was one which occurred in 1864. A man was in an accident; he stated that his spine was hurt (the usual stock phrases), and he lay in bed for a considerable time. We had one of the first men in London to examine him, and he said, "I do not see much the matter with him, but he says so-and-so, and if it is true, it fully accounts for his present inability to move." The man had not moved unassisted for weeks; in fact, for months, and we settled with him. He was only a working man, and I believe the next day he walked to the station to go home, and within a week (I had him watched for some few days) he could walk as well as ever he did in his life apparently.

600. You believe that that was a fraud completely?—I do; I may mention another case which occurred in March 1865, which the company settled by paying 2,250 *l.* The man was a grocer in a country village, and he said that he could not attend to his business, but after the settlement he did attend to his business, he has enlarged his business very extensively (his son attends to it, I believe), and the man is now living in Leicester as well as most men that I see.

601. He does not seem to you to be any the worse for the accident?—Not the slightest. In the year 1864 I settled a case myself under the advice of a most experienced medical man, and gave 3,050 *l.*; this was to an auctioneer who, up to that time, had refrained from attending to his duties. He said he could not speak; in fact, he could not attend to them at all; but he has since marvellously recovered, and is attending to his professional duties as usual. The next case on my list is that of a man who was settled with for 30 guineas, and some considerable time after, in 1866 he made a claim; it was tried in London, and the jury awarded him 1,500 *l.* and costs. Since the trial he has recovered his health, and is actually engaged in his duties as relieving officer. He gave evidence that he was totally unable to attend to his duties, but he has since not only resumed those duties, but taken on other duties, and he has been known to ride a very spirited horse which few of his neighbours could ride; and this was after the payment by the company of 1,500 *l.* and the costs, which amounted to a considerable sum. The next on my list is where a jury awarded 5,000 *l.* damages for an accident. The person remained in bed totally unable apparently to attend to business until it was settled; but he is now, and he was almost immediately after, attending to his business as usual. He is an agriculturalist, and he attends markets. He complained very much of the want of sight, and that the light injured his eyes, and he has been known to wear coloured spectacles when in town on market days, to put them on just before arriving in town, and take them off when he got out; but in his ordinary occupation exposed to the full light of day he does not wear them, and in that case, as I say, 5,000 *l.* was paid. There is another case of a person who received 700 *l.*, which was for a very slight accident, and there again, the man recovered immediately afterwards. The next case upon my list is one which I look upon as a very bad one. A man was in a very slight accident; no one would detect any injury that he sustained, but a jury awarded him 2,500 *l.* damages; and I can safely say that there is not a person in the town in which he lives, who knows the case, but who looks upon it as a complete fraud upon the company. That man has since the settlement been going on with his business as usual, and apparently is as well as I am at the present moment, and in that case we paid 2,500 *l.* The next case on my list is a man who claimed 5,000 *l.*; he was settled with, and we paid, including expenses, 2,668 *l.*; and immediately after he was able to resume his business, and his wife keeps an hotel, while he attends to a music hall. The next case

on

on my list is that of a man who claimed 7,000 *l.* damages, and the jury awarded him 800 *l.*; he was in the customs, and was off duty from the time of the accident till the settlement; but immediately after he resumed his duties in the Custom House. The next case was where a man claimed also 7,000 *l.*, and he was ultimately settled with for 1,575 *l.*; he was a working shoemaker, and he gradually recovered his health after the settlement, and when last inquired about he was apparently hearty and attended to his business as usual. The next case was a case of 2,297 *l.*; there the man was shaken in an excursion train, and paralysis was supposed to have set in; but since the settlement he has taken a public-house, and is apparently in good health. The next case is that of a commercial traveller; the medical man who examined him reported that there were no symptoms of organic disease or paralysis; nevertheless, it was put down for trial at the Liverpool assizes in 1867. The solicitor said he was too ill to be brought into court, and he was examined privately, and in February 1868, or a little over two months after the accident he set up in business as a general commission agent, being a poor man before, and is now, I believe, carrying on an important business. The next is the case of a person who was in a slight accident, I do not say that he recived no injury, but no other person in the train complained, and he was heard to say that he would make the company pay, and so he did; a jury awarded him 2,800 *l.*; and again, in the town in which this man lives, it is the common remark of everyone that he robbed the company of 2,800 *l.* There was another case of 400 *l.* pretty much in the same way. There is one case of a woman who kept a lodging-house; she was in an accident, and up to the time of the settlement, if she went out at all, she was taken out in a Bath chair; but very soon after the settlement she resumed her duties, and I saw her myself at Buxton within a very few weeks; and, in fact, immediately after the settlement she was known to resume her duties as usual. I have one or two cases of so much importance, that I thought it desirable to be furnished by our solicitor with the cases, and I have them before me. In one case a person resided in the north of Yorkshire; a slight collision occurred, and his lip was cut, but no injury to his teeth, and he walked to the station hotel and went to bed. He removed to his house and remained their two months, and he then went to Southport; he went then to Scotland, and during his stay in Scotland he took a large amount of very active exercise; and next he went to Ireland and visited all the celebrated places that were worth seeing, and he then took up his quarters at a hydropathic establishment, and went through certain operations, having his head pumped upon, and sleeping with a wet towel round his head. He laid his damages, I think, if I recollect rightly, at from 8,000 *l.* to 10,000 *l.* The medical witnesses called on his behalf, and one very eminent London medical man, who, I am sorry to say, figures generally in those claims for railway compensation in favour of the plaintiffs, stated that, from his appearance, he was suffering from spinal irritation, and had symptoms of incipient softening of the brain. They said that they founded their opinion from information given them as to his previous state of health, and I should say that, when he went into court to give his evidence, he immediately began sobbing and crying, and could not go on. The judge thought it better to try it in his private room, and he did so; but he again began those symptoms, and the evidence, which I have had printed, of the medical men who had examined the case, was allowed to be put in, to save the pain and annoyance of giving his evidence in open court, or even in the judge's private room. He laid his damages, I see, at 8,000 *l.*, and he put his loss of profit at between 3,000 *l.* and 4,000 *l.*, and his expenses at about 700 *l.* He then delivered amended particulars, in which he claimed loss of profits at the rate of 4,000 *l.*, and said he was obliged to take his son into partnership. The company feeling that this was so important a case, applied to a judge, and obtained an order for inspection of his books, and it was found that, during the period in which he said that his profits were upwards of 4,000 *l.*, it was a small retail business, and the whole of his retail business transactions amounted to 1,000 *l.*, and yet, I am sorry to say, the jury gave a verdict for 3,000 *l.* Application was made for a new trial upon the ground of excessive damages, and the judge ordered that he should pay his own costs in the first trial; he could not, I suppose, bear the expense of the second trial, and the judge recommended that we should settle it if we could, and it was settled for 1,500 *l.*, including the costs; but I may state that, by that time, his own expenses had run up so excessively, that I do not suppose he would receive 50 *l.* himself, and the company's expenses were upwards of 2,000 *l.* in that case.

602. What became of him afterwards?—I do not know what has become of him now, but very shortly after the man was as well as I am, to all appearance. There is no question that it was a complete fraud. The next case is one which probably honourable Members have seen noticed in the public papers, and in that case there can be no difficulty in mentioning even the name. A man of the name of Burton, who lives in Nottinghamshire, at the small village of Hucknall Torkard, was earning about 23 *s.* a week; he was in an accident, and pretended to be very ill, and after a considerable time he made a claim. It went to a jury, and on the following morning, the 22nd of June, the plaintiff was carried into the Court of Exchequer at Westminster, wrapped up in blankets, and when the trial came on before Mr. Baron Martin and a special jury, he was lifted in a chair by two men to the front of the court, with another man behind supporting his head, and another in front supporting his feet. He presented a most pitiable appearance, and professed to be unable to speak loud enough to be heard; he was examined by his counsel very shortly, and gave his evidence by whispering into the ear of the usher of the court, who repeated it aloud in open court. I should mention that it was so slight a case of accident that we settled with him for the sum of 10 *l.*, I think it was; he denied that the receipt which he had given on the settlement was ever read over to him, and swore that he only understood the 10 *l.* to be a payment on account. His whole appearance was so pitiable that very few questions were put to him as to what he had been doing since the accident. Six medical men were called on his behalf, including a very eminent London practitioner, who all expressed a strong opinion that he would never get better, and might die in a very short time. The plaintiff's wife was called,

Mr. *J. Allport.*

16 June 1870

called, and swore that he had had 30 fits between the accident and the trial, and that he had never been subject to fits before. At the rising of the court, and when the plaintiff's case was closed, the company, after a good deal of consideration with the counsel and their medical advisers, came to the conclusion that, in the absence of any direct evidence of fraud, they could not give evidence differing in any substantial degree from that given on behalf of the plaintiff, and they settled the claim for 700 *l.* The company had so strong an opinion from their medical adviser, Mr. Barnard Holt, on this case, that we paid the money at once, and I had the man watched. But on the Sunday before the trial he spent the evening in a public-house, and he was out walking several times during the week preceding the trial, and the week after the trial he was seen to mount a sort of carrier's cart, on his way to Nottingham. We applied for a new trial, and obtained it, but the plaintiff's solicitor wrote to say that it was no use going on with it, for the man had spent the whole of the money, and of course he had not a shilling to return. I may remark that Mr. Baron Martin, when applied to for a new trial, expressed a very strong opinion, and said, that if what was stated by our council was correct, he was a very suitable person for a sensational theatre, or some such expression of that kind. I have another case where a man claimed a very large sum, and ultimately obtained 635 *l.* He keeps a public-house, and he was apparently unfit to attend to his business up to the settlement, but he is at the present time, and was immediately after the settlement, attending to his business as usual, the amount of compensation in his case being 635 *l.* I have a case which is somewhat extraordinary, inasmuch as we know that there was an agreement between the plaintiff and the solicitor, by which the solicitor was to obtain 25 per cent. of the amount awarded, whatever it might be. That information was obtained. I cannot mention names; but still I can vouch for the truth of it. 500 *l.* was paid, and the solicitor, in addition to his costs, obtained 25 per cent. of the amount awarded. The last case but one which I will trouble the Committee with, I look upon as one of very considerable hardship. A gentleman got out on the platform at the Derby Station, and I am sorry to say, although from his position he ought to have known better, he was not quite perhaps in a proper state. Perhaps he had been indulging a little too freely at table. I have drawn a little sketch of the station which will explain it better than I can do it verbally (*producing a sketch and explaining it to the Committee*). At the Derby station on the platform there is a movable piece of platform to enable cattle trucks and horse boxes to be taken from the main line and carried through the platform into docks outside the station, where they are unloaded or loaded, as the case may be. This little bit of platform is moved away to allow the truck or horse box to perform that operation. This (*pointing to the sketch*) represents a doorway at the back of the platform which is usually closed when this operation is not being performed. This door had been opened and the platform removed to allow a cattle truck to be taken through. The platform part had been returned to its position, but the door was not closed; there had not been time to close it. This gentleman, although he had been at the Derby station hundreds of times and knew it as well as I did, and knew that the only access or egress from the station was through the central hall (there is no other of any kind except that), wandered down and fell on to the turn-table which is represented by that circular mark (*pointing out the same upon the sketch*). It was entirely his own fault, but, nevertheless, we were held responsible, and the jury gave him considerable damages.

603. What was the ground upon which they held you responsible?—The door at the back of the platform was a sliding door, and though the platform was perfect, and he knew as well as I knew that this was not a place either of ingress or egress, he wandered to that position and fell through.

604. They held you liable upon the ground that the door was not shut?—Yes.

605. Mr. *Shaw Lefevre.*] Was he a passenger?—Yes, he was a passenger, not by the Midland train, but a passenger by the North Staffordshire train.

606. And therefore not under contract with you at the time?—No, not under contract with us at all, but we had to pay the damages.

607. Mr. *Reed.*] Did the jury know that he was drunk?—We do not like to impute those sort of things.

608. Mr. *Shaw Lefevre.*] Your proposal as to limitation of amount would not meet that particular case, because he was not a passenger?—No doubt it would not meet that particular case; the action lay against the North Staffordshire Company in the first instance; but as the Midland would be ultimately responsible, we accepted service of the writ.

609. Mr. *Lopes.*] As I understand you, the door belonged to you?—Yes, the door was the company's. In the first instance, no doubt, his action would have been against the North Staffordshire Company, but they would have recovered against the Midland Company, and we took the liability upon ourselves. There was nothing turned upon that; we did not attempt to screen ourselves under that plea; it would only have been giving additional trouble for no purpose, but we certainly considered that we ought not to have been liable under the circumstances. Even assuming the man to have been perfectly sober, and it is a well-known fact to every passenger that those doors are constantly opened, and must be constantly opened, any man with eyes in his head must see that it is not a proper place for ingress or egress.

610. *Chairman.*] Was it during the daytime?—It was a little after 5 o'clock in the autumn, so that it would be dark.

611. Did you give evidence that the man was not sober?—No, we did not plead that.

612. Did you settle it without going before a jury?—No, the jury awarded him damages on the ground that the door ought to have been closed.

613. Mr. *Lopes.*] Did you move for a new trial?—No, we did not.

614. *Chairman.*] Have you another case which you wish to bring before the Committee?—I have one case, of which I am reminded, and I should mention it to the Committee, because it is a very important case, and it has been a subject alluded to in a pamphlet which I have here, which was written by a celebrated man, the senior physician of the Sheffield Hospital, a man of very extensive practice, and of very high standing

standing in Sheffield. This pamphlet is entitled "Medical Evidence in Railway Accidents," and it bears very importantly, I think, upon this inquiry; but I refer to it more for the sake of the case which he alludes to in his opening paragraph. "As these sheets were passing through the press, an action for compensation for injuries said to have resulted from a railway collision was tried against the Midland Railway Company, which certainly must be regarded as the most extraordinary ever brought in consequence of a railway accident." I have the case here, and I cannot, perhaps, do better than read it. This man's name was Gresley; he was a very convivial sort of person, a commercial traveller, and amongst his companions he went by the cognomen of Sir Roger de Coverley; and there is also a medical account of this case in the pamphlet, by Mr. Hall, of Sheffield. In this case Gresley was in the Midland train when the accident occurred at Methley. It was tried at the Leeds Assizes in March 1868, and the case was stated by Mr. Digby Seymour. The evidence of the plaintiff went to show that at the time of the accident he was shaken backwards and forwards, and he was so much hurt that he could not be removed for nine weeks. "The medical witnesses called on his behalf testified that he was suffering from irritation of the spinal chord. The medical men called by the company, including Mr. S. Hay" (who stands at the very highest position in his profession), "and Mr. Nunneley, of Leeds" (who has just recently deceased, and who also stood equally high), "stated that he was dying from natural causes, namely, chronic disease of the liver, heart, and stomach, altogether unconnected with the accident on the railway. The jury believed the evidence for the plaintiff, and, accepting injury to the spinal cord, the result of railway shock, in lieu of the truth, gave a verdict in his favour, with 1,500*l.* damages." Under ordinary circumstances we should have paid the amount, and there would have been an end of it; but this man died within a week, and, taking advantage of the law, we applied for an inquest to be held, and an inquest was held; and I have here the result of the inquiry, and it resulted in his representatives accepting 750*l.* We did not like to refuse the claim altogether, particularly as the coroner's jury thought proper, in their verdict, to say, "That Mr. J. M. G. died from natural causes, accelerated by a shock received when travelling on the Midland Railway on the 24th of April 1867." But any one who reads the statement of the appearance of the body after death must come to the conclusion that the railway accident had no more to do with it than if he had never been in it; but the company preferred paying it; and they paid, not the amount awarded, but 750*l.*

615. Are those cases increasing in number, do you think?—Yes, they are increasing, I am sorry to say, very much indeed. However trifling an accident may be, we always find that there are certain symptoms, and the symptoms are so constant that we could almost stereotype them. Even medical men cannot deny that the man is suffering; but there is no question that those cases are extending very much indeed.

616. Do you think that the nature of the symptoms which they allege is suggested to them?—It cannot be otherwise than suggested; anyone who attends to those cases at all in the public prints, will see that they go into the witness-box and complain of dimness of sight, loss of memory, pains in the back, inability to move their limbs, and pains about them generally, and it is impossible for anyone to say that they do not experience those things.

617. The whole of the symptoms of which they complain are symptoms of a kind which cannot be discovered?—Yes; of a kind which cannot be discovered, and they generally disappear after settlement.

618. Assuming the principles of law not to be altered, have you anything to suggest as to the mode of administering it in the settlement of disputed claims?—I would prefer that all those cases should be left to a judge, and it has been suggested that the county court judges might try them, and as they are so numerous in all parts of the country, the case would be speedily disposed of. The companies, I am sure, would be perfectly content to leave it to the county court judges, they having the power to call in medical assessors, if they thought proper; or I would make it compulsory on the election of either party, either the company or the claimant, to go to arbitation. I think that would meet the case.

619. Mr. *Sherriff.*] Do you mean medical arbitration?—The details might easily be arranged. I should myself prefer a medical arbitrator certainly, because, as an arbitrator, I think he would be able to detect fraud more than perhaps an unprofessional person could do, and from my experience of medical men, I am sure they would always deal fairly and justly with claimants. I have always found that even our medical men invariably recommend a liberal compensation where there is really injury sustained, and I therefore think that a medical arbitration would be exceedingly suitable.

620. *Chairman.*] Are your claimants more among the lower classes of society or the upper classes?—They are more from third-class passengers; certainly more from the lower, and from the lower middle classes; but we do find that persons of considerable wealth and position take advantage of third-class carriages very frequently. Of course they are more liable to accident in third-class carriages, and consequently there are more of them, and, as a rule, I should say that the great bulk of our claims are from the two classes that I have named.

621. I think the report of the Royal Commission suggested not only a limitation of liability on the part of the companies, but also that the claim should be brought within a definite period?—Yes; I think that that is a very proper recommendation. We have had claims made even after settlement. As I have mentioned in those unfortunate lists that I have read, claims have been settled, and perhaps 12 months after the case has been re-opened; and in one case a claim was re-opened more than two years after the settlement. There is nothing to prevent a re-opening of it, unless it has been settled in due course of law.

622. Does not the man's own receipt preclude him from re-opening the case?—In some cases I think it does; I think the court has held in one or two cases that the receipt has precluded a claimant from re-opening his case, but generally speaking it is not so.

623. Supposing that there was a limitation upon the liability of railway companies, do you think that they would take the same care of the public

Mr. *J. Allport.*

16 June 1870.

public as they do now?—I do not think that, even for one moment, the question has entered into the consideration of the railway companies in that point of view. I am perfectly sure that, if there had been no law in force, and those claims could not have been made by those persons upon the companies, the same amount of care would have been taken. As a railway manager, I would very much rather pay the amount of the claims that we have paid than that an accident should occur. I would rather be without the accidents, and pay the money, than that they should occur; and I am quite certain that no consideration of saving money has entered into the idea of either the directors or the managers upon this question. The loss to the companies in other ways is far greater than in compensation. First of all, the loss of stock is very considerable. You cannot have a collision, or an engine seriously damaged, without considerable expense, and the carriages the same, and the permanent way the same. Then there is for some time a sort of want of confidence on the part of the public in the company. I cannot, of course, prove a negative, but no doubt an accident has had for some time afterwards the effect of deterring passengers, to a very large extent, from travelling on the line.

624. To what extent do you use the block system?—We are using it now on several portions of our line; in one case from London to Bedford, and in another case between Nottingham and Derby, and from Loughborough to the Trent Junction in the North; and we are gradually applying the block system to the greater part of our main line.

625. Do you consider that it diminishes the chance of accidents?—To a certain extent no doubt it does. It will prevent accidents occurring by collisions between two blocked stations by one train being run into by another. No doubt, if anything occurs to an engine, or a train breaks down, a second train cannot follow until the line is taken out of block, and to that extent it will no doubt save a number of accidents.

626. Why is it called the block system?—I could better explain it by a little diagram. (*The Witness produced a diagram, and explained it to the Committee, and also the instructions which are given to the signalmen.*) We entrust these duties to the signalmen who have nothing else to do but to attend to the signals.

627. When it is said that the block system prevents the possibility of accident, that proceeds, does it not, upon the assumption that your signalmen do their duty?—Quite so.

628. If they do not do their duty, accidents may occur precisely in the same manner as by the failure of the other subordinates of the company?—Yes; until we can make men perfect, which I do not expect, accidents must occur. I am by no means sanguine that this block system is going to prevent accidents. On the contrary I have had a long correspondence with the Board of Trade upon this subject. I thought it my duty to point out that if an accident does occur under the block system from any negligence of the signalman, in all human probability it would be far more serious and far more fatal than under the present system, and on this ground I assume that the signalman makes a mistake, and admits a second train within the block before the first has left it. The engineman, under the ordinary circumstances of the block working, is under the most perfect conviction that the line is clear, and he keeps no proper look out, and he may run into a train; and the result would be, in my opinion, far more serious than under the present system, when he knows that he has to look out for signals, for it is a great mistake to suppose that the block system will do without every signal and signalman that we now have at work; it will not.

629. Upon the whole, do you think that it does increase the security of travellers?—I think it does. I recommended the Midland directors to incur the expense, and it is a very large one indeed, for, by the time the line is blocked to the extent now ordered by the board, it will have cost the company, I should think, from 30,000 *l.* to 40,000 *l.* in the first cost, and certainly it will not cost us less than 15,000 *l.* to 20,000 *l.* a year to work it over and above the present expenses.

630. Mr. *Denison.*] What is the cost of each signal station on the block system?—It all depends upon circumstances. Almost every block signal varies according to the curves of the line, the cuttings, the embankments, the extent of the station, and a variety of circumstances.

631. *Chairman.*] The block system protects the line intermediate between two stations, and to a certain extent the station also?—It does.

632. But chiefly the line intermediate between two stations?—Yes; at a station, for instance, supposing that a train had passed, and the line was clear between two blocks, we should not allow any shunting operations to go on on the main line without keeping the line in block.

633. Mr. *Sherriff.*] And therefore it protects the station quite as much as the intermediate space between the stations?—Quite so.

634. Mr. *H. Palmer.*] And the intermediate space as much as the station?—Yes, the intermediate space as much as the station; but then they are liable to this, and this is my great fear, as I thought it necessary to put on record in my correspondence with the Board of Trade, that, as I said before, you cannot make men perfect, and at some of our large stations, where you have points connecting with the main line considerable distances apart, you will have men forgetful and negligent, and then accidents will occur which I fear will be very disastrous.

635. *Chairman.*] Do you think that the safety of the line depends less upon the skill and care of the subordinates in the case of the block system than it does where the block system is not adopted?—No, I cannot say that; I think that the safety of the line depends more upon the care of the servants with the block system than without, because the ordinary signals are probably put against a man; but in addition to that there is the further operation of telegraphing backwards and forwards, which may be liable to mistake, and may be liable to negligence, and of course to that extent the men are obliged to exercise greater care in carrying on the traffic of the line.

636. Then your general conclusion is that it is a balance of advantages and disadvantages, and that the advantages upon the whole preponderate over the disadvantages?—Yes, that is my opinion.

637. And you think it is expedient upon the whole that it should be left to the company to decide as to whether and when they will adopt the system, rather than that it should be forced upon them by some superior authority?—Undoubtedly; I have no doubt that that, and in fact

fact all these things should be left to the companies. I am perfectly certain that if any system recommends itself to the judgment of the directors and the officers of a company, whatever may be the cost, there is no hesitation in carrying it out, and it is not the recommendation of the Board of Trade or of anyone else that would influence them one way or the other. I am bound to say that taking the company that I represent the company has incurred thousands of pounds, and I may say hundreds of thousands of pounds, in securing the safety of the line, totally irrespective of the Board of Trade, or of any recommendation of the Board of Trade. Sidings and signalling arrangements and a variety of things have been done, and I am sorry to say it has been my painful duty occasionally to differ very widely from the opinions expressed by the inspecting officers of the Board of Trade on some important questions. A good many questions have been put by members of this Committee upon the subject of interlocking of signals and points. For a long time I dissented, and up to the present moment, I entirely dissent from the views of the inspecting officers, and we resisted the interlocking of signals and points, but the Board of Trade refused to allow us to open a line until we had done it. Of course the inspecting officer's duty is to consider the safety of the public, and the Board of Trade had no alternative under such a state of things, but to refuse the opening of the line. I have not a word to say against the Board of Trade taking that position, but practically it forces itself upon the company however opposed they may be to its introduction.

638. With regard to workmen's trains, have you any suggestion to make to the Committee? —We have had no experience of workmen's trains on our line; we have very few workmen living upon our line that would take advantage of workmen's trains. Of course I have my own opinion upon the subject; I think that if companies are bound to run workmen's trains at the low fares that they are now charging, their liability should be limited to a very small sum.

639. Mr. *Lopes.*] You have given us numerous striking cases of excessive compensation awarded by juries with regard to your own line; are they exceptional in the case of your own line, or are they common to all companies?—I believe they are common to all companies; I have perhaps paid a little more attention to it than some others, because I have followed the cases up which have resulted in what I have given the Committee.

640. Have you had cases on your line of claims made by persons who have never been in an accident at all?—Yes, we have.

641. I believe that is not an uncommon occurrence?—By no means an uncommon occurrence.

642. Have there been many cases indicted for perjury and convicted?—In one or two cases they were indicted for perjury. In one case we expected that it would have gone to trial, but the man himself perhaps smelt a rat, suspected that we knew all about him, and that we were in a position to prove that he was miles away when the accident occurred, and he wisely refrained from proceeding with his case.

643. I do not know whether the case was drawn to your attention of Dickenson, and the Brighton Railway Company; the case of a man who recovered 300 *l.* for injuries which he said he suffered in an accident, and it was discovered that he was not there at all, and he was convicted?—Yes, I saw it in the public papers.

644. The contract that a railway company, as carriers, enter into with the public without any express agreement in respect of passengers, and in respect of goods, is a different contract, is it not?—Quite so.

645. With regard to passengers, their contract is to use due and proper diligence in carrying them?—Yes.

646. But with regard to goods, it is an absolute warranty, is it not, to carry them safely?—Yes.

647. With regard to passengers, I believe it is impossible, in any view of the law, to limit their resposibility for compensation in amount?—I believe it is not possible in the present state of the law.

648. With regard to goods, you may in the first case, in respect of certain valuable articles enumerated in the Carriers Act, limit the liability under that Act unless you have notice?—Yes.

649. The Carriers Act requires, does it not, that notice should be given in respect of the articles enumerated in that Act, if the party seeks to recover more that 10 *l.*?—Quite so; and then we are bound to insure, and the party sending the goods is bound to pay the premium.

650. And also by another Act in respect of horses and cattle, you must have notice if more than a certain amount is to be recovered?—If more than 50 *l.* in the case of horses, and 15 *l.* in the case of cattle.

651. And under the Canals Acts you may limit the liability under certain conditions, provided those conditions are reasonable?—Yes, we can.

652. But none of those conditions, and none of that immunity can be applied in the case of passengers?—No.

653. Do you see any reason why the same system should not be pursued in respect of passengers, that is now legal with regard to goods, I mean in respect of restricted liability?—I see no reason; on the contrary, I think we ought to have the same security.

654. You said something just now with regard to payment into court; is it the fact that companies find it impossible to pay money into court?—Not impossible; but practically it is most undesirable.

655. I believe the common course is this: where you propose to try a case in court, and you admit your liability, you generally pay 1 *s.* into court?—Yes, and then the sheriffs' jury assess the damages.

656. You pay 1 *s.*, and then the case is tried at Nisi Prius, or in court?—We pay some small sum into court, admitting the liability.

657. Otherwise, if you allow judgment to go by default, the inquiry takes place before the sheriff?—Yes.

658. What is your opinion of inquiries before the sheriff?—Generally they are longer; but there you have to deal with a jury; and without saying one word against a jury, I am sorry to say that their sympathies, to put it no higher than that, always go with the injured person.

659. Do you miss the control of the judge in those cases?—Yes, we do.

660. I believe

Mr. *J. Allport.*

16 June 1870.

660. I believe, as a rule, the compensation awarded before the sheriff is generally larger than that which is awarded before a judge?—Yes, certainly it is so.

661. Do you know as a fact, that many judges object to try those cases where the liability is practically admitted?—I have not paid much attention to that. That is a legal question, and I very seldom attend to those cases when they get into court.

662. Is not a very common item of claim in those cases the loss of profits in business?—Yes.

663. Do not the companies find that a very difficult matter to deal with?—Very difficult indeed. We have tried to get at a man's profits, and in one case we got an order for the inspection of his books; but that was a very extreme case. We have tried at other times to call in aid the payment of income tax, but the judges will not allow that to be done.

664. Take the case of a tradesman who does not keep books, such as a licensed victualler, the difficulties there would, I presume, be almost insuperable?—They are insuperable.

665. In fact, you would have to depend entirely upon the statements made by the licensed victualler as to his profits?—Yes, entirely; and we know from common repute, and the common observation of their neighbours, that the amount of profit put down in those cases is very greatly in excess of the real state of things.

666. Has your attention been drawn at all to the exaggerated particulars that are delivered in those actions by the plaintiffs' attorneys?—Yes, frequently.

667. Both as to the amount, and as to the items contained in them?—Yes; in many cases that we have tried, the original claims amounted to 10, and sometimes 20 times, the amount awarded, even by a jury, much as we complain of the decision of juries.

668. Has it occurred to your mind what the object is for delivering those particulars, which one can only call fraudulent?—I apprehend that there is a twofold object; we know very well that there is a certain class of solicitors who hold themselves out for this business, and they try for the sake of getting as much as they can for themselves, to make the claim heavy.

669. Do you think that they are delivered in the hope of a settlement to a considerable amount?—No doubt of it; but we never can secure a settlement until it has gone on to a certain extent, when no further expenses to any great amount can be incurred.

670. In fact, when the solicitor has secured to himself all the gains that he can hope to obtain?—Quite so.

671. You spoke of referring those cases to the county court judges; do not you think that you might have a reference of matters of this sort to a local jurisdiction?—I should certainly prefer one of the judges of the superior courts.

672. I am assuming that the law continues as it is at present?—Then if the law continues as at present, certainly I would not leave it to the county court judges.

673. But assuming the law to continue as it is at present, do you think that this would be a good tribunal, an arbitration of three persons, to be selected and chosen by the parties, the one a medical man, the other a lay arbitrator, and the third a lawyer?—I would prefer leaving things exactly as they are; if our liability is not to be limited, I would much rather that the case was tried in open court before a judge, because a judge can frequently detect cases of fraud that an unprofessional person would not; I should certainly prefer leaving things as they are, to an arbitration of that kind.

674. But you would prefer of course the limited liability system?—Quite so; then I have no objection to arbitration; and you see that arbitrations, or cases of trial, would rarely occur if our liability was limited to 200*l.* or 300*l.*; if an accident occurred, we should almost always settle, although we might pay more than was fairly due; we should never, I think, put the parties to the expense of going into court, because we should be putting ourselves to expense; and I do not think that the claimants then would put themselves into the hands of those low attorneys in the way they do now.

675. In point of fact, the costs invariably fall upon the company, do they not?—Yes, invariably.

676. That in itself is sufficient inducement, is it not, to them to settle on fair and reasonable terms?—It is. As I have stated, we have case after case of the costs incurred, being far in excess of the amount paid for damages.

677. Mr. *Denison.*] Have you a knowledge of many cases in which railway companies have been made liable for accidents or injuries to persons at stations where they were mere loungers, and not under contract to travel with the company owning the station?—We have had cases of that kind, and one very singular case. A woman fell over a weighing machine, which it is absolutely necessary to have at a station. It was put at the end of a bench as much out of the way as possible, and yet she negligently fell over this machine, and we had compensation to pay in that case. We had a case at one of our stations where there was an iron palisade fence, and the supports to the fence (as you have seen at every four or five yards there is a support) happened to be on the platform instead of outside, and had been there for many years. A man walking along the platform caught his foot against one of them, and threw himself down, and I think we had to pay a sum of 250*l.* for it.

678. The judges, in fact, have ruled, have they not, that railway companies have no right to exclude the general public from their stations?—Yes.

679. Although it is their private property?—Yes.

680. And although they are excluded on the continent and elsewhere, unless they are going to travel?—Yes; I perhaps might limit that to a certain extent. I think you may exclude the public from your platform when a train is arriving, or when it is departing. I question whether they would legally have a right to be on the platform without tickets; but in practice we do not exclude the public; you cannot, indeed.

681. In the instances to which you referred, in which compensation has been awarded to people for injuries occurring at stations through the platform giving way, or something of that sort. In your experience, have the verdicts of juries erred more from their own exaggerated sympathy with the persons, or from the direction of the judges?—I think more from their own sympathy and the sort of feeling that they have. I certainly do not think that the judges, as a rule, err in that direction.

682. You

682. You have suggested, have you not, as a better tribunal, the county court judges, with the occasional assistance of assessors?— That is in case the law is altered.

683. Would the evils of which you have complained, as to the intervention of unprincipled attorneys, be removed or abated, in case that plan were adopted?—I think it would be abated most considerably.

684. You have said also that those exaggerated claims for compensation are greatly on the increase; are you acquainted with a book published by Dr. Erichsen, giving his experience of railway and other injuries to the nervous system?—Yes.

685. Do you not think it possible that the book in question may have suggested many imaginary and exaggerated claims?—Yes. I also know another book, published by Dr. Fletcher, which is mentioned in this pamphlet before me in the opposite direction to Dr. Erichsen's pamphlet, and which is written in a very fair spirit. I see nothing to complain of it, either on the part of the companies or on the part of the public; but it gives very extraordinary statements. Practically, the very opening paragraph in this pamphlet shows that those medical men in a great number of cases are more advocates than witnesses; and I think I could not do better than just read the opening paragraph of the writer of this pamphlet. He says, "One morning a solicitor called upon me and stated that Mr. —— had been injured in a railway accident; that Mr. —— was in attendance; that he wished me to see the patient with him, and he added, 'Take notes of the case, for we shall probably want you to give evidence in an action against the company.'"

686. Have not some of your worst accidents occurred with excursion trains?—Yes, some of them; when I say the worst, I mean very bad accidents with reference to compensation.

687. Have you in fact diminished the number of excursion trains?—No.

688. Was not there one bad accident in 1869 which occurred with an excursion train?—Yes, there was.

689. Would the block system have prevented that accident?—I think it would. That was the Long-Heaton accident, which occurred under very peculiar circumstances, and in a very dense fog indeed, which came on very suddenly.

690. Mr. *Reed.*] You said something of one man's life being worth comparatively nothing, and another being worth 20,000 *l.*, I suppose you referred to the income of the man, and the means of supporting his family?—Yes.

691. But the life of the head of a poor family is of the same value as the life of the head of a wealthier family, is it not?—I was not alluding to poor men at all; for instance, I will take the cases of two men, one a nobleman of large possessions and great wealth, whose family, in the event of his death, are all amply provided for; the other a rising professional man, whose family are all dependent upon his labours. I apprehend, if the two were killed in a railwry accident, the company would find the life of the latter much more valuable than that of the nobleman.

692. The bulk of the claimants, I think I understood you to say, were third-class passengers, and the poorer class?— Simply on this ground, that they are the most numerous class travelling.

693. Do you not consider it a very difficult thing for a poor man to make out his claim against a company?—On the contrary, my experience is that they have the greatest possible facilities, and the poorer the man the more readily he falls into the hands of those attorneys.

694. Do not you think it is a reasonable supposition that he puts his case into the hands of a low solicitor, as you would term him, because he has no other means of fighting the company upon his claim?—Not at all; on the contrary, where those solicitors do not interfere, we have very seldom any difficulty in getting people to settle, and I could mention many cases where we have settled without the intervention of either a solicitor or a court of law in any way whatever; but when those solicitors appear on the ground, then our difficulties commence.

695. Do not you think that a reference to arbitration would be still more expensive to a third-class passenger than a simple claim in the ordinary way?—I think not, because the expenses of the arbitration would devolve upon the company in nine cases out of ten, or 99 out of 100.

696. Are you not aware that many poor people fail to press their claims because of their inability to meet the cost of the legal expenses?—I never knew a case of the kind, and I do not think that such cases do exist to any extent; I never heard of one.

697. Then the solicitor who agreed to take 25 per cent. of the award, was not to be supposed to look to that as his only chance of payment?— He could not have got anything else, for the person was extremely poor; when I say poor, he had no means of paying the expenses.

698. You mean no means of paying the expenses against the company?—We never had an opportunity of settling that case; it was taken out of our hands at once. We should have settled with the person, I have no doubt, upon very fair and equitable terms if it had not been for the intervention of the solicitor.

699. Are juries more in the habit of dealing harshly with railway companies than with other public carrying companies in case of negligence; omnibus proprietors, and so on, or in the case of street accidents?—I have no doubt of it; and I think no one can have the slightest doubt of it who has paid any attention to those cases.

700. Would not a judge detect a case of simulation readily?—Let me allude to the first case that I mentioned. The man lay in bed, and pretended that he could not walk. We sent a very eminent man down from London, and he gave it as his opinion that this man was injured, and although he might ultimately recover, he was then unable to move. That man moved from the public house where he was staying to the station the following day, or the day but one, after the settlement, so that if a medical man cannot detect it, a judge cannot very well; and in another case, when the man was carried into court wrapped up in blankets, and the judge allowed the usher of the court to take his answers, and the man could not speak above a whisper, I say, in less than a week from that period, the man was riding on the top of a carrier's cart. Neither judge nor jury detected simulation.

701. You have said, have you not, that you desire to have an immediate application on the part of the claimant, and a ready settlement?— I do not think I said that; on the contrary, I think it is desirable that a man should know precisely what his condition is. It does sometimes happen

Mr. *J. Allport.* 16 June 1870.

happen that a man will go for two or three days and not feel anything, and he then may feel unwell, and the only ground on which I would advocate an immediate settlement would be, to prevent his falling into the hands of those attorneys.

702. Do not you think it might be desirable that a delay of the application should be accepted?—We think that six months is ample time. The Royal Commission recommends that actions should be brought within six months, and I think that is ample time.

703. Simply that the people complaining of the accident may show themselves more satisfactorily to you?—Not only to the companies, but to the medical men. I think, if you read medical testimony, you will find that no symptoms can develop themselves after six months.

704. Have you yourself been in an accident?—Yes.

705. You spoke of the case of a working man who, immediately after he received his money, walked to the station. Do you remember a case which happened in 1864, that was not a bad case, I believe, and what amount the man had received in settlement from you?—It was 550 *l.*, I think, and I call it a very bad case.

706. In case of false evidence and fraudulent statements, you have your remedy against a man, have you not, if you can prove afterwards that he had deceived you?—No doubt; but what chance would there then be of proving it? A man says to-day, "I have lost, to a certain extent, my sight; I have lost my memory; I feel pains in my back." A week hence he says, "I am perfectly well;" and would any jury convict that man of perjury. You cannot deny that the man feels what he states he feels to-day, although he is perfectly well next week; it would be quite futile to attempt it.

707. I suppose, with regard to medical evidence, it is the fact that those symptoms are very variable, and may arise at any time?—They are generally very similar in railway accidents, I am sorry to say; I speak from facts, I do not speak from opinion.

708. You have spoken of men who have robbed the company, and my question is, whether you had not your remedy if you can prove that a man has, by a fraudulent representation, robbed you of money?—I have given my answer, and I can only repeat it, that I believe no jury in England would convict a man of perjury who states to-day that he feels certain pains and next week that he is perfectly well.

709. With reference to the block system, you have said that any company would go to any expense to ensure the public safety on their system; but perhaps a non-paying company might not be so willing to expend a large sum of money as your company would?—That is very likely.

710. Therefore it might be desirable that the Board of Trade should have power to interfere in such cases and require it?—I think however poor a company might be, if it was found universally advantageous to be applied, the company would adopt it. I do not think that the question of poverty enters into it at all. We know this, that very poor companies adopt the system of signalling that is practised on the best-paying lines, and the question of expense does not really enter into the consideration.

711. Your Camden Town and Kentish Town Stations are in the midst of a thickly-populated district, are they not?—Not of working men; at least, we find that they do not travel at all, and I do not believe there are a sufficient number of workmen living out at Kentish Town or at Camden Town who would come daily into the city to their work; in fact, it is a more respectable district; the passengers are quite a superior class.

712. I see by your return to Parliament, that there is one train in the morning at 7.15 called a workman's train, but I find that the charge for a return ticket to London is 6 *d.*, could you not give greater facilities for working that traffic?—I do not think we have any workman's train; we have no train on the line called a workman's train.

713. You have nothing, in fact, under the ordinary fare of 6 *d.* for a ticket?—No.

714. Mr. *Sherriff.*] Do you consider that third-class passengers are more liable to injury than either of the other classes?—I do not think that they are, excepting that they are more numerous; and, of course, where you have one first-class passenger you have probably 20 or 30 third-class.

715. Can you explain why you propose that a first-class passenger shall insure for 3,000 *l.*, a second-class for 2,000 *l.*, and a third-class only for 1,000 *l.*?—Because they pay less. I think our risk should in some measure be guided by what we receive. A first-class passenger pays, we will say, 2 *d.* or 2½ *d.* per mile; a third-class passenger pays, varying from 1 *d.* downwards to less than one farthing per mile; and that is, I think, a sufficient reason why it should be limited.

716. On what principle do you found your insurance rates; do you found them on a principle which will make pay *per se*, or do you expect a loss to accrue to the company from the insurance?—I do not think there would be any profit; on the contrary, I think there would be a loss. If Parliament should authorise it, I should be very glad to make an arrangement with any insurance company to take all the proceeds, and take the risk; but we were guided, in some measure, by the conduct of the Accidental Death Insurance Company. They decline to insure any life for more than 1,000 *l.* first-class; and they will not insure a third-class for more than 200 *l.*, and I think a second-class 500 *l.*; they will not insure beyond.

717. But in their calculations they, of course, assume that they will make a profit; as I understand you, the railways believe that carrying out this principle of insurance will leave a loss?—I think it will leave a loss, because we all know that no insurance company will take more than a certain sum on any one life; and although they would receive double the amount for 2,000 *l.* that they would for 1,000 *l.*, yet they limit the extent to which they will insure. If an accident did occur to a man insuring for 3,000 *l.*, the loss would be very serious; whereas it is very improbable that three men would be killed, each insuring for 1,000 *l.*

718. Mr. *H. Palmer.*] When you say that you wished the county court judges to have jurisdiction, do you wish to exclude the option of a jury altogether, because a county court judge may have a jury now?—I should prefer it being left entirely to the county court judge if the law is altered, and exclude juries altogether.

719. You

719. You have given such satisfactory evidence about the block system that I merely want to ask you this: if it is so advantageous, would not it be a useful thing if the Board of Trade had the power to enforce it on companies who would not adopt it without the necessity of going to Parliament for an Act?—I have a very strong opinion against the Board of Trade having that power, because I am quite sure that, to relieve themselves of the responsibility, for it would be a very serious responsibility upon the Board of Trade, they would order it on every line, whether it was a main line or a branch line; and I consider that it would be a mere waste of money to put it upon a great many branches of the Midland Railway. But upon what principle could the Board of Trade Act; if an accident did occur upon a branch, the Board of Trade would naturally feel that the responsibility of it rested upon them; and I should fear that it would result in the block system being put on hundreds and thousands of miles in this country, where it would be utterly useless.

720. I am not supposing that they should attempt to enforce it indiscriminately, but if they had strong evidence from their own inspectors that it was necessary on one particular line, should they not have the power, not only of recommending it instantly to be done, as is now the case, but of ordering it to be done?—I think not.

721. Do you think it would meet your objection at all if the order was to be laid before Parliament at the commencement of a Session before it became binding?—That is done now; the Board of Trade periodically publish the accidents that have occurred, and the reports of their inspecting officers, and the recommendations of the inspecting officers are printed with those reports, and those are laid before Parliament.

722. But that does not meet my point; I am quite aware that they do give that information; but what I mean is this: that if the Board of Trade thought it right to enforce a rule upon all companies or any company, would not it be a protection to the company to have it laid before Parliament before it became positive law?—Certainly not: I do not think that Parliament would care two straws what was ordered by the Board of Trade, whether it was a useless expenditure or not; it would be laid before Parliament, and as the Members of Parliament are travellers, they would say "This is all for the benefit of the public;" but I do not think it would have the slightest effect.

723. Of course I mean that when it was laid before Parliament, the company would be represented there by somebody who would have the power to object?—I am afraid that that is a very slender reed for the companies to rest upon.

724. Then it comes to this: do you think it desirable that in every case in which you wish to enforce any rule upon the companies, you should be driven to an Act of Parliament for the purpose of enforcing it?—Of course that is a hypothetical position to take, but the companies generally are so alive to the necessity of safety to the public, that if a Board of Trade recommendation has virtue in it, it will be adopted. But, as I said before, I have had occasion to differ from the Board of Trade's inspecting officers on several important matters, and one a very serious one, and I have seen no reason to change my opinion, and I speak advisedly, after the most active life that perhaps any man in England has led in railway management, and I have no hesitation in saying that the Board of Trade's inspecting officers are wrong in that particular case, although many railway men think differently. I could have shown reasons why I considered that they were accidents, which would have occurred if the system recommended by the inspecting officer had been in operation.

725. You say that the railway companies are always ready to adopt everything that is right, without the intervention of Parliament; are you aware that an Act was passed, I think two Sessions ago, requiring all the companies to adopt a communication by signal between the passenger and the guard and the driver?—Yes.

726. That was a comparatively small affair, was it not?—That has been utterly useless in practice.

727. But it was a comparatively small affair?—No, on the contrary, it is a very important affair; it is costing the companies a very large sum of money; even before that, all the large companies had a communication (we had it for many years in operation) between the guard and the driver; and after being in operation, I forget the number of years, and I forget the millions of miles, but I had it taken out, and I found that it had never been once used; we have had this communication between the passenger and the guard in operation since the 1st of last July; and as near as I can make out, we have run between two and three millions of miles, and there has been only one occasion which it would have been of the slightest use. I admit that on that particular occasion it would have been so, but like everything else that is not in constant use, it gets out of use, and is not in order when it is required; and the man in uncoupling the rope, had just given it a turn round one of the points to prevent it releasing itself entirely, and in attaching it again to the engine, he neglected to unfasten the rope, and the result was that it was not used.

728. You have the rope system, have you?—Yes.

729. Are you aware whether the rope system is generally adopted?—Yes, it is.

730. There was an electric system tried, was there not?—Yes, there was.

731. Was it abandoned?—No, it is in use upon some of the lines south of the Thames, but not upon any of the main lines north of the Thames.

732. Which do you think the best of the two?—Of the two, the rope decidedly; it is the simplest and the best.

733. Do not you think it would be right that it should be more accessible than it is at present to the passenger at the top of the carriage?—I think not; I think that it should only be used in cases of emergency, and that there should be some little difficulty in putting it into use, for if it was left easily to be got at, and easily used without detection, passengers would be stopping the trains in perhaps very dangerous positions.

734. It is usual, is it not, to put a notice inside the carriage where the thing is, and how it is to be used?—Yes.

735. The other day some witnesses were asked about locking the carriage doors; and in that Abergelly accident it was stated that one disadvantage was that so many of the doors were locked; do you think it a good plan, for the safety of the passengers, that the doors should be always

Mr. *J. Allport.*
16 June 1870.

always locked on the one side?—Yes; on the off side undoubtedly they ought always to be locked.

736. Do not you think that the foreign system, by which there is a hasp at the bottom of the carriage, is a good plan?—I think it most undesirable to adopt it; in the first place, it causes very great delay at the stations. In this country the public would not be satisfied with the detentions at the stations that takes place on the Continent. If you take a long train, to go along the train and do that at every carriage-door takes a considerable time; and I am certain that the public would never submit to it; it would delay the trains very considerably. In practice, I do not think it is found at all inconvenient to lock the doors on the off side, keeping them unlocked on the near side.

737. You think it a protection rather than a disadvantage?—I do; I think that the public should have the opportunity of opening the doors on the near side.

738. You have been asked by the honourable Member on my left upon what principle you limit the scale for insurances, allow me to ask you upon what principle you fix the limit of liability at 200 *l.* to a working man, or to a third-class passenger; at 400 *l.* to a second class, and up to 500 *l.* for a first-class passenger?—There must be some point taken. We considered, at least I do myself consider, that even that is an extreme limit. I do not see why you should be held liable even to the extent of 400 *l.* for a first-class passenger without insurance. Of course, we take the very best steps we can to secure the services of good men, and I know that the system is such that we do secure the best men that can be got, but it is a very difficult matter. I would put this case: supposing your coachman chose to get drunk; you select your coachman because you believe him to be a steady, trustworthy man, but if he chooses to get drunk, and, as he drives along Piccadilly, knocks down and kills half-a-dozen people, and knocks down 50 or 60 others, it is a very hard case that you should be made liable in every one of those cases, because you happen to be his master.

739. In the case of a man who travels by third class, upon what principle is it to be considered that the worth of his life and his limbs is to be limited to 200 *l.*, whilst in the case of a first-class passenger it is estimated at 500 *l.*? — On the principle that we receive more money for the carriage of a first-class passenger than for a third-class passenger.

740. Then it arises simply from the difference between the fares?—I think that that is a very proper difference; it arises from that.

741. That is the only principle, is it?—I do not say the only principle. Generally a first-class passenger's position in life is different; his life his more valuable than that of a poorer man.

742. That may be a reason why a jury would be able to judge better than, probably, a single arbitrator or judge, may it not, as to what was the loss or injury sustained?—I think that the judges judge impartially and dispassionately, but that a jury, unfortunately, does not.

743. Would you not be liable to the same frauds by unscrupulous attorneys, and people who claimed damages, if you had your proposed limited liability, just the same as you are now?—I think not, and on this ground. As I have read to the Committee in those cases, a man claims 7,000 *l.*, 8,000 *l.*, and 10,000 *l.*, and gets perhaps a few hundreds. He would know that, under no circumstances, if he was a third-class passenger, he could get more than 200 *l.* in case of injury, or in case of death, unless he was insured, and if he was insured the money would be paid without a moment's hesitation. If death occurred, 400 *l.* would be paid to a first-class passenger, and if he insured his life for a couple of thousand pounds, the 2,000 *l.* would be paid without the intervention of lawyer, or jury, or judge, or anybody else.

744. You think that you would suffer the same in comparison, and you would pay it without investigation?—We would have no choice. Assuming that a passenger is killed, we are liable to the extent of 400 *l.*, as we have proposed, and beyond that, if he insured his life for 2,000 *l.*

745. I am supposing no insurance?—Then, I think, the railway company would pay the 400 *l.* without any hesitation. I do not think it would lead to litigation by any means.

746. Mr. *Sherriff.*] But litigation would occur in case of injury, and not in case of death?—Not to the same extent as now. The man would know that the company would only be liable practically to a certain fixed sum.

747. Mr. *H. Palmer.*] The fraud could only be in case of injury?—A man may claim now 7,000 *l.*, 8,000 *l.*, or 10,000 *l.*, and the justice of the case might be met by a payment of 50 *l.*; but under no circumstances would he be able to claim anything beyond the 200 *l.*, 300 *l.*, and 400 *l.*, and being between those limits, I do not think it would lead to litigation.

748. The company would not think it worth while to litigate cases if that limited liability existed?—I do not think they would.

749. Mr. *Price.*] In the case of carrying goods you get a higher rate for carrying valuable goods than you do for goods of a minor value?—Yes, we do.

750. That is because in case of accident you are liable to larger damages in the one case than in the other?—Quite so.

751. And you see no injustice in applying the same principle to the case of passengers?—I do not.

752. It does not cost any more, does it, in locomotive power or in other expenses to move a ton of silk than it does a ton of coal?—No, it does not.

753. But if you damage a ton of silk you have more to pay than if you damage a ton of coal?—In fact, we should be protected by the Carriers Act. A ton of silk is worth about 2,500 *l.*, and a ton of coal is worth about 8 *s.* or 10 *s.*; and between those two, silk as the highest class of goods and coal as the lowest, you have every variety of value; and we, by classification, endeavour to assort goods according to their value, and charge higher or less in proportion to the value.

754. The difference you get in the rate for carrying a ton of silk and carrying a ton of coal, is not due to the fact that it costs you more to move it; but that you have a heavier liability in the one case than the other?—Yes.

755. It does not cost you more to carry, but you are under the disadvantage of the greater liability of the company?—Yes.

756. If you damage the one you have more to pay than if you damage the other?—Yes, quite so.

757. And

757. And therefore you think it reasonable that the amount of damage should have some reference to the amount that you receive for carriage?—Yes, that is the principle.

758. Generally speaking, you do not object so much to the state of the law as you do to the mode in which it is applied by juries?—That is our chief objection.

759. You think that they take a view of the case, which encourages fraudulent claims and fraudulent practice, which is very demoralising to the public, and very injurious to the railway companies?—I have no doubt of it.

760. You think that under a tribunal differently constituted, say, for example, a judge trying a case of this kind without a jury, his legal mind being brought to bear upon such cases, would generally lead to a much more satisfactory result than where they are subject to the capricious action of a jury?—That is our experience.

761. Have you any idea why it is that juries take that extravagent view which they generally do against railway companies?—There are perhaps two or three reasons for it. You cannot quite enter into the mind of juries, but every man feels that sometime or other he must travel by railway, and I believe there is a general opinion that the companies are careless and negligent, although a more erroneous one I am quite sure could not prevail. In many cases it is sympathy, and in many cases it is a desire to punish the companies. I have heard it expressed by juries, not in open court, but jurymen have afterwards expressed to me that they were determined to punish the companies. I can mention one remarkable case of this sort. A man, because he could not get a claim paid, said, "Well, let me get on a jury against you, and I will take care to punish you." That is the sort of feeling. I do not say that it prevails to any very large extent; I should be sorry to think so; but you cannot divest the minds of juries from a feeling of sympathy towards the passenger, and that they are dealing with a rich company who can well afford to pay.

762. There is a common sort of feeling that a railway company is a sort of robber and common enemy, that ought to be punished whenever he can be caught?—That is the general opinion.

763. And it is the sense of injustice under which railway companies are suffering, that induces them to ask for some relief from Parliament?—Yes, that is so.

764. Is there not a sort of feeling that a good many of those accidents arise in consequence of the carelessness of railway companies, or railway managers, in appointing their servants? — I believe there is that feeling to a very great extent.

765. Is it not a matter upon which railway companies, and those who act for them, are especially careful as far as they can to ascertain the character of all those whom they put in confidential positions?—I do not think it is possible for either private persons or companies, to adopt greater precautions in getting good servants than railway companies do. I may mention my own practice. I never put on a man without a recommendation, not only from his immediately preceding employer, but from three if I can get it, if the man has been in three employs. I always like to get three characters; and if there is the slightest flaw in his character he is not employed; he must be able to read and write; he immediately gets higher wages than he has been accustomed to, and he is not promoted to a responsible position till he has been in the service of the company a considerable time. I do not see what other precautions we can take; but men will be careless in spite of all you can do.

766. The public having an impression that railway companies are careless in the mode in which they appoint their servants, is it not a fact within your own knowledge, which you have frequently to complain of, that the public themselves who recommend those servants are guilty of very culpable negligence in the mode in which they recommend them?—Very much so, indeed.

767. Is it not the fact that people frequently recommend to railway companies servants that they want to get rid of themselves?—Very frequently. A case came under my own observation a very short time ago. A man was in our employ who received a good character. After he had been in our employ for 12 months, I ascertained that he was discharged for dishonesty by the very man who gave him the character.

768. When a railway company dismiss a servant for drunkenness, or any vice or fault tending in the direction of accidents, is it not a constant practice of the public to memoralise the board of directors to restore that man to their employ?—Constantly; and it is a common observation that the worse the servant the more numerously will the memorial be signed.

769. You have travelled a good deal on the Continent, and are familiar with the continental system. I presume that the continental system is likely to be freer from accident than our system?—Of course it is. There are fewer trains, and they run at slower speeds. In fact on most lines they have only two trains each way per diem for passengers, and they run at very slow speeds.

770. Do you think that the British public would stand that mode of railway travelling?—Certainly not. There are no express trains on the Continent; at least there is no one train running as we do now every day several trains 97 miles without stopping. I do not believe there is such an instance on the Continent, or in the world, besides England.

771. Are not the railway boards under continual pressure on the part of the public to increase the amount of accommodation?—Yes, constantly.

772. One of the greatest difficulties that you have to contend with, is to limit the number of trains that run upon your various lines?—It is, and to satisfy the public at the same time.

773. All increase in that way must tend to increase the liability to accident? — No doubt about it.

774. You were asked the question whether or not railway companies were a little slack in settling fair and reasonable claims in case of accident; is it not the fact that whenever railway companies take the initiative in settling those claims, they are always charged with a desire to do so in order to prevent a man ascertaining, through legal and medical assistance, whether his accident is a serious one?—We have been accused in open court repeatedly of endeavouring to settle those claims rapidly, with the object of preventing the claim being larger.

775. So that railway companies are obliged to be cautious how they take the initiative in all those cases?—Yes. Again, I may say we have

Mr. *J. Allport.*

16 June 1870.

taken the settlement of those claims entirely out of the hands of our medical men; we do not allow the medical men to settle a claim at all.

776. I presume it is not the interest of those men who make a trade out of railway accidents to allow the sufferers to settle those matters without their intervention?—No doubt.

777. A railway accident is looked upon much in the same way as a wreck was formerly, on some parts of the coast, as affording a good opportunity of getting loot?—Yes; I am afraid it is so, and it is a great hardship upon railway companies.

778. Mr. *S. Lefevre.*] You stated that you wish to apply to passengers the same rule as you now apply to goods; would you also apply to passengers the same principle as you now apply to goods in respect of a warranty carrying safely, because you are bound now to carry goods safely?—I suppose we are under the same liability in the case of passengers now.

779. Not quite the same, because, in the event of an accident, the passenger is bound to show negligence before he can recover?—Yes; I should not be afraid to come under the same obligations.

780. Upon this principle, which has been recommended by Mr. Blenkinsop, being applied would you also warrant the safe arrival of a passenger?—I question if we are liable in the case of goods if a pure accident happens; if, for instance, a tire breaks from any cause not to be ascertained, and damage arises, it is a legal question whether we are liable, and I would rather not answer it.

781. My impression is, that there is a warranty upon his safe arrival?—I think not.

782. The company is the insurer in the case of goods but not the insurer in the case of passengers?—I will not, of course, go to that extent; I believe that the Royal Commission recommended that the company should be liable for all accidents.

783. So that the onus should not be thrown upon the passenger to prove negligence?—Not if we were liable in other respects.

784. If there was a limitation of liability you would be prepared to accept that extension of liability to that amount?—I think so.

785. So as to relieve the passenger of the onus of proving negligence?—I think so.

786. Is that the general impression of railway companies?—I think so; it is a point which has not been discussed, but I think I know them sufficiently to say that that would be the general opinion.

787. Do you agree with Mr. Blenkinsop in the proposal which he has made, namely, a liability to the extent of 500*l.* for first-class, 300*l.* for second, and 200*l.* for third-class passengers.

788. Irrespective of the fares paid by those three classes?—I think it should be quite irrespective of the fares paid.

789. Supposing a railway company charges less than a 1*d.* a mile for a first-class or a second-class fare, whereas other companies are charging 2*d.* or 3*d.*, would you still hold them liable?—Yes, I think so.

790. There is no legal distinction between first, second, and third class, is there?—No, there is not.

791. Therefore it would be necessary to make some legal distinction if this principle is to be applied?—The fact of a person having taken a first-class ticket would settle the question.

792. But there is no legal distinction between what is first class and what is the other class?—If those changes are made, they must be embodied in an Act of Parliament, and the details would have to be arranged of course.

793. Have you considered at all what would have been the effect of this principle had it been adopted some time ago upon your payments in respect of compensation?—No, I have not.

794. You told us, I believe, that the payments made by the Midland Company amounted to about 130,000*l.* in the last five years?—£. 142,000, I think, including medical expenses, and so on; I find that in actual compensation we paid 113,485*l.*

795. I see, if those figures are a fair illustration of the payments made, that the great bulk of them are very much less than 500*l.*, in fact varying from 50*l.* up to 200*l.*?—Yes, no doubt.

796. The cases of considerable amounts being paid are very few?—Yes, there is no question that in individual cases there are many of them very small; as low as 5*l.* and 1*l.*, and so on.

797. The cases in which large sums are paid are comparatively rare?—Comparatively rare.

798. I make out in this list only 33 cases, in which sums of over 500*l.* have been paid?—There are a great number of cases here where the amount is not filled in at all.

799. Still, I presume, that the larger amounts would have been filled in?—I think not; they are not filled in.

800. Still a very large proportion are of a smaller amount than the sums which you would have to pay upon the principle which you now wish to apply?—No doubt of it.

801. And within limits in which it would still be possible for fraudulent claims to be made of all kinds?—I think the very fact of the sum being limited would prevent fraudulent claims being made. The fraudulent claims we find to be in almost all cases where they claim very large sums, amounting to thousands, instigated, I have no hesitation in saying, by their professional advisers.

802. The case you have made out on the part of the companies is not entirely an exceptional case, namely, the one of fraud?—Not entirely.

803. You have insisted that railway companies are subjected to so many cases of fraud?—I do not put it upon that ground at all; I put it upon the ground that it is unfair, looking at the small sums which we receive from the passengers, for two men riding in the same carriage side by side that we should pay 10,000*l.* in the one case, and 100*l.* should be deemed sufficient in the other.

804. Then quite apart from the cases of fraud which you have put before this Parliamentary Committee, you think that the railway companies are entitled to some consideration?—I do, undoubtedly.

805. In that way you separate your case from that of other carriers, apart from the case of fraud?—As I stated, I am not aware that other carriers are liable to the same hardships as railway companies in respect of accidents.

806. Surely there are cases in which omnibus companies and shipowners are found liable for negligence to their passengers?—I do not remember any serious case of an omnibus proprietor, or an omnibus company, in London, paying any large sum; nothing like what the railway companies pay.

807. Do not you think shipowners do so?—I have

have shipowners in my mind; and I do not remember a case of a shipowner being called upon to pay a large sum.

808. Supposing it is proved to you that shipowners are called upon to pay very heavy demands, would you think that the same principle which you wish should be applied to you should also be applied to shipowners?—Yes, if they are subject to the same injustice as we are.

809. I mean, quite apart from injustice; I am putting it as a matter of principle, and trying to separate the question of fraud from the question of *bonâ fide* claim?—I say we are subject to injustice, not from fraud only, but from a variety of reasons, namely, sympathy, and our being wealthy companies; I think it is that that we have more to complain of than fraud; juries give large damages because they think that we can pay, and that we shall never feel it, and their sympathies go with the claimants.

810. Supposing even that case was removed, namely, of juries giving excessive damages, there must be many cases in which, looking to the principle laid down by the law, the plaintiffs are entitled to a considerable sum of money; perhaps they have been very severely injured, and have lost the means of livelihood, or perhaps a passenger has been killed, and the family have been deprived of the person who was winning bread for them?—That may have occurred, but I am quite certain of this, that if shipowners or omnibus proprietors had been subject to the same claims as railway companies have, you would have heard of them before this.

811. Are those cases in which you think that the railway companies ought not to be compelled to pay more than the limited amount which you apply for?—I have no hesitation in saying, that if the railway companies' liability is limited, other carriers' liability ought to be limited; there is just this, that private individuals have not the same means for carrying as railway companies.

812. You would also say that any principle which is applied to railway companies should be applied to all carriers and all persons in the same condition?—With that reservation.

813. With the reservation that you think that railway companies are more hardly treated in practice?—No; with the reservation that I think railway companies have more inducements to be additionally careful than private individuals.

814. Why?—Simply because a private individual has not the same motives for care as a public company in reputation, in loss of traffic, and a variety of other things.

815. A claim that is likely to be made against a private person is much more serious to him than to a public company, is it not?—I admit that it is, and hence a jury do not give such high damages.

816. Let us take the case of damage to a person where there is no contract between the private person who inflicts the injury and the person injured; you mentioned an instance just now, where the owner of a carriage might be rendered liable for the negligence of his coachman who was drunk; do you think that the same principle of limited liability should be applied to that case?—I have not given my attention to that. I do not think that that case has arisen. I do not think that cases of great hardship of that sort have occurred; I do not remember one.

817. Have you not considered at all as to how far the principle you are wishing to adopt should be applied to other companies, and should be applied to private persons?—I am quite certain that the same measure of injustice would not be meted out to private individuals as is meted out to railway companies.

818. You stated that you yourself are of opinion that the block system would be the preferable mode of working a line?—I did state so.

819. I suppose not universally, but in particular portions of the line, where the traffic is at all crowded?—Quite so.

820. How long have you been of that opinion yourself?—We have had it in work on the Midland Railway for many years, on certain portions; we work all our tunnels on that system, and we have extended it very greatly of late years, where the traffic becomes exceedingly heavy, and the trains very numerous and of various kinds. We have a very large mineral traffic on the Midland Railway. We have also very quick express trains and every variety of trains, and where they become as numerous as they are on certain portions of our line, I think it advisable to put up the block system, but I think it is inadvisable to put it up upon other parts of the line.

821. On account of the traffic being thin?—Being so much smaller than it is on other parts.

822. Then you do not think it is universally applicable?—Certainly not.

823. Do you think that the railway companies are the proper persons to decide over what portion of their line it should be adopted?—I do; I would leave the responsibility with the railway companies.

824. Are you of opinion that it is a measure which is adopted generally by railway companies, or not?—Perhaps not at present, because it is a new system.

825. You are aware that it has been recommended by the railway inspectors of the Board of Trade now for some eight or ten years?—I am quite aware of that.

826. They have repeatedly reported to the Board of Trade and to Parliament, have they not, that accidents would not have occurred if the block system had been adopted?—I am quite aware of that, but I must say that many of the conclusions of the Board of Trade inspectors I beg leave to differ from.

827. Do you think that accidents would have occurred, even though the block system had been adopted?—I could mention several accidents that have occurred, in spite of the block system, and serious ones, too.

828. You have stated, also, that the block system does not altogether relieve the company from the possibility of accidents?—Certainly not.

829. But it is a matter of choice between the two systems?—Yes.

830. On the whole, you are of opinion that, under certain conditions of traffic, the block system should be adopted; that, I believe, has been the opinion of the railway inspectors, too?—I do not go quite so far as that. I say that, under certain circumstances, it is better that it should be adopted; but that if it should be adopted, I would leave it to the decision of the companies, as they are the best judges.

831. You think that, in all cases, the railway companies are the parties to carry out the block system, if they should think it is the best system to adopt?—I have no doubt of it. I have never yet seen a company averse to adopting a good system.

Mr. *J. Allport.*

16 June 1870.

832. Let me put to you the case where a railway inspector has repeatedly recommended that the block system should be adopted, and has repeatedly pointed out that an accident would not have occurred if it had been adopted; do you think that that case should be left entirely without remedy?—You are putting, as I said before, a hypothetical case, and I should like to hear the other side; the railway company might have come to the conclusion that the inspector of the Board of Trade was wrong in his conclusion. I have known them to be wrong, and I have known different opinions to be expressed by Board of Trade inspectors.

833. Still we have the fact that the Board of Trade inspectors have from time to time recommended this system, and it is now being very much further extended?—No doubt; but at the same time it must be in the knowledge of the Board of Trade that their inspectors are not always united in recommending any one particular system.

834. But where the Board of Trade inspectors are united, and where they have repeatedly reported upon some railway company that the block system should be adopted, the question is whether any power should be given them to enforce the adoption of that system upon any line?—I should say certainly not, and for this reason, that experienced as they may be in inquiring into those things, they have not had experience in working of railways; and when their four inspectors differ in opinion from the opinions of practical men, not only four, but 40 or 50 of them, I do not think that their opinions should have sufficient weight to justify Parliament in putting that power into the hands of the Board of Trade, because I know that the Board of Trade would not take the responsibility upon themselves; they would order the thing to be done, and would leave the responsibility with the companies.

835. You think that in no case should any responsibility be left with the inspector; but the responsibility should be entirely upon the railway directors?—I do; I think where there is weight in an inspector's report, it will make its way if it is worth consideration.

836. Do you attach any considerable value to an inspector's report?—I do.

837. And generally, do you think that their reports on accidents are really valuable in informing the public, and the railway companies themselves?—I do. However wrong they may be in their conclusions, in the first place they give the facts very accurately, and that is valuable to the railway world generally. I myself have experienced great advantage in reading of accidents that have occured on other lines of railway. I have gained knowledge from them in a variety of ways; but I must say that they are not always right in their conclusions.

838. Even though they are sometimes wrong, you think that their reports are valuable; and even though they lead to no correct conclusion?—I believe they are valuable.

Monday, 20th June 1870.

MEMBERS PRESENT:

Mr. Dalglish.
Mr. Davison.
Mr. Denison.
Mr. Headlam.
Mr. Lopes.
Mr. Hinde Palmer.
Mr. Plunkett.
Mr. Price.
Mr. Charles Reed.
Mr. Sclater-Booth.
Sir Henry Selwin-Ibbetson.
Mr. Sherriff.
Mr. Rowland Winn.

THE RIGHT HONOURABLE E. T. HEADLAM, IN THE CHAIR.

SIR SAMUEL MARTIN, Knight, and SIR GEORGE WILLIAM W. BRAMWELL, Knight, Two of the Barons of Her Majesty's Exchequer, called in; and Examined.

Sir *S. Martin*, and Sir *G. W. W. Bramwell*.

20 June 1870.

839. *Chairman* (to Mr. Baron *Martin*).] The House of Commons has delegated to this Committee the duty of inquiring into the theory and the administration of the law concerning the compensation that is paid by railway companies in consequence of accidents occurring upon their lines; the Committee, in the prosecution of their inquiry, have already had before them several gentlemen representing the interests of the railway companies, and they complain greatly, partly of the theory of the law and partly of its administration, and we have thought it right to obtain the advice of gentlemen like yourselves, of the highest authority and experience, in order to assist us in the conclusions to which we should come. The first question which I would ask is, whether you have had great experience in the trial of those cases which occur against railway companies?—We both have had very great experience in the trial of railway cases. I have tried a very great number indeed, both in London and the country.

840. I need scarcely ask you whether you and Mr. Baron Bramwell have not been on the Bench for a considerable number of years?—I have been longer than any person at present on the Bench; nearly 20 years. (Mr. Baron *Bramwell.*) I am in my 15th year.

841. I think you have also had considerable experience in the trial of those cases?—Yes, I should not think that I have tried as many as my learned brother, but I have had a good many of them, and I was counsel for a good many railway companies before I sat on the Bench. (Mr. Baron *Martin.*) Owing to circumstances, of which probably the Committee are aware, up to 1866, I tried by much the greater proportion of those cases that were tried in London and Middlesex. My brother Bramwell tried a good number, but I tried a very great number of them.

842. In the first instance great complaints have been made to us as to the theory of the law; the railway companies complain that they have no power of limiting their responsibility, and that they have no power of making any difference of charge with respect to the most valuable life and a life of the least value, but that they are compelled by law to give a railway ticket to every person that applies to them, and they are compelled to take them at a certain amount, which is prescribed by Acts of Parliament, and over which they have no control, and, further than that, that any limitation which they were to attempt to make upon their responsibility, would be illegal; they say that that is very hard, and that the accidents are, in their nature, almost inevitable in certain cases, and that if they are to be visited for everything that might be called an accident, there ought to be some limitation, some power of discrimination as to the sum which they should charge to persons who are taking tickets from them. The first question which I will ask is, whether you think there is any hardship in the theory of the law as distinct from the administration of it?—The law with regard to the carriage of passengers by railway companies is the general law with regard to the carriage of passengers for hire. Unless there be an Act of Parliament, which I am not aware of, which makes it compulsory upon them to carry all persons, the common law certainly does not; the common law makes it incumbent upon carriers of goods, but there is no such obligation at common law upon carriers of passengers for hire. There may be some provision in the Acts of Parliament which renders it incumbent upon railway companies to carry all persons, but otherwise I apprehend there is no obligation upon them; that is to say, that no man who went to a railway station could bring an action against the company for refusing to be a carrier of passengers, at common law; but there is generally great anxiety to carry passengers, and make money, and carry for hire, and get gain upon the carriage of them; therefore, as regards that, I do not think there can be any ground of complaint at all, or any reason to alter the law upon the subject. They carry passengers, I apprehend, in the same way as any other person seeking to make money by a business seeks for as much custom as he can get. (Mr. Baron *Bramwell.*) If I understand the right honourable Chairman's question, the idea of the companies is, that they cannot limit their liability. As I understand, they may refuse to take altogether, and if they may refuse to take altogether, they may take upon such terms as they think fit. The only doubt that I have upon that is, as you know, that in the Acts making them railway companies

Sir *S. Martin*, and Sir *G. W. W. Bramwell*.

20 June 1870.

companies you give them permission to be carriers; that permission, of course, they need not exercise, but there is, I think, in one of the general Acts relating to railways, an obligation that they shall every day run a train at a certain rate, and that train therefore they would be bound to run, and I suppose they would be bound to run upon common law terms, and they could not limit their liability in respect to passengers so carried by that Government train, but otherwise I do not see what there is to prevent their saying to each individual passenger as he comes, "We will carry you upon such and such terms." I mean in point of law; but how far that would be a practical matter is another question.

843. (To Mr. Baron *Martin*.) Is it not the case that they are limited by their Acts, and cannot charge above a certain amount?—They are limited; I see constant complaints that they charge up to the utmost limit, and charge exorbitantly.

844. Supposing a life of a most valuable description; for instance, the Archbishop of Canterbury has been mentioned as an abstract individual: supposing they were to say, when the Archbishop of Canterbury came in, "You are far too valuable for us to take at our general rate, we must charge you, as we are bound to carry you perfectly safely, three times as much as another gentleman;" would that be legal?—It would not be legal; I believe that you are restrained to a certain limit with respect to each class of passengers, and therefore all that the company could say to the Archbishop of Canterbury would be, "We cannot take you." (Mr. Baron *Bramwell*.) My own notion is that they could not refuse him if they were carrying passengers; but what I think they could do is this, they could say to every passenger who presents himself, "We will carry you, of course, at the statutory rates, but with no liability for accidents;" I do not see what there is in any Act of Parliament to prevent that.

845. Do you think it would be valid if a company were to put up a notice, that they would not be liable at all, or that they would only be liable to a certain amount?—I was not aware till a little while ago that that question would be put; but, answering the question offhand, I do not know of anything in any Act of Parliament to prevent it. They are not bound to carry at all, excepting by the Parliamentary train; then if they are not bound to carry at all, I suppose they may carry upon such terms as they think fit, except with respect to the Parliamentary charges, as to which there is a limit; but whether it would be held, that inasmuch as they were bound to carry at certain Parliamentary charges, it must mean upon the common law terms of liability, may be a question. I do not see anything to prevent it. (Mr. Baron *Martin*.) Upon this matter I should say that, if you wish our opinions upon it, you had better give us a little time. But, like my brother Bramwell, I had no idea that I was to be asked the question; I have very great doubt whether carriers of passengers for hire could say to their passengers, "I will carry you, but no matter what occurs upon the journey, I will not be responsible for damages;" I have considerable doubt whether it would be lawful to do that. It seems to me that it might be an illegal thing for a person who carried passengers for hire to say, "Under no circumstances shall I be responsible in the event of damage arising in the course of the journey." It would seem to be repugnant to the contract; but it is an abstract question, and I should like to consider it before I gave an answer. The question constantly arises with respect to the carriage of goods.

846. In the Act for the Better Regulation of the Traffic on Railways and Canals of 1854, in the 1st clause there is this definition: "The word 'traffic' shall include not only passengers and their luggage, and goods, animals, and other things conveyed" by them, and so on; and consequently passengers are made luggage?—I am not aware of that. (Mr. Baron *Bramwell*.) And then, in the same Act, it is said that in some cases they may not exempt themselves from their liability.

847. The marginal note of the 2nd section is, "Railway Companies to make arrangements for receiving and forwarding traffic without unreasonable delay and without partiality," and the definition of the word traffic, says that it "Shall include not only passengers and their luggage and goods, animals and other things conveyed by any railway company or canal company, or railway and canal company, but also carriages, waggons, trucks, boats, and vehicles of every description." (Mr. Baron *Martin*.) You will consider the answers which I have given to be in reference to the common law; it so happened that I had a very great deal of experience in cases connected with carriers whilst I was at the bar. I, for many years, had been counsel for Pickford's, and if you wish to ascertain what is the effect of notices, and how notices can be made available, I could refer you to several cases, especially to the case of Wilde *v.* Pickford, where you will find the law laid down with great precision; but I should not desire to be considered as giving an opinion upon an Act of Parliament, unless the Act of Parliament be before me; it must be governed by the terms of the Act of Parliament, and the language of it.

848. I think I understand you that the liability of railway companies is, under the common law, similar in kind to that of other carriers?—As far as I am aware, entirely; I never knew the statute law brought to bear upon the question of the liability of railway companies for the carriage of passengers. (Mr. Baron *Bramwell*.) It really is a question of contract; a man pays his money, and that constitutes a bargain between him and the companies, and the bargain to be implied is that they will convey the passenger with reasonable care and diligence in the matter, and then, if by the negligence of their servants a man comes to any harm, the bargain is broken which the railway company has made between themselves and that person.

849. Assuming it to be the same law with respect to railway companies, and with respect to other carrying bodies, or private individuals, do you consider that there is any hardship in the law that, where there has been no positive negligence on the part of one person, and an accident comes to another, the person through whom it may be said that the accident came should be subjected to unlimited liability. Perhaps I had better state a case to make our meaning clear. We will suppose that the carriage of a private individual, by some accident, injures a person going along the street; that it is proved that the gentleman whose carriage has done the mischief has been specially and particularly careful in getting

getting as careful a driver as he possibly could, and that there is not the slightest ground for supposing that he individually could have done anything to prevent the accident: under these circumstances I apprehend that there is no doubt that he would be unlimitedly liable for the accident that had accrued, by what may be called the negligence of his servant; do you think that there is any hardship in this state of the law?—(Mr. Baron *Martin.*) That is a question involving very great consequences indeed. The question involves whether or not the law of master and servant is to be altered. The law of master and servant is as old as any law in this country, and it renders the master responsible for the negligence or misconduct of his servant whilst acting in the course of his duty as servant. It is a law as old as Lord Coke. There is a well-known distinction between the liability arising from the relation of principal and agent and the relation of master and servant; and I am not prepared to say, without further consideration, and a great deal of consideration, whether it is expedient to alter the general law of master and servant. You can scarcely make a difference in the law of master and servant, as between railway companies and their drivers and a cab proprietor and his driver. (Mr. Baron *Bramwell.*) If the man who is driving is my servant, that is to say, if I have a right to tell him how to drive, whether to go fast or slow, or to turn the horse right or left, I am liable, because as I could direct how the Act should be done, the way in which it is done is my affair, I take it; but if he is not my servant, if I hire a cab, for instance, and tell him to drive to so and so, he has a right to say, "I shall take which street I like, or I shall drive as fast or as slow as I like; it is not your affair, I am bound to carry you from one place to another;" I am not liable. The consequent absurdity is this, that if my servant is driving my own carriage I am liable for his negligence; but if I job a carriage for a day, or even job a coachman for a day, the relation of master and servant does not exist between him and me, and I am not liable; that does not seem to me to stand upon any sensible principle. I have heard it attributed to this, that it is a relic of the old Roman law, when servants were slaves, and the masters were held liable for their acts in the same way as you are now liable for the trespass of your horses and cattle, and other things. I have heard it attributed to that, but otherwise I do not see why the liability should exist at all on the part of the master for his servant, when the latter has done wrong and the master has done his best to secure a good servant, and he has given him no unreasonable means of doing mischief. It is quite certain that if your servant in your absence puts your horses to your carriage and drives his fellow-servants on for a treat, and then through negligence an accident takes place, you are not liable, because he is not upon your business. It seems to me, therefore, that the law is, to say the truth, rather an irrational one. You may make it ludicrous in this way: My gamekeeper is a servant who has a gun, and my coachman is a servant who has a carriage; if the gamekeeper should mount the carriage and drive it contrary to my orders, and if the coachman should take the gun and fire it contrary to my orders, I am not liable for either of them; but if the gamekeeper fires negligently with the gun, and the coachman drives negligently with the carriage, I am liable for both, and I confess that I see no reason in that at all; but I am afraid that that is not quite the question before you, the Committee, because, in the case of a railway and a passenger, it is a matter of contract. In the case of a man who is run over in the streets by your carriage, it is a simple *tort*, it is a wrong, there is no antecedent bargain between him and you, and it is a mere wrong; but in the case of a man whom you undertake to carry on a journey from one place to another, you have entered into a bargain with him that you will carry him with reasonable care at all times, and you have not kept your bargain, because your servants have failed to do so; so that the two cases are not identical, if you will forgive me for saying so. (Mr. Baron *Martin.*) The master has a different liability criminally to what he has civilly. He is not liable criminally at all; it is a mere civil liability.

850. Supposing the master sits upon the carriage on the box, and directs his coachman to drive very recklessly, and he runs over a man and kills him, who would be liable?—Both would be liable, and I apprehend that if the master is sitting on the box, and desires the servant to drive in the most careful way that a man can drive, but if, instead of that, he disobeys the orders he has received and drives negligently and furiously, the master would be responsible civilly.

851. The master would be responsible civilly, whether the servant drives recklessly or whether he drives carefully, whatever directions he may have given to the servant?—Yes; for an act done in the course of the service. The master is not responsible for an act of violence of a servant not done in the course of the service, but for an act done in the course of the service he is responsible, although it is wilfully and recklessly done; you will find that decided in a case in the Exchequer Chamber.

852. With regard to criminal responsibility, under what circumstances would a master be liable, say for manslaughter, supposing his carriage killed a man?—I am not aware of any, unless he was sitting on the box and encouraging the man to do it, and then it would be his own act.

853. In order to make him criminally liable he must be a party to the special act?—I should think so, certainly.

854. And no general authority to a servant to drive would make him liable criminally?—I think not.

855. But the general authority to drive the carriage would make him liable unlimitedly with respect to civil damages?—I believe you have stated the law perfectly correctly. (Mr. Baron *Bramwell.*) I quite agree with my brother Martin, but for fear of any misunderstanding, if the thing were actually wilfully done; that is, if a man wilfully drove over another, he himself would be liable and not his master. (Mr. Baron *Martin.*) If the man got off the box and fought a man that was insolent to him, and injured him, the master would not be liable.

856. Does a railway company stand in a different condition, in consequence of the fact that the liability arises upon a contract and not under the common law?—There is not much difference, I should think, between them. I have known cases of actions brought against railway companies, where there was

Sir *S. Martin*, and Sir *G. W. W. Bramwell.*

20 June 1870.

no contract between them and the party who brought the action. There is a case now pending for judgment in error, where a railway carriage or engine destroyed a cart and horse crossing one of the lines near London, and there was no privity of contract between the owner of the horse and cart and the railway company; that would stand precisely upon the principle that you recognise of a man driving in the street; but it is idle to say that it is the same in administration, for it is not; indeed I do not think even if the matter was not tried by a jury, that you would have practically the same responsibility cast upon a man who was under no contract, but who merely was exercising his business in the street as upon a person who had made a contract to carry you safely, although probably in laying down the law you would lay it down in the same terms, but the practical conclusion would be, that the person who had entered into a contract would be held much more strictly than an independent person who is guilty of a mere act of negligence.

857. Is the law the same with reference to a railway company when they injure a person with whom they have no contract, and when they injure a passenger with whom they have a contract?—My brother Bramwell has told you that our direction to a jury in the case of a railway company is, that they are not insurers; that they are not under legal responsibility at all events, and that they are not responsible unless those for whom they are responsible have been guilty of some want of due care, or have been guilty of an improper act; and I apprehend that if there was a collision between two carriages in Parliament-street, the jury would be told pretty nearly the same thing, that the one man was not responsible for an inevitable accident, and that if it was an inevitable accident the law casts upon the person who sustains the loss the burthen of it, and that they must be satisfied that there has been some want of care or improper conduct before they fix the defendant; but I am sure that practically there would be a different measure of care required from the person who was under contract to take care, and the person who was merely under the general liability of the law.

858. Assuming that the liability of a railway company in the case of the transit of passengers rests upon contract, is it not clear that the contract, to a certain extent, is compulsory; it is compulsory, partly by Act of Parliament and partly by the nature of the case, because they cannot, in reality, enter into a bargain with each particular man; consequently, even where there are no provisions of an Act of Parliament, the contract might be in its nature of a very simple description, and it might be practically compulsory upon the company to adopt one form of contract. Do you think there is any hardship upon a company in such compulsory contracts being so enforced?—I do not know of any. I do not see myself, to a general question of that kind, how I can give any other answer than that there is no hardship upon a man, or upon a body of men who choose to carry on a particular business, if they are made responsible for the ordinary liabilities consequent upon that business. It seems to me that they must take the benefit with the burden, and that there would be no reason that a railway company should be relieved from the ordinary responsibilities of carriers, no more than that you should say that any other tradesman or tradesmen should be relieved from the ordinary consequences of a thing occurring in their trade. It seems to me that it is an incident of the trade to bear them; my own notion is, that the hardship upon railway companies is not upon the law, but upon other matters unconnected with the law; the law seems good enough. (Mr. Baron *Bramwell.*) I should like to begin my answer to the Committee, by saying that I am a railway shareholder, and therefore I invite them to look upon what I have got to say with some distrust. If it is a matter of bargain practically, if a company could say what the bargain was, I think no question of hardship could arise. But as you have put it practically, it is a matter of law, theoretically they may bargin, practically they cannot. My Brother Martin and I both remember the time when the carriers of goods used to endeavour to limit their liability by notices, but the jury found against them in some way or other, until at last an Act of Parliament was passed to remedy it; but, for my own part, I should say that if left to myself, if I undertook the management of a railway company, I should be inclined to say that I should not have the slightest objection to the ordinary railway liability, provided that none but honest claims were made against me; but what I object to is to a liability which involves dishonest claims being brought against me, and foolish or dishonest verdicts being given against me; and therefore, though I believe you to be a very honest man, who now come for your first-class ticket, I must ask you to agree with me that you will not hold me liable for any negligence; because if I do not so agree with all the passengers, and any accident happens, there are rogues in the train who will be bringing actions against me, and there are a good many of them, I have no doubt; but if none but honest actions were brought, and fair damages given, I do not see any particular reason why the railway company should limit their liabilities; but when one sees the way in which they are treated, according to my humble judgment, I think it is very desirable that they should be at liberty to put a stop to it if they can. I do not know whether it is pertinent to make the remark now, but it has occurred to me that it might be done in a reasonable way in this manner; let the general law be that I am not liable to you for negligence, but if you choose to pay an extra 1*d.* I will be; nobody would pay the 1*d.*, they never care about it; nobody is afraid he will be upset; railway claims are never made till actually the accidents happen; I should have no fear about it, and yet I would give a fair option to any man if he liked to insure himself against negligence, and let him pay his extra 1*d.*; the truth is, none of us would.

859. Do you think it would be a good thing if a law were passed to say that the liability of the company should be limited with respect to persons paying the ordinary fare, but that if parties would pay a little more, then the company should be held subject to further liablity?—(Mr. Baron *Martin.*) That is one of the matters which you mentioned in your note to me, and I have thought a good deal of it since; and, in my opinion, as regards the public, there would be no right to complain at all of such a principle. You mention such a provision, and of course you merely mention it in general terms. You say 400*l.* for a first

first class passenger, 300 *l.* for a second, and so much for a third. I refer to it only to explain the meaning of the answer that I am about to give. And then you further state that that is to be accompanied with the liability on the part of the company to give an insurance ticket to an amount, say a limited amount, or an unlimited amount, upon the payment of a reasonable sum for the insurance. So far as the public is concerned, I see nothing at all unfair in that; but I would myself strongly recommend the railway companies to consider well whether they would accept it, for I am afraid you would find that the consequence would be that in almost every instance they would be held liable to the full amount. In juries you have 12 men to decide, and they must concur in giving the verdict. In almost every real railway accident (I do not mean such accidents as my brother Bramwell was speaking of, to which I shall have a word to say in a few minutes), I believe that the great majority of claims are real. Some of them may be exaggerated, but they are not merely fictitious claims, and I should say that such a law would, in all probability, lead in a very great number of cases to damages being given to the entire amount permitted, and that you would not get the jury fairly to consider whether or not the amount of damage was not less; and I fear that practically the railway companies would find the law not to be beneficial to them.

860. However, you do not think there would be any hardship upon the part of the public?—I think not. I think that the public would have no right to complain of their being told, you travel by this railway, and if you think fit to pay a reasonable sum, you may have an insurance to any extent you like; but in the event of an accident occurring, you can only recover a certain sum, that sum being such as to secure to the public what I do believe they get, namely, the greatest care that carriers can possibly give to ensure proper carriages and proper conveyance. I have seen many cases where verdicts were quite right, but I am not aware that I ever tried a case where there was what you would have called blameable, culpable negligence on the part of the railway company. I do believe that the servants are excellent. I have never seen a drunken man upon a railway myself, nor have I ever heard a case tried, that I remember, in which any servant of a railway company was alleged to be drunk, or in a state of incapacity. (Mr. Baron *Bramwell.*) I entirely concur with my brother Martin. I cannot see what hardship there can be in permitting two people to make a bargain; in England at all events, I am persuaded it may be permitted.

861. You think that a law to that effect, authorising the railway companies to limit their liability to a certain fixed amount, imposing upon them the duty of insuring anybody who estimated his risk at a higher rate than that, would be perfectly fair as far as the public is concerned?—Perfectly fair, upon the simple principle that it is open to them to enter into it or to leave it alone.

862. Do you concur with Mr. Baron Martin that, in the cases that have come before you, there has been an absence of culpable negligence on the part of the railway companies?—It is really wonderful the small amount of reprehensible negligence; and I think the Committee will feel that when they remember how very rarely it is that any engine driver, or the person said to be in fault, is ever found guilty of manslaughter. (Mr. Baron *Martin.*) I do not remember ever trying such a case. (Mr. Baron *Bramwell.*) I think I had once the case of a man convicted before me; but wherever there is negligence for which a railway company is responsible, or, rather, I will not say wherever, because it may be a slightly higher degree of negligence which is necessary to make the servant who was actually guilty of it liable to manslaughter, so that I will not say that they are quite the same thing; it must be culpable or criminal negligence. Perhaps something less is necessary to make the company liable, though what culpable or criminal negligence is nobody can define; and I could refer the Committee as an authority for that to Adam Smith's "Theory of Moral Sentiments," in which he says that it is impossible to define what amounts to culpable or criminal negligence; but it is wonderful the very small amount of blame that is attributable in those cases where, nevertheless, railway companies are held liable.

Sir *S. Martin*, and Sir *G. W. W. Bramwell.*

20 June 1870.

863. It has been suggested that in some cases the injury has arisen after the contract had been completed; for instance, there was one case brought before us in which a lady stumbled in consequence of a hole in the carpet, after she had completed her journey, and not in travelling. Do you think that, under those circumstances, the railway company ought to be liable?—The Lord Chief Baron, who tried that case, told me that there was no direction by the judge to the jury, nor any finding by the jury, but the verdict was consented to by the counsel for the defendants. It appears to me, that it was, in truth, a case of contract, because where a railway company takes a person as a passenger they contract with him for safe carriage and easy and reasonable means of egress from the premises, and therefore it is a part of their contract that there shall be no trap or snare in their way as they are going out; but even if that were not so, supposing the thing had happened as she had entered the railway premises, the rule would be the same; it would not be a case of contract there, but it would arise upon the same priniciple, which is familiar to my brother Martin, that if a shopkeeper has got a trap-door open in his shop, and anybody falls down it, the law makes that shopkeeper liable, not on the score of any contract exactly, but on this ground, that he has by keeping his shop, and having his door open, invited all persons to come in and trade with him, and has by implication undertaken with them that they may do so without unreasonable danger, and there is therefore in that case something in the nature of a preliminary bargain, "If you will come into my shop to deal with me, I will undertake that there shall be no needless impediment in your way." In the case of this woman, as she was leaving the railway premises after having been carried, she tripped upon a hole in the carpet in the waiting room, fell down, and was seriously injured, and she brought her action.

864. Assuming that to be rather a strong case, still there is nothing contrary to the ordinary principle of the law in it?—Keen as I am in favour of railways, compared with the treatment that they meet with in general, I always thought it was a proper cause of action, and that this lady had a right of action against the company just as much

Sir *S. Martin*, and Sir *G. W. W. Bramwell.*

20 June 1870.

much as if they had a trap door open there. (Mr. Baron *Martin.*) You must of necessity decide the question where liability of this kind begins and where it ends, and when you get upon the very bounds of the line there is some difficulty in determining it. I know that almost the only difference of opinion which I think has occurred during the last four or five years between my brother Bramwell and myself was upon a question of this kind, viz., where was the termination of the liability, in respect of some bullocks which were brought up from Devon. The transit began on the Bristol and Exeter line, and the bullocks came up to Paddington by the Great Western Railway, and we had a difference of opinion in the Court of Exchequer whether or not the liability of the company had terminated when one of those animals was killed. It is impossible to avoid difficulties when you have to draw the line where responsibility ends and non-responsibility begins. It would be impossible to avoid that, in any state of the law. A line must be drawn, and when you come just upon the line there always will be a difficulty.

865. I think you mentioned that, in your experience, but few cases had come before you in which there was what might be called culpaple negligence; would you consider it culpable negligence if trains ran rather too rapidly one after another?—You would scarcely call that culpable negligence; it would not be negligence properly so called, it would be an improper arrangement, it would be an act done by the company. I should myself think that there ought to be some reasonable limit with reference to trains, but I do not see how we can give you any opinion upon that subject. If the Scotch limited mail was started after some slow train that ran down to Harrow, and overtook that slow train, and an accident ensued, there could be no doubt that the railway company would be responsible for it; but I do not think we could give any opinion that would be worth the consideration of the Committee. (Mr. Baron *Bramwell.*) I think that your question answers itself. You say, would it not be wrong if trains started too fast after each other? By the hypothesis it would be, but whether it would be a culpable thing, in the sense that you would punish or illuse the people who had done it, and make them subject to the criminal law, would depend upon how gross the negligence was.

866. Do you think that there is any hardship in the manner in which the law is administered? —(Mr. Baron *Martin.*) I have considered the matter a good deal since I received your letter. You must take it that the law is administered by 17 judges, and you will not find 17 people that will entirely concur upon the matter of damages. You have heard what my brother Bramwell's view is, and though probably not taking so strong a view with regard to railway companies as he does, yet, as far as I have had it in my power, I have endeavoured always to keep the damages moderate. I cannot bring to my mind but one case which I have tried, where I thought the damages outrageous; in some cases I might have given less, but there was not anything to complain of. I spoke to my brother Bramwell about it, and it was his experience also. He says that, taking into consideration the cases which he has tried, it is his impression that, if the cases were really genuine cases, the damages have not been excessive, but I must add that I have seen in the newspapers damages which, if the facts were correctly stated, I thought were excessive. I know that there are some judges who take the view, that the damages ought to be high, and in all probability they lead the jury to think so too. But you will not be able, as it seems to me, to avoid this difference and discrepancy until you can bring 17 men to be all of one mind. I have not myself heard, of course, any cause tried by any other judge, and all that I know is what I have learnt upon motions for new trials, and I have observed that there are judges who seem rather to think that large damages are the proper damages to be given in cases of this sort, but others, I know, do their very best to keep the damages in moderation. I do not know whether or not the railway companies have supplied the Committee with a list of the cases that have been tried, and the amount of damages given. If they have, I strongly think that you will find that the damages in cases tried before me could not be said to be excessive. The case to which I refer as being excessive was an action which was brought by the executor of a veterinary surgeon at Bolton in Lancashire, who was killed in that accident upon the South Eastern Railway, which occurred by a bridge breaking down. There may have been, perhaps, actual negligence in that case, and some means ought to have been taken to have stopped the train by reason of that accident having occurred upon the railway before the train came to it. (Mr. Baron *Bramwell.*) I do not think that the damages usually are excessive, on the contrary, I am rather surprised at their moderation when one considers the cases that are brought forward of the loss of limb or sight, and those dreadful concussion cases also; but I think the railway companies are excessively unwise in trying cases always before a special jury, for a special jury always value their own and consequently the sufferers' lives and limbs at a higher rate than a common jury would. But the fault I find with juries is, that they find negligence in the railway company and no negligence in the passenger, when they ought to find negligence in the passenger and no negligence in the railway company; that is the fault I find with them, and I am afraid that they very often do it.

867. It has been stated to us that if a company once admits its liability the jury does not consider the least about negligence on the part of the passenger, or anything except simply the amount of damages; is that the case, do you think?—(Mr. Baron *Martin.*) It very frequently occurs that the counsel for the defendant says he admits the liability, and then there is an end of it.

868. Has there been any case in which there has been negligence upon the part of the plaintiff or on the part of the person injured?—Yes; and I think that in cases where there has been negligence on the part of the plaintiff the verdict has been for the defendant. I have no doubt there have been several cases tried before me in which companies have obtained verdicts upon that ground. According to the law of England in a matter of negligence, the act of negligence must be exclusively that of the defendant; if the plaintiff has himself been guilty of conduct which in the words most commonly used conduces or contributes to the injury, the defendants are not responsible; and again, if the circumstances be such that no blame is attachable to either party, and it has been one of the accidents of humanity which will occur, neither

Sir *S. Martin*, and Sir *G. W. W. Bramwell.*

20 June 1870.

is the defendant responsible. And the jury must be satisfied that the cause of injury was entirely the negligence of the defendants. That is the ordinary course of summing up; generally I begin with it, and so far as I am concerned, I begin with a sort of stereotyped form, which if it were a case of much importance I would write down that there should be no mistake. I have no doubt that it is a sort of stereotyped direction with other judges; I am satisfied that there are cases in which the defendants have obtained verdicts. There was one case of that kind the other day.

869. It has been stated to the Committee that the damages given against a railway company are much larger than what would be given in like cases against individuals; do you know whether the damages given against railway companies are not greatly in excess of what would be given against individuals or certain small associations; for instance, the owners of cabs and omnibuses, and steamboats?—It is my opinion that there is a higher scale of damages given against railway companies than would be given against private individuals for the same injury occurring by an illegal act of theirs. When railway companies first began there was a general impression that they were very valuable and profitable concerns; the shares rose very high, and it was thought that they were exceedingly profitable to all persons concerned in them; and I believe that a scale of damages then began, which we have never since got rid of. If I remember rightly, the first case in which a large sum in damages was given, was one in which a Dr. Carpue was plaintiff against the Brighton Company. There was a very large sum of money given to him, and it always seemed to me that that began the mischief which has gone on since that time. Again, there was an action that was brought against the Great Northern Railway Company, in which the sum of 13,000 *l.* was found by a jury in respect of the death of a Mr. Pym, which was a very large amount; and there was also the case to which I have referred; and I have no doubt whatever, that if this accident had occurred from a man being upset by the negligence of a mail-coach driver the damages would not have been a tenth part of the amount. If a man gets his leg broken by the negligence of the conductor of a railway train, or a person connected with a railway company, and an action was brought against the proprietor of a stage coach by another man for exactly the same accident, you would find the damages different; in fact, upon a different scale altogether, and the jury would think that the cases were not at all analogous when one of the parties was a rich railway company. (Mr. Baron *Bramwell.*) I do not venture to differ with my brother Martin, because he knows better than I do upon this matter, because he has tried more cases; but I should not have expressed precisely the same opinion that he has. I think that as large damages would be given against a large steamboat company, or a large omnibus company, or any other large company, as against a railway company; and I think they give smaller damages against individuals, because they cannot make up their minds to give such an awful sum of money as it would be if it came out of an individual purse in many cases; but I do not conclude from that, that the damages given against railway companies are very unfair. (Mr. Baron *Martin.*) Probably in the case of large steamboat companies, or large omnibus companies, such as the Metropolitan Omnibus Company, I daresay it is so; but I was contrasting in my mind the damages that were given in cases of accident that occurred by stage coaches or mail coaches. I adhere to the opinion which I have given that, with regard to railway companies, damages are given on a much larger scale than would be given for liabilities of a corresponding character against other people.

870. Of course, you are not aware of what takes place before the case comes into court; you can only judge upon it when it comes into court; but so far as you can form an opinion, and according to your experience, do you think that railway companies unfairly contest cases, in the hope that the plaintiff will be driven to accept a less compensation?—That is also a matter upon which I have thought a good deal since I have received your letter, and I have spoken to my brother Bramwell about it. It involves the question of payment of money into court; that is not at all a difficulty peculiar to railway companies, for before railway companies existed, I have no doubt that my brother Bramwell, as well as myself, had weekly, and probably more than weekly, to consider what was to be done in a case where the defendant was certainly responsible for negligence or damage of some kind, and where we had to consider the payment of money into court. By an Act which became law since I began to practise at the Bar, and I believe since my brother Bramwell did also, it became admissible to pay money into court in respect of liabilities to damages; and I can state my own experience, and I believe the experience of all, that it was utterly useless to pay money into court. No matter what money you paid into court, the jury would give more. It was used against you that you had admitted your liability by the payment of money into court, and you could not prevent it. I believe that if a railway company paid a reasonable sum into court, they would find that there would be a verdict against them for a further sum. The jury would say, "It is a very hard thing to make this man pay the railway company's costs, and we will not do it; we will give him a further sum;" and they do do it. In that respect I believe that railway companies are in the same condition as their neighbours, and that any one who is liable for an action for damages would have the same difficulty. Another matter that I ought to mention is, that railway companies complain very much with regard to costs, and they say very truly that in almost every case where they are liable to an action they can do nothing to get rid of the liability for costs, which is very large. I have made some inquiry into it, and I find that probably railway companies are somewhat to blame, if you call it blame, and they bring it upon themselves somewhat by their own act. An accident happens, and most railway companies have, I believe, a medical man who is their general adviser; and they at the trial give as evidence the opinion of medical men of the very highest possible reputation and character. You are told that their medical witness is chairman of this hospital and surgeon of another hospital, and he is heralded in with a flourish of trumpets and half a dozen statements of the many offices he holds as surgeon and physician;

Sir *S. Martin*, and Sir *G. W. Bramwell.*

20 June 1870.

sician; the man who brings the action against the railway company knows that it would be quite hopeless for him to come up and go to trial with a mere apothecary, or general practitioner, in the country, to set against great guns like these, and therefore he goes and gets other great men to come for him. It is a mere matter of opinion; they are not speaking as to facts, but they come to give their opinions, and I am surprised at what I hear of the expense of obtaining those opinions. I am told that surgeons of eminence require a very large sum of money for examination of the case, and I am told that it is the practice to require 25 guineas a day for their attendance in court to give evidence. Then the Master will only allow either a guinea, or at the very utmost two guineas a day, so that the plaintiff is at a dead loss with regard to at least 23 guineas for each day that the case happens to be in the paper, and the consequence is that the bill of costs as between attorney and client very much exceeds the bill of costs as between party and party, so that a great deal of the damages recovered goes to pay that bill. I was told by an excellent authority last week that with reference to the Brighton accident, in respect of which so many actions have been brought against the Brighton Railway Company, that unless a man got damages to the amount of 300 *l.*, in most cases it occurred that he was a loser by the verdict. (Mr. Baron *Bramwell.*) I entirely agree with what my brother Martin says about a jury always finding a trifle beyond, and sometimes a good deal beyond, the amount paid into court; and it occurred to me, after I read the right honourable Chairman's note to him, whether the same principle might be adopted that is adopted in respect to a man who is indicted for an offence after a former conviction, that you do not speak of the former conviction to the jury till he is found guilty of the particular crime with which he is charged; that, in like manner, the amount of money paid into court might be withheld from the jury until they had given their verdict and said what the right amount should be. I venture to suggest that for the Committee. I have formed no opinion upon it, for I have not had time to think whether it is worth making any provision for. But as to whether railway companies defend actions improperly, I have been trying to think of a case of that kind. I think I was invariably concerned for four of them. If the gentlemen are here, probably they have forgotten me by this time; but with regard to the Great Western, the South Eastern, the Brighton, and the Great Northern Companies I think I always held their briefs, and I am quite sure that we never defended a case unless we felt absolutely bound to do it, for we knew that the chances were that, even if we were right, we should get beaten, and much more so if we were wrong; we never defended a case if we could help it. But it occurred to me with reference to such a congeries of accidents as happened in the case of the London and Brighton Railway Company, that this thing might possibly be done. At present each plaintiff thinks (and of course for ever it will be so) that his case is a separate one; his leg is not the arm of his neighbour; they have each lost a limb, and a different limb, and they are entitled to present their case by their own witnesses, and their own counsel and attorney, but I have thought that I might possibly venture to suggest to the Committee, not as a definite opinion of my own, but as a suggestion which they might, perhaps, think worthy of their consideration, that a railway company, when a great accident of this sort happens, might present a petition or memorial to the Board of Trade, for instance, in which they might either confess or not confess, according as they thought fit, their liability, and then require that all the claims should be sent in there and then, if you like, that they might be examined before a judge, or before a judge and jury; but let the same judge, and the same jury, and the same tribunal examine into them, so that you would not have what you now have; for instance, each man has his own separate writ, his separate declaration, his separate witnesses, and his separate attorney; not his own separate counsel, for there are generally two or three of them at the same time, but he has his own counsel, with separate briefs, involving an immense amount of extra and needless expense; and each plaintiff is, of course, entitled to say, "I cannot tell how you will meet my case; I must be able to prove negligence, and prove the whole matter, whereas, if you could refer the general question, if it might so be said, to the same tribunal, and let that tribunal assess the particular damages in each case an immensity of expense would be saved. If I may be permitted to suggest to the Committee by way of justification for what may be said to be anomalous or unconstitutional in that proposition, I know that there is a precedent for it in the case of the Sheffield Waterworks, where, if you remember, the reservoir gave way and caused an enormous amount of damage. In that case a Commission was issued, before which all the people that were injured had to bring their claims. My learned friend Mr. Overend was at the head of it, and I have not the slightest doubt in the world that if that case had been left to ordinary litigation, the expenses would have been tenfold what they must have been before him. (Mr. Baron *Martin.*) With regard to the suggested remedy of requiring the amount paid into court should not be mentioned, I would say that it would be utterly hopeless except you can devise some Parliamentary means of stopping counsels' mouths. When the power of examining parties on their own behalf was introduced, many people were apt to state, and their statements were amply confirmed by experience, that there would be an increase of perjury; and accordingly it was introduced into the Act that the judge was to have the power to direct that any person who committed perjury should be committed to trial, and tried before a jury. There is the most positive provision that it should be in nowise mentioned to the jury that this had been done; that they should try the matter in ignorance of it. The counsel for the prosecution were always straightforward and honest in this respect; but the first thing the counsel for the defence did, was to make a complaint of the tremendous hardship of a man being sent to be tried with the decision of a judge round his neck. Instead of being kept from the jury it was the first thing that was announced, and that they were to be on their guard lest they should give their aid to this tyrannical proceeding of the judge in sending the man to trial. I do not believe that every man on the jury would not in 10 minutes know what had been paid into court. You never could keep it from them.

871. The principle applicable to costs in cases in

in respect of compensation for land is, that if the claimant does not recover more than the sum offered by the company, he does not get his costs, but each party pays his own; might not the same principle act as a strong preventive against dishonest and exaggerated demands, if applied in the case of compensation for accident?—I think myself that if it were applied to cases of accidents on railways it would have a beneficial effect; but I desire to say, in answer to the last question, that I think it would be very desirable that, in a case such as that of the accident upon the Brighton Railway, which has led to so many actions, if there were some power given to the Board of Trade to interfere and stop all the actions, and refer it to the same tribunal to decide them all, and compel persons to go before it, that would shorten the inquiry very much, and would lead to an amazing saving of expense; for as Mr. Baron Bramwell has said, I have no doubt there are several pages of briefs in every case that have to be paid for by the railway company; in very many instances, the same thing has to be paid for over and over again. They must pay the taxed costs; they have no possible opportunity of preventing it; they have no means of controlling those costs; and I daresay that the Brighton Railway Company have paid hundreds of pounds for costs in respect of their liability in this respect. (Mr. Baron *Bramwell.*) I agree with what Mr. Baron Martin has said; in truth, what he suggests, to a certain extent, exists by their power of payment of money into court, because up to the time of the money being paid into court the costs are trifling; but we have seen very little advantage in it, from the fact that juries always go beyond the amount.

872. (To Mr. Baron *Martin.*) You mentioned the fact of the high charges paid to medical men, have you any knowledge of what has been stated to us that in fact there is a class of medical and legal speculators of not very high character who trade in those cases?—I certainly have had occasion to suspect it in two or three cases. The authority from which I spoke with regard to the high charges by medical men, is a barrister of very considerable eminence, to whom I spoke, as I knew that he had the means of giving me information upon the matter; I do not know it judicially, I never have had reason to know it in any other way than by the statement of a gentleman who has had experience in the matter, and whose words may be thoroughly depended upon; I have known certainly one instance, very lately, where I believe the case was got up by a medical man who was believed here in Westminster; but another action was tried against the same company at the Guildhall, in which the same man was a witness; but the company in the meantime had made some inquiries about him, and the result was that he was so discredited upon his own cross-examination that the jury found for the defendants. That is a thing which occurred lately. (Mr. Baron *Bramwell*). With respect to the case which Mr. Baron Martin has put, I think that if they were at liberty to offer a sum of money, and that offer was not admitted to be put in evidence before the jury on the part of the plaintiff, it would be a beneficial thing undoubtedly, because then the plaintiff would not be able to say to the jury, "These people of course do not take an unfavourable view of their own case, yet they have offered so much money," a topic which they use now in respect of payment into court; and if the plaintiff could not say that, they would have no datum from which the jury could reckon, and consequently they might even give less than the sum demanded; and therefore I think it would be a beneficial thing.

873. (To Mr. Baron *Bramwell.*) Do you think that you could preclude the jury getting a knowledge of the case from the plaintiff's side?—They must be precluded from knowing the sum offered, otherwise the effect would be the same as the payment of it into court.

874. Mr. *Lopes.*] Are you aware that under the Lands Clauses Act they do not learn that, as a rule, in the case of compensation for land?—I was not aware of that.

875. *Chairman* (to Mr. Baron *Martin*).] The last question was whether you have any knowledge of the fact that there is a class of legal and medical speculators who trade on those cases; have you any observations to make upon that subject?—I would not like to say so, but I certainly have a strong suspicion that, in many cases, there were exaggerated bills sent in by medical men, which they never would have thought of charging to their ordinary customers; but because they expected that the jury would give as damages the medical expenses of the person who had received the injury, they sent in exorbitant and unreasonable bills.

876. It is alleged that there are a class of attorneys and medical men who look out for all those accidents, and go down immediately to make something out of them, being completely prepared to get cases up for their own benefit; have you any knowledge of that?—No; it could only be a surmise. There are two or three faces that I am very familiar with when I see them; and I think there are gentlemen in the room who could give better evidence upon that subject than I can. (Mr. Baron *Bramwell.*) I can give the same answer. I certainly do remember the case of some actions against the South Eastern Railway Company, in which I am quite certain that some attorney had gone down in search of alleged sufferers. But with respect to the appearance of the same witnesses in case after case, where a man is at liberty to call an expert he, of course, calls an expert, who takes a favourable view of his own case; that is the reason for those people appearing and re-appearing; it is not from any *mala fides* necessarily on the part of the plaintiff, or on the part of the witness. Perhaps I might be permitted to suggest that it has been often recommended that the expert called should not be upon the nomination either of the plaintiff or the defendant.

877. (To Mr. Baron *Martin.*) Is not the evidence in those cases, especially concussion cases, of such a nature as to render it very difficult to test, and therefore very open to fraud; for instance, in concussion cases where there is no external symptom, and where it rests in reality almost entirely upon the statement of the man himself as to his own symptoms?—With respect to those concussion cases, it may be, and probably is, the case, that I have arrived at a wrong conclusion; but I have an idea that the medical men do not understand them well, and I think, from the evidence that they give, it is not a subject that is well understood. I heard of two cases last week of two gentlemen whom I knew; one of them was Mr. Hall, who was a member of the Northern Circuit. He met

Sir *S. Martin*, and Sir *G. W. W. Bramwell*.

20 June 1870.

with a railway accident, and brought an action, and recovered very large damages. He was not killed; but I believe there is not the slightest doubt that he died within a year in consequence of that accident; the other was the case of a barrister, who was also upon the Northern Circuit, named Saunders. I recollect him very well, and he also met with a railway accident, and he got a considerable sum of money for damages; but he died within a very short time afterwards. I have been informed that, beyond all manner of doubt, both those deaths were caused by the injury which was received in those two accidents. Those are cases in which no doubt if they were tried, there was evidence on both sides, and different medical men expressed different opinions with respect to what were likely to be the consequences of the injury that each had sustained. With regard to those cases in which frauds are practised, I do not believe, at least I have no reason to suspect, that in the great majority of cases there is fraud; but in some cases there is. I daresay some gentlemen in this room will remember a case of an action against the Midland Company, where a man was brought into court in the most wretched state you can by possibility imagine a man to be; he was brought in upon a stretcher. He was supposed to be unable to speak, and his wife acted as interpreter. Such was the case that, although I believe the company had a perfect defence to the action by reason of a satisfaction having been received by him, under a written agreement signed by him, and a perfectly honest agreement it was, I have not the slightest doubt, on their part, such was the effect produced by the man's condition that the counsel for the defendant asked the Court to adjourn rather earlier than it was in the habit of doing, for the purpose of consulting his clients. The next morning he came into court, and stated that he had seen his clients, and that in consequence of the condition of the man, he being injured so much beyond what was thought likely to be the case at the time when the satisfaction was given to him, they would not insist upon it, and they were content that the jury should give what damages they thought, under the circumstances, the man really ought to have, supposing no such agreement to have been made, and accordingly he got 750 *l*. The money was paid a fortnight afterwards. Some of the railway people thought that it was not genuine, and accordingly they watched the man, and it turned out to be a fraud from beginning to end; the man went to Scarborough, and amused himself with jumping off the rocks and swimming about, immediately after he got the money. The statement made when they applied for a new trial was, that it was useless to go any further, for the whole of the money was spent, and there would not be a penny forthcoming. There is not the slightest doubt that it was a mere got-up case. I do know that the railway company were inclined to force it on to a second trial; indeed, they had no means of doing it after it had been tried before.

878. (To Mr. Baron *Bramwell*.) Have you had any of those cases?—I will mention a case that I was in, if the Committee will listen to it, where I was counsel for the plaintiff. It was not an action against a railway company; it was the case of a medical man who had fallen over stones negligently left by some paviors, and had struck the lower part of his spine against them. I was instructed to lay before the jury a most horrible account of that man's sufferings, and a probability of his death; that it was very unlikely that he would recover, and if he did, it would be after years of anguish and pain; and we got some damages, I forget how much. Some little time after that, some three or four years, I think, after I had been made a judge, the man took out a summons to tax his attorney's bill, and it came before me; I happened to remember the name, and I said, "Why, I remember the name of this case." "Oh, yes," they said, "you were counsel for the plaintiff in it." "Well," I said, "I do not know whether that disqualifies me from hearing the summons." "Oh dear, no," they said; "by all means hear it." I said, "How are you here taxing the attorney's bill; it was tried four years ago, was it not?" "Yes," they said; "it was tried four years ago." I said, "I thought he was going to die; what has happened to him?" "Oh," they said, "immediately after the verdict he went to the Crimea, and has been in the Crimea with the army ever since, and he has only just come back, and that is the reason his bill is being taxed now." I do not say that that was not a *bonâ fide* case; but certainly those concussion cases are most extraordinary. Perhaps the Committee will permit me to mention a case I tried the other day, which I am satisfied was a genuine one. The sufferer was a lady, an actress by the way, and she was one of a party in a railway carriage, and had a very slight shock indeed; I think there was no exterior bruise upon her, or any indication that she had been injured. The other passengers in the same compartment, her own friends, were not shaken off their seats; but I am satisfied that that woman suffered from concussion of the spine, as was proved by the medical evidence, and I was satisfied that it was a genuine case. (Mr. Baron *Martin*.) But you are not to suppose that railway companies are the only persons in this kingdom who are subject to fraudulent actions being brought against them; I have known in my experience many.

879. But is not this evidence particularly of a kind which makes fraud possible and probable?—I should think that railway companies must be subject to damages being given to fraudulent persons pretending to receive injuries, and they probably are to a greater extent subject than ordinary persons; but they are not the only persons in the community who are subject to this. Every year, I have not the slightest doubt that there are fraudulent actions brought.

880. Do you concur with the opinion of Mr. Baron Bramwell, that it would be a good thing if, either before the Board of Trade, or a judge, or some other form of tribunal, medical witnesses were appointed, not by the plaintiff or the defendant, to give an opinion upon these cases?—Certainly I do. I think it would be a very desirable thing that you should have some really independent man to give evidence; in all probability you would find that practically he would be the only witness, and you would not have that which is somewhat a scandal, two sets of medical men giving evidence directly opposed to each other; but if you had a really independent man, and you could rely upon his giving his evidence officially, and with his credit at stake, to tell what was the real state of the case, it would be very desirable. (Mr. Baron *Bramwell*.) I quite concur with my brother Martin's remark. I am not casting any slur upon the medical profession, because really it

it continually happens that railway companies' medical officers are not called upon to contradict the evidence given on behalf of the plaintiff, and that shows, therefore, that the medical testimony given for the plaintiff is *bonâ fide* true. (Mr. Baron *Martin*.) I think that it is well worthy of consideration, whether the Board of Trade should appoint some experienced person to give evidence upon the subject, like experts' evidence.

881. Would you consider that all cases for compensation should be sent to the Board of Trade?—It would be idle to say that the Board of Trade should be called upon to examine into every accident that occurs; but with respect to such accidents as that which occurred the other day, and which caused so many actions to the Brighton Company, I think it would be a very excellent provision if, in any case of that sort, the railway company should have the power of appealing to the Board of Trade, and that all the cases should be decided by some tribunal appointed by them, or under their control. I do think that is a very good suggestion, and one well worthy of consideration.

882. I think I understood you to say that you have endeavoured to control the tendencies of juries to give excessive damages as against railway companies; have you in the majority of cases succeeded in so doing?—I think I have. Two gentlemen in the Committee can tell you that I am always for reasonable and moderate damages as I call them, and I do my best to secure that it should be so. I have told you of one case where larger damages were given than I would have given; but I have not in my memory any other case where the company could reasonably complain. The Committee should have a list of cases furnished to them by the railway companies' solicitors, stating how many accidents there have been, and what was the amount of damages given. I could tell in a moment if I saw a list; but I cannot take upon myself to say further than that, upon consideration since I have received your letter, that is the only case that does strike me where, what you may say, unreasonable damages were given. Of course there were damages given in several cases where I would not have given so much.

883. Mr. *Sclater-Booth*.] That is assuming that there was no fraud upon the part of the witnesses?—In the great majority of cases I should say there was no fraud, at least, I have had no reason to suspect fraud. (Mr. Baron *Bramwell*.) I agree with my brother Martin. If I remember rightly, I used an incautions expression a little while ago. I think that in the majority of cases they are cases of nothing more than that exaggeration which we are all subject to when we are presenting our own cases for consideration; but I do not find that the damages are extravagant. As I said before, the fault that I find is, where I think there is an error in their finding the company liable when they ought not to be held liable, where either there is no blame attributable to them, or where there is contributory negligence on the part of the plaintiff; but certainly the majority of cases, so far as suffering and loss of power is concerned, have a great substratum of truth in them; but they exaggerate their money losses very much I think. I do not know that they exaggerate their pain and suffering so much; but they make out that they were carrying on a most successful business, and that it is all gone, and all lost, and that is untrue very often. (Mr. Baron *Martin*.) If there could be devised any mode of giving the judge more power than he has at a trial at Nisi Prius with regard to those cases, and if it could be put upon some reasonable footing, I think it would be a very beneficial thing.

884. *Chairman*.] Have you any opinion to offer as to the time within which claims for compensation after injury should be brought; the Royal Commission, you are probably aware, recommended six months?—(Mr. Baron *Martin*.) The ordinary limitation is six years. I really doubt whether it is necessary to alter it. If an action is brought a very considerable time after the accident has happened, except it is in respect of real suffering, arising at a distance of time not contemplated when the accident originally happened, I think that the company have sufficient protection with a jury in that matter, that they would not lend themselves to claims except where they are real. At least, as at present advised, I am not prepared to say that the statutory limitation should be altered. But I was about to say that I think a beneficial result would arise if the judge had more power than he possesses at common law in the trial of railway cases, if in some way effect could be given to his opinion without being subject to a new trial being granted for misdirection. The rule of law is, that if there is any evidence to go to a jury it must go to a jury, and the judge has no power at the end of the case to interfere. It must be more than a scintilla, though how far that goes I do not know; but if there be a case of negligence for the jury he is bound to leave it to them. Now, many cases have occurred before me where, if I had had the power (but, of course, I could not do it, knowing of a certainty that there would be a new trial upon me), I would have stopped the case, because I was satisfied that the negligence was not such as would make them responsible. But a judge has no power of doing that; and if any means could be devised of giving him, in cases where he thought the evidence was so very slight of negligence, although there was some, the power of stopping the cause, I think it would be desirable. I am sure that many cases have been tried before me where I should have been very much pleased to have been able to say, "Well, now I will stop this cause of my own proper authority;" but I could not do it because there was evidence for a jury, and knowing that, if there was a motion for a new trial, there must be a new trial in consequence of my having gone beyond the power I possessed. If anything of that kind could be done I should be glad. (Mr. Baron *Bramwell*.) That is quite my opinion. There must be more than a scintilla (what that is I do not know), but a rag of evidence would do, and what that is I do not know. But I might mention to the Committee a case that occurred the other day. A woman went to one of the Metropolitan stations, she took a return ticket, she entered the carriage on the proper side, and when she came back at night she attempted to go out at the same side at which she had entered, but instead of going out of the door at which she had entered she passed out and walked along the platform, and when she got to the end of the platform she walked off it, and walked under the tunnel expecting to find the outlet of the Metropolitan Railway and she got hurt. I inquired of the counsel what the negligence was, and the negligence was this, that one of the Metropolitan

Sir *S Martin*, and Sir *G. W. Bramwell.*

20 June 1870.

porters had told her that her way out was over the stairs by a door where she would find a man standing; and that when she got to that door no man was standing there, and therefore it was their fault that she had walked on under the tunnel and had been reached by a train. I had the courage to nonsuit her, but they moved for a new trial on the ground that I ought to have left that to the jury. The Court took some time to consider. I think my brother Martin was not one of them. After grave deliberation they held that I was right, but I was very nearly held wrong. By the way, that was an action with regard to which I said, when I gave my judgment at the trial, that nobody would think of bringing such an action as that, except against a railway company. I will mention another case. Some men were repairing the railway close to a station, I think on one of the Northern lines, I think it must have been the Midland, and a train came out of the station. It was what you may call a terminal station; that is to say, the train did not come from anywhere beyond, but it came out of this station, and through the men not getting out of the way some of them were injured, and they brought an action against the railway company. The chief of them, their ganger as he was called, said, "We really had not time to look out for the trains, we could not do it," and the men stopped there till they were run over. What was the negligence? The negligence alleged was this; that the engine driver had piled up the coals in the tender higher than was usual, and consequently, they could not see any person upon the line ahead of him. Ixhorted the jury with all my might and main to find a verdict for the defendants, on the ground that there was no evidence of negligence, or none that you could rely upon on the part of the railway company, and that there was strong evidence of contributary negligence on the part of the plaintiff, but the jury were very much inclined to find for the plaintiff, and I believe they really rather yielded to my insistance upon the matter, than acted upon their own opinion, and found a verdict for the defendants. (Mr. Baron *Martin.*) The judges are blamed a good deal, but they have very great difficulties to contend with with regard to these matters. So far as I am concerned, there is only one case that I tried against a railway company that haunts me in my conscience as having done them wrong, and I think if I had the same case to try over again, I should act differently.

885. It has been suggested to the Committee that a county court judge should try those cases without a jury; have you any remark to make as to that proposal?—I do not see any objection to that, if the companies like it.

886. How do you think it would affect the public?—I do not know. I have had no experience of county court judges. (Mr. Baron *Bramwell.*) I should like to say, in answer to that, that one does not desire to introduce exceptional legislation as to railways. (Mr. Baron *Martin.*) The truth is, I think you will find, that 17 people are quite enough different minds; and if you brought 200 or 300 different minds to bear upon accidents of railway companies, I am afraid you would have very conflicting decisions.

887. I think you have stated your accordance with the views of the railway companies, that there should be some limitation upon the liability; do you think that limiting the amount of the liability would diminish the caution of the companies?—I think I have already said that that was one element, in my opinion. I think the sum should be high enough to ensure as much caution and care as exist at present. I really do not see how it can well be exceeded. Speaking from my own experience (and I travel a good deal upon railways), I think that nothing can exceed the care and attention which is paid to the safety of all. It is really admirable; there is no doubt about it. (Mr. Baron *Bramwell.*) Though I do not think that, as a judge, I have any particular competency to give an answer to the question, I should like to say that the companies will take care for their own interests to avoid accidents. I would put it to members of the Committee, whether, in hiring a coachman, we are thinking of the damages that we may have to pay to the persons whose horses and carriages may be run against, or are rather thinking of having our own horses and carriages properly taken care of. We all of us, as a matter of fact, in engaging servants, are not thinking of the mischief they may do to other people, but of the mischief that they may do to the property which we entrust to them.

888. Do you think that there is any reason why railway companies, not being liable for accident, or injuries to the persons in their employ, should be placed upon a different footing from other employers of labour in this respect?—(Mr. Baron *Martin*). That is a question to which it is very difficult to give an answer. I recollect well the introduction of that doctrine, that railway companies were not responsible for injuries occurring to their servants in regard to accidents or misfortunes which occurred in the course of their service. It is now an incontrovertible principle of law, that a railway company or a master is not responsible for an injury which happens to one servant by reason of the negligence of another servant; it has been so decided in the House of Lords, and, therefore, we must take it as an incontrovertible principle of law. It has been in some way attempted to be broken in upon by a judgment of Lord Cranworth's, in the House of Lords, which goes to say that there is an obligation upon a company to employ, and to take care to have proper persons employed to superintend the performance of mining works. It was sought, the other day, to be applied to what I may call the case of an ordinary employment, but we rather set our faces against it, and proposed to carry into effect the law holding masters free from that species of action entirely. But I do not think that that is a question for me to answer; it is a question of general policy, and there is that established rule, as I have told you; it is one of those new rules of law which was not supposed to exist when I began. I recollect perfectly well the origin of it, and I think I know the history of it; but that it is established now nobody can doubt, and it is not to be altered except by an Act of Parliament, and I do not think you could alter it with regard to railway companies and not with regard to the community generally. (Mr. Baron *Bramwell.*) I understand the question to be whether there should be any difference between the liability of a railway company for the acts of its servants and that of any other employer of labour. I do not know why there should be; there is not any that I am aware of at present. If I let my carriage to a parson, and let my man to drive my pair of horses to-morrow, I must say

to him, "Mind, I am not going to be liable for my servant's negligence." Practically I can do that now, but practically the railway company cannot do it, and therefore to put them upon that footing would be to put them upon the footing of enabling them to make themselves not liable if they thought fit. If I let a carriage and a pair of horses and a driver, I may bargain that I shall not be liable for the misconduct of my servant; and so, if I am the owner of a stage-coach, and undertake to drive a man from here to Croydon, I may make that bargain; but a railway company cannot make that bargain practically. (Mr. Baron *Martin*.) I would like to observe upon that, that I do not see why that species of notice would not be got rid of in the same way as carriers' notices were got rid of. I daresay every gentleman is aware that few railway companies existed at all before the Act of 1 Will. 4, with regard to carriers, was passed. The carriers always gave notices; you always read in their offices, "Take notice; this company is not responsible beyond 5 *l.*," or something of that sort. The notice was absolute non-responsibility; and how the Courts got out of it, I do not know, but they did hold that that notice only protected the carrier against misfortunes which occurred when ordinary care was used. That is laid down in the Reports, and the consequence was, that the notice was of no avail. I fear that if you had a general enactment of that kind it would be got rid of in the same sort of way.

Sir Edward William Watkin, called in; and Examined.

889. *Chairman.*] You are Chairman of the South Eastern, and of the Manchester, Sheffield, and Lincolnshire Railway Companies, are you not?—Yes.

890. What length of experience have you had in railway management?—About 25 years.

891. What observations do you wish to make with regard to the law of compensation in respect of railway accidents?—I think, in the first place, it is impolitic in public interests.

892. On what grounds?—The first ground is, that no private person of fortune would provide a private railway; no landowner of fortune would ever think of owning a passenger railway through his own estate in his own name, because, he might be liable to the extent of all his fortune in case of a serious accident. Again, I think it has the effect of restricting the amount of low-class accommodation. Companies are naturally averse to extending the facilities given to the working classes, for instance, on the ground that the fares received are very small, and the risk is so excessively great. You may run a train for the working classes and get, say, 10 *l.* in fares, and you may be liable for 10,000 *l.* damages in consequence of giving this facility. In addition, it has the effect of entirely stopping the introduction of what I think would be a very important change in the interest of the public, and that is a system of assisting the circulation of labour. I think what we very much want in this country, both for the interests of labourers and capitalists, is a better means to labour to get to a market. You find now a man getting 15 *s.* a week in one county where there is no employment, while he could get 1 *l.* a week in another, 100 miles off, and plenty of employment all his time. The difficulty which prevents his access to a market is mainly the want of facilities and cheapness in travelling in search of work. The railway companies would be, I will not say insane, but extremely unwise, under the present law of compensation, to issue cheap tickets which would enable men to circulate, as it were, everywhere, which tickets, of course, must be issued to all people alike, really working men and non-working men, which, of course, would involve such an enormous amount of risk as would extinguish all profit, if there were any, in carrying out the operation. I think that in these three points of view, and there are others which might be mentioned, it is exceedingly impolitic.

893. Do you think that it has any demoralising effect?—I think that the demoralising effect is seen in the sort of evidence that you get. You go into a court of justice, and you have two distinguished medical men, each on oath, saying exactly contrary things with regard to the same symptoms; and you find growing up all around a number of railway accidents' attorneys, and railway accidents' doctors, and railway accidents' engineers, people who are ready to come and give professional evidence under entire protection, and to swear exactly opposite things upon the same state of facts. I think, when you have that temptation introduced into the middle class of society, it is highly demoralising as regards the middle class. Then, as regards the people at large, I am sorry to believe that, as a result, it is not considered a very dishonourable thing to get the better of a railway company, provided you have the protection of a judge and jury. A man would think it very dishonourable, in buying from you a horse, to cheat you out of 500 *l.*, or to get the weather-gauge of you to the extent of 500 *l.*; but he would not think it very dishonourable to receive, if a judge and jury gave it him, 500 *l.* compensation where the damages might not be 5 *l.*

894. Can you mention any cases in illustration of what you have stated?—I have several cases which will illustrate two or three phases of our liability, such as excessive amount of damages, others as evidence of personal fraud and exaggeration, and others showing the very long interval of time after accidents at which claims have been made, when, in point of fact, it is almost impossible to detect them. It is difficult to mention cases without mentioning the names in such a way that the individuals may be identified; but as the South Eastern Company has been mentioned, I will give a case which occurred on the South Eastern Railway. I may say that this is the case of an accident which arose upon a portion of the line where the block system was in operation. It was a case, if I remember correctly, of collision, where a portion of the train, the leading part of it, went through a tunnel and left two or three of the hinder waggons in the middle of the tunnel. The man who saw the train come through, as he believed the whole train, signalled to the man at the other end of the tunnel that the tunnel was clear, and a passenger train ran into two or three of those waggons which had been so left. That, of course, was an accident over which, one would think, you had no control. In this case several passengers were injured; and amongst others, a gentleman who was employed in a Government office. This

Sir *E. W. Watkin.*

20 June 1870.

gentleman, at first supposed uninjured, was reported to have sustained injury to the head, and concussion. He was lodged at an hotel, where he remained for some months under the care of several eminent surgeons. Every reasonable overture was made by the company, so soon as circumstances permitted, with the view of compensating him; but it was evident to the representatives of the company that nothing but an appeal to law would induce a settlement; and failing every friendly negotiation, the company had to submit to an action, by reason of the exorbitant pretensions of the claimant. The case was tried at the Spring Assizes 1865, where it was contended that the plaintiff had received great and permanent injuries, and his mental powers were so destroyed that he never would be able to resume his former occupation, or the literary avocations which he followed for obtaining his livelihood. The jury, upon the representations on the plaintiff's side, notwithstanding the counter evidence and testimony of the witnesses for the defence, awarded 5,550*l.* damages, imposing upon the company, including expenses and costs, 6,284*l.* 10*s.* 5*d.* Shortly after the verdict the claimant served notice upon the company to restrain them from paying the money over to his attorneys. The company demurred, besides, as to payment at all to the claimant, on the ground that, if the finding of the jury were correct, he could not give a legal discharge; but however, under a judge's order, the money was ultimately paid. It was reported, after a short while, that this gentleman was believed to have quite recovered from the effects of the accident, and, in fact, was sufficiently restored to be able to resume his usual avocations; and upon the inquiries made by the company they found the rumour thoroughly confirmed. He was found to have married, and after a lapse of about 18 months, gone back to his employment in one of the Government offices, where he appears to be employed at the present time. The claimant published a book with which he had occupied himself, a work apparently incompatible with the alleged diseased brain and weak intellect. The verdict of the jury, based as it was upon the alleged permanent and irretrievable injury asserted by the claimant and his witnesses, was evidently excessive, and could not have been obtained but for the imposition, exaggeration, and (to the defendants apparently) feigned symptoms exhibited by the claimant who, from circumstances, it is fair to suppose, was versed in the theory of concussions and their possible effects, and therefore understood so thoroughly the simulation of them as to deceive the judgment of medical men of the highest order in the profession and of unquestionable integrity in every way. That is a case where the man probably paid to the railway company about a couple of shillings or half-a-crown for his fare, and where the company had to pay 5,550*l.* to him, and 700*l.* more in costs. Not to weary the Committee, I could give them one or two cases on the Manchester, Sheffield, and Lincolnshire Railway. There was a German musician who held a second-class pass to go on to Worksop when the Prince of Wales came to Worksop in 1861. He paid no fare, but I believe his music was gratis and therefore he got his pass. In that case there was a slight collision and he got some small abrasion under the right eye; he claimed 1,000*l.* and got 800*l.*, and in a couple of months was playing again just as well as ever in Mr. Hallé's band. Then there was another case of a man, a small builder, who recovered 1,250*l.* for a very slight damage, who paid the company only 1*s.* 1*d.* for his fare. In the case of a governess there was an alleged injury to her shoulder; she recovered 1,100*l.*; she had paid to the company for travelling between Doncaster and Thorne 1*s.* 4*d.*, and she was happily married very soon afterwards, in consideration of her compensation and her personal charms. Then we had a case of a man who got a slight injury and who lay down on the platform and declared that his spine was injured, and he would not get up. He had to be carried. He lay on his back for months; he was watched, but not detected. He claimed a very considerable sum and, although every attempt at reduction was made, the attempt failed and the case went into court. The company were, of course, obliged to admit some negligence, and, of course, admitting anything means admitting everything, and the man got 1,050*l.* awarded by the jury, but within a very short time that man was fighting a battle in the streets of Sheffield; his solicitor was the solicitor of Broadhead. These are some specimens of the sort of imposition which we have to suffer. With regard to the question of claims coming in long after an accident, when you have great difficulty in tracing them, there is a case now on the Manchester, Sheffield, and Lincolnshire, and the Great Northern lines, of a very serious character indeed. In October 1868 there was a slight collision at Sheffield. The Great Northern express came out of the station; whether the signal was on or whether the signal was off, is a question that never was fairly cleared up; my own notion is that the evening sun was in the eyes of the driver; that the signal was on and he did not see it, and he ran very slightly into a coal waggon which was just being shunted across the line. It was a very small thing indeed; two people, I think, made claims of a few shillings and a few pounds respectively, and that settled the whole matter. But a couple of months ago the company received a letter of six pages from the solicitors of a gentleman who called himself an engineer; it is a very long account that he gave. The statement was that, in this accident his hat was driven down upon the bridge of his nose, that it abraded the skin; that this slight wound turned into an ulcer, and that the ulcer at last took the form of a permanent cancer; that he had to consult Dr. Nelaton in Paris, and further, a doctor in Rome, Dr. Mazzoni, I think his name is, and had to undergo an operrtion, and he now claims 5,000*l.* The company have no means whatever of telling whether this gentleman was in the train or not; the probability is that he was; but after a year and nine months, he has claimed 5,000*l.*, and we have been obliged to send, at very great expense, official persons over to Rome to see Dr. Mazzoni, and official persons to Paris to see Dr. Nelaton, who, I suppose, will not give an opinion for nothing; and we are under a liability for that 5,000*l.*

895. Mr. *Price.*] That case is not tried yet, I presume?—No, it is not tried yet. Speaking in general terms, I find that, in those cases the costs paid by the companies is about 20 per cent. upon the amount of compensation; that is to say, if a man recovers 1,000*l.* the railway company have 200*l.* to pay for costs, and that 200*l.* divides itself thus: about 12*s.* 6*d.* in the pound to the lawyer, and about 7*s.* 6*d.* in the pound to the medical

medical parties concerned; and I believe that is about the relative rate of interest which the two professions have in the continuance of the system.

896. Mr. *Sherriff.*] You mean that those gentlemen's expenses amount to 20 per cent.?—Yes, they amount to 20 per cent. Of course that does not include the amount which the successful claimant has to pay, in addition, to his own professional man, which is sometimes another 20 per cent. I should not at all wonder that the amount paid by both parties, plus the actual damages, may be at least 30 per cent. So that there is growing up in the country a distinct class of persons who have an interest in keeping things as they are.

897. *Chairman.*] What should you say as to the tribunal; do you think that the cases should be tried by a jury, or by some other form of investigation?—Of course all juries are assumed, like gentlemen on committees, to have no interest in the case: but a jury has a very large interest. They are all railway travellers, and are all interested in damages in cases of accidents, and very naturally they must have a sympathy, not with the railway companies, but with travellers. My own view is that I would rather see the cases tried before a judge, because where you have a case tried before a judge, you know that you are having it tried by a man of the highest experience and the most undoubted position. I would rather see that, than before a county court judge, myself.

898. You would not like it to be tried before one of the county court judges?—I think I would rather have the cases tried by a judge without a jury. It is so in France and Prussia, and I think almost all over the continent the judge decides it.

899. What do you think as to the suggestion which has been made, that there should be a commission to try all the compensation cases arising out of any one accident?—I do not see any reason why cases arising out of the same accident should not be tried before the same judge, or why all those things, which must be proved separately in every one of 50 or 60 cases, should not be proved once for all, and be taken by commission and laid before the judge.

900. Mr. *Sheriff.*] That would only apply to a very severe accident, such as the Brighton accident; it would not apply to cases where only one or two were hurt: the utility of it would be best shown in large accidents, where a great many people suffer?—Of course, if only one person was injured there would be no utility in it; but where you have, as in the Brighton case, say, 150 or 200 cases of alleged injury, or of real injury, clearly it would be more convenient to have the facts of the accident, and the causes, and all those things, which have to be separately proved in each case, proved once for all at one place.

901. *Chairman.*] Do you think that there should be a limit of time in respect of actions for damages?—Yes. I have given a case where between a year and a half and two years after the alleged accident a claim of 5,000 *l.* is made. Supposing it was a small railway company, with a capital of about 50,000 *l.* or 60,000 *l.*, how could they make up their dividend if they are liable to have those claims such a long time after they have made up their accounts.

902. Do you concur with the other gentlemen on behalf of the railway companies, in suggesting a limit to the liability of companies?—I think that the position of railway companies is this; it is always said that railway companies want to be in a different position to all other interests carrying passengers; but it should be borne in mind that the railway interest is the only industrial interest in whose case liberty of contract is absolutely suspended. You will say, well, it is the same with omnibuses, and the same with cabs; but no, it is not. An omnibus is not obliged to go on carrying everyone for all time to come, nor is a cabman, but a railway is. You are not only bound to carry, but you are bound to carry for the same fare, people of all ages and in every stage of health, and difference in the number of their family, and different positions, and to carry every variety of risk, for the same price. You are obliged to do it and to go on doing it.

903. Their fares are, generally speaking, are they not, below the limits which the Acts of Parliament enact?—Sometimes they are and sometimes not. Take, for instance, the 4 *s.* 6 *d.* train down to Margate; we will say that four persons present themselves, one a working man getting 1 *l.* a week, without family, and in perfect health; another person so ill that if you gave him a good shake, he would give up the ghost; another person with 10,000 *l.* a year, and a large family; and another, some widow or widower, with a great many children, in very poor circumstances. Here in every case, the risk is totally different, and the difference in the risk represented in figures would probable be as 1 to 10,000. We are compelled to carry each of those, and at the same price; and I am certain that if each of those classes were to apply for a ticket, and were refused, they would bring an action against us, and it would be decided that we were compelled to carry them. Therefore, really, in our case the right of making a voluntary contract is entirely suspended. Under those circumstances you must either do as the learned Baron suggested; you must either assume that there is no compensation without insurance, and then permit or compel insurance, or you must limit the liability. I have been a great deal in America, and in many of the States of America the liability is looked upon as so injurious in the public interests that the liability is limited; the English law with limited liability.

904. Can you tell the amount of the liability in New York?—I can only tell you of the law in Massachusetts of my own knowledge, and there it is 5,000 dollars. That is the extent of compensation which any individual can get; it is the English law, with a proviso that, "Provided such amount of damage so recoverable shall not exceed the sum of 5,000 dollars."

905. That is whether the company is guilty of negligence or not?—It is assumed that negligence can be proved, and that there is no question.

906. Suppose that they admitted negligence?—It is just the same.

907. Sir *H. Selwyn-Ibbetson.*] Does that apply to all classes of passengers?—Yes; to all classes of the same amount. I should be in favour of taking a limited sum for all classes. I do not believe in a discriminating limit, although I quite admit that you can argue for it, upon the ground that

Sir *E. W. Watkin.*

20 June 1870.

the poor man pays 1 *d.*, and the rich man pays you 3 *d.*

908. Mr. *H. Palmer.*] There is no distinction of classes upon the American lines, is there?—They are getting a distinction now that they are beginning to be more luxurious; but it was not so before, except with regard to negroes; there was a negro car, but there was practically no distinction of class. But I am opposed to making an invidious distinction between rich and poor in the limitation.

909. *Chairman.*] There is no provision for compulsory insurance, is there?—None whatever.

910. Does it work with satisfaction, as far as you know, in Massachusetts?—Yes, I apprehend so, the Americans are a sensible people. They say, if you will make an industry so risky and so dangerous that people are not disposed to enter into it, the great bulk of the public who want it suffer. I am bound to tell the Committee that the public of England, especially the working man, is suffering now by those anomalies which press upon anybody who goes out of the ordinary line in order to give extensive cheap accommodation.

911. Practically, there is no difficulty, is there, in working accommodation of that kind?—Not the slightest.

912. Do you wish to say anything upon the block system on the South Eastern line?—I may say that we have the block system upon the South Eastern line, and it works very successfully; in point of fact, I think the South Eastern Company introduced the system generally before there was any recommendation from the Board of Trade. I should certainly say that an interval of space must be always better than an interval of time, with regard to the system of signals, but, at the same time, the Committee will no doubt have learnt already (I mentioned the case myself) that a new class of accidents is brought about by the operation of the block system. The case I mentioned is where the tunnel is signalled clear, and the goods train has actually passed out, but the train has dropped its hinder end in the tunnel, and it is left there, and the next train is sent into the tunnel, the man believing that all is right, and he runs into it. Of course that may be so, and in addition you may find when you stop a goods train on an incline, by stopping it and starting it again you may break the coupling, or get into some difficulty, and therefore the Committee must not think, though I should advocate the block system as a rule, that it is infallible, or that I should recommend its compulsory adoption. I think the best course in the interests of the public is to leave the responsibility upon the railway companies.

913. Is the additional expense material?—Yes, there is considerable additional expense. You must have on a line like the South Eastern, between each station, a telegraph system, with a man night and day, and therefore the Committee will see that there is, first of all, the expense of the telegraph itself, there is then the expense of the box for the man, and then there are two men, one by night and one by day, or in crowded places you must have three, because a man's attention will not last 12 hours with such a duty, with a great number of trains, and if you multiply it by the number of stations on the line, you will see that it is very large; still I do not think that the mere matter of expense should influence us at all; we should do all that is possible to secure safety.

914. On the whole, you think that the matter should be left to each railway company to judge for itself?—I think so; but at the same time I should say very strongly, that upon a crowded line, if I were the manager of it, I should use the block system.

915. What do you think is the great cause of accident?—The cause is getting less and less, I hope; but many of the accidents that we have had have been from the poverty of the companies, simply. I think that what Parliament has chosen to call competition, which means having two poor and incapable railways, instead of one moderately prosperous and good one, has led to a great many accidents; and apart from that, of course I need not suggest to the Committee that as regards material machines we can control them, but when we come to the human machine, all that we can do is to make the best selection in our power. It is obvious that we cannot expect infallibility from men at 18 *s.* a week, or at any wages that you will pay. The law of Lord Campbell assumes that every man is infallible, that he is always awake, that he is always sober, that he always has his wits about him, and that he always has courage. That is impossible; and as it is impossible from the very nature of human nature, clearly you must have some accidents. Then I think that the only thing to do is to exercise the greatest care in selecting your men, to pay them well, not to over work them, and do what an ordinary employer of labour does, get the best class of labour and enforce strict discipline.

916. Sir *H. Selwyn-Ibbetson.*] Have you any return of the number of accidents that have happened on the South Eastern Railway during the last few years?—No; I have not it with me here.

917. I see by the Government report that there are only three accidents mentioned against the South Eastern Railway in the last two years, 1868 and 1869; in both those years the line had been worked under the block system, had it not?—Yes; and so it was before that. The main line has been worked for many years on the block system.

918. Did the accident which you mentioned happen within the last two years?—No; in 1864.

919. Under the block system, by preserving a space between the trains, you absolutely protect them between the stations?—Yes, assuming the machine to act, you do, certainly.

920. Of course an accident arising from a defect in the machinery of trains, would be the same under the block system?—Yes, it would.

921. At stations where the block system is at work, I suppose you could entirely protect the trains if shunting and other work is not done while the station is under block?—You can; but things of this kind happen in this way. I daresay many members of the Committee will remember the great fog two or three years ago, when everything was shut up except the railway from Charing Cross to Cannon-street. I may say that on the South Eastern Line, on the Metropolitan part of it, we have got something in addition to the block; we have a telegraphic system under which the preceding station telegraphs to the next (and when I say station I mean a signal station) to say what train it is that has left, whether

whether it is a passenger train, or a goods train, or a ballast engine, or what it is. In the case in question, of course it was so dark that you could hardly see you hand before you, and though there are lamps of gas in the signal box, the signal boy, who had to do those telegraphs, omitted to report the passage out of the South Western Line, I think it was, of an engine. By some misunderstanding of that sort, a train was signalled that all was right when something was all wrong, and we had a collision in consequence of the failure, under those circumstances, of the mode of working to act.

922. But that is no evidence against the block system, because it might have happened with any other system of working?—I think it would be, because under the other system in that case the engine driver would have looked out with more care, and perhaps the collision would not have happened.

923. I understand you to say that the collision was on the occasion of a very dense fog?—Yes.

924. Therefore you think that under those circumstances greater care would have been used by the servants of the company than under the block system?—For this reason: the engine driver got, of course, an affirmative signal; the block system assumes that you get an affirmative signal, which is an order to go on; if he had not had an order to go on, he would have looked out; he would not have believed that all was right; he would not have taken anything for granted.

925. Do you mean that the engine driver, in the case of the fog that you speak of, would not consider that he is obliged to use some extra caution?—When he got an affirmative signal, he would assume of course that the road was clear. I would not say anything against the block system, but I want the Committee fairly to see that, although it brings a great deal of safety, it brings some danger also.

926. Practically, you believe that it does secure a very far greater amount of safety to the public in the working of a railway than the present system?—On a crowded system, I do.

927. Do you find any difficulty in working it on the whole length of your line?—No, it is simply a matter of expense and delay.

928. Is there no greater difficulty where the stations are a short distance apart, than where you have long distances to travel?—It of course reduces the power of passing a number of trains to a certain extent; it limits the useability, if I may coin a word, of the railway to a certain extent.

929. At the same time, I suppose, in limiting the number of trains, it ensures the safety of the public very greatly by that fact?—Yes, as regards collision, certainly; no trains, no accidents, of course.

930. It does away with the possibility of running, as some companies do at the present moment, trains within a few minutes of each other?—The block system does; but on the Metropolitan Line under the block system, you can run trains within three minutes of each other. I consider the Metropolitan to be the most successful illustration of the working of the block system, and I know that there you can run a train within three minutes; sometimes you have to wait a moment or two.

931. That is in consequence of the shortness of their stations?—Yes, that is in consequence of the shortness of their stations.

932. That would be impossible, of course, in long distances?—In the case of the block system upon a line, say, where there were stations every 10 miles, you would either have to have a block intermediate, or not have it at all, because you would have trains 10 miles off each other waiting, and that would be absurd.

933. Mr. *Winn.*] How long after an accident has happened do you think, that the possibility of claiming damages should cease?—I would not limit the time for claiming damages, but I would enact that the party alleged to be injured should give notice within a fortnight, or some reasonable time, of the accident, that he was in a certain train, so that we can identify him, and see that he really was injured, and examine him immediately after the accident. I would not at all limit the time within which he might bring his action, but I would not allow him to bring his action, unless he had given notice within a reasonable period.

934. It has been given in evidence before this Committee that in some cases of nervous shocks, the damage did not appear till a considerable time after the accident had happened; what is your opinion upon that point?—I think there may be some cases, but I confess, speaking with all impartiality, that I look upon them with considerable suspicion when the damage appears at so late a time; but my proposal would not interfere with that at all. I would let a man have his full six or seven years, whatever is the present period, but I would compel him within a given number of weeks or days of the occurrence of the accident, to give notice that he was in the accident, in order that you may identify him, and ascertain the fact that he was in the accident, and that you may see the first effects of the accident upon him.

935. I think you agreed with what was said by one of the learned judges just now, that he thought it would be desirable, if possible, that the whole of the damages, as I understood, which had happened in an accident, should be tried at the same time?—Yes; or the facts ascertained once for all.

936. But the damage done to any individual might manifest itself a long time after, and you would have to keep all the other people waiting, would you not, till some certain time had elapsed?—No; I do not propose that all the cases should be tried together, but that the facts of the accident, the causes, and all those things, which have to be proved, if there are 100 cases of damage, 100 times over should be proved once for all, and that the report should be simply put in; and then, if possible, I would try all the cases before the same judge. How far that might be possible, as a matter of the judge's time, I do not know.

937. In case the liability of railway companies to pay heavy damages were removed, in what way would it affect the fares of passengers?—I do not know that it would affect the fares at all, excepting to this extent: take the case of the South Eastern Railway; some two years ago, rather from motives of benevolence than motives of profit, in order to assist those people from Deptford and Woolwich, and down the river, where the iron ships used to be built, and where trade has been so bad, we put on a work-

Sir *E. W. Watkin.*

20 June 1870.

man's train, at a fare of 2*d.*, from any station to Plumstead, which, I think, is 12 or 13 miles from London, so that a working man could go up and down, and we give him a choice of trains to return by for 2*s.* a week; 2*s.* a week is about the sum representing the difference of rent and taxes between a hole in London and a cottage in the country. We carry a very large number of people by that train, and hitherto we have never had an accident; but if we had an accident, we might lose more money in one accident than we should get by running it on for 20 years. Our proprietors do not get a very large dividend; and I have had a number of letters from them, saying you are carrying a sort of gunpowder, and I am under a pledge that, if we do not get a similar limitation of liability to that which the London, Chatham, and Dover, the Great Eastern, and the Metropolitan Companies have got with regard to carrying workmen, we must take the trains off, and we shall be obliged to take the trains off. I believe that, if the liability was less, we should run a great many more of those trains which we do not run now, for fear of the liability; and that some of the fares no doubt would be reduced in consequence. I am most anxious myself to see a system of fares established under which workmen may circulate all over England in search of employment. It is one of the most important questions with regard to the working classes, but nobody will dream of doing such a thing under the present law of compensation. So that in effect, what I expect from the taking off of this unreasonable and unfair liability, which attaches solely to railway companies, is, that the working public will get the benefit in lower fares and greater facilities.

938. Do you know at all what proportion the annual payment made for damages bears to the net proceeds of the company?—I have got a statement from the Manchester, Sheffield, and Lincolnshire Company, and I see that the passenger traffic is about 400,000 *l.* a year. I see that in three years the amount of compensation has been 27,200 *l.*, exclusive of expenses, and if you put on 20 per cent., that would be about 33,000 *l.* or 34,000 *l.*; but that line, as the honourable Member knows, has not a very great number of fast trains upon it; the trains are worked mainly at slow speeds; it is more a goods and mineral line than a passenger line, and therefore it would hardly be a fair criterion. In that case, assuming the traffic to have been 400,000 *l.* a year for three years, it is about 2½ per cent.; it is 10,000 *l.* upon 400,000 *l.*

939. Is not the tendency of your being liable to pay heavy damages to make companies more particular about the persons that they employ, and the means taken to prevent accidents?—I will not at all contend that it may not have some effect, but you must bear in mind that the risk is reduced to two risks; one is the personal risk to the company's servants, and the other is the pecuniary risk to the company. Really the people who have the lives of the passengers in their hands mainly are the company's servants, who are risking their own lives, and I do not know what greater security you can have for caution than that, the stake of the men's own lives. Then with regard to the companies, clearly it is their interest as well as their duty (and I beg to think that railway directors do try to do their duty) to work the line safely and without interruption. I believe that if you were to double the present amount of compensation, it would not increase the desire of the companies to carry people safely; and when you come to consider really what are the causes of accidents, if I am not wearying the Committee, I would just like to ask them to consider how many of those accidents occur from causes over which all the management in the world can have no control. I will take the accident which Mr. Baron Martin mentioned, the Staplehurst accident of 1865, on the South Eastern Railway, since which there has been no fatal accident of the kind on that railway. That was an accident to a tidal train; the tidal train has carried from its beginning up to now over 1,000,000 passengers, and there never was an accident of any kind to that train till the Staplehurst accident, and there never has been an accident since. The road is specially kept clear for it, because of course it runs at irregular times and runs at great speed. There is a special time table for it; every station has a copy of the time table, and every person employed upon the line has a copy also, and special instructions with reference to it; in fact, the road had been made so safe that I dare say the driver, the fireman, and everybody else on the train never anticipated danger, and had no vestige of that fear of impending danger, which may make men sometimes more cautious. The accident arose in this way; they were repairing a bridge and had taken out the central girder of the bridge in front of this train; the foreman over the persons engaged in the work was a very intelligent man, who had been a long time with the company and was perfectly competent. The time table is here, which gives the time for Thursday, Friday, and Saturday; on Thursday the time was 3.19, on Friday 3.19, and on Saturday 5.24. The man knew that the train on the Thursday had passed at 3.19; he looked at his time table and he found the next day 3.19; then he assumed that the last 3.19 that he saw was the 3.19 of the day before, and that the train that day would be at 5.24; he assumed, therefore, that he had to look out for the tidal train, not at 3.19, but at 5.24; therefore he took the girder out within a moment almost of the train coming in sight. It is true that he sent a man back 1,000 yards with a flag. Whether the man fell asleep, or whether he did not show his flag properly, or whether the engine-driver was not looking out, we cannot tell, but every precaution that the company could take was taken; but from the mere mistake of this man in forgetting that the train started at the same time two days together, that accident, with its compensation of 80,000 *l.*, occurred. I want to know whether any fear of compensation in that case could have made the company more careful than they were.

940. Was the block system in force at that time?—Yes, certainly.

941. This is quite an exceptional case, is it not; it would not happen on any ordinary line?—It may happen to any line.

942. Surely a tidal train does not run on most lines?—No, but trains run at irregular times on all lines; special trains of all kinds. Anybody who wants a special train on any line always gets one if there is no particular impediment.

943. There is nothing to connect this accident with the block system in any way?—Not at all, except this, that if I were disposed to argue against

against the block system, which I am not, I might add that this man got a signal when he passed the Ashford station, that all was right at Staplehurst, and that there was no train in the way. If he had not got that signal, if he had seen the green flag, showing that something might be in the way, he might have gone slowly, but he went on, believing that all was safe.

944. Sir *H. Selwin-Ibbetson.*] The signal that went back was not observed?—No; but with regard to a temporary signal used for a temporary affair of that kind instead of the block system, that is, if we take a rail out or a sleeper, we always send a man backwards.

945. Mr. *Winn.*] The block system would only be as between station and station?—Yes, only between station and station.

946. Mr. *Davison.*] The Sheffield total earnings, I think you said, were 400,000 *l.*?—The gross earnings for passengers; I am speaking from memory.

947. You said that you paid 27,000 *l.* for accidents for three years; then that would be 9,000 *l.* for one year as against 400,000 *l.* gross?—Yes.

948. Do not you, as a matter of practice, always receive notice from persons who you find make claims against the company?—We very often do; but I have given a case where we have only received notice a year and a half, or two years afterwards.

949. That, of course, may occur, but as a rule you do receive notice?—As a rule, if we have an accident that is at all *èclatant,* we find some solicitor sends out circulars to everybody, and we have plenty of notices.

950. You have notices within a very short time indeed?—Yes.

951. Would you propose this; that you should be told by everybody who is in a train to which an accident occurred that they were in it, whether they are hurt or not?—Quite so.

952. Not that they should give you notice actually of the injury that they received, but simply that they should warn you that they had been in the train?—That is all.

953. You would not, in any way, limit the time in which they could bring their action?—No, I think it would be unfair to do so. I do not think we should try to take away any of their common law rights, or law rights of any sort, or whatever they might be.

954. Mr. *Denison.*] The block system would not be any real protection against, for instance, a mischievous person laying an obstruction on the line, or from the operations of workmen between station and station?—No, it would not, of course.

955. It is from such things that a great many accidents occur, is it not?—A great many.

956. Sir *H. Selwin-Ibbetson.*] I presume that upon any alteration in the working of the line, that is, upon the taking up of a sleeper or anything of that sort, you would control the line, and have that part blocked while the operation was going on, under the block system?—If it is a serious case of relaying, we stop one line absolutely, working the single line, so that the system is an absolute block system. If, on the other hand, it is a mere temporary repair, it is done between the trains, but notice is given to all parties concerned at each end, and a special man is sent out with a great red flag that goes across four or five feet, and that is kept up, so that the line is under control during the operation.

957. Under those circumstances, then, the driver would know that extreme caution was required, and therefore that does not quite apply, which the honourable Member wished to bring out, that this accident could not have been guarded against under the block system, whereas the line was best protected under the usual system?—In an ordinary case the driver, no doubt, is instructed to show extreme caution, and he gets the caution signal instead of the admitted all-right signal. I do not see how you can work it in any other way.

958. Mr. *Denison.*] Then the caution would be due to the flag system, and not to the block system?—Quite so. In the case of the block system there are cases where there may be danger, although there is a signal that all is right, as I mentioned just now about the accident in the tunnel, where a part of the train was left behind. There is nothing to prevent it; and on a dark night a train may be going along at a hard pace, something may tumble off upon the line, a goods train on the other line, which has lost a bale of goods, for instance, has passed, the signal given to both trains may be "all right," and the driver comes on with a confidence which a positive signal gives, therefore he may get into trouble which he might not have got into otherwise. But of course, like everything else, you cannot have absolute perfection.

959. But would not the legislative enforcement of the block system mainly have the effect of making engine drivers perhaps less cautious than they would otherwise be?—There is no doubt that is a difficulty, and the vice of an affirmative signal. If you tell a man that all is right, it is not in human nature that he should take the same caution as if he assumes that something may be wrong. With regard to enforcing it, I think Parliament would take from the railway companies a very grave responsibility if they enforced any particular system of working. Personally I should be rather glad if the public would take the responsibility, which is a very serious one, from railway directors; but I think it would be a very grave mistake.

960. Do you think that your old experienced engine drivers could give this Committee any useful information upon the point of the actual driving of trains and the working of signals?—I do not know that they would. They are under discipline, and they work to order; but we should be very glad to present any of them, if the Committee think that they would be of any use. You see that the driver must have properly very little opinion of his own; he must obey orders, and therefore I do not know that he would be a very useful witness upon management.

961. Mr. *C. Reed.*] In your opinion, this open liability stands in the way, does it not, of a material reduction of fares?—I do think so, to the poorer class of people.

962. Supposing that this was altered, upon the question of limited liability, the public might expect a considerable reduction?—I think so.

963. And the working classes especially, in the way you have indicated, in moving from place to place?—Yes; I will say the working classes solely, for I do not see that there is a case for a reduction to rich people. I want to see a reduction to the poor. I do not believe in reducing the fares to the rich at all.

Sir *E. W. Watkin.*

20 June 1870.

964. Strictly the railway companies have no greater grievance than the steamboat companies have, have they?—Yes, I think they have.

965. A steamboat company is liable, is it not, for damage done by concussions?—Yes.

966. A steamboat company has open competition, has it not?—Yes.

967. But a railway company has not the same class of competition?—No; I think, taking the case of the railway and the steamboats, say between London and Gravesend or Greenwich, the case is this: Supposing that the train from Charing Cross Station to Greenwich has had an accident in which 100 people, are injured, the company is liable, perhaps, for 10,000 *l.* or 20,000 *l.*, or it might be 50,000 *l.* in the case of a dinner of the Cabinet, or other great people. A steamboat goes to the same place, but they are only liable for the value of the ship and cargo; there is no question about the value of the passengers; the ship is worth about 3,000 *l.*, and the amount of liability is limited by the value of the ship. Those small boats on the river will carry quite as many passengers as we carry by a train, and they might injure 100 people and get off with 3,000 *l.* damages, whereas we should be saddled with 20,000 *l.* or 30,000 *l.*, or even 50,000 *l.*

968. Particularly there is a limit in the case of a steamboat?—Yes. Parliament has given the limit in the case of a ship, but has given no limit in the case of a railway competing with the ship.

969. In reference to injuries arising from an accident, is it not a fact that, in the case of injuries caused by concussions, the most serious symptoms often do not arise for many months after the accident?—Sometimes; but I say that I look at those cases with very great suspicion.

970. But, physically, is it not a fact that in the case of a concussion the symptoms of a spinal affection or a brain affection do not arise, so that no one could know them for a very long time?—I should think they are very rare cases. It is very frequently set up; and there is a Dr. Erichsen who has written a book upon railway spinal affections, but we look upon it as not well founded, to say the least of it.

971. Your object would be answered if you had the names of the persons who were travelling in the train?—The object of the limitation of time would be.

972. You could always obtain that after an accident through the companies' servants, could you not?—No; we never know the travellers. Supposing we take the continental train, in which there are 200 or 300 passengers, we might not know a single one.

973. Could you not, through the companies' servants, after the accident, obtain the names of all the travellers, without their having to give notice to you?—I think not. As soon as ever an accident happens, the people are very anxious to get away; there is always a great amount of confusion, and practically it is impossible to get the names and addresses of all the people.

974. Is it not a fact that many persons, in what may be called ordinary accidents, do suffer and make no claim on account of poverty or want of means?—I do not think so. I think that where people suffer, and where they come and make a claim, they are almost invariably settled with on fair terms. I think that the people who do not make claims are men like the late Mr. Dickens, who was in the Staplehurst accident, and whose letter I have now in my pocket; people of that class, who consider there is a certain amount of danger attending all travelling, and that they ought not to press an unjust law upon the companies.

975. You have spoken of workmen's trains and the facilities which you desire to give them, are you connected with the Great Eastern Railway Company?—I am a director of the Great Eastern.

976. There has been by that company a great displacement of poorer property in the districts passed by their line?—Yes, no doubt; and by all those metropolitan companies.

977. I have taken a note of the returns from the Great Eastern of the workmen's trains, and I find that from Poplar or from Stepney a man can only get in at a very early hour in the morning to his work from his residence in those places, and at rather high fares?—The workmen's trains on the Great Eastern, I fancy, will not really operate until the opening of the Metropolitan Extension. In the case of the Metropolitan Extension, there is an Act enabling them to extend their railway from Shoreditch to Liverpool-street in the city, under the obligation to run workmen's trains, with a restriction with regard to the amount of compensation.

978. You have referred to the train running from Plumstead in the morning; what time does it leave?—It leaves Plumstead at five in the morning, and gets to Charing Cross at a quarter before six, I think.

979. Is that the only train by which a working man can come to his work at eight o'clock?—No, there are many other trains; but he cannot come for 2 *d.*

980. That is the only train at a low fare by which he can come to his work; and supposing that his work required him in town at eight o'clock, he must come away at five o'clock in the morning to entitle him to that pass?—Yes; but from Plumstead to the stations nearer London, at all of which it stops, it gets later.

981. Therefore it is a very early hour for a man to take advantage of it to be at his work at eight o'clock?—Yes.

982. Greater facilities than that, in your judgment, would be desirable if you could take off this liability from the company?—If I saw my way to a reasonable number of passengers, I should be quite ready to put on a second train; at present we put on that train at five o'clock, because after we canvassed the district, we found that it would accommodate the greatest number of people.

983. Mr. *Sherriff.*] I understand you, on the whole, to say that the block system is a system which should be generally adopted on railways when the time comes, at which, in their own opinion, they should adopt it?—I think is should be adopted voluntarily upon all crowded railways, and gradually extended.

984. But there are, as I understand you, a certain class of accidents which the block system could not prevent, such as one carriage in a train being left behind by a bad coupling breaking in two, which neither the one station nor the other could know anything about, or the operations of repairing the line, which are not under the superintendence of either of the stations?—Exactly so.

985. Those accidents might occur whether the block system was in operation or not?—Of course, and

Sir *E. W. Watkin.*

20 June 1870.

and the block by its affirmative and assuring character must have a tendency, perhaps, to produce new, or at all events, to increase some old, classes of accidents.

986. But on the whole, you think the block system on crowded lines of railway is the best system that has yet been adopted?—I do; that is our experience.

987. As to the kind of workmen's trains which you have suggested to the Committee, as I understand, a kind of ticket would be given a man in search of employment, at a cheap rate of fare to districts where he thinks that employment could be got; haye you in you own mind developed that plan, so as to give a little more information about it to the Committee, or have you the acquiescence of other railway companies in such a plan, or their willingness to join in it?—No; I have no right to speak for any other railways. I know with regard to the two or three that I am connected with, we should be only too glad to devise a system which would enable men to search for employment, with much greater facilities than there are at present.

988. In case the Chamber of Commerce took up the question of the redundancy of labour in one place, and the paucity of labour in another place, and suppose they would give a certificate to a man to apply to a railway company, do you think that the railway companies would listen to any such suggestion as reducing the gross fare throughout the country?—I think that the railway companies would meet the question cheerfully, even although it would not be attended with any great profit, but what they dread is the liability.

989. Have you observed, as regards the machines used by railway companies, I mean the engines and carriages, that at the beginning of the railway system, very frequent actions arose from the failure of them, and that such failures have of late years been very few?—I think that we have now got an almost perfect mastery of the mere material elements, but the human nature element we never shall get the entire mastery of.

990. As regards the machines which you have to select and pay for, the accidents arising from the failure of such have of late years been reduced, have they not?—I know of but very few accidents arising from defective machinery. When I say defective machinery, I mean defects that might have been seen and guarded against.

991. Mr. *H. Palmer.*] You have spoke of workmen's trains, and that if there were some limit you would willingly carry workmen more than you do. Upon what principle would you put a limit upon railway companies?—Exactly upon the same principle as Parliament has put a limit in the case of steam-boats and other vessels.

992. Is it to be influenced by the number that you carry or the smallness of the fares?—It is of course, very difficult to give an answer which would be mathematically correct, but I think that we might agree upon a figure which would represent something like the average risk.

993. You do not think it right that there should be any distinction of classes as to the limit, but this is a special case that you are putting now of a distinction of class for working men?—The limit that Parliament has established in the three cases that I mentioned, namely, the Great Eastern, the Metropolitan, and the London, Chatham, and Dover, was 100 *l.* I think that evidence has been given before this Committee, recommending 500 *l.*, 300 *l.*, and 200 *l.* I should not at all myself object to making it 250 *l.* or 300 *l.* for everybody, working people or anyone.

994. You would not go so high as the American system?—Certainly not. I do not think that you would get anybody to carry a workman for 1 *d.* if you risk 1,000 *l.*; and there are no such fares in America.

995. You are influenced more by the numbers which you would carry than by the smallness of the fares which a third-class passenger pays; if an accident happened, there would be a great body of working people that would have claims?—There are a greater number involved of course. A low fare involves a large number; you would not have a low fare if there were not a large number, and it involves this, that first of all, if you do injure a man, you have to pay a high insurance for a very small premium, if you so speak of the fare; and secondly, you carry him upon the condition that you carry a vast number of people, and therefore an accident must injure a larger number than in the case of an ordinary first and second-class train.

996. Does it influence you at all in regard to excursion trains, in which large numbers are carried?—Yes, it does. I habitually set my face against and avoid excursion trains, entirely upon this ground of compensation; and I believe companies generally do.

Mr. Samuel Laing, called in; and Examined.

Mr. *S. Laing.*

997. *Chairman.*] You are the chairman, are you not, of the London, Brighton, and South Coast Railway Company?—I am.

998. You have had, no doubt, very considerable experience of the present law?—My attention has been drawn to it for a great many years, as having been formerly connected with the railway department of the Board of Trade, and chairman of railway companies, and especially of late by that New Cross accident on the Brighton Railway.

999. How long were you Vice-President of the Board of Trade?—I was first secretary to the railway department of the Board of Trade, and then railway commissioner under Lord Dalhousie.

1000. You have experience in the New Cross case specially?—Yes, that has directed my attention to it specially, for that is a very recent case, and one, on a very large scale, which illustrates the working of the present system.

1001. What was the broad inference which you drew from that case?—It impressed still more forcibly on my mind the excessive hardship to railway companies of the operation of the present law. It was a case, I may say, in which no blame was ever imputed to the railway company. An excursion train to the Crystal Palace Fête of the Licensed Victuallers was returning from the Crystal Palace at night; the tickets were being collected at the New Cross Station, and the train was protected by no

Mr. *S. Laing.*

20 June 1870.

less than three signals, one of them being a special signal, more than a mile up the New Cross incline, which had been erected in compliance with the special recommendation of the Board of Trade. There was a goods train following it from Forest Hill, which knew that the excursion train was before it; there was no particular hurry; the driver was an old experienced man, who had been 20 years in the service with a good character; but he ran past those three signals all against him, and ran into the train standing at the ticket platform with sufficient force to cause a concussion by which a large number of persons were injured. The result to the railway company was simply this: the total receipt from the passengers in the train was a little under 20 *l.*, and the total cost of the accident to the company will be something over 60,000 *l.* I should say, as nearly as I can ascertain, that it will be about 65,000 *l.*

1002. What were the number of claims for compensation?—There were about 360 claims for compensation; and I refer to that specially as an illustration of the working of the present system. The company made every effort possible to settle those claims out of court, because we know, as Mr. Baron Bramwell said to-day, that the feeling of jurors was such that, even if we had a good case, they would probably go against us, and, therefore, our instructions to all our officers and legal advisers were to settle at almost any cost out of court, and yet, notwithstanding that we have had 126 actions and law suits brought against us which we have been obliged to take into court.

1003. What was the amount in costs?—I should say that the amount in costs will come out to about the figure which Sir Edward Watkin stated, namely, about 20 per cent. of the whole amount, from 10,000 *l.* to 15,000 *l.* at least will be the amount of costs both sides; and they would have been much more in the case of the railway company, but that we have an arrangement with our lawyers by which they get so much by the year, and do not charge by the job, therefore our costs are materially diminished; the bulk of that amount would be the plaintiffs' costs.

1004. To what do you attribute the excessive amount of litigation?—I attribute the immense amount of litigation mainly to the nature of the tribunal. I think that a separate jury trial in each separate case involves so much uncertainty and holds out such a premium to litigation that it is amost impossible to get those cases settled. I find that practically it has the effect of calling into existence a class of professional men who make a trade of things, who go about after an accident touting for cases; and they get hold of a certain number of cases, and they know that under the present state of the law they are pretty safe of their costs, because the costs go against the railway company, if there is a verdict for the plaintiff at all, or up to 10*l.*; and therefore a man may claim 1,000 *l.*, or 5,000 *l.*, or any amount he likes, with the certainty that he will get the costs against the railway company, though only 10*l.* be given by the jury.

1005. Have you had any gross cases of fraud?—Yes, a good many have been detected; and we have had cases of personation. There was one case in which, after a verdict of between 200 *l.* and 300 *l.* had been given against us, one of the accomplices split, and we got evidence upon which we proved that the man was never in the train at all. There was another case in which a young woman who, although she had not been in the least injured, on coming home, was advised that she might make a good thing of it if she took to her bed, and she brought herself at last into such a condition that she was seriously ill. These are only two instances; our solicitors who defend the cases could give the Committee if they desired it, the minute details; I can only give the general result, that there was a large per-centage of downright fraud and personation, and a still larger per-centage of cases which were got up by professional men, and many extortionate and excessive claims were made and prosecuted no doubt with the hope of being paid the costs of the litigation.

1006. Do you concur in the recommendation of a fixed maximum liability unless the party is specially insured?—Yes, I concur in thinking that that is the best mode of cutting the knot of those difficulties, and I have always thought so myself. Mr. Baron Martin and Mr. Baron Bramwell stated that, according to their view of the law of the case, a railway company might refuse to carry passengers, unless under the condition of not being liable for compensation, but I think this would be so invidious, and there would be such a tendency on the part of judges and juries to stretch the law against that course of proceeding, that practically you can hardly look at it as possible: I should think myself that a very fair practical solution of the question would be to impose a certain moderate maximum amount of compensation as is proposed by the Bill of the associated railway companies, and then say that if the public want to be insured beyond that, facilities should be given them for doing so, but that they must pay an extra insurance.

1007. Do you know the American law?—No; I have no specific acquaintance with the American law.

1008. You heard Mr. Baron Bramwell and Mr. Baron Martin say that they had some doubts as to the wisdom of the railway companies accepting this maximum liability, but you as a railway chairman would be glad to do so?—I should certainly prefer a limited maximum; it is clear to me that if a maximum is given for an extreme case, that of death or permanent injury, any proper tribunal to which the case could be referred, would not give the whole amount in the case of a very minor or partial injury; but I should observe that in my opinion a great deal more depends upon the nature of the tribunal than even upon the limitation of the amount.

1009. What should you say as to the suggestion which has been made, that the whole case should be referred to a commission or an arbitration in the case of any one accident, who should hear all the cases and decide upon them?—That I have always advocated as by far the most effectual remedy for the grievances under which the railway companies are suffering. I quite go with Mr. Baron Bramwell when he says that we are not afraid of honest claims, but it is the dishonest claims we dread. I think that by having a number of separate juries it is a premium almost upon fraud. A man goes in for a sort of lottery ticket, with the chances in his favour, and in addition he is certain to get his costs allowed; and if he gets a clever advocate, who makes a moving tale to the jury, he will get the full amount. If you had the same tribunal,

a sort

a sort of permanent commission or arbitrators, who were always selected to try this class of cases, it would be a very great protection against that sort of thing. For instance, a professional man may take a case up, and going to separate juries one doctor or one professional man is almost as good as another; but if we had had in this New Cross case a permanent tribunal, the same tribunal to try all the cases, and they had found, after they had had experience of the first dozen or so, that certain professional men were always coming in claiming extravagant damages and setting up absurd cases, it would have had a very great effect in deterring them from doing so in the remaining cases.

1010. Do you think that the nature of the risk that the railway companies are now under materially affects them in the determination of running cheap trains?—I have not the least doubt as to the effect of the present law adversely to the public in making railway companies very often keep up the fares. Practical illustration is always much better than argument. In the case of the New Cross accident, which cost, say, 65,000 *l.*, the Brighton Company being, unfortunately, in that position that about 35,000 *l.*, was all that was over for dividend to the ordinary shareholders last year, if they had not had that New Cross accident the company would have been in the position of paying, although a small, yet still an improving dividend. There are many experiments in the way of reduction of fares to the public which I, and the directors, and the general manager, are anxious to try; reductions of day tickets, reductions of annual tickets, and running cheap trains for the working classes, but I am positively afraid to try them when I feel that we have only a slender margin of some 35,000 *l.* a year between us, and not being able to pay our preference shareholders; and one does not like to take the responsibility of trying experiments with fares which, even in the first instance, for a single six months, might sweep away the small margin left us for dividends. I do not hesitate to say that if, instead of 65,000 *l.* we had had this maximum limit, and had only had to pay about 10,000 *l.* for the New Cross accident, at this moment a large number of passengers on the Brighton Railway would have been travelling at cheaper fares than they are now travelling at.

1011. Sir *H. Selwin-Ibbetson.*] I presume that you can speak as to the mode of conducting the traffic on the London and Brighton line?—Yes.

1012. Are you not working it upon the block system?—It is worked on the block system.

1013. On the absolute block system?—Nearly the whole system is now worked on the absolute block system, and we are extending it as fast as we can get the wires laid down.

1014. And was it adopted subsequent to the New Cross accident?—Before the New Cross accident it was worked upon what they call the partial block system.

1015. I see in the report of the Inspector of the Board of Trade that he recommends the block system to be adopted, and rather finds fault with the partial system that you have mentioned in the working of the line?—The partial system was this: that a train was not allowed to leave a station until you had it telegraphed from the preceding station that the preceding train had got safely in, and was protected by signals.

1016. But since that the block system has been adopted?—We carry it a step further now, and adopt what is called the absolute block system.

1017. And do you really think that it gives you greater permanent security against collisions and accidents?—I certainly think so, and it is proved by our having adopted it. I think that the block system has every advantage, except that in certain cases, perhaps, it may tend to oblige you to run your trains rather more slowly, and to be a little behind time.

1018. Have you a code of rules for your servants on the Brighton line?—Yes.

1019. How do you enforce those rules; are there any punishments attaching to the breach of them?—Yes; of course, in the case of an infraction of any of our rules, we should enforce them according to the nature of the case and the gravity of the case. In at all a grave case affecting the public safety, we should enforce them by dismissal.

1020. Then any such accident as that at New Cross shows that the servants of the company did neglect the signals which they ought to have seen?—Yes, no doubt.

1021. Was any notice taken of it?—We dismissed the driver and guard, and we considered very seriously whether the men could be indicted for manslaughter; but the tendency of juries is so universal not to convict a man of manslaughter upon mere negligence, even culpable negligence, that we felt there was no likelihood of obtaining a conviction for manslaughter, and we inflicted therefore the heaviest punishment in our power, namely, dismissal from our service.

1022. Improvements in the working of the line and in the machinery have been constantly recommended in the reports of the Inspector of the Board of Trade, have there not?—Yes, they have been frequently recommended.

1023. Do you think that the directors are altogether unprejudiced with regard to the idea that the Board of Trade should have no further authority than they have at present, namely, that of merely recommending, and that the directors of the different lines should be the only people to put in force any of the alterations that are constantly recommended for the public safety?—I think that possibly there may be a certain amount of prejudice, and I do not know that I quite agree with all my railway brethren in that respect. Having been at the Board of Trade myself, I am not at all afraid of the Board of Trade ordering anything unreasonable or wrong.

1024. Directors are often led, are they not, from a wish to consider their dividends, to economise in the way of adopting new inventions that would secure greater safety to the public?—I should rather doubt that. I should doubt, if a thing were clearly proved to their mind as necessary for safety, whether any managers or any board of directors would take the responsibility of declining to adopt it. It would be contrary to my experience. But I think there may be in some railway minds a certain amount of prejudice against the directions of the Board of Trade. They do not like to be interfered with. They say, these are a sort of amateur suggestions, throwing the responsibility upon us if we do not adopt them, but made by men who are not responsible themselves for the working of the line.

Mr. *S. Laing.*

20 June 1870.

1025. In a company that is not in a very flourishing condition with regard to dividends, do you not think that another authority, such as the Board of Trade, would be useful to step in on the part of the public to enforce improvements that have been constantly recommended as likely to prevent accidents?—In the case of the Brighton Railway, the poverty of the company did not for a moment stand in the way of the adoption of the block system, when we brought our minds to see that it might be conducive to safety. But I should say that I am not the least afraid myself of the recommendations of the Board of Trade. I should not at all mind giving the Board of Trade a positive authority to order any improvement. The only thing that I am afraid of would be the division of responsibility in that case, and whether the public might not lose by there being a divided responsibility.

1026. Would you see any objection to the Board of Trade having power given to it, in the case of alterations thus constantly recommended as likely to conduce to the public safety, of submitting to the House a resolution, giving them authority to enforce them upon a particular company?—If the Board of Trade can see their way to take the responsibility of saying what shall be done, and therefore assuming the principal responsibility of the safety of the public on the railways, I as a railway director, should not object.

1027. Submitting to the House would give it all the publicity that would be required, and opportunity for opposition, if it was necessary, on the part of the companies, if it were laid upon the table of the House for a certain time before they gave the Board of Trade power to enforce it, and it would be something in the nature of an Act of Parliament?—I should not be afraid of it myself. I am only afraid of the division of responsibility; that the manager of a line, who practically must be responsible for everything connected with safety, would feel that there was a divided responsibility, and that if he had omitted any precaution, if the Board of Trade had not ordered it he was not responsible.

1028. There are many suggestions that have been thrown out within the last year or two; on such points, for instance, as locking and unlocking the doors; do you think that it would be advisable to give them power to enforce such orders?—I should be very glad, as a railway director, if the Board of Trade would take it. That very question of locking the doors is one of the most difficult; I have known of accidents resulting from the doors being locked; and I have known of accidents resulting from the doors being left unlocked; and I should be very glad indeed if a tribunal like the Board of Trade would take the responsibility of pronouncing an authoritative decision which way the balance of danger lies, and whether they ought to be locked or unlocked; having done so, I should feel that I was free from further responsibility if I obeyed their instructions.

1029. Are you aware that on the Continent, since the accident near Paris, whilst the doors are left open, the plan of a hasp has been universally adopted?—I am aware of that.

1030. And that by the application of that very simple contrivance, no accident from the door being open, has as yet happened?—No; at the same time I am aware that there are accidents which have arisen in that way. I do not know on the Continent, but I know that in this country there are.

1031. Then I presume that the very simple contrivance that I mentioned which is adopted on the Continent has not been put in force; that is, having a hasp, which makes it a second action on the part of a person before he can open the door, and not an involuntary act of jumping up and opening the door and getting out at the wrong station?—Yes; but at the same time I have known several cases of accidents in this country which have arisen from people being able to open the doors, and getting out on the wrong side, and so being run over by some train on the other line of rails.

1032. Are not those accidents generally arising from the person's ignorance, and from some sudden impulse on the part of men who have wished to get out?—Yes, no doubt.

1033. Those accidents would be obviated, would they not, by some machinery which would make a man think twice before opening the door?—Hardly; because, if it is to be of any use, it ought to be within easy reach.

1034. On the Continent it is so far down, is it not, that you have to stretch considerably out of the carriage before touching it?—It may be that a person has to change to the opposite platform to meet some other train, and he thinks that by jumping out on the wrong side he can just get across and catch the train; that would be very often the case with us.

1035. There would be no difficulty, as was suggested the other day, in the delay of the trains or anything of that sort, by adopting such a system, would there?—As far as I am concerned individually, I think, on the whole, I prefer having the doors unlocked, and I say, as a railway director, I should be very glad indeed if an authority like the Board of Trade would take the responsibility; only, if they do take the responsibility and then next day somebody is killed, or anything goes on wrong by having got out on the wrong side, do not let me be responsible for it.

1036. Continuous breaks are another matter which has been strongly recommended, has it not?—I cannot say that I think that any particular system of break has been strongly recommended. Of course it is very essential to safety that there should be a sufficiency of break power.

1037. Then you would admit that if break power could be applied to all the carriages at once, as it is in the case of continuous breaks, it would very materially assist the people in charge of the train in preventing accidents and in stopping the train?—So much depends upon the nature of the traffic. A continuous break which may be comparatively easy where you have a train made up, running a long distance without a change may become difficult or almost impossible, if every 10 or 20 miles you are taking carriages off and putting carriages on.

1038. Continuous breaks, I believe, are adopted on several lines at present in England; the Metropolitan and the North London, and on a great number of foreign lines; on the Mont Cenis line, for instance?—The Mont Cenis is different, because there everything does depend upon sufficient break power.

1039. But, then, I suppose, from the point at which I wish to look at it, which is, giving greater power for stopping trains, and therefore preventing

ing collisions, a continuous break, if it could be applied to a train, would be a great advantage?—Yes; I should say that the chief difficulty on the subject that I see in the way of a continuous break is, that a line like the Brighton line, which I am especially responsible for, is one of the most difficult on which to apply it, because we have such an immense number of stations at which we must be constantly breaking up the trains, putting on and taking off carriages, and so on; and, therefore, until some specific plan of a good working continuous break had made its way sufficiently to be either recommeneed authoritatively by the Board of Trade or adopted by other railways which have a longer run, I do not see my way to adopt it.

1040. I only mention those points, because I wish to show that it is possible that a greater amount of safety might be secured to the public, if the Board of Trade had power to discriminate in the matter, and to enforce their opinion when it was satisfactorily proved to them that the adoption of some particular scheme was likely to work very much for the benefit of the public, and even that the directors might be inclined to do it, if they were not influenced by a wish not to run into greater expense by the change?—I think it would be found that even now, if anything were so perfectly clear that the Board of Trade could make up their mind to recommend it in a public authoritative way, and throw on the railway companies the responsibility of disregarding it, I do not think you would find that they require any additional power.

1041. But the adoption of the block system, you must be aware, the inspectors of the Board of Trade have on many lines recommended over and over again, and that they have even gone so far as to report that there was no use in continually recommending things to companies, because they were universally neglected?—I think that a recommendation like that to be of authority, must go a little beyond a mere recommendation in a report of the inspector; it should be adopted by the Board of Trade itself on some deliberation, and if then, on hearing the parties, after due deliberation the Board of Trade thought fit to order anything, I can only say that I for one should have no sort of objection, but would be bound to obey it.

1042. It would be to the advantage of the public, would it not, if there were some independent authority with power to investigate, and if it was proved to their satisfaction that it was correct to enforce a recommendation of that sort?—I cannot say that I am clear on that in my own mind. As I tell you, I have no objection to it personally; but I have not brought my own mind to see clearly that you would not lose more by dividing the responsibility than you would gain by it.

1043. Would it not take away the fear of the managers to bring before their directors anything that would lead to great expense on the line?—I do not think there is much in that, if they were convinced that a thing is necessary for safety. In all my experience as a director, I do not know that I can recollect a case where, if a clear question of safety came in competition with money, the board would not decide for the safety. After all, the money is the shareholders, and the responsibility is yours individually; and even as a question of money, it never could be a good policy to risk accidents. It is a most disagreeable and invidious position for any railway manager to be in, or even in a less degree for a railway board, to have a bad accident on their line.

1044. You would not agree that if this question of liability to compensation was altered in the way pointed out by the different managers, and suggested by the Bill before this Committee, the public should have further security when their only security, as it has been called, was done away with?—I should not have the slightest objection to it. If the Board of Trade were ready to take the responsibility, and Parliament saw its way to give it them, I should acquiesce most cheerfully. All I say is, that I do not see my way quite clearly in my own mind. If you ask me the question whether I think it is a good thing or not, I say there is a good deal to be said on both sides.

1045. Mr. *Winn.*] You stated that you were not afraid of claims for compensation by honest persons who had been injured, but what you wished to provide against was dishonest claims?—Yes.

1046. I suppose you do not consider that the sums which are awarded to honest persons now by juries are excessive?—They are often excessive even under the present state of the law; but I think it is a hard state of the law in which you have to pay that immense amount of compensation, even in case where you are in no way to blame.

1047. You have spoken in favour of cheap workmen's trains; if it was desirable to encourage cheaper workmen's trains, would not it be possible to limit the responsibility of railway companies specially in respect of those workmen's trains, without interfering with others?—Yes; but then I think the excessive amount of compensation often tells against you in other cases than cheap workmen's trains. As I instanced in the case of the Brighton company, the excessive amount which we have had to pay in respect of the New Cross accident, is undoubtedly one cause why one cannot try an experiment which would be very beneficial to the general public in the way of reducing our return fares and annual tickets.

1048. Then you do not agree with what the judges who have given evidence to-day said, that they knew of very few cases, if any, in which excessive damages have been awarded in what I may call genuine cases?—Of course, what they say must have reference to the existing state of the law. As long as the existing state of the law is, that a master is liable to an unlimited extent for the act of his servant, even though there may have been no negligence or blame on the master's part, I should not go so far as to say that there are not even then a great many excessive cases; but of course while that is the law you may have to pay very heavily for it. The question is, whether on the whole it is fair to the railway companies and for the public interest. I hold that the public interest is, in the long run, when rightly understood, identical with that of the railway companies. You cannot impoverish a railway company without, in the first place, the railway shareholders feeling it; but before long the public feel it also; and what you wish, namely, more accommodation and more liberal treatment upon the whole of the public by the railways of this country, would be effected in a very much better form if railway companies were not mulcted

Mr. *S. Laing.*

20 June 1870.

to the extent they are in a variety of different ways.

1049. Do you think that the effect of doing away with the responsibility of railway companies, or limiting it very much, would have the effect of lowering the fares upon railways?—Yes, I do; I think decidedly if you could relieve railway companies from any of those special burdens, either in the form of excessive compensations for accidents, or in the form of excessive payments for local rates, or in the form of taxation on passenger receipts, for which competing modes of conveyance are not liable, I think you would find that the public in the long run would get the lion's share of the benefit.

1050. Are you in favour of the system which has been spoken of, that the railway companies shall become practically insurance companies as well?—As a railway director, I would much rather wash my hands of insurance altogether, and leave it to a separate company, but for the convenience of the public, to meet the feeling that there might be against altering the present state of the law, and not giving a man an opportunity of insurance, I think you must provide that the railway companies should insure a passenger if he wishes it. I do not look upon it as any advantage to a railway company; on the contrary, I look upon it as one of those concessions that must be made to meet public opinion on the subject, if you fix a limit to ordinary insurance.

1051. Mr. *Denison.*] I suppose, in the event of the proposed alteration of the law, if the maximum compensation were considerably to exceed the figures which have been given by former witnesses, you would prefer letting the law remain as it is at present; in other words, that if the maximum of compensation were fixed very high, the railway companies would be losers rather than gainers by an alteration of the law?—Yes, I think decidedly so, especially if the tribunal remain the same, because I think that ordinary juries would often do what Mr. Baron Martin suggested, namely, give up to the maximum.

1052. Do you think, as some witnesses have told us, that if there were such a fixed maximum, we should get rid of a great deal of litigation in disputed claims, and that we should get rid of the costs of actions pretty much?—Yes, I think we should, with a fixed maximum, get rid of a great deal of it, but we should get rid of still more if we had a reference to arbitration instead of the ordinary course of a jury trial.

1053. Do I understand you to recommend an arbitration, or facilities for arbitration, in every case, or only in the case of large accidents, such as those to which you have alluded?—I should like to see arbitration in all cases. In the case of workmen's trains, where a small sum by way of compensation has been fixed, arbitration has been provided as a means of assessing it. In the case of the Railway Passengers Insurance Company, a separate company, who issue insurance tickets; there also I find that arbitration is provided by Act of Parliament, and that I think is a very good precedent. If it is good in that case, and their insurance goes up to 1,000 *l.*, I do not see why it should not apply equally to the case of railways.

1054. Since that Act was passed, have you had any practical knowledge of the working of these arbitration cases?—I only hear from the persons who have had that practical knowledge, that they get off a very great deal better under it, that the arbitration clauses are a very great security to them against fictitious and exaggerated claims and against litigation.

1055. What class of people have you found nominated as arbitrators?—I have not had much experience of that myself, as we are not working under any arbitration clause on the Brighton Railway, but I should fancy that the Board of Trade would be the best tribunal to name the arbitrators for that class of cases.

1056. Do you approve of the judges' suggestion, that there should be a medical expert appointed by the Board of Trade in those cases, to examine into the nature of the injuries received, and who should not be employed directly by either the plaintiff on the one side, or the railway company on the other?—I think that would be a very good suggestion, and I should like to see it carried further, by the arbitrator who decided the case being appointed by the Board of Trade also; and I should also adopt another suggestion which I think was thrown out as to costs; that the costs should be in the discretion of the arbitrator, or should follow the result of the award.

1057. I understand you to say that you would be in favour of applying this principle in all the cases you have spoken of, in single injuries as distinguished from multiplied injuries to many individuals?—Yes; I should like to see the same principle that was applied in the case of workmen's trains, and this Railway Passengers Insurance Act, namely, arbitration, applied to all cases of compensation whatever.

1058. Turning to the questions which had reference to the introduction of improvements, do you not see in practice very considerable difficulty in naming an authority which should decide what is an improvement and what is not an improvement. We all know that in the army and in the navy departments the heads of departments are applied to from all sorts of inventors for the adoption of improvements, and that their great difficulty is in deciding what is an improvement and what is not an improvement; do not you think that railway companies have just the very same difficulty?—No doubt; and their tendency is to throw into the waste paper basket everything that professes to be an improvement. You are deluged with such a number of things that are perfectly absurd that you no doubt may, perhaps, be carried a little too far, and become prejudiced against considering things which would be really useful.

1059. A railway company, being a trading company, having to look for its profits to the general efficiency with which they conduct their operations, might there not be very considerable hardship in their having to adopt expensive improvements upon which professional men are divided in opinion?—Yes, no doubt that would be so; but I for one should not be much afraid of the Board of Trade enforcing them, because I cannot imagine any public body that is responsible to public opinion and Parliament, taking upon itself to enforce authoritatively on all the railways in the kingdom anything that had not been well established by experience.

1060. Mr. *Sherriff.*] I understand you to say that the medical and the legal costs amount to about 20 per cent. of the whole sum that you paid

paid in the case of the New Cross accident?—I think so.

1061. Those I suppose are the taxed costs?—Yes.

1062. But there is generally a very great difference, is there not, between the costs paid by the plaintiff, and that which the railway company has to pay as taxed costs; for instance, with regard to medical men who are called in as evidence, and in other ways; the plaintiff's bill would be a different bill, with reference to the amount, from that which was paid by the railway company?—Yes, there are several cases with us where medical men, whose usual charge for the attendance of patients of the poorer sort is 1 *s.* or 1 *s.* 6 *d.* a visit, in their bill against the railway company claim two or three or five guineas a day.

1063. And those would be reduced on taxation, would they not?—They would be reduced on taxation.

1064. But still, probably, the plaintiff in the cause would have to pay, out of the damages which he received from the railway company, the bill of the medical man?—Yes, and with that class of medical men it is not likely that it would be taxed down so low as perhaps the plaintiff actually had to pay; that is a matter between the plaintiff and his professional advisers.

1065. If the legal expenses were reduced in the bulk of the cases, would not more money go into the pockets of the sufferers by the accident?—Yes, there are a great many of those cases where the whole compensation is swallowed up by the professional men who get up the case.

1066. The Board of Trade, generally speaking, have not, I think, originated improvements in the railway system?—No.

1067. Do you know of any one improvement which the Board of Trade have originated in the working of railways?—No, I do not know of any.

1068. Have not improvements in railway working been made by the railway authorities themselves, and has it not been after they have been adopted for a considerable period, that the Board of Trade inspectors have recommended them to others?—Yes, certainly.

1069. As regards the continuous break about which you were asked certain questions, is not one great disadvantage of the continuous break this fact, that the blocks of the breaks do not bite the tires at the same time; that generally speaking, there are many of them that do not take hold of the wheel at the same time, and in consequence the continuity is broken; then there is an amazing amount of trouble in keeping them in order, and sometimes when they are most particularly wanted, the want of that power is detrimental to their being used at all?—Yes, I think it is always found that if you multiply complicated precautions, you let danger in by one hole when it goes at the other.

1070. What kind of accidents would be prevented by the doors of carriages being open on both sides?—The only class I can conjecture is in the case of an imminent collision, or in case of a train breaking down, and carriages taking fire.

1071. Is it not your opinion, as a practical railway man of many years' experience, that with regard to opening the doors on both sides, especially in the case of excursion trains, where passengers, as a rule, are not easily kept in their places, there would be more danger from opening the doors on both sides, rather than there would be any gain from the plan suggested?—Yes, I think it is very probable indeed that you would have a greater number of accidents from leaving the doors open than from shutting them.

1072. So that, in truth, there is a great difference of opinion; some persons believe that opening both doors will be an advantage, and others believe that the shutting of the doors on one side is a distinct advantage, and the Board of Trade will not take the responsibility of issuing a general instruction, so to speak, that they shall be either open or shut?—Precisely so; I think the circumstances are very different, according to the nature of the train; where you have a number of people getting in and out perpetually at short stations, it may be very dangerous to leave the door open on the wrong side. In a long train running 20 miles at a stretch, travelling at night, if you ask me to choose personally, I like to have the door open.

1073. Mr. *H. Palmer.*] There are occasions, are there not, where the door being open would afford facilities for escape from accident?—I say so; I say that, personally, travelling long journeys either in England or on the continent, I individually would prefer having the door open; at the same time, I think if you were to introduce it by law generally in England, the probability is that you would have more accidents from opening the doors.

1074. It affords facilities of escape more than for preventing accidents, does it not?—No doubt of it; it strikes the imagination more. You do not like the idea, if a bad accident happened, of a lot of people being jammed up in carriages, when, if the doors were open, they might all get out. In a great accident, it might be much better that the doors should be open; but in a small accident it would be worse; that is to say, in the class of small accidents which do not strike the imagination; for instance, in an excursion train, where the people in their hurry and confusion are continually getting out at the wrong side, and hurting themselves, I believe it would be rather a disadvantage; but in the big cases that strike the imagination, I think the door had better be opened.

1075. Does it often occur that accidents arise abroad from the door being unlocked?—No; but you have not so much of that traffic abroad, great crowds of passengers getting in and out at short distances, with frequent trains passing.

1076. Supposing you had a limit to the liability, would you have it by a scale; that is to say, that the third-class passengers should have less than the second, and the second less than the first?—I have never been able to bring my mind to see any clear distincton between the three.

1077. There is no very great reason why a third-class passenger should have less for his injuries than a first-class passenger?—No; or why a first-class passenger should have more than a third. You must take care that you do not raise the figure so high as to make the thing impracticable altogether, because you raise it much beyond the 200*l.* that I have mentioned, I should think that the railway companies had better remain as they are, especially if the tribunal is to remain the same.

Mr. *S. Laing.*

20 June 1870.

1078. Is there a passenger signal communication with the guard on the Brighton line?—Yes, there is, under the Act of Parliament.

1079. Is it by a rope or electricity?—A rope.

1080. Does it effect its purpose fully?—I think so; it amounts to this, that a person might by just putting his hand outside the window of the carriage, get hold of the rope, and pull it.

1081. But it sometimes gets caught, does it not, and by a sort of twist around the top of one of the carriages it becomes fixed, and does not act?—It has been very little used with us; but I have not heard of any complaints, and the Board of Trade allows it.

1082. Do you prefer it to the electric system?—Yes, it is simpler; it is difficult to work the electric system on a line like ours, where you are so constantly putting carriages on and taking them off. The conditions of a traffic are very different on a line where you never go more than 50 miles without attaching or detaching carriages, and a long run of 300 or 400, or 500 miles with the same train.

1083. Then you think that the rope system answers the purpose as well as any other?—I think it does on a line like the Brighton line. If you were travelling across the continent of America in the same train for 1,000 or 2,000 miles, I am not prepared to say that the telegraph system might not be better.

Thursday, 23rd June 1870.

MEMBERS PRESENT:

Mr. Dalglish.	Mr. Plunket.
Mr. Davison.	Mr. Price.
Mr. Denison.	Mr. Charles Reed.
Mr. Headlam.	Sir Henry Selwin-Ibbetson.
Mr. Lopes.	Mr. Sherriff.
Mr. Hinde Palmer.	Mr. Rowland Winn.

THE RIGHT HONOURABLE T. E. HEADLAM, IN THE CHAIR.

Mr. JOSEPH BROWN, Q.C., F.G.S., called in; and Examined.

Mr. *J. Brown*, Q.C., F.G.S.

23 June 1870.

1084. *Chairman.*] YOU are one of Her Majesty's Counsel, I believe?—I am.

1085. And you have paid considerable attention to the subject of the law concerning the compensation paid by railway companies for accidents upon their lines?—Yes, I have.

1086. And also, I may say, generally to the law, not only affecting railway companies, but affecting private individuals, as to compensation for accidents?—Yes.

1087. You have written a pamphlet upon the subject, have you not?—I have.

1088. Will you give us, in as short and precise terms as you can, what is the law concerning the liability of railway companies at the present moment?—The liability of railway companies must be considered, I apprehend, under two heads; first, their liability for accidents to persons who are not passengers, and, secondly, their liability to those who are passengers. When an accident occurs to a person who is not a passenger; for example, a stranger crossing the line of railway, who is run down by a train, the liability of the company depends upon the ordinary rule of law applicable to master and servant; that is to say, under such circumstances, if a carriage driven by my coachman were to run down a man by negligent driving, I should be responsible to the last shilling of my fortune for the damages caused by the accident; and in like manner, if a railway train is carelessly driven, say, by neglecting a signal or by neglecting a passenger, who was actually in any way upon the line at the moment, and the man is run over, the railway company are responsible to the full extent of the mischief done by their driver, however great it may be. That is the ordinary law of master and servant in a case where the party injured is a stranger to the person causing the injury. In the case of passengers the liability depends either upon an express or implied contract. Every passenger who pays the railway company for a ticket, enters into an implied contract with them, and the railway company with him, to carry him with due care and skill, and if any of their drivers or servants break that contract by not carrying with due care and skill, and the passenger is injured, the passenger has his remedy against the railway company to the fullest extent of the injury caused by it.

1089. Is there any material difference in practice with reference to their two different forms of liability; suppose, for instance, that an accident were to occur by a railway train running into a cart crossing the line, and killing the driver of the cart, and that a passenger upon the line was killed by the same accident, would not the damages be measured exactly in the same way in each case, notwithstanding that the case of the passenger stood upon a different theory of law to the driver of the cart?—By the rule of law they would be measured precisely in the same way. I can only suggest one difference, and it is this: in the case put the passenger could hardly have contributed to the accident at all; but in the case of a man driving his cart across the line, a suggestion might be thrown out to the jury, though possibly not established, that the man was in some respects to blame himself; and that might affect the damages in their judgment, though it ought not to affect it if they go by the theory of the law.

1090. With respect to the passenger also, as well as to the driver of the cart, if he contributed to the accident by his own negligence, the rule would be the same with respect to the passenger as to the driver of the cart, would it not?—The rule of law is the same.

1091. So that in reality the distinction between the two forms of liability is not very material in practice?—It is not.

1092. That being the state of the law, do you think it is reasonable, and are there grounds for the complaints that are made by the railway companies as to the state of the law?—Certainly; my impression is, and has been for some years past, derived from experience, that the railway companies have reason to complain of the state of the law. I think so, whether you view the case as relating to accidents to strangers, or to accidents to passengers. It appears to me that the present state of the law has unfortunately operated as a great encouragement to fraud and imposture. I say so from experience of causes at Nisi Prius. I do not think that any man who has had much experience of those cases before juries, will deny that a large number of cases occur in which both passengers and strangers recover damages from railway companies for accidents where they ought not to recover at all; either because they have themselves been negligent, or because there has really been no negligence on the part of the servants of the company. And again, I think not only is that so, that they

Mr. *J. Brown*, Q.C., F.G.S.

23 June 1870.

recover in many cases where they ought not to recover at all, an observation which applies equally to the case of ordinary passengers, but I think that where they are entitled to recover, where negligence is justly imputable to the company's servants, the damages are constantly made the subject of the grossest exaggeration, and in many cases of imposture.

1093. First, as to the common law, I will put a case in order to make my meaning clear; supposing that an injury is inflicted upon an individual by a gentleman's carriage, in some respects by the negligence of the coachman, or that there is such a degree of negligence that the present law makes his master liable; and I will also suppose that it is proved that the master has exercised special and particular care to get as careful a coachman as he could, so that no blame whatever could really be imputed to the owner of the carriage, do you think it a right theory of law that the master should be unlimitedly liable for what may be called the negligence of his servant?—That is a matter to which I have given great consideration, and my conclusion has been that it is decidedly wrong. In the first place, I deny that it is just that, where the master has taken every proper precaution to select a careful servant, he should be responsible at all even for one shilling. I deny the justice of it. Our law in one case admits the irresponsibility of the master, where he has taken due care to select a careful servant. I mean in a case where one servant receives injury from the carelessness of another, in which case the injured servant has no remedy against the master, provided the master can show that he took due care in the selection of the other servant. There are, of course, a great number of cases of that sort in the books, and that principle has been settled by the courts for a great many years. Then, I cannot see the abstract justice of making a master responsible because his servant did what was contrary to his orders. One can understand the justice of making a master answerable for what his servant does in pursuance of his orders, but when the servant acts contrary to orders, as by being guilty of negligence when he is employed and engaged to drive carefully, I am totally unable to see the justice of making the master responsible for it; and it appears to me as unsound on first principles. The other part of your question relates to this, is it right in theory that the master in such a case should be responsible for the full extent of the damages. I should say most decidedly not; and the greatest code of law (at least such it is regarded by the first jurists) that ever existed amongst mankind (I mean the Roman law) expressly limited the liability of the master in such cases to the value of the slave who did the mischief. The remedy against the master by the Roman law was by what was called the *noxalis actio*. In that action the master had his choice either to give up the slave to the complaining party, or to pay the amount of damage done; therefore he could always rid himself of the responsibility by giving up the slave, and it was a very rare case indeed for the value of a slave to exceed 20 *l.* in money. I found the other day, on looking into the "Commentary of Gaius," the manuscript of which has recently been discovered and printed, that he lays down expressly in his text, that it is not just that the master should be responsible beyond the value of the slave. But irrespective of what the Roman law says upon the subject, I cannot, for the soul of me, understand the justice of making a master responsible to the last shilling of his fortune, for a momentary accident caused by the negligence of a servant, who had the best of characters, and who was habitually careful. What possible justification can there be for making me liable, at the rate of 10,000 *l.* or 20,000 *l.*, because my coachman, in a moment of thoughtlessness, drives over a man who is making 3,000 *l.* or 4,000 *l.* a year, and kills him?

1094. I understand that you would not make the master liable, unless something in the nature of negligence or improper conduct could be imputed to the master?—Precisely.

1095. That would conflict with the doctrine of common law, *qui facit per alium, facit per se*?—It would conflict with that doctrine as at present interpreted; but I humbly suggest to the Committee, who will judge for themselves in the matter, that it is not fair to say that I do act by my coachman, if my coachman is acting contrary to my orders at the moment in question. If he was acting in pursuance of my orders, I admit that it is a case of *qui facit per alium*. But I do strongly urge this upon the Committee, that in criminal courts the law is that it is not the master's act, if the coachman is driving carelessly at the time he is employed to drive carefully. The law says, that it is not the master's act, and in criminal proceedings will not allow the master to be punished for it for that very reason; and yet the law of civil rights says that it is the master's act, and that he shall be responsible for it.

1096. We were informed by the judges that if a servant acts quite contrary to the line of his proper employment; for instance, if a gamekeeper took the horses out to exercise, under such circumstances the master is not responsible if the gamekeeper rides over a man?—That is so.

1097. The same theory, I think, would cover, according to your view, the master in the case of a coachman who drives contrary to his master's instructions?—I think it ought to be so. I dare say the Committee are aware that the distinctions in the decided cases run very fine as to when a servant is acting within, and when he is acting beyond, the line of his employ; for example, if my coachman is driving my carriage home to my stables, and in doing so he carelessly drives over somebody, I am answerable, as he is acting within the line of his employ; buf if, instead of driving it home to my stables, he drives it two or three miles off to make a call on an object of his own, the rule then is that he is not acting within the scope of his employ, and I am not responsible; that is an illustration.

1098. You think that the distinction is an absurd and technical one?—It shows how very fine the line runs between a servant acting within his employ and beyond his employ.

1099. Your theory would be that the master should in no case be liable, unless it could be said that there was certain negligence on the part of the master?—Or unless the master was himself present directing the coachman, or giving him orders; for example, if I was riding in a cab, and was in a great hurry to get to a railway station, and I said to the man, "Drive as fast as you can, or I shall lose the train," and in doing so he ran over somebody, I should be responsible by law, although I am not that man's master, because I gave him the particular direction.

1100. In

1100. In the case of a railway company, the liability depends upon contract, would you apply the same principle, and not hold the railway company liable in a case where they exerted every reasonable and proper precaution to get good servants, and yet an accident happened by the negligence of a servant?—I would exempt them from responsibility in the case where an accident happened to a stranger, not to a passenger; I would not exempt them from responsibility altogether in a case where such an accident happened to a passenger, because it would be a question of contract.

1101. Take the case that I put before: suppose that a train ran over a cart crossing the line, and that the man in the cart was killed, and a passenger upon the line also, and it was proved that, although the railway company had exercised every possible precaution in getting careful drivers, yet, notwithstanding their care, this accident happened, you would hold that they were completely irresponsible as to the man in the cart?—I would.

1102. But as to a passenger who was killed, you would hold that they were not completely irresponsible?—As to the passenger killed, I should hold them responsible, but I submit that some limitation ought to be imposed upon their responsibility.

1103. It has been suggested to the Committee that the law should be altered to this effect, that the ordinary fare, or at any rate the fare charged, should cover the liability on the part of the company to a certain amount, and then that the passenger, if he wished to insure for a larger sum than that, should be at liberty to do so, upon paying a certain extra premium; do you think that that would be a reasonable alteration of the law?—I do think it would be a reasonable and desirable alteration of the law; but with regard to the limit of amount that you would fix, that is a matter of detail which would deserve consideration. I would suggest this to the Committee that it is probably more desirable that third-class passengers should be insured to some extent by the railway than either the first or the second-class passengers, because they can least afford to meet with those accidents, and are least able to help themselves. First and second-class passengers, as a rule, or a portion of them could generally pay extra insurance if they desired it.

1104. You have had experience, have you not, of the administration of the law?—I have had some experience, but not so great as some gentlemen who hold briefs for railway companies more frequently than I do.

1105. We have had very great complaints on behalf of railway companies of the extortion to which they are subjected in consequence of the existing state of the law and the frauds that are practised upon them; I presume that you are acquainted with such complaints?—Yes, and I must say that those complaints are too well founded. One of my reasons for thinking that a limitation upon the railway companies liability would be extremely desirable, would be, because it would I think prevent a great many of the frauds and impostures which are now practised through the medium of courts of justice, and a most odious description of frauds they are; and secondly, I think, that it would save a great deal of time which is now wasted in investigating the amount of damages due to a plaintiff who is injured. I suppose the Committee are aware that things have come to such a pass that probably one-half of the time of the courts at *nisi prius* is consumed in trying actions for those accidents; and it is a very serious obstruction to other business, and business of the most important character as every barrister knows.

1106. Sir *H. Selwin-Ibbetson.*] Do you consider that it would be a reason why those trials should not take place, because they interfere with the course of other business?—No, probably no consumption of time that was requisite to do justice would be any reason for altering the law. It is because I think that the consumption of time is unnecessary, and because in too many cases it is spent in furthering fraudulent claims that I object to it. At the same time I must tell the Committee that it is a very remarkable and astonishing thing to a lawyer (it amounts to what I may call a phenomenon) to see the incredible increase that has taken place in those actions since I entered the profession, which is now 35 years ago.

1107. You think that that is not to be attributed to the fact that accidents, from the amount of travelling being increased, have increased very considerably within the last few years?—It must be attributed, in a great measure, to that cause on account of the dangers incident to railway travelling, and the number of accidents that have been caused must be attributed to that. I humbly conceive that railway travelling is inseparable from accidents; and this unfortunate case on the Great Northern, which has happened within the last two days, seems to be an illustration of it.

1108. That clearly was an accident that no forethought could have prevented, as you can see upon the evidence, so far as it has gone at present; but still accidents, such as collisions, have grown in number very much within the last few years; and those accidents, some of them are very serious, and in many cases injuries take place in them, and that accounts, in some way, for the number of cases that are brought before the courts?—Certainly.

1109. I think I understood you to say just now, in answer to the right honourable Chairman, that you would not hold the companies responsible in the case of a stranger; that is to say, a man crossing the line with a cart?—I did say so in a case where they had taken every care to select a proper servant.

1110. In those cases a man crossing the line with a cart is presumed, is he not, to be crossing it under the sanction of the company's servants?—That is a very important assumption. In most of the cases of that sort the question discussed is, whether or no the man crossing the line was doing right or doing wrong in the act at the time; as, for example, whether he had looked up and down the line to see whether any train was approaching.

1111. In limiting the responsibility of railway companies with regard to passengers, do you believe that such a limit would materially diminish the number of those fraudulent actions?—I do indeed; and I will give the Committee my reason for thinking so. In a very large number of cases indeed (I cannot say what proportion, but the proportion is very large), the question between the company and the claimant is not whether the company are liable, but how much he is entitled to. If you put the case that their liability was limited, we will say, to 250 *l.*, I dare-

Mr. *J. Bronn*, Q.C., F.G.S.

23 June 1870.

say that in three cases out of four it would prevent an action being brought at all.

1112. That is to say, they would settle the claim at once, without going into court?—Precisely.

1113. But otherwise, supposing that it was a case of death, and therefore one for compensation by the jury, you do not take the case out of court unless the company at once meet the claim, because there would always be some lawyers willing to make a case out of it for the sake of the costs, if it was disputed?—If the negligence was denied, the cause would have to be tried; but, as a rule, a considerable portion of any length of evidence is occupied in inquiring into the amount of damages, particularly where surgeons are called on both sides; which, I may also observe, is perhaps the most expensive part of the evidence, and the costs of the inquiry would be very materially shortened if the amount of damages were limited to a fixed sum, even although the question of negligence had to be tried. Doctors are very expensive witnesses, as I dare say you know.

1114. You mean that the same number of witnesses would not be brought into court?—Precisely so; and they would be less expensive witnesses.

1115. Mr. *Winn.*] To what extent do you think that the liability of railway companies ought to be limited in point of amount?—That is really a question on which I scarcely feel competent to offer an opinion; but I would submit to the Committee that the amount of liability rather should bear some proportion to the profits derived by the company from the traffic. There was a time, I believe, when railways were expected to pay 10 or even 15 per cent., and a larger liability in point of amount might have been reasonable then than at a time such as we live in, when very few railways pay 5 per cent., and a great many do not pay 3 per cent.

1116. Mr. *Denison.*] You published a pamphlet upon this very subject in February last, did you not?—Yes.

1117. Did you write that pamphlet from your own experience of the way in which those cases are worked?—Yes; it was from a sense of the injustice that has been caused by the present system. I may say this, that I have been no friend of railway companies in my practice; my practice has been generally against them. I have conducted a great many actions for very large amounts indeed against many railway companies with success; but I have been seldom employed by them.

1118. You say in the preface to your pamphlet, that the present tendency of things is "to shift the accidental misfortunes of life from those who meet with them on to other people"?—That is so.

1119. In other accidents as well as railway accidents?—Yes, in other accidents, as well as in the case of railway companies, there is no doubt that innumerable cases occur in courts of law, where a man who has met with an accident that was either wholly due to his own negligence, or partially due to his own negligence, or at all events that was not really attributable to the fault of the defendant, succeeds in recovering compensation from the defendant. The cases are endless.

1120. The judges, who were before the Committee as also yourself in your pamphlet, have drawn attention to the different results under the civil law and under the criminal law; is it your opinion that the two laws should be made to correspond in this respect?—As a question of abstract justice, I cannot see why a master, if he is answerable at all, ought not to be punished in person if he cannot pay in purse. If he ought not to be punished at all, I conceive that he ought not to be mulcted of his whole fortune as he is, and has been in some cases, because his servant has momentarily committed an act of negligence. Then, as a rule, I would say this, that the civil punishment, as I may call it in the shape of damages, which the master receives by an action, is 20 times worse than any that he would receive if he was actually criminally responsible.

1121. Have you any observations that you would wish to make to the Committee about the working of what is known as Lord Campbell's Act?—I conceive that Lord Campbell's Act operates very harshly and unjustly in a great many cases. Above all in the case where a man of considerable income loses his life by a railway accident, it operates very harshly in this respect. When the company give that gentleman a ticket, they probably do not know him, and do not know what his income or fortune is; they do not know what his will may be, or what settlement may exist, or how his fortune may go after his death. If he happens to be killed by a momentary act of negligence on the part of one of their servants, and it turns out that he had a life income of 5,000 *l.* a year which ceased with his death, and he left a widow and several children, a jury may give him 20,000 *l.* damages, which would not be at all exaggerated in the case of an income of that amount; and the jury may give 20,000 *l.* damages, although that gentleman only paid the company 1 *l.* or 5 *s.* probably for his railway ticket; the company had not the smallest notion of the extent of responsibility that they were incurring. That is certainly quite contrary to the principle which has been sanctioned by Parliament in the case of carriers of goods. Parliament has long ago imposed a limit upon their liability unless goods above the value of 10 *l.* are insured and paid for as such; and why? Because it is not fair to impose liabilities of an unknown or unlimited amount upon carriers, without they know them beforehand, and have an opportunity of taking a corresponding premium which may cover the risks they incur.

1122. Is not one of the great objections to the present state of things that the amount of fine or damages would bear no proportion whatever to the degree of carelessness or delinquency?—Yes, it bears no proportion whatever; and I may say this, and I venture to suggest it to the Committee, that it is impolitic that it should continue as it is now. The solicitor of the North London Railway Company, a gentleman of the highest character, informed me himself, that the company ran their trains over a short line in London, I forget the exact stations between which it runs, belonging to some other company, and they had to pay 2,000 *l.* odd damages to some passenger who had only paid them a fraction of a penny, that is to say, that was their share of his fare; and this solicitor informed me that, in consequence of that, the company resolved to discontinue running their trains upon that line, because the very small sums that they receive from it were utterly inadequate to the risks that they incurred

Mr. *J. Brown*, Q.C., F.G.S.

23 June 1870.

incurred by so doing, and yet he told me that it was a matter of considerable convenience to the public that the trains should be run there. I do not know whether I might take the liberty of suggesting to the Committee that if it be, in their judgment, a matter of the highest importance to encourage the making of railways in future, they certainly will remove one consideration which probably restrains people from embarking their money in the making of railways now, I mean the manner in which their profits are affected by the large liability that they incur through those railway accidents.

1123. You have expressed a very strong opinion that the present system of awarding damages is, in fact, no real security for the public, and that it does not bring about a better state of things, as regards the public, than would exist if the liability of railway companies was limited; and you have said that "No infliction of damages can do more than ensure the vigilance of directors to employ good servants; it cannot prevent or guard against the errors to which the best servants are liable"?—I think that is so, certainly.

1124. Are you of opinion that the present system of awarding excessive damages, which have no relation whatsoever to the negligence or delinquency which brought about the accident, are, in fact, no real safeguard to the public?—I do not think that they are any real safeguard to the public. I must say this, that in the cases in which I have been concerned, I have had occasion to admire the extreme precautions that were taken to ensure safety to the public and to prevent accidents; and I have considerable doubts in my own mind whether any system whatever would secure much more care and caution than is exhibited at present. The only thing that astonishes me is, that the accidents which occur are not 10 times as numerous, when I reflect on the risks that are run, and the dangers that are inseparable from that system of travelling; and I certainly do conceive that even if railway companies were not responsible to the extent of 1*s.* to a passenger, yet inasmuch as they know that no accident can occur to a train without the smashing of engines and carriages, which probably cost them thousands of pounds, besides the damage to the line and the interruption of the traffic, really their own interest would probably secure pretty nearly the same amount of caution as exists at present.

1125. Do you think there are any considerations which would make an alteration of the law in favour of railway companies justifiable, without extending that principle to all branches of society, to individuals as well as to associated companies?—If considerations of abstract justice were looked at simply, I think not; if considerations of policy were looked at, I certainly have a strong, and I may say overpowering, impression upom my mind that it is the highest policy of Parliament to do everything to encourage the making of railways, which is not very likely to be done unless Parliament holds out some encouragement for it, seeing the low profits to which so many railway lines are now reduced.

1126. Have you formed any opinion as to the practicability of altering the present mode of trying those actions by judge and jury?—The truth is, I feel a difficulty there on account of the popular ideas on the subject of trial by jury. I expressed my sentiments on the subject of trial by jury a good many years ago in a pamphlet which I wrote upon the subject. I regard this tribunal as one which is excellently well adapted to certain causes, but extremely ill adapted to others; and I have reason to think that such is the general opinion amongst the judges at the present moment. I believe that great jealousy would be created amongst the public by any suggestion of withdrawing those actions from a jury; but at the same time it does appear to me that Parliament has rather led the way to the establishment of a special tribunal for the investigation of such cases by the provisions in the Merchant Shipping Act, which are to the effect that where loss of life occurs on board ship, or loss of goods by negligent navigation, the whole matter may be made the subject of inquiry before the Board of Trade, and any number of claims of damages for loss of life or property may be investigated and decided upon by them, and in such case nautical assessors are employed. Of course they possess knowledge which it is impossible that a jury should possess, and which is of the greatest importance in many cases. In like manner, I can conceive that it would not be difficult to construct a special tribunal which was much better adapted for the investigation of railway accidents than a jury, of which tribunal I conceive that one or two experienced medical men should form a part, either as assessors or as judges. Probably one of the judges of the superior courts, with a couple of medical assessors, would form about as satisfactory a tribunal for the investigation of such cases as can possibly be constituted. I am sorry to say that, as far as juries are concerned, their sympathies are too apt to mislead them in cases of this sort, more particularly where the plaintiff, perhaps, is a widow left without any provision. Nothing is so pleasant as being charitable with other people's money, and such is found, I think, to be rather the impression amongst juries.

1127. Do you think that, in the event of a great accident, for instance, such as that deplorable accident which occurred two days ago on the Great Northern Railway, a tribunal of this sort would give satisfaction to the public; do not you think that the intervention of a jury in great accidents acts as a sort of buffer between public opinion and the railway companies?—I must say that I have some doubt whether any tribunal whatsoever would give as much satisfaction to the public as a jury. It appears to me that the great argument in favour of juries is that, whether their decisions are right or wrong, as a rule the public look upon it as a popular decision, and it reflects to a considerable extent the popular voice. As an instrument for the investigation of truth, I must say that I think that the jury in many cases has wholly failed.

1128. Mr. *Reed.*] In your opinion it would be desirable, would it not, to increase the competition amongst railways?—I am not sure that my opinion involves that. My observation respecting the policy of making further railways was rather directed to new cross lines, such as cross country lines for example, which will not pay upon the present system of things, unless they can be made cheaply and worked cheaply, and they would operate probably as feeders to the main lines of railway; there would be some additional competition, no doubt.

1129. Of course the tendency would be to lower the fares, if there were a large increase of

Mr. *J. Brown.* Q.C., F.G.S.

23 June 1870.

railway lines?—I have very great doubt myself whether the fares could be lowered below their present scale with advantage to the railway companies, or rather to the public. It strikes me that most companies have been driven by competition to lower their fares to that point at which they will secure the greatest amount of traffic and the greatest yield. I believe nearly all the great lines have been driven to that long ago, and I very much question whether they could lower them beyond their present scale.

1130. Are you not aware that the companies have expressed an opinion that, if limited liability were given, there would be a considerable diminution of fares?—I am scarcely competent to judge upon that point, but I should have thought not.

1131. With regard to juries, is there a greater tendency on the part of juries to give damages against railway companies than in ordinary cases of accident; for instance, a man falls over an area grating in the street, and breaks his leg, would a jury give against the owner of the house, who was responsible, a less amount of compensation than they would in the case of a railway accident; do they not take the same evidence, and are they not guided by the same principles?—Strictly, the damages ought to be exactly the same, whether the defendant was the owner of a house, or a railway company, or any other person, but in practice we find the difference is most conspicuous. In a case where a small tradesman, we will say, is the defendant, the damages given in a case of that sort are usually pretty moderate and fair; but if a rich company, or a rich brewer, or a railway company, are the defendants, the damages are very frequently excessive.

1132. With reference to those extortionate claims, has it not been the prevailing custom in connection with public improvements, the making of a new street for instance, to send in exaggerated claims, and to do exactly in that case that which they do with regard to railways?—Yes, certainly.

1133. Uniformly, that is the tendency; it is not alone applicable to railway cases?—Yes, it cannot be helped; but this observation perhaps should be made, that in the case of a claimant sending in a claim for compensation, he looks upon himself as a sort of person selling to the company, and that he is entitled to get the best price he can.

1134. Mr. *Price.*] Your evidence has all reference to the present state of the law, and not to its alteration; but I think I understood your answer to the question put by the honourable Member on my left to be this, that you have not noticed so very much difference in the mode in which the law is applied in the case of railway companies and the case of ordinary householders, or men engaged in other pursuits or trades?—I do not think there would be much difference in a case where a railway company was defendant, or a case where a rich brewer, or any other company were defendants, or a case where Pickford, the carriers, for example, were defendants; but if you had a small tradesman, and a very serious accident, he would probably have much more moderate damages given against him than would be given against a railway company.

1135. Would that be because the tradesman was more likely to be of their own class, or because the distinction would be a rich and poor distinction?—The first reason which you suggest is the one commonly believed to operate; it is a trial *per pares*, in case they are defendants.

1136. Does it not occur to you that it is an additional injustice to a railway company that they shall be liable for an amount of damages so largely out of proportion to the amount which they receive, seeing that they are bound to give a ticket, and therefore bound to enter into a contract with a traveller whether they would like to to do so or not?—Abstractly, I think that is an injustice, but, practically, I doubt the operation of it; for this reason, that railway companies would be obliged, in carrying on the business upon which they are solely dependent for their profits, to give a ticket to everybody who comes. If the company were at liberty to impose their own terms on the back of the ticket; for example, saying, "This company will not be responsible in the event of loss of life or injury to passengers beyond the amount of 100 *l.*;" if they were at liberty to do that, probably they would have no reason to complain of the present state of the law, but I am quite satisfied that that would never be adopted; they have never attempted to impose such terms as those, and it is questionable whether they could do it under the Railway Traffic Act.

1137. I am aware that a railway company, in the very nature of the case, must carry every passenger who presents himself to take a ticket; but since that is a peculiar incident of that peculiar traffic, does it not seem rather to justify some special precaution or protection?—I conceive that is a matter of public importance, and that if any limitation is made it should be made by Parliament, and not be left to the companies themselves. That was the conclusion at which Parliament arrived 30 years ago, when they passed what is called the Carriers Act, the 11 Geo. 4, and the 1 Will. 4. Carriers had been striving for 40 years before the Act passed, to limit their liability by notices, but those notices were always evaded by judges and juries by some shift or other. At length opinion turned upon the subject, and it was thought to be unjust to make carriers responsible to an unlimited amount where a man only paid a very small charge, and where they did not know the value of the parcel, and so Parliament imposed a limitation, that where goods were of a value above 10 *l.*, unless the value was declared, and some rate of insurance paid, the carriers should not be responsible. That was thought to be a matter of public interest, and I conceive it to be still more a matter of public interest in the case of passengers, that if any limitation be imposed it should be done by Parliament.

1138. I gather that you have already expressed the opinion that there should be some Parliamentary limitation?—I think so; I have a very strong opinion that way, certainly.

1139. Sir *H. Selwyn-Ibbetson.*] You stated that one great objection to the present system was, that medical evidence on both sides of a very expensive character was brought in, raising the amount of costs in the actions; how would you be disposed to look upon a medical authority appointed independently of either the railway companies or the private individual injured, belonging, say, to the Board of Trade, who should investigate into all cases of accident, and whose evidence should be received as the only evidence in the case?—I think there would be a difficulty about that, unless the inquiry was conducted openly.

openly. If the inquiry was conducted openly, and by a medical man who had had some legal experience (for he really ought to be something like a coroner, a lawyer, and a doctor rolled up into one), there would be less objection to it. I question whether it would give satisfaction if there was any private inquiry by a medical referee as to the amount of damages.

1140. I meant that the medical evidence in the case should be only the medical evidence of an impartial person appointed by a central authority; that neither side should have the power of calling in their own medical evidence, and bringing conflicting medical evidence, therefore, into court? —Probably that would remove the objection to the course proposed, but I am afraid, then, that the expense would very nearly come to what it is under the present system.

1141. There would be only one medical officer, and that a public servant, who would be employed, and therefore his rate of charges, whatever they might be, would be a fixed rate?—He would be compelled, I suppose, to hear the evidence of the medical men who had attended the injured party, and to hear the evidence of the medical men employed on behalf of the company probably. I do not think it is very probable, that in a case of that sort, if the company knew that the injured man had employed a doctor to state the nature of the case to the medical referee, they would neglect to employ a doctor on their side also to examine the injury.

1142. You do not think that medical evidence might be taken in the same way that the inspectors of the Board of Trade are bound to be present after every accident to investigate into the causes of it; that the medical officer of the central authority might go down and take a view of the accident, and claimants for compensation would go to him, or he would have to go to them, for examination?—The difficulty I feel is in seeing how you would lessen the expense in such case of the other medical men. I fully concur in the suggestion that the employment of a kind of medical referee, officially appointed, would be of great value, but I have some difficulty in seeing how that would diminish the expense of the trial.

1143. You stated, in answer to a question, that you did not think that this compensation which was given was any check at all upon directors in the management or care exercised over their lines; but do you not think it is any check on their running an increased number of trains for the sake of profit, and thereby in that way increasing the risk of accident?—I do not think it is. I apprehend that directors, as a rule, never anticipate an accident. They take precautions against accidents, and they are hopeful that, having experienced servants, their servants will conduct themselves with due care, and that they do not anticipate accidents; but when an accident does occur they look upon it as a sort of misfortune, which nobody can foresee, and which cannot be prevented.

1144. May not the question of expense sometimes interfere with improvements for the protection of the public being introduced?—Undoubtedly it may.

1145. And therefore the public are not likely to get the same amount of benefit, unless the directors feel that it is their interest to protect the public on their lines as much as possible?—I quite agree with that.

1146. Then in that case every additional onus that you throw upon the directors, and every additional penalty, is an additional interest in their minds to keep their line properly worked?—It seems to me that the penalty which they suffer from an accident is so large, under any circumstances or any form of liability that you impose, that it is sufficient to secure a great amount of vigilance and care on the part of the directors, and I do not myself believe that increasing the penalties to the enormous amount to which they at present run, secures any additional amount of vigilance. My own impression was that possibly the utmost limit of vigilance that could be obtained from directors, would be obtained by some system which imposed on them the full amount of responsibility, where they were personally to blame by their regulations, or by their niggardliness, or anything of that sort, but which exempted them either wholly or partially where they were not to blame but their servants were.

1147. That would meet the difficulty of the case of a company not being very prosperous, placing the probability and possibility of loss by compensation and other things against the known expense of an improvement on account of the public?—That is so. I have heard of the case of a line which is yielding a very low dividend indeed, where a portion of the line undoubtedly wants renewing, and the directors refrain from renewing it on account of the expense. I conceive that if such a case as that came before a jury under any system of legislation, it would probably be judicious and perhaps right to make the company responsible to the full extent.

1148. Mr. *Winn.*] You have said that you think no tribunal would give so much satisfaction to the public as the present one of a jury; by what kind of jury are those cases generally tried; by a common jury or by a special jury?—The company in the cases of large amount almost invariably have a special jury.

1149. A special jury are of a class rather superior to a common jury, are they not?—They are generally superior in education and intelligence.

1150. We have had it stated in evidence that the greater number of accidents occur to second and third-class passengers; do not you think that the fact of the jury being taken from the same class of persons as those who are injured, rather tends to give satisfaction and to create additional confidence in the public mind?—I should hardly say that for my own judgment. My own impression would be that a special jury does as full justice to a passenger in an humble class of life as to one of their own rank. I have often myself thought that even special juries were misled by considerations of compassion and humanity to a poor man to go beyond the strict line of justice.

1151. Are not special juries generally composed of shopkeepers and persons of that class? —Sometimes that is so in London, but not as a rule, I think; as a rule they belong to a superior class.

1152. But they belong to the class who would be second-class passengers, rather than first, would they not?—I am by no means clear about that; that is rather a difficult question to answer, because some gentlemen, I believe, will travel second-class whom you would expect to travel first.

1153. Mr. *Davison.*] With regard to medical

Mr. *J. Brown*, Q.C., F.G.S.

23 June 1870.

men, I understood the honourable baronet's suggestion to be, that there should be a medical referee, and that neither party should call medical witnesses; did you understand the suggestion to be made in that way?—I am not certain that I understood the suggestion of the honourable Member completely. I had rather supposed that the suggestion was, that the medical referee should hear the statements of the doctors of the party injured, and possibly those of the company.

1154. If a man had enjoyed perfect health up to the time of the accident, possibly the examination by the medical referee under those circumstances might be satisfactory, but if the man happened to have had delicate health it would be essential to him, would it not, for the sake of justice, that his own medical man should be called to show the effect of the particular accident upon his frame?—Absolutely essential; in a large number of cases the most difficult part of the inquiry is, whether the symptoms under which the man is undoubtedly labouring, are due to the accident, or due to some previous ailment.

1155. *Chairman.*] I think that you do not put particular value upon the suggestion that there should be a medical referee?—I think not.

1156. Mr. *Davison.*] I do not know that it matters to companies what kind of juries they have, but special juries are supposed, are they not, to give higher damages than common juries?—Very often.

Mr. James Staats Forbes, called in; and Examined.

Mr. *J. S. Forbes.*

1157. *Chairman.*] You are the General Manager, are you not, of the London, Chatham and Dover Railway?—Yes.

1158. And have been so from the year 1861?—Yes.

1159. Before that time you were one of the managers and superintendents of the Great Western Railway, were you not?—Yes, I was 16 years with that company.

1160. For a certain time you were managing director of the Dutch Rhenish Railway, were you not?—Yes, I was four years there, living in the country and conducting the daily management of that railway.

1161. Part of that line is in Holland, I believe?—Part in Holland and part in Rhenish Prussia.

1162. Can you give the Committee any information either as to the Dutch or to the Prussian law upon the subject?—Yes; I thought it better, as I was coming here, to get the information at first hand, and I will take the liberty of reading to the Committee a note which was written to me by one of the leading advocates in Amsterdam, a gentleman who possibly has had his attention given more fully to the state of the law in different countries than almost any other man I know. It is very concise, and it puts the case very clearly. He says that the state of the law is as follows: "In France, Germany, and in Holland, the railway companies are liable to pay damages for bodily injuries or death caused to passengers and to railway officers. Moreover, if the injuries are caused by negligence, those to whom the fault may be imputed, incur punishment under the criminal law. As to the civil action for damages, this is brought before the ordinary courts of justice. There is no special mode of proceeding in the case of railway accidents, but the action is brought, and the proceedings are the same as in any action for debt and contract. The amount of damages is not fixed by a jury, but by the court. But then it should be remembered that the institution of a jury does not exist in Germany and Holland, and in France only for the trial of criminal cases. In all these countries the liability of the State in working railways is the same as of private companies. The principle on which damages are allotted is nearly the same in these three countries. In France the matter is ruled by the Articles 1382–1384 of the Code Civil, stating that everyone is responsible for damage done by his fault or negligence, and by things that are under his control. This rule of the common French law is applied to railways; in fact, neither in France nor in Germany, nor in this country, railway accidents or the liability of railway companies for accidents are not ruled by a special law; but the common law is applicable. In France and in Holland, any damage done to persons and to goods by carriers and by railways, is to be made good by them, unless they prove that it arose by *vis major*, the contract between the parties being that the persons and the goods shall be carried safely. In Germany, I think that the *onus probandi* is on the other side; so that the party injured must prove some fault or negligence on the part of the railway. This, however, is open to doubt, and I cannot say what opinion prevails at this moment in the German courts. In case of death the Dutch law gives no action for damages but to husband, children, and parents, and only then if they were sustained by the labour or industry of the deceased. The amount of damages is to be in some proportion to, or rather to be fixed, having regard to social position and wants of the party concerned. In fact it is left at least, practically, to a somewhat arbitrary valuation of the court. And so it is in France and Germany too. In France the action is not limited to husband, children, and parents; there is a strong tendency in the jurisprudence of that country to extend the principle of responsibility in civil law; perhaps to make good for the sad deficiency of it in political matters. In Germany the action is granted, not only to widow and children, but generally to heirs. An ordinary mode of assessing damages, is giving an annuity for life to the person who was disabled, or to his widow in case of death." Therefore the Committee will see from that, that the common law of responsibility for negligence applies; but the valuation of life, and the question of damages is left to the court and not to a jury.

1163. Have you any experience of the practical working of the law there?—I am glad to say that my experience is limited, because there were very few accidents; but we had two, one in which a carpenter was killed; and the other, more recently, in which a passenger was killed, and proceedings were taken very much as they would be in England. The actions were tried by the court, and damages were awarded; but my belief is that if those actions had been tried in England under circumstances identically similar, the penalties in both cases would have been much heavier upon the railway companies than they were there.

1164. Do the companies complain of their liability

liability on the continent?—They do complain, in France especially; but I think they feel satisfied that the evil of liability to pay compensation is somewhat mitigated by the fact that the tribunal is one more likely to do justice, and less likely to be influenced by sentiment than a jury would be.

1165. Do you know whether, in estimating the amount of damages, much attention is paid to the degree of negligence on the part of the company, or do they simply consider the extent of the injury inflicted?—I fancy that the criminal law in those countries is very strong indeed upon all persons contributing to accidents by negligence, though the question of damages would not rest very much upon the degree. The penalty for any degree of negligence would fall upon the perpetrator.

1166. The traffic on the London, Chatham, and Dover Railway at the present time is, I presume, very heavy?—Yes, it is one of the heaviest traffics out of London.

1167. Do you work it upon what is called the block system?—Yes; we have from the time the railway was opened throughout to Dover adopted the block system in one of its forms. There are one or two forms of it; we have it in both forms, what is called the absolute block, and what is called the block and bell.

1168. What is your experience of the value of the system?—My experience of the value of it is, that when the circumstances of the traffic are such as on the London, Chatham, and Dover Railway, great frequency of trains, trains running at irregular speeds, stations very close together, and much movement going on, it is, no doubt, a great additional security.

1169. Are there any disadvantages incident to it?—Yes, it is by no means free from disadvantages; and one of the chief disadvantages which I have found in practice is, that it induces the driver and attendants of the train to become careless, and in fact to assume and feel much less responsibility in keeping a good look-out, and being ready to meet emergencies than under the old system.

1170. Do they rely rather upon mechanical aids than upon care and vigilance upon their part?—Yes; they expect, in fact, to have the way shown to them, instead of looking out for it; and we have found that operating so strongly that, in the book of regulations in which the rules for the use of the system of telegraphing are set out, we have found it necessary to call the special attention of all the people concerned to the fact that the system of block signalling does throw the engine-drivers off their guard.

1171. With your experience of it, would you recommend that the Government should exercise authority for the purpose of enforcing the adoption of the block system?—No; I wish to speak with great respect of the public departments who control these matters, but having worked in Prussia and in Holland, and having seen in many parts of Germany the operation of very stringent and minute codes, prepared by the State for carrying on the details of a railway, I am quite satisfied that they do more harm than good. I had peculiar opportunity of considering this question, because in Holland there was no state law on the subject, and we were perfectly free for a good many years; but the surrounding circumstances of the German law on the one side, and the French and Belgian on the other, induced the Government of Holland to consider whether they ought not also to appoint a control department upon railways; and they determined to do it, and amongst other people, I was consulted as to what rules should be laid down for the control of railway companies. I am sorry to say they did not take my advice; they prepared very stringent rules, and they have established on the railways in Holland, as they have in Prussia, inspectors who daily examine and control the working of the line. I found that the result of that was to induce everybody, from the directors and the manager downwards, to frame rules for shifting the responsibility from the shoulders of one on to somebody beneath them. The law provides, amongst other things, for the pecuniary and personal liability of the directors, of the manager, of the engineers, and, in fact, of every man; and under that law they can be imprisoned for negligence, either constructive or actual. Of course the first thing the directors did was to meet together to see how they could frame regulations for carrying on the railway in such a manner as to shift the liability off their shoulders on to that of the managers. Then the manager considered how he could subdivide the responsibility and put it on to the back of the engineer, the permanent way superintendent, and the superintendent of traffic. Those men, again, have devised regulations by which they sought to make liable the drivers, the running foreman, the gangers, and the inspectors on the line and so on, and it ends in this, that the responsibility of the governing body is frittered away, and the control which they exercise over the staff is very seriously interfered with. I should be very sorry to see introduced into England anything which would interfere in that way with the whole machinery of the working of a railway, because such interference is very bad in countries where the traffic is very light, and where the complications in the working of railways are not at all to be compared with the complications in this country; I am quite sure that it would be fatal to the convenience of the public of England; I think it would imperil the safety of a railway if any Government department whatever were to attempt to interfere in the details of railway administration.

1172. You would not put any strain upon the companies compelling them to adopt the block system?—No, I think that the universal adoption of the block system is absolutely unnecessary, because the object for which you require it is that particular posts, which, from the character of the traffic passing over them, the frequency of the trains, or other circumstances require special protection, should be specially protected; but that is not necessary over hundreds and, in point of fact, thousands of miles of railway in England, where the circumstances are not such as to require the block system; there is the danger about its application in this way, that you would be leaning on a broken reed, because it becomes a matter of habit to those signalmen, who are especially appointed to that service, and who in their eight hours or their ten hours are constantly employed, and who are alive and active, because their employment is unceasing, the trains are constantly moving. But if there were intervals of 20 or 25 minutes, or half-an-hour, you would find that those men would relax in vigilance, and neglect the work. We find, oddly enough, as a matter of practice that

Mr. *J. S. Forbes.*

23 June 1870.

accidents take place where, according to theory, you ought to expect them the least.

1173. Can you give us any information about workmen's trains; have you any workmen's trains on the London, Chatham, and Dover line?—Yes; I think our company were the first to accept the obligation, and perhaps it is desirable that I should go a little at length into that subject, because my name has been associated, without my consent, with some statements which have been brought forward to support a proposal for extending the obligation to companies without the consideration for which we accepted it. The London, Chatham, and Dover Company were, as everybody knows, clearing quantities of property in the south of London and through the City. The late Lord Derby, amongst other objects of philanthropy, was greatly concerned for the working people who were disturbed, and he suggested that in those Metropolitan Bills some provision should be made for counteracting the evil which the railway companies were doing. It was suggested to myself, and I had the honour of discussing it with Lord Redesdale, and I pointed out to Lord Redesdale that the companies would no doubt be willing to incur some obligation, but that it must be accompanied by conditions which would limit their liability in case of accident, and would make it perfectly clear what the intention of Parliament was, and would make it perfectly certain that the intention of Parliament should not be abused, and clauses were drawn in our Act with that express view, and they are very explicit. The theory was that we had disturbed a certain number of working people; that they were obliged to remove from the centre of work into the suburban districts, and that the railway companies must, so to speak, leave them in as good a position practically as they had been in before they were disturbed. We did not quite agree with the doctrine, nor do I think it can be established if it were gone into; however, we accepted the obligation, and these were the clauses: "The company shall and they are hereby required, at all times after the opening of their railway to a junction with the Metropolitan Railway, to run a train every morning in the week from their Loughborough Park and Peckham Junction stations to their Ludgate station" (that is 3¼ or 3½ miles), "calling at all intermediate stations, and one train from their Ludgate station to their Loughborough Park and Peckham Junction stations every evening, also calling at intermediate stations (Sundays, Christmas-day, and Good Friday always excepted), at such hours not being later than seven in the morning, or earlier than six in the evening, as may be convenient for artisans, mechanics, and daily labourers (both male and female) residing at or beyond Camberwell, and having business daily in London, at fares not exceeding one penny per passenger for each journey (in addition to the Government duty)." Then there is a proviso, "Provided, in case of any complaint made to the Board of Trade of the hours appointed by the company for such trains, the said Board shall have power to fix and regulate the same from time to time; and also, that if in any continuous period of six months, it shall be found that less than 100 of such passengers shall have been conveyed by each of such trains, the company, on proof of that fact, to the satisfaction of the Board of Trade, may discontinue the running of such trains; but the said Board may at any time order the resumption thereof by the company, if it shall seem to the said Board desirable so to do." Then the next provision is, that tickets were to be issued for a week, and that the company were to have the power of demanding the name and address of the person applying, as well as the name and address of his employer, in order to verify the claim of the applicant to use the ticket. There was a penalty for an abuse of the tickets, and then the 137th section enacts, that, "The liability of the company under any claim to compensation for injury or otherwise, in respect of each passenger travelling with such ticket, as aforesaid, shall be limited to a sum not exceeding 100 *l.*, and the amount of compensation payable in respect of any passenger so injured, shall be determined by an arbitrator to be appointed by the Board of Trade, and not otherwise." I would point out to the Committee that that clause 137, contains the two principles for which the railway companies contend. They are contending, as I understand it, for a limitation of their liability in amount, and they are contending for a tribunal, which tribunal shall be free of the influences which they believe to be operating against them now, not only in the nature of the jury, but in the necessary form of proceeding to get the decision of the jury. That is why those very words were put in, "and not otherwise." As I gave the idea of that clause myself, though not its precise language, I remember to have had that distinctly in my mind, and discussed it at the time with Lord Redesdale, and I told him then that we were anxious, not only to limit our liability, which was a condition for accepting this responsibility, but that if the responsibility did arise, we were anxious to have it settled promptly, and without cost, and that an officer appointed by the Board of Trade was the proper machinery; that we did not want lawyers or courts, because lawyers or courts meant costs. Those are the conditions upon which we have carried on those trains.

1174. Has the practical operation of the clauses been good?—Exceedingly beneficial to the working men; and the company have not narrowed their action upon these clauses to the mere letter; but what was done was this, the moment we had to consider the practical application of these conditions, it was found that one train each way daily, was, in reality, giving nothing, because the working people whom it was intended to benefit were people whose vocation leads them to or from London at different hours of the day; they are subdivided into classes, whose business may require their attendance earlier or later; for instance, there are workmen from the Post Office; the Post Office employ a great number of people, sorters, deliverers, and people of that class, who have to be there a very little after four in the morning. Then there are the bricklayers and masons, and those men who begin business at six in summer and seven in winter. Then there were a large number of men, packers, and people of that class in the wholesale warehouses in the City, who did not want to be in London until an hour later. We ascertained from the men themselves, and from the employers of labour, as near as we could, what hours of arrival would best suit those people, and we fixed our trains accordingly. There are now three, one from Victoria at four in the morning, making the circuit to Ludgate; another at five, and another at six; those three trains just suit the requirements of people whose business is of the nature

nature I have described. In the afternoon we at first limited them to returning by particular trains, but we found that that involved some little hardship upon the men who had to hang about the stations, and we now allow them to return by any train which happens to be starting after half-past four.

1175. Would you have had to pay much more for accidents if there had not been this limitation upon your liability?—Yes; and it is a very singular illustration to my mind of the advantages to railway companies at all events of having a limitation upon their liability, and of having a tribunal which will, as nearly as possible, do absolute justice, and which is not a tribunal of sentiment, for I find that last year we carried no less than 690,000 of those workmen without a claim being made. Since we began we have carried several millions, and we have only had two claims, one of which came to an issue at the Board of Trade; and the other fell through the moment the solicitor was referred to the clauses, and was shown that his client was subject, not only to a limitation of liability, but to the decision of the Board of Trade. I am perfectly satisfied that those 690,000 passengers who travelled with workmen's tickets last year, and in respect to whom we have not had a single claim, would have produced a certain per-centage of claims if they had been travelling under the ordinary conditions, because they have not escaped the ordinary average of pinched fingers, jumping out of the train before it stopped, and tumbles upon the platforms, which are very fruitful of such claims.

1176. What is about the rate per mile which you charge?—We carry them from Victoria to the city, seven miles, for a penny; the obligation being to carry them 3½ miles for a penny.

1177. You carry them at the rate of about one-seventh of a penny per mile?—Yes.

1178. Could you have carried them as cheaply as that if you had not been exonerated from more extensive liability?—No; we should have been reluctant to accept the responsibility with an unlimited liability; we should certainly have been reluctant to accept the responsibility to carry them, unless accompanied by those conditions which make a train pay. That means this, that to run one train in the morning will ensure that that train shall be filled with people to its greatest capacity, and that enables us to ensure such-and-such a receipt upon the train, so that although the individual contribution is very small, the aggregate is sufficient to pay. I find that those trains last year ran 12,700 miles, and they have earned an average of 4*s.* 6*d.* a mile; 4*s.* 6*d.* a mile is rather a low average, but it is not so little that there is not some profit upon that particular transaction. It is not very great, but still there is a profit. But the advocates of the extension of the workmen's train propose two things which are utterly inconsistent with profit, and which are very unjust; they propose, first of all, that you should get rid of the limitation of liability, and then they propose that you should get rid of the conditions which are protective of the interests of the companies in other respects. In fact, that the distance should be extended considerably; that the hours within which those trains run should be extended; in short, that all trains run up to eight or nine o'clock in the morning should be workmen's trains; that the distinction, of artisan mechanic and day labourer should be done away with; that all the working classes indiscriminately should be carried; and, in fact, their proposition worked out means this, that all railway companies running trains within 8 or 10 miles of London should carry by every train up to eight or nine o'clock in the morning every passenger for a penny. That is what the practical outcome of it would be, and that, of course, would make it intolerable. Railway companies must shut up shop upon those terms.

1179. You could not run at a profit at prices of that description?—No; it would be impossible.

1180. Do you mean to recommend that all liability with respect to accident should be done away with, or that you should get rid of the unlimited liability that is now imposed?—The railway companies have had a long negotiation with the Board of Trade recently upon this question of workmen's trains, and they were disinclined to extend the limitation of liability to the trains of companies not at present protected.

1181. To extend the limited liability to everybody passing by the train?—Yes; they said there is no reason why the responsibility with respect to working men should be limited, and they appear to ignore the conditions upon which this concession has been made.

1182. Do they propose to make your liability unlimited?—Yes; they proposed to do away with that limitation.

1183. And to that you object?—Yes, certainly.

1184. You feel that you cannot give the benefit to the public unless this limitation upon your liability were continued?—Yes.

1185. Would you recommend that there should be a limitation of liability generally throughout the country?—Yes; I have thought a good deal of this matter for some years, and it has always struck me as a great anomoly that there should be no relation whatever between the premium paid and the sum assured, for that really is what it comes to.

1186. Do you think that the fares might be generally reduced throughout the country, not fer merely working people, but for the public at large, if the railways were exonerated from the extreme liability to which they are now subject?—Yes; as a practical man, having had to consider this subject for some years, I am sure that the liability to accident, and the large penalties (because it goes much beyond compensation) inflicted upon the companies in case of accident are always considerations in the mind in determining whether you will or will not grant increased facilities to the public.

1187. Would you recommend insurance as being part of the system?—Yes; I think that would be very reasonable indeed to meet the case. I think it would be reasonable that a man should do in respect of his person what he does in respect of his horses or his goods. He should put his own value upon the article up to a reasonable amount.

1188. Sir *H. Selwin-Ibbetson.*] You stated that 4*s.* 6*d.* per train mile is about the amount of those trains; what would be the fair proportion to an ordinary train?—I think on our line we come out at about 5*s.* 9*d.*, taking all classes of trains together, express and others.

1189. Is

Mr. *J. S. Forbes.*

23 June 1870

1189. Is that the gross or nett?—That is the gross receipt.

1190. The number of passengers you mentioned was 690,000 in last year, was that both ways?— 690,000 journeys.

1191. One-half of that figure probably would be the number of passengers?—Yes.

1192. That is about an average of 1,100 and something a day?—Yes.

1193. And, I think you also said that there have only been two claims from any of those people?—There have been none at all with respect to this particular year. We commenced running those trains in 1865, I think it was, and in the whole of that period we have only had two claims.

1194. Is this part of your system worked also on the block system?—The whole of our system is worked on the block system.

1195. Therefore we may fairly imagine that some part of that diminution of claims arises from the fact that you have had no accidents?—We have been, happily, very exempt from accidents.

1196. I see by the return that only three accidents have happened upon the whole of the line in the last two years, and of those two were from defects in the material, and one was the case of Mr. Jennings getting out of the door?—Yes.

1197. Therefore the block system has preserved, or at least those who advocate the block system may fairly infer that it has, given immunity from accidents to your line?—My opinion is very strong indeed upon that. I think that within a certain radius of London, or, indeed, upon any railway where the traffic has reached a certain quantity, the block system is indispensible, not only for safety, but for economising time, and for a variety of things, conducing to the comfort and convenience of the traffic.

1198. What amount of space do you work your blocks on?—We look upon every station as a block, and every junction as a block, and in the metropolitan area, extending perhaps 12 miles out of London, we may have a block at about every mile, and in some cases it is even nearer.

1199. With regard to length, would you go as far as five miles?—We have a block between stations seven or eight miles apart.

1200. Without any material inconvenience to the working of the line?—There is a good deal of inconvenience when you get the block too long; for instance, we have a block between Rochester and Sole-street, that is, up a bank of one in 80, or at all events one in 100, and it is about six miles, and we find a great deal of inconvenience arising, particularly where you get a passenger train following a goods train, or where you get an express train following an ordinary train, from the difference in pace.

1201. It would be possible, would it not, to work the block system on any line where you could have five miles intervals?—Yes; I think there would not be a great practical difficulty about five miles, but that depends entirely upon the number of trains that you have to pass.

1202. Therefore it is really only a question of the expense of creating a certain number of signal stations?—No doubt there is considerable expense incurred.

1203. The system would be applicable, would it not, to all lines, by creating a certain number of additional stations?—Yes, of course, it is very easy to put up an intermediate block apparatus, and a signal-man.

1204. Then you would give the security of the block system to all those lines?—Yes, in that case.

1205. With regard to what you stated about State interference being very objectionable on Continental lines, I suppose that the objections arise principally from their entering into all the minor details, such as the codes of rules for the working of the trains?—Yes; they enter very minutely into the codes, into the hours of labour, and almost into the selection of the people.

1206. That would hardly be contemplated in what the right honourable Chairman suggested with respect to power being given to the Board of Trade to enforce the adoption of some improvement, or some new system of working the line which had been constantly recommended by experienced people?—But I think that that is just where the Board of Trade would get into a great difficulty; because, take as an illustration the question (and one may as well ventilate it as a very good illustration of this position) of communication between the driver and the guard. There has been legislation with regard to that subject. I was the chairman of the committee of the Clearing House which inquired into the inventions for securing it, and I drafted the report of the railway companies upon it. We did not adopt any system, because none of us could agree that any one of those inventions would effect the object which we then wished to effect. Then Parliament, in its wisdom, says, "Well, never mind; you must do this, and you must do it upon a principle which shall be satisfactory to the Board of Trade." Now, what is the result of this? The Board of Trade will approve of anything almost that we ask them to approve of; and I will undertake to say now, and I speak, in order, if you please, that it may be challenged, that the public, at this moment, are covered by no practical security, and that no single casualty or risk to which they were subjected before are they saved from now; it is utterly useless in England, and it is utterly useless in France.

1207. Are you referring to the system which has been adopted so recently under an Act of Parliament?—Any one of the systems.

1208. Do you mean the telegraph system, which is very common on Continental lines, and do you believe that that is inoperative?—I say that it is utterly useless, practically. Then, if you come to the question of the block system; the weight of trains; break power; and all those questions, one does not analyse the reports of the inspectors, or try to make them consistent the one with the other; but we do know, as a matter of fact, that the Board of Trade officers (and I desire to speak with the greatest respect of them, because they are men of eminent capacity and of great experience), do not agree amongst themselves very much upon any one thing. If you were to ask them to-morrow, "What is the best block system?" they would not agree; and they would not agree if you were to ask them, "What is the best telegraph system, and the best communication between passenger and guard, or the best break system?"

1209. Or the system of locking signals and points which they are most of them agreed on?—They are very strong indeed upon what they call the locking apparatus, which is a source of continual, what shall I call it; well, it is a trap for the

the railway companies; we have more accidents, not bad accidents, but more trains getting off the rails now in our yards under the locking apparatus, than we had under the old system of pointsmen.

1210. Practically, you find that the result of locking points and signals is not beneficial as a remedy for accidents?—It is not a certain cure for an evil inseparable from the working of complicated railway stations, nor can any be discovered.

1211. Has it diminished at all the accidents which used to arise and were reported on from the defect of the men in charge having two actions, if I may so call it?—No, I have just said that I thought that the number of engines and carriages getting off at the points now (and we have some very bad stations to work upon the London, Chatham, and Dover line) is certainly as great, if not greater, than under the old system of pointsmen.

1212. With regard to the accident to Mr. Jennings, I see that the inspector on that occasion recommended the adoption of the system of which you are perfectly well aware abroad, of a hasp being applied below the handle of the door; do you think that that system would be beneficial if applied in England?—I think it would be beneficial to the railway companies, because I think it would tend to stop that evil from which the public suffer greatly; and the railway companies suffer greatly and very unjustly, namely, the disposition to leave the train before it stops. That is a very good illustration of the law of compensation. We have taken the greatest pains to put a stop to that practice; we issued notices to the public and warned them in every way and begged them to desist, but then they would not and did not; and we thought that some other measures must be taken. Then we gave an order that in every case in which a passenger jumped from a train before it was stopped (they are so numerous that you cannot deal with all), but in every aggravated case the man should be summoned before a magistrate; and we summoned a good many. But we found at last that the idea got possession of the mind of the magistrates, that this was a race between the railway company and the man as to which should make out a case of liability or non-liability. We were absolutely discredited, and gave up taking those cases before the magistrates, because we found that the magistrates thought that we brought men there, not to punish them for an offence against the bye-laws, but to protect ourselves from possible actions.

1213. You think that, adopting the system of a hasp would materially check the evils complained of, of people getting out of the trains before they stopped at the station?—Yes, I think it would be beneficial to the railway companies. I think it would check that evil; but I think it would annoy the public immensely.

1214. Do you see any difficulty in adopting it, and therefore leaving both doors unlocked, and although passengers might be apt to get out on the wrong side of the train, would not it be in itself a check upon their doing so?—Yes, I think it would add to the safety of the passengers.

1215. On the Continent universally, I believe, they leave the doors unlocked?—Yes.

1216. And there is no return that I have had before me showing any amount of accidents arising from that being the case?—It is so; but I would remind you that on the Continent there is a very stringent law which is applied very promptly, and without ceremony or favour, to people who get out on the wrong side.

1217. A law that might very usefully be applied in England?—Yes, it would be very useful if the legislation in England were a little more in the direction of controlling passengers in their own interests. A railway man always gives opinions of this sort under some suspicion that he has an interest to serve, but I say that, notwithstanding that suspicion, probably the best thing that Parliament could do, or that the Board of Trade could do, would be to see how passengers could be protected from the results of their own gross negligence, and if the law of England were applied as stringently as it is certainly in France and Germany, you would have this class of railway accidents greatly diminished in number.

1218. In that view you would be rather inclined, would you not, to give the Board of Trade power to legislate?—I think I should not object to their imposing reasonable restrictions upon the public in their own interest.

1219. As to the system of continuous breaks, have you ever tried it on your line of railway?—No, we have never had it on our line. We have very powerful breaks; our breaks were specially built; they are six-wheeled breaks, and they are loaded and very heavy, and very effectual; but we find a difficulty in continuous breaks from the constant necessity of breaking up trains at the junctions, and we have a great many junctions on our system.

1220. Of course it materially increases the safety of a train, and therefore of the passengers, if you have a continuous break, and consequently the power of applying break power to each carriage?—I am not an engineer, I am only a manager, but I venture sometimes to question those theories about continuous break power, although I know that the weight of the Board of Trade is against me upon that point.

1221. Many accidents, I think, are shown by their returns, at least to arise from an inability on the part of those in charge of trains to check their speed within a certain distance, and that they do not see the danger till they are so close upon it, or within so many hundred yards of it, that they cannot, from their deficient break power, arrest the train that they are in charge of?—Yes, no doubt that is the allegation.

1222. Therefore, it seems to the public rather to point towards the necessity of some increased power of that sort, if it could be found?—Yes; if the theory is established that that is so in fact, and no doubt it is so to some extent; because, to say that a train running without a break would be more safe than a train with a break, would be to state an absurdity.

1223. Therefore, if you increase that break power you increase the safety?—I do not know that. I have known cases in which the only possible reason that could be assigned for carriages getting off the line in a running train, was the too sudden application of the breaks.

1224. The continuous break would rather meet that, would it not, because it would be applied gradually to each carriage?—Having considered the question of the continuous break, I do not think that the advantages of it, in the interest of

Mr. *J. S. Forbes.*

23 June 1870.

the public, are such as would render it desirable that they should be adopted compulsorily.

1225. All those different inventions have been constantly recommended, not only by the officials, but by the Board of Trade; and if they recommend so many inventions that are not adopted by the railways generally, that strengthens one's idea that some further authority should be given to the Board of Trade to enforce its opinions; accidents constantly happen, and recommendations of the officials are constantly put in print, stating that those accidents arise from certain defects in the working of the lines; and they even go so far as to state that their recommendations are useless, because they are never carried out; and the question then arises in my mind whether a central power might not be entrusted to the Board of Trade, giving them the option, if such constant reports come before them, of laying on the Table of the House, for instance, a resolution authorising them to enforce them upon the particular company in question?—Will you allow me to put this to you: I have attended a good many Board of Trade inquiries, and as I said before, I desire to speak with the greatest respect of those gentlemen; they have a very onerous duty to perform; they are, so to speak, under the public eye, and in cases of bad accidents they are generally reminded by the Press of what their duty to the public is. You see they come and have to inquire into the cause of the accident; that is what they have to find out, and I have observed, and in one or two cases strikingly so, that they arrive at the cause almost before they have examined the witnesses, and that the whole of their examination led up to this, to prove upon examination that their foregone conclusion was the cause. Now, you see when they make a report founded upon that kind of thing, the reason why the railway companies do not agree with them is, that they do not believe that that is the cause, and they do not believe that the remedy proposed is a remedy.

1226. What course do the railway companies adopt on receiving one of those recommendations from the Board of Trade?—They are always read at the Board; the engineer or the manager, or the parties concerned are had in, and they have to give their explanation; and I believe that it generally ends in this, that the letter is acknowledged. Very often the railway companies do not agree with the conclusions; but they say, "Well, what is the good of our entering into a discussion with the Board of Trade; it is a public department; these are public officers; they are impartial people; they have no object to serve; they stand much better before the public, in an argument of this sort than we shall; we are on our trial; we are people who have to defend our position; these men have all the advantages of public position, and impartiality; therefore, although we do not agree with them, and we do not think they are right, what is the good of getting into a discussion with them?" Therefore, the letter is generally acknowledged.

1227. How do you arrive at the conclusion that the inspectors of the Board of Trade have a foregone conclusion before they hear the evidence?—I ground that opinion upon my own experience of cases in which I saw, very early after the commencement of the inquiry, that the inspector would only have it that the accident had arisen in such-and-such a way, from such-and-such causes; and that idea has made itself manifest in all the questions put, and in all the suggestions to the witnesses, and in the report; I myself having had the advantage of hearing it all, being by no means sure that the inspector was right in his conclusion, and being quite sure that the answers put to leading questions (because that is what it amounted to) did not justify the conclusion.

1228. With regard to the rules that are laid down, the inspectors have also constantly reported that those rules are very seldom enforced by the companies or their servants; that they have a very good code of rules, but that they find, from their examination of the witnesses at the time, that those rules are never practically enforced, and are neglected; is that the case?—No; I should say that it was a very unwise assertion, because it is contrary to the fact.

1229. You acknowledge that that leads the public to think that they are not fairly treated when they are travelling under a special code of rules which insures safety, but which are systematically neglected by the servants of the companies?—I must say that I was exceedingly pained to find that assertion made by a gentleman of great authority, on an occasion of great gravity; and I venture, as a railway manager, to protest against it *in toto*, and to say that there is no justification for such a statement from such a man.

1230. We have at the same time, on many occasions, evidence tha engine-drivers, as a body, are constantly in the habit of running past signals at which they should stop, either from carelessness or from their having so generally travelled with security, that they neglect them?—Yes; but my contention is not that the rules are not broken, but that it is not the fact that the companies wink at the breaking of the rules, because that was the conclusion.

1231. Do you think that they ought to wink at the breaking of rules made for the purpose of insuring safety?—No, I think that they ought to punish the breach of them; but I want to put you in this position. You see, theory is one thing, and practice is another. An engine-driver breaks a rule, and you punish him, you fine him 5*l.* or 10*l.*, or you may dismiss him; but suppose you do dismiss him, suppose you dismiss a signalman at a box of great importance, as a matter of fact, you replace an experienced and good man by somebody who is, upon the theory of chances, more open to-morrow to the very same risk; it is the nature of the punishment that you ought to apply which is the difficulty in these cases. It is not that the man ought not to be punished, but it is the nature of the punishment which is the difficulty.

1232. What punishment would you suggest?—What penalty would you put upon an engine driver greater than the chance of death, for instance, and that does not restrain him.

1233. We know that that really never restricts any man who is accustomed to risk every day of his life?—I am afraid that you cannot get beyond this, that in the very nature of the case there must be casualty, and we find very often it is a very difficult position for a man who has to deal with those things practically. You have to punish a man who, by a momentary neglect or want of thought, after years of good conduct, and after years of good service and great care in the interest of the public, has committed some offence.

1234. At

1234. At the same time railway companies, by enforcing their code of rules, would by degrees make their servants better servants surely, instead of by neglecting to enforce them, as it seems from that account they systematically do?—I must again take occasion to say that it is not systematically done, and it is a matter to me of great pain, because I think that statement must have been thoughtlessly put forward; but perhaps you will just allow me to qualify it in this way: you must entrust all those servants, from the highest to the lowest, with a certain amount of discretion. I defy you, or any public department, to draw rules so precise as to admit of a definition even of what is to arise or may arise upon a particular event which interrupts the regular flow of traffic; and almost all of the accidents which one reads of, and many bad ones, arise from this, that a man has got a rule, and in the application of the rule in the very nature of the case there is a certain amount of discretion, and he does not exercise his discretion wisely; but against that you have got the other position, that you cannot make rules sufficiently minute to meet everything that arises, and therefore you have got the choice of one thing or another, you must either make rules which are impracticable, or you must give discretion.

1235. Mr. *Winn.*] You said, did you not, that you think the block system, as a whole, is a desirable one to adopt?—Yes; you cannot, in my opinion, draw any hard and fast rule about it. I think that the block system is a system which adds to the safety and to the facilities of the working of trains where they are numerous, where there are frequent junctions, and where the traffic is very heavy.

1236. You say that the objection to it consists in its having a tendency to make the drivers careless?—Yes, there is no doubt; and I think it must be admitted by all practical railway men, that one very great safeguard in the conduct of a train is the vigilence of the men who drive it, and the block system does induce laxity on the part of drivers.

1237. Have you any instances on your own line where drivers, in consequence of the block system existing, have been careless?—Yes; I have no hesitation in saying that my experience is, that the complaints against drivers within the last few years have been much more frequent under the block system than they were under the old system.

1238. How long is it since you have adopted the block system?—Ever since we opened the railway to Dover; about 1862 or 1863.

1239. Could not a system of fines be enforced when those cases are brought before you?—We always fine them for those breaches of discipline, We look upon running past a signal, for instance, as a very serious matter, and we generally fine them. The drivers, the bulk of them, are men of excellent character; many of them are not only old servants of our company, but some I knew 25 years ago on the Great Western, and they do not hesitate to admit their fault, and say, "We are very sorry we have committed a fault," and 5 *l.* is not an uncommon penalty.

1240. Have you had any accident upon your line which you can attribute to the existence of the block system?—Yes, we have had accidents.

1241. What accidents have you had?—This class of accident: the block system depends upon the man at B, who is in advance of A, giving the signal to A; then, occasionally, you find that an engine runs past A, and pitches into something at B; then immediately there is a conflict of testimony. The man at A says, "Well, the block was not on;" and the man at B says, "Yes, but I know I put it on." Those cases are not unfrequent.

1242. Ought not they to telegraph to inform you whether the block is on or not?—They ought to do so; and the theory is that it is to be done by telegraph, and the needle at A is depressed by the man at B. It is the business of the man at A, whose needle is depressed, to keep back the train by signal; but the signal is all right, and the engine driver runs past it, and then the man at A tells you, "I left the signal down, because the needle was not depressed; I had no block on;" but the man at B says, "I put the block on." There is no possibility that we have yet discovered of fixing the liability upon the one or the other of those men.

1243. Can you tell us of any particular accident that happened in consequence of the existence of the block system?—I think there was one very recently, upon which the inspector reported on, on our railway near London.

1244. Sir *H. Selwin-Ibbetson.*] There are only three reported in the last two years?—I have a recollection distinctly of one such accident, and I should be very happy to furnish the Committee with the details. I almost think that the inspector made a report upon it.

1245. Then it must have happened during this last year, since that return has been in our hands?—If you will allow me I will hand in the details; but we have had several cases of that kind where no accident has resulted. There was one case in which there was a pitch in, as it is called; that is to say, one train ran into another; but I have several cases in which a train has been allowed to pass a point when it ought not to have passed, and where nothing has resulted, but the fact that there was a breach of discipline, and there might have been an accident.

1246. Mr. *Winn.*] With regard to workmen's trains, I think you said that the workmen's trains that you have run have answered the purposes of the company?—Yes, they have.

1247. And you say you have not been altogether free from accidents with those trains?—We have had two accidents; one was a labourer, or a carpenter I think he was, who had travelled by the train, and had gone downstairs at the Ludgate Hill Station, and in passing through the booking office to get out, he slipped upon a brass ventilator which was put into the floor. His solicitor wrote us the usual letter; I think it was said to be injury to the spine, or something of that sort. We reminded the solicitor that the man was a workman, that the conditions of the workmen's travelling were so-and-so, and that we should be very happy indeed to submit the matter at once to the Board of Trade. He did not much like that. However, he did submit it to Colonel Yolland, and Colonel Yolland, within a day or two, made inquiry, awarded him nothing; he held the company to be free. In the other case I do not know whether it was a man that stumbled or a female, but we had a lawyer's letter, and in that case we sent a reply that the matter was a question to be decided by the Board of Trade, and the lawyer did not go on; he did not think it worth while to proceed.

1248. Would you like the Board of Trade having

Mr. *J. S. Forbes.* 23 June 1870.

having jurisdiction over all accidents, and being the authority to decide upon cases of compensation?—I think that some public department might very well settle those matters. I am sure that that would put an end to the abuses of the present system, because it has become a very sad trade, this legal prosecution of claims of this sort.

1249. Do you mean to say that the Board of Trade should decide upon the liability, or the non-liability, or upon the compensation?—I think that the principle that we contend for is, that the liability of the company should be limited. Of course in case of death there is no question about how much to pay, because the limited amount, whatever it was, would have to be paid, but within that there might be very many gradations of how much might be fair within 100 *l.*, or 500 *l.*, or 5,000 *l.*, whatever it was, and I think the Board of Trade might very easily appoint a tribunal under which that question should be settled speedily and cheaply.

1250. You stated, did you not, that there has been no serious accident to workmen's trains?—No; happily there have been very few accidents.

1251. Can you say at all the difference between what you have actually paid in damages and what those damages would have amounted to if those workmen's trains had not been limited in liability?—The only information which I can give upon that is, that dealing with the averages, I feel satisfied that, if those 690,000 journeys had been made by the same people, as ordinary passengers in ordinary trains, we should have had more claims upon us, and we should then have paid some considerable per-centage upon the receipts.

1252. Mr. *Denison.*] Had you only two accidents, or only two claims?—Only two claims.

1253. Mr. *Winn.*] You said that you would desire to put some legal restrictions upon passengers, something in the way that they practice abroad with a view to their own safety; can you mention any particular mode in which you would desire to put a legal restriction upon passengers?—I think the most fruitful source of small accidents and small claims, broken legs, let us say, and contusions, and occasionally death (Mr. Jennings was a very sad illustration), is the disposition which numbers of people have to get out of a train the moment it approaches a platform, and before it has stopped. Anybody who chooses to stand at any Metropolitan Railway station, not a railway manager, but an observer, and watch the trains come in, will see that people habitually throw the doors wide open the moment a train approaches the end of the platform, regardless of the safety of the people standing on the platform, and out they jump, and very often fall. There is a law which says that such a person is to be fined 40 *s.*, but it is inapplicable.

1254. Is there any other way in which you would put a restriction on the passengers?—I think I would make a penalty for leaving a carriage on the wrong side, because that is a fruitful source of accident.

1255. Any other?—Those are the two chief causes of accident.

1256. You have said, have you not, that it is unwise to dismiss a signalman for not working the signals correctly?—I think you must qualify that a little.

1257. But is it not the case that trains constantly pass a station very considerably after the time that they are due?—No doubt of it.

1258. Are you in the habit of fining the persons who are to blame for the trains being late?—If you found the lateness of a train habitual, and to result from the negligence of the train attendants, you would punish them; I should remove, for instance, a guard; my method of proceeding is this, I find a complaint against a particular train, that complaint is investigated; we keep an account of the running of every train, when it starts, and when it arrives at every station, how long it stays, and when it starts again, and so on; that brings out the aggregate detention, and the aggregate late arrival; you have the guard up, and say to him, "How is this?" And if there is one station prominent for those delays, you have the station master up, and you say, "This train must be got up to time, do you want more time?" "No," he says, "we think, perhaps, we may get along." "Very well, we must have it up to time, and if you cannot do it somebody else can." You generally find if you make a dead set at a train in that way, that by degrees you get it to work to time, or if you cannot get it to work to time, in preparing the next time bill, you give it a little more time; That you can control, but you cannot control the public. There again, everybody conversant with the English as compared with the foreign system, must know the very stringent regulations under which passengers are put abroad with respect to being in time. All those are operative causes, and what is more serious, they are operative causes upon accidents, because a great many accidents at stations arise from the hurry consequent upon everybody coming at the last moment.

1259. The guard reports, does he not, the arrival of the trains at each station, and the hour at which they have left each station?—Yes.

1260. And the station master or clerk in charge reports as well?—Yes, they both report, and they have to give an explanation if there is an unusual detention why it is. Supposing you have a county Member driving up at the last moment with his lady and family, and his boxes of all sorts, with two minutes to do that, which he ought to have given a quarter of an hour for, what can you do?

1261. Is it the practice of companies to take notice of these irregularities, or is it exceptional when they do?—I will not say as to other companies, I can only speak for myself, both on the Great Western and the London, Chatham, and Dover. It is a great part of one's daily labour to see that the service is going on properly; we have a regular establishment upon every railway, who devote themselves to nothing else but checking these matters, and the amount of paper and returns and correspondence upon that very subject in connection with every train, would probably startle the honourable Member if he were to see it.

1262. Is that general on all railways as well as on yours?—I am quite certain about its being on the Great Western, and I apprehend upon every railway.

1263. Mr. *Denison.*] You have been in America and in Canada, have you not?—Yes.

1264. Have you any knowledge of the law of liability of railway companies there?—Yes; in one or two of the States, I think New York and Massachussetts,

Massachusetts, they have limited the liability to 5,000 dollars in case of death or accident.

1265. How is that compensation awarded; is it by the instrumentality of a judge and jury?—By a judge I almost think, but I am not very clear upon that part of the subject.

1266. I suppose you are of opinion, as well as other railway managers, that if the maximum compensation were pitched very high, railway companies would be in a worse condition under the alteration of the law than they would be in the present state of things?—Yes; I think that a gentleman much more competent to give an accurate opinion than myself, Mr. Baron Martin, shadowed out that difficulty. There would be a disposition certainly, on the part of a jury, to take a round sum and to give it, but I should not fear that very much upon the part of a judge. I think a judge would look at the circumstances, and would do what is reasonable.

1267. You have said that on the Continent there is a very much stricter law as regards the travelling of passengers; can you tell us whether, on the Continent, the railway companies have the power of apprehension as well as of summons; in England, if a passenger contravenes a bye-law, all you can do is to summon him, after getting his name and address; you have no power of detention?—There is the power of detention abroad; in Germany and in Holland especially you have on the stations either the police of the town itself, or of the State, or you have your own officers authorised to apprehend; and they do without ceremony take people at once into custody, and prosecute them at law.

1268. But is it not the fact, that the difficulty of getting at a man who has contravened a bye-law in England, through the instrumentality of a mere magistrate's summons, does operate to prevent railway companies from enforcing penalties?—First of all, it is a very common thing I am sorry to say, that people who are challenged with an offence, scruple very little about giving a false address; you have sent out a summons, and you find that Mr. Smith does not live there. Occasionally, having some suspicion in the matter, if you can afford an officer for that purpose, he follows those people and verifies the address. But the whole procedure has been so awkward, and has been so unfavourably received by the magistrates, that we have practically given up summoning people for those offences at stations, such as getting into trains in motion, or getting out of them.

1269. You are distinctly of opinion that the British public would not be in favour of railway companies having the power of absolute detention on the occasion of breaking the bye-laws?—The British public are exceedingly sensitive to the liberty of the subject, undoubtedly so; the practical result is that you cannot deal with them.

1270. On the Continent the proportion per day of trains to passengers is of course very largely in diminution of anything that you have in this country, is it not?—Enormously so; of course some French railways have a very heavy traffic, but as a rule in Germany and in Prussia, the intervals at which trains travel are much longer, and the receipts per train mile are very much greater. I need hardly tell you, that with stringent rules for getting people to time, having plenty of time at stations to deal with the traffic, and carrying it at long intervals of time, you reduce the risk not only in the exact proportion of the number, but in a much greater ratio; something like the squares of the number.

1271. It is obvious that what may be good and practicable on the Continent would be impracticable in this country?—The fact is we have been driven foolishly by competition to concede to the public in England such facilities, that it would be impossible to work the traffic under the same kind of restrictions as are imposed upon the Continent.

1272. Take the ordinary restriction of not allowing a passenger to enter a station after a certain period of time; in the tremendous competition which exists on all the great lines of railway in England, a passenger who was turned back from a railway station before the train had actually left it, would probably send you an angry letter to say that he would no longer go by your line, but would go somewhere else where greater facility was shown?—Of course any rule which you impose on the public in the interest of their own safety, if it interfere in the slightest degree with any man's appreciation of his own convenience, is looked upon as a nuisance, and is disclaimed against. I will illustrate that by one instance, with which I dare say some honourable Members are familiar. On the Metropolitan Railway running under London they have found it necessary, the moment a train comes in, to lock the door giving ingress to the platform, and why? because when the doors were left open people rushed downstairs pell mell and across the platform, and rushed into the carriages utterly regardless of their own safety, or the safety of the people who were just leaving the train and crossing the platform. I myself have repeatedly seen people cannoned one against another and up against the train from that cause. I know that their locking the gate is a matter of serious complaint on the part of people. Nothing can be more irritating, if you are going westward, than to find the gate just shut in your face. You say, what a scandal this is, you yourself being solely to blame, because you ought to be in time, and the company are not thanked for taking the precaution.

1273. Sir *H. Selwin-Ibbetson.*] Would not that cure itself in time?—No, never.

1274. Mr. *Sherriff.*] Do you not think that it rather gets worse?—Yes; I think it rather gets worse.

1275. Mr. *Denison.*] You have suggested that the continental plan of having hasps to the doors might with advantage be adopted in England; do you think that locking trains in the Metropolitan district by a hasp would be workable where the average stoppage of a train is less than a minute at each station?—No; I qualified my answer by saying that it would add to the safety of the public, but I am sure it would not add to the convenience of the public, because the detention of trains then must necessarily be considerably greater.

1276. Either the detention would be greater or those hasps would be left unused on the Metropolitan district?—Yes; in all those things I claim credit for this, and I hope it may be accorded to one. One considers, not what is best upon one special point in working a railway, but what is best, looking at all the things with which you have got to deal. Having in view the advantages and disadvantages you say. Now I know that locking this gate is a nuisance, and there will be a great row about it, and people will be dissatisfied, but I know that that is better than letting

Mr. *J. S. Forbes.*

23 June 1870.

letting them run and cannon against each other, and hurt each other upon the platform; you cannot help feeling that it is an inconvenience. And so with the hasp upon the carriages; if you are going about London, these repeated stoppages in performing a journey of a few miles, must take a great deal of time, and all that you can do to limit the time increases the convenience to the public; after all, it is a matter of degree, and you have to weigh anything which leads to detention as against some fancied security which it may give.

1277. There is an answer which you gave to the honourable Baronet which I did not quite understand, with regard to the impracticability of the block system at distances of five miles. I did not catch the drift of your answer, and would you be so kind as to repeat it?—What I said was, that it is practicable, of course, but I think that at distances of as much as five miles it would be inconvenient, as resulting in delays to the trains.

1278. Had your answer reference wholly to the Metropolitan district?—No, beyond the district; in the Metropolitan district, of course, an interval of five miles would be impossible.

1279. Sir *H. Selwin-Ibbetson.*] At this moment you have, I understand you to say, an interval of even seven miles on a part of your line beyond that district?—Yes, that is outside the Metropolitan district.

1280. Is it working satisfactorily?—It is working satisfactorily, qualified by occasional delays to trains following one another.

1281. If seven miles could be worked without any great inconvenience, would not the natural inference be that five miles could be worked with less inconvenience?—The inconvenience, if it were five miles, would be reduced, because, as the distance increases, the chances of inconvenience become greater.

1282. Mr. *Denison.*] As to workmen's trains, I suppose their extension to a larger radius, where the population is not so great, might not prove remunerative, though it does happen to be remunerative within the radius which you have mentioned to the Committee?—That is perfectly certain, because the receipts per train mile worked out from any centre in London vary for every mile and vary with the density of the population. You may have, for instance, from Ludgate to the "Elephant and Castle," which is the fact, something about 450 *l.* or 460 *l.* a mile a week; then the next circle for a mile or two you have 400 *l.*, and it keeps diminishing as the distance of the circle from the centre increases. In fact it is in proportion to the density of the population, and therefore a train running four miles out of London at a penny, may be sufficiently filled with people to make it remunerative, but for the next four miles it would have so few people as to be a positive loss.

1283. Have you formed any estimate of the minimum number of passengers per train or per day that would make it remunerative to extend the workmen's trains to any further station?—I think you must look for a receipt, but we are satisfied on the whole with this 4*s.* 6*d.* per train mile, because we have accepted the obligation, and because there are conditions attached to it which on the whole make it pay; but I should not be satisfied with 4*s.* 6*d.* per train mile beyond the metropolis, certainly, or in the absence of such conditions.

1284. Your answer scarcely meets my question; the endeavour is to extend the radius of workmen's trains, and what I wished to arrive at was, whether you had formed any estimate of the number of those passengers, per train or per day, that would induce you to extend workmen's trains to a further station?—I find that we have had 405 passengers per train in this Metropolitan area. It is seven miles from Victoria to Ludgate, and the whole of that seven miles traverses a district within a certain radius of the centre of London, you must have an equal number of passengers outside that to produce the same earning per train mile. In fact you must have a great many more passengers if you diminish the rate, because if you take 1 *d.* to go 10 miles, it is much less per mile than 1 *d.* to go four miles: therefore you want a much larger number of passengers to produce the same result. And if you were to do this by extending the area to what I have heard talked of, eight, or nine, or ten miles; you would be diluting the rate to such a figure, four or five miles out of London, as to make it impossible for a train to carry enough people at that rate to pay the working expenses.

1285. I think you attribute the paucity of claims for compensation arising out of those workmen's trains directly to the fact of the limitation of the liability; might not one reason of the paucity of claims be owing to the inability of professional men to recover their large bills of costs?—Yes; not only to recover them, but to proceed with the case at all they must go to the Board of Trade.

1286. Mr. *Davison.*] Your company and the Metropolitan, I think, are the only two who have that law of limited compensation as regards the sum to be paid to workmen?—I am not sure whether it has been extended to any third company.

1287. Do you know that it was extended, for instance, to the South Eastern Compan y by the decision of a Committee of the other House?—I do not know that. I think it has been extended by a Bill which has been just passed through the House of Lords to the Metropolitan District Company, but I do not know as to the South Eastern Company.

1288. Mr. *Plunket.*] Do not railway companies in this country complain quite as much of the amounts which they have to pay for attorneys and doctors as of the actual amount of damages which are found against them?—I think that that is a state of the case which may be put forward as one of our chief grievances.

1289. Is that grievance felt abroad much?—No; the process abroad is much more rapid and much less expensive.

1290. Can you tell us what the process is, in that respect, abroad?—First of all, the lawyers are indifferently well paid there; you can get your law done for a very small cost, and you do not want the machinery of witnesses which you have in this country, because you have got to take such evidence before a judge as will satisfy the mind of a judge; the judge will only listen to facts; whereas, a man who has to conduct a case before a jury knows that the facts want embellishment; this leads him to call a variety of evidence which is not at all necessary, and which would have no influence upon a judge. I have some illustrations of a matter which I do not think previous witnesses have dwelt upon with quite the importance that it demands, and that

Mr. *J. S. Forbes.*

23 June 1870.

that is the enormous penalties inflicted upon railway companies in defending two classes of claims; first of all, claims which are utterly fictitious and fradulent; and in the next place, claims which represent small injuries upon which the evidence is very conflicting, where the damage is very slight, but where the costs are very large. I think I might illustrate that by the case of Colmer and Wife, a thing which took place very recently, to show rather the absurdity of the machinery. This was a case of a woman who took a ticket from one of our stations to a station on the Metropolitan Railway. She went, I think, from Walworth-road to King's Cross, and she travelled by our railway safely to Farringdon-street. At Farringdon-street, in the course of business, she had to change carriages to get into the Metropolitan train; but the Metropolitan Company have an arrangement under which the Great Western trains passing over that railway are bound to carry their local passengers. This lady at Farringdon-street got into a Great Western carriage to go to King's Cross, and in getting in at Farringdon-street, the attendant slammed the door on her thumb and injured her. She employed a solicitor, who brought his action against the Metropolitan Company; it went up to trial, and the time of the court was occupied, and it was only when it came before one of the learned judges, that he non-suited Colmer and wife, upon the ground that they had gone against the wrong parties. Then they had to consider who really was liable. It was a ticket issued on the London, Chatham, and Dover Railway; but the lady got into a Great Western train, and a Great Western guard slammed the door upon her finger, but in a Metropolitan Station; and it ended in Colmer and Wife going against the London, Chatham, and Dover Company. We defended it; and the jury vacillated a long time; it took them some time to make up their minds, but they did give Mr. Colmer 40*s.* for an injury inflicted, not by us, but by a Great Western guard in a Metropolitan station; and we had the satisfaction of paying 40*s.* fine and 220 *l.* costs. There is also the case of Sarah Bridger, who brought an action against the company; this is not the class of case where what they call exemplary damages were gone for, where there is a good deal of public feeling whipped up by the papers, where people are badly injured, and have to be compensated by large penalties; but this is one of a class of cases arising every day. I have scarcely a day, certainly no week, in my office in which I do not receive applications founded upon this sort of thing: "I got out of the train and fell down; the train moved on just as I was on the step, and I had a fall;" and those are very often accompanied by a lawyer's letter and a claim for costs. In the case of Sarah Bridger, to which I have alluded, she brought an action in June 1868 to recover large damages for very serious injuries sustained while she was alighting from a carriage. Of course she tells the usual story; the train was in motion after having stopped as she was alighting. The action was tried before Lord Chief Baron Kelly and a special jury. We made out our case, and the lady was non-suited; but we had to pay all our own costs, as she had no effects. We had four cases of that sort in one year, two of them being cases of the grossest immorality and attempts to defraud. In one of them, I am glad to say, we succeeded in bringing home to the man, who was reputed to be a highly respectable man, a charge of perjury, and he got seven years' penal servitude. One of those cases is rather an amusing one. "Henry Septimus Wardale, in September 1868, claimed compensation for personal injuries alleged to have been sustained at the Beckenham Station, by his being violently thrown against the side of a carriage by a sudden movement of the train while he was in the act of entering it. No complaint was made by any other passenger at the time or afterwards, and the company's officials were positive in their statement, that nothing happened that could have caused any shock to, or sudden movement of, the train Compensation was refused, and an action was brought. Strict inquiries were at once set on foot as to the plaintiff's character and position. He described himself as an accountant, but it was ascertained that he was acting as a waiter at a night house in the neighbourhood of Leicester-square. It also appeared that he had been bankrupt; that when lately a servant in one of the clubs in London he had purloined property amounting to nearly 100 *l.*, which a guarantee society paid for him; that subsequently he had robbed an employer of a considerable sum of money, only escaping prosecution on account of the tradesman's disinclination to trouble his customer's to come forward and give the necessary evidence against him; that he had suffered imprisonment for theft, and had been guilty of various acts of dishonesty, proving him to be a common swindler. It further appeared that he had been several times in the company of a surgeon residing in his own immediate neighbourhood after the alleged accident, and had never mentioned to him that he had sustained any injury on the railway. The case was tried at Westminster Hall before a special jury, who gave their verdict for the company; but it will at once be seen "that this result was only secured by the company being enabled, at great trouble and expense, to furnish counsel with sufficient materials for cross-examination of the plaintiff to shake his credit in the witness box, and prove him to be a person utterly unworthy of belief. It was necessary to supœna and have in court as witnesses the persons whom he had defrauded, so that he dare not deny what was alleged against him. Had this course not been adopted there would have been great risk of his obtaining damages, as a surgeon (misled, it is to be hoped, by his statement), gave evidence that he had sustained an injury which produced concussion of the spine, and other injuries. The company, of course, have never recovered any costs. Another case is that of Eugene Moriarty, and Rhoda his wife, who brought an action in 1868, to recover large damages for personal injury sustained by the latter, in consequence of her having fallen while in the act of alighting from a train. The reports of the company's officials clearly proved that she got out of the carriage after it had been set in motion, and the claim was therefore resisted. This is a remarkable case, because this action was brought by one of the most respectable solicitors in London, and a man who stands very high in his profession, and this is what was elicited. The case presented this remarkable and unusual feature, viz., that shortly after the action was brought, the solicitor of the company received communications from three

Mr. *J. S. Forbes.*

23 June 1870.

persons to the effect that the claim was fraudulent, and that a clerk in the office of the plaintiff's solicitor had applied to them to give false evidence in support of the plaintiff's case, stating that there were no witnesses, and promising a third of the damages as a reward. They also stated that the male plaintiff was party to this corrupt proceeding. Inquiries were made with reference to these persons before any attention was paid to their communications; but, as they were all in respectable employment, and apparently perfectly consistent and truthful in their statements, the information they supplied was acted upon; as I before mentioned, the solicitor for the plaintiffs is a highly respectable practitioner, and there is no doubt that he was wholly ignorant of the course pursued by his clerk, and would have been most indignant had it been brought to his knowledge. The case was tried at Westminster Hall before a special jury. There was a conflict of evidence upon the facts as to whether the woman got out of the carriage while it was in motion, or not; and the three persons who had volunteered the information as to the attempt to suborn them to give false testimony, were called as witnesses. The jury were, no doubt, materially influenced by their evidence, and gave their verdict for the company. Subsequently an application was made on behalf of the plaintiffs to the full court for a new trial, on technical grounds affecting the evidence of the three volunteer witnesses, and the court, after very elaborate arguments, consented to grant a new trial in order that that evidence might be further sifted, and provided the company's costs of the former trial were first paid. That case is hung up. We have had this enormous expense, we have had our guards, and our conductors, and our inspectors and people taken away from their work, who had to hang about Westminster Hall for days together, and this thing is going on continually; I say that the railway companies are not only aggrieved by the verdict of a jury, but much more aggrieved by having to resort to a jury to decide a case of compensation of a trivial amount, where, as in the case of Colmer and wife, we had to meet a 40*s.* verdict, by 220*l.* costs.

1291. Sir *H. S. Ibbetson.*] All such cases would be avoided, would they not, by a reference, as in the workmen's trains cases, to an authority like the Board of Trade?—Yes, I feel quite sure of that.

1292. Mr. *Sherriff.*] I think you stated that the average earnings per train mile of the London, Chatham, and Dover Company were 5*s.* 9*d.*?—Yes.

1293. Does that apply to goods or passengers?—To passengers only.

1294. And that the average earnings of the workmen's trains were 4*s.* 6*d.*?—Yes.

1295. Are the workmen's trains used by other persons besides workmen?—To a small extent.

1296. But to whatever extent, they are increased by such an element as that?—Yes.

1297. Is there not an additional expense incurred in running those early trains?—Yes; there is the expense contingent upon their starting at such a very early hour in the morning, because you cannot run those trains without having the attendance of the servants of the company, both on the trains and at the stations, and that means longer hours, more wages, and so forth.

1298. How many passenger train miles do you run in the year?—Somewhere over 2,000,000.

1299. Supposing that this system were extended in the way which the Board of Trade ask for, as I understand you, and your receipts were reduced from 5*s.* 9*d.* to 4*s.* 6*d.*, the loss would be so great that you would not be able to pay your debenture debt?—No; I hope I guarded it sufficiently when I was giving that evidence, that if the conditions upon which workmen's trains are now run were to be extended to all trains, I think I said that the company must very soon shut up shop.

1300. Then workmen's trains were, in reality, a continuation, were they not, of the penalty for disturbing the houses of the working class?—It was that damage to the working class which it was proposed to meet by imposing that obligation upon the railway company.

1301. The amount paid for the property by the railway company was not lessened, was it, on account of that arrangement for workmen's trains?—No, the railway company has always paid the full value of the property.

1302. Therefore the arrangement as to workmen's trains which, under Act of Parliament, you are compelled to run, was an arrangement which, in reality, had the aspect of a continuation of the penalty for disturbing the habitations of the working class?—Yes; but I think I must put it fairly by reminding you that the landlord of the house in which the working man lodged received compensation based upon the rent. The working man himself was subject to very short notice, and had no claim; the company paid the full value to the owner, and then was called upon to compensate the tenant.

1303. Do you consider that any extension of those trains beyond what you now run, and which are, to a certain extent, remunerative, though not so remunerative as other trains, would be an injustice to the company?—I think I might put it in this way: This is an obligation imposed and accepted upon express conditions, to meet a certain wrong done, and I think the moment you satisfy that wrong you have done all that you are called upon to do, and to make that fact a reason for imposing those conditions indiscriminately where no wrong has been done, would be the height of injustice.

1304. With regard to the manner in which the Board of Trade Reports or recommendations are dealt with by your company, do they undergo strict attention and inquiry on the part of the officers as well as of the Board?—Yes, any report of the Board of Trade is always very carefully canvassed; in fact it is usually sent, or a copy of it, to the officers more particularly concerned. It is always sent to myself as the manager, and by me to those officers, and is invariably discussed (and I think that is the general practice of railway companies), and I am frequently called upon to explain to the directors how those suggestions of neglect, or those suggestions of improvement on the part of the inspecting officers of the Board of Trade are to be met.

1305. You do not take those reports as a mere matter of course, but every recommendation made by the inspector of the Board of Trade receives minute attention from both the officers and the directors of the company?—I may say for myself, and I think I may say it with equal truth of all men that I have known in a similar position,

position, that they are only too happy to receive suggestions, either from the Board of Trade or from anybody else entitled to speak with some authority, which will enable them to do that which they, of all men living, have the greatest possible interest in doing, namely, securing the convenience and safety of the public; because, and I put it forward boldly, that is the very first consideration in the administration of any railway. One need not go into arguments, but there is not only the character of the manager and the directors themselves at stake, and the natural sort of pride which a man takes in doing his business in a proper way, but it is the sound financial way, and the common sense and business way to approach the thing. Whatever is good for the public is good for the companies. I am quite sure that all those suggestions receive full consideration. There is no indisposition on the part of companies to spend money. I have heard it said in this room that if you take off those penalties imposed by juries upon companies, it certainly will lead to laxity in the administration of the railways, and that particularly you will find that poor railway companies that are under a cloud would be disposed to economise at the expense of safety to the public. I think that there is nothing more fallacious, and, as an illustration, there is my own railway; on the whole, there is no railway in England that has been under such a cloud or has had greater difficulties to contend with, and yet I will undertake to say, and I am not afraid to say that there is no railway in England which, for the last seven or eight years has had more money spent upon it, has had more appliances for the convenience and safety of the public, and where the work has been carried on with less regard to cost where those considerations have to be held in view, than the London, Chatham, and Dover Railway.

1306. As to the block system, the Metropolitan system of railway is no doubt the very best position that the block system could occupy; it is there essential, is it not?—It is absolutely necessary there.

1307. The stations are every half-mile, are they not?—Yes, or thereabouts.

1308. In one case, I think, on the Metropolitan Railway, where the station was a little beyond half-a-mile, it was found necessary to put up a block station in order that the half-a-mile might be preserved, I think between King's Cross and Farringdon-street?—Yes.

1309. So that, in reality, although it may be essential with regard to the Metropolitan, it is by no means clear that it should apply in anything like an equal degree to railways in the country?—No; there are two things to be served by the block system, which I think are often lost sight of. Some gentlemen seem to think that the block system is only put up as a matter of safety. It is quite true that that is one of its objects, but it has another object, and that is to increase the capacity for the movement of trains over railways, and to enable them to be run at intervals of space instead of intervals of time. That is the reason why on the Metropolitan railways the block system has been applied; it is there absolutely indispensable. You could not pass over any given part of a line anything like the number of trains without the block system, that you can with the block; but of course those circumstances do not exist over thousands of miles of railway in the country. And, as I said, I venture to think that, looking now at the safety point of the question, the safety on those Metropolitan lines is secured by the fact that the system is so constantly in use that it gives rise to the employment of a class of men who are always alert and vigilant. If it were used at long intervals of time, in different parts of the country, it would be less safe.

1310. I think the average stoppage at a station on the Metropolitan Railway is only half a minute?—It is exceedingly short.

1311. Mr. *H. Palmer.*] You think that an interval of space is far greater safety than an interval of time?—Yes.

1312. Is the block system the only system by by which you can attain an interval of space as distinguished from an interval of time?—I think it is the most convenient method of doing it.

1313. It is the only practicable way, is it not, of securing an interval of space as distinguished from an interval of time?—Yes; I know of no other way.

1314. Except for an accident which may occur in the interval of space, it is practicably the safest mode of conducting the traffic?—Yes; it is a very safe method.

1315. You have referred to passengers leaving the carriages hastily at stations. The platforms on the London part of your line, are on a level, are they not, with the bottom of the carriages?—Very nearly so.

1316. You consider, of course, that that is safest when the platform is level with the carriage?—My own view certainly is, that where you have a large number of persons to be got in and out of a carriage, the most convenient and safest thing is to have the platforms close up to the bed of the carriage.

1317. You recollect the accident on your line, at the Bickley Station, to Mr. Jennings. I presume that the platform there was not level with the carriage?—No, it was somewhat lower.

1318. Would it be equally easy on the country lines, as on the Metropolitan lines, to have the platform level with the carriage?—I think perhaps that question involves my going a little more fully into the subject. If we were building railway stations again, I think it would be very wise to do what they have done in Germany, where they had the advantage of course of a little pioneering. There the railway engineers and managers considered what particular form and dimension of carriage, what particular construction of platform; in fact, what details generally governing the question were the best to adopt, and they have adopted them there almost universally. The result is that they have uniformity of system. Now, unfortunately for us in England, we do things very often first, and think about them afterwards, and while admitting, as I do admit, that to have the platform on the level of the carriages would be a great convenience, I cannot shut my eyes to the fact, that it is almost impossible to hope that we shall ever get things to that state in England. It is not only a question of the platform being heightened more or less, but it involves the carriages being all of the breadth and all of the same construction, with respect to the height of the doorway, which they are not. You have carriages of all sorts of breadths, overhanging more or less, and narrow, more or less; you bring your train at one of the stations up to the platform, and you find that you step

Mr. *J. S. Forbes.* 23 June 1870.

step from the floor of the carriage easily, without any intermediate space, sufficient to involve you in danger in getting on to the platform. The next train of carriages that comes up, is, say, a Great Northern train, and there you find that the floor of the carriage is either higher or lower than yours. If it is higher, the step down is greater; if it is lower, there is a step up, and there is an interval of space; so that the difficulty arises from the original construction of our works, and from the want of anything like unformity in the width of our stock, or in the height of the floor of the stock.

1319. Would it be a very expensive process if there were a general law passed that all platforms of railways should be level with the carriage; would it be a great expense to construct them on a new principle?—It would be a very large cost indeed, because it is not only the platforms, but it is the stock that would have to be altered, and that is even more serious. And then to show you the practical difficulties, I am rather anxious that you should know this. Those Germans who are somewhat philosophic inquirers, oddly enough (I cannot understand it, I admit) have elected not to have platforms; they think that no platforms, or very low platforms are much the safer of the two, and more convenient than high platforms. I dare say you have observed, in travelling in Germany, that that is the condition of things, that the platforms are very low.

1320. But in the German carriages there is communication frequently the whole length of the train, by which the guard can pass along every carriage by means of foot-boards?—Yes.

1321. Would not it be an advantage if we could have such a system as that in England, both for safety as well as for alighting?—We have had some of our carriages fitted with foot-boards, but unhappily the carriage in which poor Mr. Jennings travelled was not one of them. Then that depends again upon the construction of the carriage.

1322. Is there any periodical examination by officers connected with and appointed by your own company of the plant of the railway, the carriages, the wheels, and the axle-trees of the rolling stock generally?—Yes; a most systematic examination. You may observe in travelling on railways, at certain stations, the tapping of wheels, for instance; that is to test the tyres; but before the engines come out there is a daily inspection of those engines, first of all by the driver, who is responsible for the mechanism of his machine, and then by what is called the running foreman, and very often indeed by the engineer himself. Then, with respect to the stock, the examination of that is frequent and, I may say, almost unceasing; indeed, it is a business of itself.

1323. You consider that so far as it is possible to carry it out, that is done on your line at any rate; daily, I think you say?—Yes, daily. It is a part of the business; the examination of the springs, and the general efficiency of the plant is regularly looked after; every train is cleaned and greased, and the couplings looked to and oiled, and all that sort of thing, systematically. Of course I need hardly say that there is no rule without an exception, and, under great pressure, occasionally, railway porters and railway carriage examiners (which I ought to explain to you is a separate branch, because we have a class of men called carriage examiners) will scamp their work or overlook it, but, as a rule, you may rely upon its being systematically and thoroughly done.

1324. You sometimes take upon your line, do you not, trucks supplied by other companies, who undertake to carry goods, or by local dealers on a wholesale scale?—Yes.

1325. When those which I call external trucks are furnished to your line, are they examined in the same way by the officers of your own company before they are allowed to run?—Yes, they are examined very critically, for at every junction where the stock of one company passes on to the line of another company we have what we call the clearing house number taker and examiner. There are several things which have to be done. First of all a waggon running on the line of another company has to be paid for its mileage; that involves taking its number, when it comes on and when it goes back again; then the railway company, having the use of a waggon in that way, are responsible for two things. They are responsible for the good condition and safety of the contents of the waggon coming on, unless there is evidence that on receiving it they were out of condition, and they are responsible for the waggon being returned in good condition, unless they can prove that when they took it over it was in bad condition. That involves at all those points of contact an examination to secure those objects.

1326. Then practically that secures a complete examination of the strength and working efficiency of the carriage?—Yes.

1327. As much as if it was one of your own?—Yes; and even at that particular junction more, because one of our own waggons would pass unchallenged; but our responsibility begins at that particular point for the foreign waggon, and an examination is therefore made.

1328. Is it the custom with goods trains to have a guard at the end of the train?—Yes, I think the general rule is that a goods train should have two guards and two break vans, and as far as practicable that one of those vans should be next the engine, but the rule as to a van being at the end of the train is absolute.

1329. Then it is the duty of course of the guard at the end of the train to see if anything goes wrong in the train, between himself and the driver?—Yes, he is generally the head guard in charge.

1330. Under these circumstances, does it happen that a train sometimes becomes uncoupled, and a part of the train is left behind without the driver knowing it?—Yes, that has occurred. The couplings break, and the driver finds himself in the position which you have indicated. He has run some mile or two, then he finds that he only has part of his train; he feels very soon that he is pulling half a load instead of a whole load, and that excites attention.

1331. Supposing the guard saw that, is there any way of communicating with the driver and stopping the train?—He has a lamp and a whistle, that is the only means. The practice is (of course occasionally the practice is neglected), that no driver shall start on his journey, without having looked for a signal which is given with a hand signal by day or a lamp at night by the guard at the rear of the train, who has walked from the head of the train to the rear; his mate also comes to the front, and gives a general examination, the one guard going one way to the rear, and the other guard coming to the front. The guard

at

at the front next the engine, gets in and says that he is right; the man at the end of the train gets into his break at the rear, and he signals all right to the driver looking out for it. That is the rule.

1332, Mr. *Price.*] Even in the case of the couplings breaking, railway companies have provided protection, though not a very perfect one, I believe, in side chains which are supposed to save a rupture, even supposing the couplings should give way?—Yes, they have in the coupling, in the centre, two side chains to catch the weight.

1333. But the side chains are not very effectual, I believe?—They generally snap.

1334. Still it is all that you can do?—Yes; cases have arisen in which they have answered their purpose, but sometimes they snap.

1335. With regard to a question asked you by the honourable Member for Lincoln, what would you say as to the expediency, supposing it to be possible, of having upon a railway no other stock running, but the company's own stock?—If the honourable Member means railway company's stock, instead of running what we commonly call owner's stock, of course that would have some advantage. I think you could probably exercise rather more stringent control over the construction of your stock, the selection of material and what not, than you could over the stock of an owner, but I confess that I should stand aghast, as a railway manager, at the idea of its being possible to carry on the traffic of this country without owners' waggons.

1336. That is a question of capital, is it not?—Yes, it is a question of capital, no doubt.

1337. I dare say you would rather take over the stock of some other railway company than you would take over what is commonly called owner's stock?—Yes, I think you are more likely to find that a railway company, in the selection of the material and the construction of the waggon has exercised care and diligence than a man who is practically without responsibility.

1338. Within your own experience, taking the case of a broken axle, because that is often a cause of accident, would you have more accidents from the broken axle of an owner's truck than you would from the broken axle of a company's truck?—I have no doubt that is so.

1339. Generally speaking, the British public are not so very careful of even their own life and property as the railway companies are for them?—As an illustration of the comparative providence of a company and an individual, I have no doubt it might be put down as a broad principle, that the stock of railway companies is much better than the stock of private owners.

1340. The public, in fact, have the privilege of keeping imperfect stock, and the further privilege of complaining?—They are never very slow to complain.

1341. You were also, in answer to a question by another honourable Member, speaking about the supervision which railway companies exercise with respect to the breach of rules, and so on; I do not know what the practice upon your line is, but I dare say you have a perfect history in your office which you could get at a very short notice of every train that is run upon your line in the present year, 1870?—Yes, every one, certainly.

1342. If we were to ask, for instance, for the history of any train that left London on the 1st of this month, or the 1st of January, at any particular hour, you could give us its history, could you not, from the time it left London until it got to Dover?—Yes, every train that left in the whole year we can tell what it was, how many carriages were in it, who went with it as guard, where it was kept, and why it was kept.

1343. You keep that history, do you not, for the purpose of exercising supervision over your servants, and dealing with any case of breach of rule?—Yes; it is the constant daily practice carried on by a machinery employed for that express purpose; and then we have this further security, every station master has to make a daily report; that daily report is in a form, in which form almost every casualty and breach of duty and suggestion for the public safety and convenience is provided for; this form is sent up daily, and if that man does his duty, you have a short epitome of the life of the station for the day, and everything that has transpired, and, amongst other things, any irregularities of the servants, either of those at the station or of those conducting the trains; and we very often get a little history about the progress of a train which the conductor of a train has omitted in his report to favour us with.

1344. Do you know anything in the public service, or in private service, equal to the care that is exercised by railway companies with respect to all those details?—I have seen a good deal of the public service in England, and I must confess my admiration for the way in which, at all events, one department of the public service is carried on, namely, the Post Office; and, perhaps, it might be invidious to say that a Government department, if they were working the railways, would not do it as effectively and well as a private company. From my observation in Germany, I can speak, where, as honourable Members are no doubt aware, there are many railways worked by the State, and other railways which are worked by companies. I do not want to put it too high, but I know, as a matter of experience, that the administration of the Government railways in Prussia, which are pretty taut, will admit that the administration of competing railways in the hands of companies is more effectual than their own. Their competition with private companies is severe, and they feel the severity of it, because a private company does more for the public, and has a greater interest in doing it than the Government. Of course, you must take that for what it is worth, coming from me, but that is my practical answer to your question. Taking the Cologne and Minden Railway, which is one of the main lines in Germany, I believe that railway will, for its service and administration, and its stock, and its freedom from accidents, bear a comparison with the best administered railway on the Continent, and that railway is managed by a private company.

1345. Mr. *Sherriff.*] That is a railway in connection with the Dutch-Rhenish, is it not?—Yes.

1346. Mr. *Price.*] To return to the subject of your former answer; even with respect to your waggons, you could tell us any waggon, where it is to-day, what year it was built in, how often it has been repaired, and even when it was last in your shops?—Yes, we have a regular history of the waggons; we keep an account of their mileage, and where they are, because we have very often to make out a long bill against another company for unduly detaining them.

1347. Supposing you found that a waggon that arrived in your station had not been in your shop for

Mr. *J. S. Forbes.* 23 June 1870.

for a considerable period, by reason of its having been travelling over other lines, you would think it right, in consequence of that absence, to submit it to a more rigorous inspection than you would one that had been in the shop any time in the last week?—Yes; it is my province, in the London Chatham, and Dover, to examine all the indents before they go to the directors, the indents being the requisitions of the different departments for stores; and every now and then I am startled by finding continuous orders for new axles and new tires, and I say to the locomotive engineer, it is only the other day that you had an enormous number of them; yes, he says; it is not that the axles of all the engines that are upon the lines are out of order, but they have now run so many thousand miles, and I must begin to make provision for renewing them. The moment an axle has run so many thousand miles, although it shows no defect, it must be taken out, because we know from experience it is no longer absolutely safe to leave it. As a matter of fact, I dare say if the Committee could adjourn to any of the workshops of the great companies, they would find a number of axles of engines, and cranks, and wheels lying on the sidings worn out, but bearing no visible sign of being inefficient, and they have been taken out simply because they have done their service.

1348. For instance, would not it be scratched off, because it had done as much service as you think safe for it to do?—Yes; because they had gone what is allowed to be a reasonable number of thousands of miles; we do not in fact wait for them to break.

1349. I am only anxious to elicit from you the care that railway companies display with respect to the condition of their stock; you said, did you not, that the gross receipts were about 5*s.* 9*d.* per train mile on the London, Chatham, and Dover Railway?—Yes.

1350. Do you happen to know, as you are conversant somewhat with the statistics of foreign railway, what the average receipt per mile would be upon such a line as the Great Northern of France, or the Paris and Marseilles, or the Paris and Bordeaux?—Very much higher than anything we have in England.

1351. Do you happen to recollect what it is?—I am pretty near the truth when I tell you that it is something like 15 francs per train mile.

1352. Then the difference in the average receipt being the difference between 5*s.* 3*d.* on your line, and 15 francs on a French line, is not that due to the fact that they have in France, and on the Continent generally, a very much smaller number of trains, compared to the same quantity of traffic?—Yes; that is the reason the English railway companies, under the pressure of competition, have conceded such a number of facilities to the public in every way, in trains, in speed, and in accommodation, as materially to affect their position. The history of the foreign railways paying so well is that they rather stint the accommodation. I know, as a matter of experience, that they will not put on another train until all the trains running average a certain receipt per train mile.

1353. But the great increase in the number of trains that we give must of course be an increase in the liability to accident?—Of course the liability to accident is increased much more than in the numerical proportion as the trains increase in frequency and increase in speed, this liability increases in a much greater ratio.

1354. But that increase in this country in the accommodation that we give, and consequently the increase in the liability to accident, is due, not to the voluntary action of the companies themselves, but to the action of the public outside upon the companies, is it not?—Yes; the public in England have a knack of making their wants and grievances felt, which our foreign friends have not yet attained.

1355. Did it ever happen to you, for example, to hear of your short coming at any particular town upon your system through the Member of that place, if it had any, or through the Member for the county, if it had none of its own?—I have had the pleasure of making the acquaintance of many honourable Members of Parliament in my capacity of manager of a railway, and it has been, I think, mostly in that way.

1356. But it is a fact, is it not, that the public in all sorts of ways are continually putting upon railway companies great pressure to increase the accommodation, to increase the number of trains, and to increase the number of stoppages, and thereby increasing at the same time the liability to accident?—Yes, we are under constant pressure.

1357. And if it be so, that this greater liability to accident is incurred by the greater accommodation which the public require to have, does it not seem to you fair that the public should bear some part of that risk, and not throw the whole of it upon the companies?—That seems the common sense sort of inference, if the liability to accident is increased by the demand of the public to have more accommodation.

1358. And therefore the public ought to share somewhat in the risk?—Yes, I think so.

Mr. Samuel Lack Mason, called in; and Examined.

Mr. *S. L. Mason.*

1359. *Chairman.*] You are the Manager of the North British Railway, are you not?—Yes.

1360. Can you speak also for the Glasgow and South Western Railway?—Yes, I am authorised to speak for them in the absence of the manager of that company.

1361. Where does the North British Railway commence?—At Berwick, on the east of Scotland, and at Carlisle, on the south; we are also at Newcastle, we run *viâ* Hexham; we exercise running powers upon Newcastle over a portion of the North Eastern Railway. In the north, we are at Dundee, by agencies at Aberdeen, by our own line at Glasgow, by agencies at Greenock and Helensburgh, and the whole of the railways north of the Forth and south of the Tay in that portion of Scotland known as the Kingdom of Fife belongs to us. We have altogether between 800 and 900 miles of railway.

1362. Can you mention to the Committee the law in Scotland upon the subject of compensation?—It resembles the law in England, with this exception, that if a tender is made to the plaintiff in settlement of a claim for compensation, the amount so tendered is binding upon the plaintiff in the event of his going to trial; if he should go to trial, and the jury

jury should award him a smaller sum than the company originally tendered, he would have to pay his own costs, and those of the company in addition. In a case reported to me by the Glasgow and South Western Company, a claim was made for 400 *l.*; the Glasgow and South Western Company tendered 300 *l.*, the jury awarded on the trial 200 *l.*, and the plaintiff in that case had to pay his own expenses, and those of the Glasgow and South Western in addition.

1363. Did that case go to a jury?—Yes, it went to a jury, and the jury awarded the smaller sum that I have mentioned.

1364. The jury awarded a smaller sum than the sum which they knew to have been tendered?—Yes——

1365. Did the jury know the amount that had been tendered?—I am not quite sure; it is not the practice to tell the jury, but it may have been within their knowledge from other sources.

1366. You cannot speak positively as to whether they did know, or whether they did not know?—I cannot tell; I know that it is not the practice to tell the jury; it is supposed to be kept a secret from them, but with what success I cannot say.

1367. By whom are cases of compensation tried in Scotland?—By a judge of the Court of Session, and by a jury. The composition of juries in Scotland is somewhat different to that of juries in England. In a criminal cause there are mostly 15 jurors, I think, and five of those are special jurors. On an ordinary jury there would be five special jurors and 10 other jurors. In that way it is thought that you get a more intelligent jury, and from my experience I should think that would be so.

1368. You have heard the recommendation of the other companies as to limiting the liability; what is your opinion upon that subject?—I concur generally in what Mr. Blenkinsop and the other gentlemen have said upon the subject. I think it would be a great boon to the companies, and only that which would do them justice.

1369. If you had a limitation of liability as suggested, would you be enabled to run more trains than you do at the present moment, and to charge lower fares?—I think ultimately that effect would be produced.

1370. Have you any workmen's trains upon your line?—No; we have not upon the North British. We have been pressed to run them in the vicinity of our large towns in the neighbourhood of Glasgow and Edinburgh, and Leith and Granton, where a great number of workmen live and circulate, but we have been deterred entirely from considerations of the risk that would be incurred thereby. We should never be able to make them pay, we are quite satisfied of that, but I think the directors are not on other grounds indisposed to run trains if they saw that anything like a limitation of liability would be obtained.

1371. Do you think it would be a very valuable thing in Scotland if workmen's trains were generally in circulation throughout the country?—I think it would be a boon that the public would appreciate. I do not think that it would do the railway companies much good. They have tried the experiment upon the Glasgow and South Western to the west of Glasgow, in the vicinity of Greenock, and Paisley, and Govan, and some of the trains pay and some do not. On the whole they appear to earn about 4 *s.* to 5 *s.* per train mile, which will, of course, pay the actual running cost of the train; but if you take into account the risk incurred, and the ordinary traffic which those trains no doubt attract, I think there is no doubt that they are not, on the whole, remunerative trains to run.

1372. When you say that they have not paid, you think that the fact of their liability to risk has contributed to the circumstance of their not paying?—No, I think that the liability of the company to risk would not influence passengers against travelling, rather the reverse, it would attract them to those trains, and it is their attraction of other traffic, not properly workmen's traffic, that has made them not remunerative. They rob the other ordinary trains in short.

1373. Have you had to pay large sums for compensation for accidents in those trains?—There have been no claims for compensation in respect of those trains, but the Glasgow and South Western Company have ceased to run excursion trains from the pure consideration of the risk that is incurred by running them.

1374. Sir *H. Selwin-Ibbetson.*] Can you speak at all as to the working of the block system?—Yes, I have had a great deal of experience, first and last, with the block system.

1375. Is it generally adopted on your line?—It is not generally adopted. When I went to Scotland three years ago (I received my training upon the Great Northern Railway of England) there were upon the North British system which, as I have said, is between 800 and 900 miles long, about 30 miles of the block system in operation. Those 30 miles have been gradually increased, till at the present time there are 120 so worked, and extensions are now under the consideration of the directors, which I have no doubt will be carried out ultimately.

1376. Is it worked absolutely on the block system, or what is called the permissive block system?—There are two systems of block telegraphs within my knowledge and experience; the one I should call the absolute block, and the other the modified block; the one prescribes an interval of space absolutely, and the other an interval of space, qualified occasionally by an interval of time. For example, in the modified block you would permit one train to enter an unoccupied telegraph circuit, and upon another train coming up to the circuit, you would stop that train, tell the driver what was in front of him, and give him permission to proceed at a slow rate of speed, say, 10 or 15 miles an hour, till he should receive an all-right signal, when he could resume the ordinary speed of the train according to the time tables.

1377. Under that modified system, of course you are much more liable to accident, are you not, than you are under the absolute system, because you, to a certain extent, increase the discretion placed in the hands of the drivers?—I have found that the accidents under the modified block are not more numerous than those under the absolute block system, and I should say that the one could be adopted where the other could not. The circumstances of mineral lines would be much more suitable to the modified block than to the absolute block, and I shall have something to say about that presently. We have also another system in operation upon the North British Railway, which I may denominate as the information system, that is to say, it gives information of the trains that are upon the line several

Mr. *S. L. Mason.*

23 June 1870.

stations in advance; for instance, taking the Great Northern Line as an example, upon a fast train leaving King's Cross, a message would be despatched to Barnet, another to Hatfield, and another to Hitchin; by this means Barnet and Hatfield and Hitchin could so dispose of goods trains, or mineral trains, that might be in their stations, as to keep clear of the express or other trains, that they might have occasion to shunt for. Upon the passing of this fast train at Barnet, a message would be sent from Barnet to Hatfield, and Hitchin, and Biggleswade, which is further north, and in this way overlapping the various stations.

1378. Sending a kind of *avant courier* over the whole line?—Quite so; and this is accompanied by instructions to the staff in charge of trains, to inquire at every telegraph station at which they stop, the position of other trains which there may be on the road, and that facilitates considerably the passage of traffic along the line, at the same time it ensures tolerable safety; in fact, I may say complete safety. This is a system which will be found to answer very well where the traffic is not quite thick enough, and the trains not numerous enough for the block or the modified block.

1379. In fact it is an additional security?—Yes, it is an additional security.

1380. On your line do you find the great distance between the stations any great objection to the block system?—I should be inclined to think that it would be an insuperable objection to the adoption of the block system. I heard Mr. Forbes's evidence, in which he gave five miles as a practicable distance; but in my experience that would hardly be so. I should of course differ with Mr. Forbes on a matter of that kind with very great caution; but I should be much inclined to state three miles as the utmost limit of the block telegraph where the trains were mixed in character, and anything like numerous.

1381. Whatever the limit was, it is only a matter of expense; it is only a question of creating a certain number of additional signal stations?—Yes; no doubt to have the block system every three miles, would be very much more expensive than having it every six miles.

1382. Is it not the result of your experience, after amply testing the block system, that it is workably feasible on the line, and that it does diminish risk?—Yes; where the adoption of the block telegraph is suitable to the circumstances of the traffic, I think it is unquestionably an advantage; but I must beg not to be taken to admit that its general application, irrespective of the views of the parties who are to work it, would be at all suitable; in fact, I think that would be a very grave error. I should be very sorry indeed to take the responsibility of it in Scotland, although, of course, for convenience it would be a matter of no small importance to me to be relieved of the responsibility of working the traffic, as I should be if others prescribed the rules. Still I think it would be a mistake (all railway men agree upon that) to adopt the block system without the full concurrence and consent of the railway boards. I should like to say a word here upon something which is peculiar to Scotland. We have an official there whom you have heard of in England, I dare say, known as the Procurator Fiscal, who, under the authority of the Lord Advocate, is the public prosecutor in Scotland; and in all cases of occurrence of accident, and even where an accident has been narrowly escaped, the Procurator Fiscal makes a very rigid and a secret inquiry; his officials are frequently on the ground as speedily as the chief railway officials themselves; but the result of his inquiry is not made known to the company, and ultimately, perhaps, some one of the railway officials is taken up. I have seen the working of coroners' juries in England, and the Procurator Fiscal system in Scotland, and I am quite sure that there are five people taken up in Scotland for assumed neglect of duty for one in England.

1383. Would you be inclined to constitute some authority in England that would carry out similar supervision over accidents, or over the working of lines, as that exercised by the Procurator Fiscal in Scotland?—No, I think not; on the whole, I think that the Procurator Fiscal in Scotland commits many errors when he attempts to deal with railway matters. I can relate some experience on that which is peculiarly personal and unpleasant. I have said that it is frequently the case that railway officials are taken up for some assumed neglect of duty; that was the case on the North British Railway only a few weeks ago, when one of our first-class station-masters was apprehended and tried, and unanimously acquitted, for some neglect of duty which had existence only in the imagination of the Procurator Fiscal. And my predecessor also submitted to the unpleasant ordeal of a lengthened trial, although he was also honourably acquitted. But what I was about to say was that, shortly after I went to Scotland, the chairman of the board of directors and myself were summoned, for not, as we understood, having devised some safe means of working the line. It was assumed that something was wrong somewhere, and that it was either my fault for not having properly made the rules, or if I had made them properly and submitted them to the directors, they had not approved them—that there was a mistake somewhere; that if it was an officer's mistake I was the chief of them, and they took hold of me, and that if it was a director's mistake they held the chairman accountable. I need hardly say, that on such vague grounds, the whole thing toppled over, but it is after all an unquestionable fact, that the responsibility of directors and railway managers in Scotland is more directly upon them than it is in England. It is by no means nominal; it is unpleasantly real. I would like the Committee to place themselves in the position of the general manager of a railway in Scotland, feeling that some authority, as the honourable Member put it, is to devise rules under which the railway is to be worked, and he himself has to stand in the position of being answerable for them. There is direct responsibility upon the managers and directors, and in my opinion that is sufficient to secure the adoption of all reasonable precautions in the working of the line.

1384. Notwithstanding the possibility of the line not paying satisfactorily, or there being inducements not to adopt alterations or improvements for fear of increasing the expenditure or diminishing the dividends?—I really do not think that the temptation to save money in that way is at all felt by railway directors or managers; it certainly does not influence me in the least. If I saw that any portion of our railway required the block

block system, or any other system to make it safe, I should, without fear or favour, make that recommendation to my board, and urge it upon them. The North British line, like the London, Chatham, and Dover, that you have lately been hearing so much about, stands in the unhappy position of being in difficulties. Not long ago we had a liability of something like a million and a-half of money, and Parliamentary obligations to the extent of about two millions more, yet, notwithstanding this, as I have said, we have gone on increasing the block system with its very great expenses from 30 miles, which were in operation three years ago, to 120 which are in operation at this moment.

1385. With regard to something which has been stated about difficulties in the block system of working the line and the stations, and the probability of accidents even being increased at the stations under the block system, I suppose you can keep the line at stations clear till such time as the shunting and all that is completed?—Yes, I regard the block system, where it is in operation, as a complete protection not only to trains between the telegraph stations, but generally. You may say a thorough protection to the stations as well as the line. But, of course, this is always qualified by the statement that the block telegraph will not prevent accident. A great proportion of accidents, according to my experience, happens from the neglect to observe some signal or other; and a signal is just as likely to be neglected under the block system as under the ordinary system of working, and rather more so.

1386. Mr. *Winn.*] You have said that you had various applications for running workmen's trains from, I think, Edinburgh, Glasgow, and one or two other places, but that you had refused to do so in consequence of the risk?—Yes.

1387. Supposing the risk was limited in the case of those workmen's trains, would that enable you to run them?—I think it is probable that we should run those trains as an experiment if we could do so without incurring risk. I am not quite sure that the circumstances of Scotch towns are such as would make workmen's trains pay so well as those in the neighbourhood of London; most likely not; but I should like to be in the position of trying that experiment, and so satisfying the public in the north, and at the same time not being compelled to continue the trains if they did not pay.

1388. In order to enable you to try this experiment, it would be sufficient, would it not, to limit the liability of the company on those particular trains?—Yes, I think so. If you limit it in the way which has been mentioned by Mr. Forbes, I think that it would, I do not say satisfy the companies in the north, but it would enable them to try such an experiment, which I for one should not be sorry to see tried.

1389. Mr. *Davison.*] You have a large mineral traffic on your line, have you not?—Yes.

1390. In Fifeshire, and also in the Wishaw district?—Yes.

1391. And frequent trains largely in excess of your passenger traffic on certain parts of your system?—Yes, we have three very large mineral districts; three large coalfields that we serve exclusively with accommodation in Scotland, and there are a great number of trains necessarily run upon the lines in those parts.

1392. Do you see any necessity for the extension of the block system to that part of your system?—I think it would be most disastrous to extend the block system to those mineral lines.

1393. The honourable Baronet puts it as if it were a mere question of expense; it is a question, also, is it not, of the user of your line, and getting more traffic over it?—Yes; I will illustrate it by one example, first, saying that we have a mineral traffic upon our line of something between four and a-half and five millions of tons annually. The Glasgow and South Western Company, whom, as I have said, I represent also, carry minerals to the extent of nearly three million tons annually. The coals in Scotland are worked differently to the coals in this country in this respect, that the sub-tenants, who work the collieries are men of small means, and the Scotch coal has not the reputation that the English coal has in the foreign or the home markets, it has not so ready a sale, and our shipping facilities are inferior to those which obtain in England; and generally those drawbacks contribute to render the profit of Scotch coal works very much less than we are familiar with in this country. All this tends to make the mineral owners and the mineral lessees very chary of expense. It is very often a matter of pence in the carriage of the coals whether a coalpit is worked or not. We carry from one of our largest coal fields, in the kingdom of Fife, to the largest port, Burntisland, a great many hundred thousand tons annually. We charge a low rate of 1 *s.* 4 *d.* per ton in our waggons, which is something like ·40 *d.* per ton per mile. On this portion of the line the coal pits are frequently about a mile to half-a-mile apart, and if you were to have the block system there, of necessity you must have a block telegraph establishment at every mile or half-mile. As I have shown, it is a question very narrowly scanned whether a colliery will pay under the present arrangement; and I have explained that we carry the coals at a very low rate; there certainly cannot be much profit got in conveying coals 35 miles for 1 *s.* 1 *d.* in the way we do; under these circumstances I say it is just a question evenly balanced whether the coal shall be worked or not; and if you put down the block system every mile or every half-a-mile, which you must do to carry it out in its integrity, you necessarily stop the operations altogether. I believe that a great number of our coal pits would never be opened if you were to adopt the block system as a compulsory matter, and it would tend to the ruination of the mineral traffic of the country.

1394. Mr. *Dalglish.*] You have had comparatively few accidents, I think, upon the North British line?—We have had, I am very glad to say, very few accidents; I have a Return which extends over a period of six years, and during the whole of that time we have not killed a single passenger, and we have only averaged, during five years, 5,000 *l.* a year for compensation for injuries. So that, on the whole, we have done very well without the block system.

1395. May not the Procurator Fiscal, looking after the directors and managers, have had something to do with it?—No, I think not; it has certainly had no influence upon me. I endeavour to work the railway for my own credit's sake, and for the sake of economy generally, as safely as possible, and I do not think that the

Mr. *S. L. Mason.*

23 June 1870.

Procurator Fiscal has had any influence. The Procurator Fiscal has not, in my experience, made any one suggestion that we were able to avail ourselves of. I omitted to say this in answering the questions of the honourable Member as to the block system that two accidents which have contributed more to the 5,000 *l.* compensation, which I have mentioned, happened under the block system. We had an accident not long ago exactly similar in character to that which occurred on the Great Northern the other day at Newark, and that, of course, could not have been prevented by the block system, or by any system.

1396. Mr. *Lopes.*] I understand you to say that, in Scotland, it is open to the company to make a tender, and then if the plaintiff does not recover more than the sum tendered, he does not get his costs?—That is so, and he has to pay the costs of both sides.

1397. Does that amount appear on the record, or is the tender merely made by letter?—The tender, of course, would be formally made.

1398. It is not on record?—No; I do not think it is alluded to in the proceedings; the award of costs, I believe, is in the hands of the judge. After the jury have given their verdict and stated the amount of damages which they find, it is in the judge's discretion, or is in his power at all events to give costs; and if the jury's finding has not been in excess of the tender, he awards that the pursuer or plaintiff shall pay the costs.

1399. Therefore the amount of the tender is only known to the judge, and he acts upon it after the verdict is given?—I believe that is so. In practice I daresay it does happen that it is known in court; those things are mostly known, but they ought not to be.

1400. I do not know whether you know the working of the Lands Clauses Consolidation Act in England with regard to the compulsory purchase of land? — Yes, I am acquainted with it.

1401. You have the same state of things there, have you not?—Yes.

1402. There, at any rate, the amount tendered ought not to be known?—Yes, it ought not, but it is sometimes known.

1403. Do you think that the adoption of that principle with regard to the tender and the costs would prevent fraudulent and exaggerated claims?—I think it would have that tendency distinctly. I think that the Scotch practice might, with advantage, be adopted in England; that you might make the tender formally to the plaintiff, and not permit him to refer to it during the trial; you might even keep the judge in ignorance of it by placing it in his hands under seal, or in some such manner. In that way it would be kept from the knowledge of the juries, and at all events they would not be able to do as they do now so frequently, give something more, in order to secure the plaintiff from the costs of the action.

1404. When you pay your money into court in this country the amount is known, and juries are apt to say, "The company having admitted that so much is due, in all probability that is not enough"?—Yes; I have some very strong cases of that sort in my memory, which I need not delay the Committee by mentioning.

1405. Do I understand you that in every ordinary jury there are five special jurymen?—Yes; in criminal cases, for instance, there would be 15 jurors, 10 of them common jurors and five special jurors. I think, in civil causes, there are 12 jurymen, but I do not know the proportion of special jurymen in that case. I know that special jurymen enter into the composition of Scotch juries with very great advantage.

1406. In fact you never have a jury without some special jurymen?—No.

1407. In some cases there are juries composed entirely of special jurors, are there not?—Yes.

1408. Mr. *H. Palmer.*] Have you passenger signals upon the North British line to communicate between passengers and guard, under the late Act of Parliament?—Yes; we, of course, come under the operation of the general law upon that subject, and we have adopted the cord communication along with the other railways.

1409. Have you any notice up in the carriages to tell passengers how to use it, and where it is?—Yes, there is a similar notice to that which you will find on all railways; we adopt one uniform plan on all the lines north of the Thames.

1410. You have the cord system, not the electric?—Precisely so.

1411. If a train were to become uncoupled or broken, would the cord system indicate that to the guard or driver?—Yes, the breakage of the train would necessarily throw some stress or strain upon the cord, and that would be usually of sufficient force to ring the bell or to open the whistle upon the engine.

1412. Mr. *Winn.*] You have said that you have had two accidents on a part of your line, where the block system was in force; was either of those two accidents attributable to the existence of the block system?—I cannot say that they would be directly attributable to the block system, but I think that the tendency of the block system is to cause the drivers to place too much reliance upon the all-right signal, which they receive when they enter upon the block circuit. They conclude at once that the line is clear to the next station, and do all you can you cannot make them as careful as if they were running along the line with the chance of meeting some obstruction in the way.

1413. Was either of those accidents attributable to over confidence on the part of the drivers?—I can hardly tell you that, because the driver would not be likely to say what influenced him in passing the signal, but it is the fact, that he did pass the danger signal, where the block telegraph was in operation, and disregarding it met with a very serious accident; one of the most serious that we have had upon the North British line. The Board of Trade inspector referred to that, and admitted that our precautions were of the most ample and complete description.

1414. Was the danger signal up within the block point?—It was the distant signal of the station which he was approaching.

1415. And that station had no block, I suppose?—Yes, the station had a block. When the driver was permitted to enter upon the block circuit the line was clear, and while he was upon the block system, another engine-driver came out of a siding on to the line in front of him, and then to protect the engine which so came

came out on to the line, the distance signal was exhibited, and this distance signal the driver of the approaching train entirely disregarded.

1416. Mr. *Price.*] I presume what you say as to the Fife coalfields, applies equally to the Ayrshire coalfields?—Yes, distinctly. The Glasgow and South Western Company, like the North British, are gradually adopting the block telegraph wherever they consider it is necessary; wherever their experience tells them that it is so.

1417. Do you have a Board of Trade examination as well as that of the Procurator Fiscal?—Yes. Mr. *S. L. Mason.* 23 June 1870.

1418. It is in addition to that examination, is it?—Yes, it is additional; in fact, the Procurator Fiscal in Scotland takes the place of the coroner and his jury in this country, with the exception that in the Procurator Fiscal's case it is a secret inquiry; whereas, in England, it is an open and public one.

1419. You have not a coroner in Scotland?—No, we have not a coroner.

Monday, 27th June 1870.

MEMBERS PRESENT:

Mr. Dalglish.
Mr. Denison.
Mr. Headlam.
Mr. Mowbray.
Mr. Plunket.
Mr. Sclater-Booth.
Sir Henry Selwin-Ibbetson.
Mr. Sherriff.
Mr. Rowland Winn

THE RIGHT HONOURABLE T. E. HEADLAM, IN THE CHAIR.

Mr. OLIVER PEMBERTON, called in; and Examined.

Mr. *Pemberton.* 27 June 1870.

1420. *Chairman.*] YOU are Professor of Surgery in Queen's College, and Surgeon to the General Hospital at Birmingham, are you not?—I am.

1421. You have been for nearly 22 years engaged in the medical management of accidents of all kinds, and ascertaining the result of them, have you not?—I have.

1422. And employed by the London and North Western and the Midland Railway Companies?—Yes, the London and North Western and the Midland Railway Companies, and also the Railway Passengers' Assurance Company have employed me as consulting surgeon; the Midland Railway Company for 17 years, the London and North Western Company for 13 years, and the Railway Passengers' Assurance Company for nine years.

1423. During that time have a great many cases of claims for compensation come under your investigation?—Yes, I have had many hundreds.

1424. What information can you give the Committee as to the nature of the cases?—The general observation would be that the more marked injuries have not, as a rule, led to litigation; for instance, cases of serious operations. I do not remember, in my experience, seeing a case come before a jury in which a limb had been amputated, in which there was any doubt as to compensation; the cases that have led to litigation have been those in which the symptoms of injury were only to be determined by the patient's own statement.

1425. In cases of clearly ascertained injury, have the companies usually paid without litigation?—They have, and there has been no difficulty about the adjustment.

1426. Have you reason to suppose that many of those cases are fraudulent?—I have very little doubt that a great number of them are in every sense of the word fraudulent; for instance, one is asked to believe that a person is paralysed when you can see him bear the entire weight of his body upon the paralysed limb. I am asked to believe that a patient cannot hear when I have the strongest evidence of the acuteness of that faculty in an interview with him. As to loss of memory, again the very strongest evidence is given by the patient himself of the opposite, and also with regard to the injury of the brain; whereas, in case of real injury to the brain or spine well known to experienced surgeons in general, and in hospital practice, apart from compensation cases, the evidences of those injuries are, as a rule, immediate and unmistakeable; and a patient with real loss of memory from affection of the brain, could no more make a statement of his own case than I could make a legal statement.

1427. You think that in many cases they deliberately sham the symptoms which they are told might possibly occur in such cases?—I do think so in many cases.

1428. Are they in communication with medical advisers?—I do not quite take the meaning of the word communication; they are under the care of medical attendants.

1429. Do you think that their medical attendants suggest to them those symptoms?—I do not think that at any rate in many cases. It is very easy for a patient to learn the drift of a medical man's inquiry, and to shape his own views of his condition accordingly.

1430. Are they respectable practitioners?—They are of all classes. My experience is, that many of the most honourable members of the profession, the moment they are aware that any case of accident is likely to be the subject of a money claim, thereupon instantly decline to have anything to do with it, because they well know that whatever may be the value of their scientific opinion in regard to surgical cases, that that opinion is rendered of comparatively little value, by the counter opinions of less respectable and less scientific practitioners which are brought against them when there is a money claim in question.

1431. Do you think that they frequently state previous diseases?—I have no doubt upon that subject.

1432. Do they claim compensation for the accident when in reality their state of health is due to some previous disease?—That is so; an unsound traveller will not only attribute the increase in any malady that he may be suffering from to the fact that he has met with an accident, but he will actually attribute the production of that malady to the accident.

1433. Have you had any cases of that kind?—I remember one remarkable case in which a child had a well-known scrofulous disease termed ozœna, which is a discharge of matter from the nose, and an action was brought, and damages were obtained before a jury for that case.

1434. That

1434. That clearly could not have been caused by an accident in any way?—It was impossible in that case; another very remarkable illustration which I recollect, was a case in which a man had an enormous rupture, which even descended down to the knee. This man was in a railway accident and sustained some slight bruises about the shoulder; I need not say that if he had received any injury to this rupture it would have been attended by serious consequences; the contents of what is called the sac might have been broken, in which case he would have died after a short time; but an action was brought not for the production of this rupture; that was going a little too far; but for the injury that that rupture had sustained, which was in reality none; and the case was determined by the man threatening to exhibit his rupture to the jury, and thereupon damages were paid to him rather than go to the jury.

1435. In the former case that you mentioned of the child, subject to a particular disease, did that go to the jury?—The case of ozœna went to the jury, and despite the evidence which was given that this case arose from a well-known surgical malady, considerable damages were awarded.

1436. Were the damages awarded upon the presumption that the disease was caused by the accident?—Certainly.

1437. Mr. *Denison.*] Do you remember the amount?—I think it was from 100 *l.* to 200 *l.* The child was not more than seven years of age.

1438. *Chairman.*] Then, upon the threat in the other case of exhibiting the rupture in court the company compromised?—The company paid several hundred pounds damages without going into court at all.

1439. Mr. *Sherriff.*] Why?—Because they felt satisfied that they could not convince a jury that a well-known surgical malady, of even such extraordinary dimensions as that, had not been affected by the railway accident. I myself even advised the company to settle. It was impossible that the man could have convinced a jury of medical men, because they would have seen at once the impossibility of a man with such a rupture being seriously struck on it without the blow producing very serious results.

1440. *Chairman.*] What is the next case that you can recollect?—A case in which a man sustained a very slight bruise, leaving hardly a mark upon his body, but a week or two afterwards a rupture was discovered. In that case the settlement lingered on for a year or two, and was then brought to the court in London, and damages to the amount of something like 1,500 *l.* were paid without going before a jury, because it was felt that the company could not convince the jury that the rupture was not caused by the accident. Another case which is well before my mind is one in which a woman resisted the settlement of a claim for a very slight injury to the knee, owing to the presence of varicose veins on the limbs, especially about the knees; she denied that there was any other condition existing likely to produce this state of things, and it was not until unmistakeable evidences showed themselves, that I discovered that she was pregnant. Varicose veins, as is well known, are a frequent accompaniment of pregnancy; she was the mother of many children, and on being taxed with pregnancy, she admitted that she had had such a condition of the veins before. A settlement of the case could no longer be prevented.

1441. Do you think that that was fraudulent?—I have no doubt about it.

1442. She knew perfectly well that the varicose veins were due to the pregnancy?—No doubt; I think she had had as many as 12 children before.

1443. Have you any other case that you think worth mentioning?—Not with reference to the unsound traveller; the remark which I would make with regard to medical men, and their interpretation of the extent of those injuries is, that they interpret accidents for which compensation can be obtained differently to what they interpret the effects of accidents generally, that is to say, that whilst as to the extent of the disability arising from ordinary accidents, there is no great diversity of opinion; there is almost always a serious diversity when there is a money payment to be obtained.

1444. Speaking quite generally, do you think that railway companies have been compelled under the existing law to pay very much more largely than they ought to pay?—I have, without any prejudice in my mind at all, no doubt whatever in making that statement.

1445. Partly out of court, and partly in court?—In both positions; in one almost as certainly as in the other.

1446. You act for the Railway Passengers' Assurance Company as well, do you not?—Yes, I do.

1447. Do the same remarks apply to that company?—There is a very curious point there, which I should like very much to mention to the Committee; in the Railway Passengers' Assurance Company, in case of accident, the payment is so much per week; 6 *l.* per week in case of complete disability, and a certain sum less than that in case of partial disability; so that the circumstances of the disability are determined easily by time. Supposing a man broke his leg; in the case of a simple break of the leg, I can see him, and say to him, "Well, you will be three months, more or less, disabled completely, and I will so report you," and he assents to that at once; it is a well-known fact, that at the end of a couple of months at least every broken leg is repaired, and it takes another month for the patient to learn its use again; but if that man happens to have sustained a broken leg upon a railway, I cannot get him to determine his claim at the end of three months, but he says, "I will settle with the Railway Passengers' Assurance Company when I have settled with the railway company;" and I have had cases of that kind over and over again.

1448. Mr. *Denison.*] Do they think that one settlement will prejudge the other?—Certainly; the one is limited and the other is illimitable.

1449. *Chairman.*] Is the Railway Passengers' Assurance Company always limited to a fixed sum?—A fixed sum of 6 *l.* every week.

1450. Supposing a man was injured for life, how long would that payment go on?—It cannot go on beyond 12 months.

1451. So that the extent of the liability of the Assurance Company is 6 *l.* for 52 weeks?—That is, I believe, what it amounts to. I am sure it does not extend beyond 12 months; but taking the case of a person who happens to be insured in the Railway Passengers' Assurance Company, and happens to be fortunate enough within limits to meet with a railway accident at the same

Mr. *Pemberton.* 27 June 1870.

same time, he says, "I will not settle with the Railway Passengers' Company till I have settled with the railway company."

1452. Does not the limit in the case of the Passengers' Company make it much easier for them to settle than for a company to settle where the liability is unlimited?—I think very much so indeed. I think it would constitute a very important feature in facilitating the settlement of these claims if certain payments per week could be made, and a period assigned; it is the illimitable nature of the damages which causes the mischief.

1453. You think that it is the illimitable nature of the damages which makes the extravagant demands, and compels litigation?—I do most strongly think so.

1454. Mr. *Sherriff.*] £. 6. per week would, at all events, only be paid till the amount was expended that the person assured for; if he assured for 300 *l.* they would not, I presume, pay more than 300 *l.* under any circumstances?—The plan is this: 3 *l.* per annum only is paid; and then, in case of an accident, they are allowed 6 *l.* per week during complete disability, but no more.

1455. Sir *H. Selwin-Ibbetson.*] If I understand you, there is a fixed sum paid in case of death under that company?—In case of death a fixed sum of 1,000 *l.*

1456. £. 1,000., or 6 *l.* per week, is the maximum of a payment in case of injury?—Yes.

1457. *Chairman.*] Does not it depend upon the fact that the man has got a ticket of insurance?—No, not at all; 3 *l.* per year insures 1,000 *l.* in case the death is the result of an accident occurring within the given time, and 6 *l.* a week during, I think, a year of complete disability; but you will have that accurately from Mr. Vian himself.

1458. A medical arbitration has been suggested to the Committee; what do you think would be the practical working of such an amendment of the law?—I think great benefit would arise from that. A surgeon advising a railway company is placed in the position of the greatest possible difficulty, because motives are imputed for his opinion; he may hold any possible position where he practices; he may be a teacher, or he may be a hospital surgeon, and he may give his opinion with every possible candour and ability, but because he is an officer of the company, the jury pay but little attention to him.

1459. What is your idea of medical arbitration; that a medical arbitrator should decide the amount of damage, or what should be his function? — He should decide the character and extent of the injury.

1460. And leave it to a jury to decide the extent of the damages?—The extent of the money value of the damages should be determined by a business man selected for the purpose, or by a jury.

1461. Would you call medical witnesses on behalf of the individual?—Certainly not generally. The course I would suggest would be, that an arbitrator should be selected by both parties, and an umpire be selected by them in case of disagreement, and they should be at liberty to call witnesses on either side.

1462. Then it should be first heard, as it were, before a medical arbitrator, who should decide upon the nature of the injury, and the evidence of it, or be decided by a jury as to the extent of the damage?—Either; supposing the medical arbitrator did this; we say that A. has sustained a certain injury, which will completely disable him for a given time, and at the end of that time probably he will be able to resume his employment.

1463. Sir *H. Selwin-Ibbetson.*] To continue this last question; do you imagine that such arbitration and such medical investigation would at all diminish the costs?—I do, very greatly.

1464. You state that the arbitrator on each side is to have before him any amount of medical eveidence in support of and against the case, which I presume is exactly what happens at the present moment, only that you in addition would increase the expense of medical evidence by the arbitrator?—I see that your question refers to the subject of costs.

1465. That has been a point which has always been placed before us, that one of the principal reasons against the present mode is, that the costs from medical evidence and from legal evidence, are so great as to force the railway companies into court?—I was rather directing my evidence to the question of excessive and unmerited damages, and I was thinking that the medical Arbitrators would, by the accuracy of their opinion on the character and extent of the injury, so limit the damages as that the question of costs would be comparatively unimportant.

1466. At the same time all the medical evidence, which on many occasions is of a costly nature, would still be incurred?—It certainly would, and I almost think must of necessity, be incurred, because it would be hardly fair not to hear both sides.

1467. Do you think that a medical officer appointed by some authority such as the Board of Trade, for instance, could not receive the evidence of the medical men who had been present at the accident, and that the evidence of the medical officers of the Board of Trade should be the only one received in court?—I think that is quite practicable. I think such a medical officer, appointed by the Board of Trade, might see the ordinary medical attendant of the claimant, and might see the ordinary adviser of the company, and the patient himself, and then the officer of the Board of Trade might report for the business determination of the claim.

1468. And his evidence should be the only evidence before either the jury or the court, whatever it might be?—I am entirely with you in that.

1469. With regard to the cases of injuries that have come before you, in many instances arising out of railway accidents, such as shocks to the system and nervous shocks; very often they are slow in developing themselves, are they not, because the very nature of a nervous shock is that its effects do not show themselves until after a certain time?—My experience is that a very serious injury is attended by immediate serious symptoms; still there are exceptions to that.

1470. I mean, spinal affections very often appear after a certain number of months; and yet, I suppose, you would hesitate to say that, supposing a patient had been healthy before, that was not the result of an accident?—I never myself saw an affection of the spine follow at a remote period from a serious injury. The symptoms come on, as a rule, immediately.

1471. Do you mean to say that paralysis invariably occurs immediately after the shock that produced it?—Certainly not, but as a rule I am speaking

speaking. I take civil practice, where we meet with the same, and, in fact, far greater concussions than they do on railways, and it is most rare in our experience to find symptoms coming on remote from the occurrence, unless symptoms have been manifested immediately after the injury.

1472. And yet you admit that that is sometimes the case?—Yes, certainly.

1473. And in those cases the examination of the patient at the time by the medical officer of the company might lead to a very erroneous view of the patient's real state if he was precluded from coming for compensation within a very short period?—In all cases of injury to the head, no surgeon who knew anything at all about his profession would attempt to say that he would determine the extent of the injury at the time.

1474. The Committee have been asked to limit the time in which claims should be made, and in many of those cases that would prejudice the patient very seriously, would it not?—Supposing a man met with a concussion of the brain, and lay, which he might do, for one fortnight without any knowledge of anything that was going on externally, and at the end of that time he came to himself, probably the medical practitioner sees that, by care and quiet during a given number of months, he will be restored to health. I could not promise you that that man would be as good at the end of five years as he was before. I am having experience of those cases every day of my life, and dozens of those cases have been settled with companies upon information given by surgeons, that they could not say when such and such a person would be well, but the symptoms made it evident at the time that the man had sustained a serious injury.

1475. My question rather referred to those shocks of the system which do not appear so visibly immediately, but appear after a few weeks or so?—I have not a belief in that. I was not taught it when I was a student, nor have I learnt it since I have been a practitioner, nor do I teach it to the students in my classes.

1476. But are there not accidents that arise in the hunting field, or from other causes, in which from some shock to the system an injury sustained does not manifest itself for some time?—They are very rare. Like blue moons, they are very rare.

1477. In cases of previous illness, may not an accident very seriously increase the illness and bring it to that state when it becomes a serious grievance to the patient, whereas before it was tolerable?—Unquestionably.

1478. The accident, then, is the cause of the complaint just as much as if it had originated it?—An accident may have a bearing upon an unsound traveller, and be the cause of death even, although with a sound traveller the same accident would not damage him at all. Take a man who has an aneurism of the aorta; the merest shake might determine his life.

1479. In the case you mentioned, in which immediately after the accident a rupture was found, you could not tell whether the man would have had a rupture if it had not been for the accident?—You could not.

1480. So that it was a natural presumption that the accident had caused the rupture?—That might be, but we know that, as a rule, rupture is the result of a gradual weakening of the parts, and whenever it occurs as the result of violence, it is attended by immediate danger, sometimes requiring an operation.

1481. But a shock, like an operation, giving the same shock to the system, might produce a weakening of the parts, which would cause a rupture?—It would be very likely to do that; it is not a matter that we take into consideration in speaking of the cause of hernia.

1482. You stated that the railway companies send their own medical man down to examine the patient, but, after a claim had been made, an arbitration takes place, does it not come before some other medical men, some of the principal medical men or surgeons in London, for instance?—Yes.

1483. And in case those medical men cannot agree, a reference takes place to some independent gentleman in London?—That is so frequently.

1484. And they always receive those cases, do they not?—I have known such cases occur.

1485. I mean there is no hesitation on their part to receive cases sent in that way, to give an opinion, in fact, on a question submitted to them as from the railway companies?—The great objection that I alluded to, which is made by the highest and most honourable members of the profession, is the objection which they have to encounter the misery of going before a jury, for the reason which I have previously stated.

1486. I suppose in that case, if it was referred to them for an opinion, they would have to go into the question?—Not in the case of an arbitrator, I think. Supposing a very eminent medical gentleman were requested to act as arbitrator in a certain case, he would simply give his award, and there the matter would end.

1487. I do not mean that; I mean that if the first two opinions do not agree, and an opinion is sought from some higher authority, that opinion is all the evidence in the case, and that evidence would be all that would come before the court?—When a gentleman is asked to give his opinion he would say this: I will give my opinion, but I will not give my opinion if the case is to come into court.

1488. Is that always done?—I have known that done on the part of a great many of our ablest professional men, who entertain the same views. They say that they will not come into court; not that they are unwilling to adjudicate in any given case of injury, but they want to avoid coming into court.

1489. We have had it in evidence that a very large part of the costs arise out of the immense charges of medical men, and men of high standing, who appear in court?—I have no doubt that that is so.

1490. From which one would argue that they do appear?—A certain number of them do appear, unquestionably. I was not aware that that was the object of your question, or I should have given the answer sooner.

1491. Mr. *Denison.*] Have you been in the habit of giving evidence in cases of railway injuries, as well as advising the railway authorities?—I have.

1492. Up to the present day or previously?—Up to the present day.

1493. Have you also been frequently commissioned to pay and settle the money compensation in the case of a *bonâ fide* injury?—In early days such was the plan adopted by the railway companies; but perhaps I may be permitted to explain

Mr. *Pemberton*, 27 June 1870.

explain that plan. I never attended any case of a railway accident myself. If an accident occurred, the nearest medical man was requested to attend the case, and I then saw the patient with him; and if when the patient was fairly recovered he was willing to determine his claim, a tribunal of the medical attendant of the patient, and myself, instructed by the company, would determine it; and if he were willing to accept a given sum, some years back that sum was paid him, but never under any circumstances by myself alone.

1494. You mean that the money did not pass through your hands?—Certainly not; but that plan has many years been at an end, because the judges expressed an opinion that the medical officer of the company should have nothing whatever to do with the £. *s. d.* That was some five or six years back, and since that period the plan adopted by the railway companies, whom I have the honour to represent, namely, the Midland and the London and North Western, is this: I report to them as to the nature and extent of any given injury, and the probable, partial, or complete disability that may ensue, and the business man of the company then estimates the money value of it. This, it is presumed, is a friendly adjustment, but under no circumstances has the consulting officer of the company anything to do with the £. *s. d.*

1495. Have you dealt directly with the claimant's medical attendant, or the legal adviser in those exceptional cases in which you were commissioned to settle the claim?—Not with the legal adviser, but with the patient and his own medical attendant. When a case came into the hands of his legal adviser, it went into the hands also of the legal adviser of the company.

1496. I think you told the Committee that when you have had to deal with medical gentlemen of character, you have not in your experience found much difficulty in cases of undoubted injury in arriving at a satisfactory settlement?—No difficulty whatever, in many hundreds of cases. If a man lost his leg there was never any difficulty in settling with him.

1497. I suppose that that observation would not apply to cases in which the legal adviser intervened?—Certainly not; of course I make that observation with great reservation. There were many instances where the opposite was found to be the case.

1498. If the plaintiffs knew that their claims were to be adjusted by a tribunal composed of a judge, on a commission, assisted by a medical adviser, do you think, as the medical adviser of the company that they could readily and satisfactorily settle many fraudulent cases which are now litigated, that is assuming that the plaintiffs knew beforehand that their claims would have to be adjusted by a tribunal of experts?—I think so. I think they would never come before the experts. The feelings of a jury are what they look to as in the case of the man I mentioned who had a large rupture.

1499. According to your experience, do juries give damages with reference to the actual state of incapacity in the plaintiff, and ignore the previous debility and unsoundness, except on special directions from the judge?—Absolutely I have not known a single exception in which an unsound traveller did not before a jury graft that unsoundness on the railway accident.

1500. You have had very large experience also, have you not, of cases of nervous shakes?—I have, as surgeon to one of the largest hospitals in England. I am not simply speaking as consulting surgeon to those companies, but I am speaking as a professor of surgery, and as surgeon to a great hospital.

1501. In those cases, is it an exaggeration to say, that the medical advisers of the companies are almost entirely at the mercy of the patient's description of his own symptoms?—That is so; they are almost entirely at his mercy; it is a question of *bona fides*.

1502. Is not any evidence which the company's medical adviser might give before a jury looked upon with extreme suspicion, as opposed to the plaintiff's own statement of his case?—That is so, although in a previous case, probably on the same day that he has given evidence in a corresponding accident, his opinion has been listened to with respect. It is a question of money payment at the end; it seems for the moment to damage the respectability of the medical man who is giving his opinion adverse to it, although he is only speaking the truth. That is what medical men feel in going before juries in those cases.

1503. Mr. *Plunket.*] We have heard from several witnesses, that of late years a class of medical men have grown up side by side with a certain class of legal men, who make rather a trade of these injuries; is that your opinion?—Yes, it is so.

1504. I suppose you would suggest that a medical referee of high character and quite independent would act as a great check upon that class of practitioners?—I think it would absolutely put a stop to them.

1505. That would act in two ways; in the first place they would not venture to give the same evidence as they give to a jury; and secondly, perhaps some of them might be personally known to the referee?—That is exactly so; take one's own district where men are educated at one's own school, they would not think of doing such a thing.

1506. And I suppose that the advantage arising immediately in such cases is, that of the child afflicted with ozœna, that no medical man would venture to give evidence to the effect that that was caused by a railway accident?—Precisely so.

1507. And also in the case of rupture?—Yes, in the case of rupture of the kind that I described, and also in the case of varicose veins in connection with pregnancy; those are only illustrations amongst many.

1508. Mr. *Sherriff.*] With regard to this class of medical evidence which has been alluded to, you generally see the same faces, do you not, and they are a distinct class of medical men who appear in those cases?—I think that is very much so.

Colonel WILLIAM YOLLAND, called in; and Examined.

1509. *Chairman.*] YOU are, I think, an Officer of the Board of Trade?—I am one of the Inspectors of the Board of Trade.

1510. Have you been frequently employed in investigating the causes of railway accidents?—Yes, since 1854.

1511. Upon many occasions during that time?—In a very large number of cases.

1512. Have you made reports to the Board continually?—Whenever a serious accident takes place, the Board of Trade are in the habit of sending an inspecting officer to the locality, and by the permission of the railway company he makes inquiries as to the circumstances and facts that have accompanied the accident, as far as he can learn them by actual inquiry, and by investigation of the locality itself, and then he reports those facts and those circumstances, and the conclusions which he arrives at, as to the causes that have produced the accident.

1513. Is your authority drawn from Act of Parliament?—No, it is not; it is entirely permissive.

1514. Do you think that there is any lack of sufficient authority?—I think that the inspecting officers, in the first place, are placed in an invidious position, requiring them to make inquiries into the conduct, frequently, of a large number of persons, and the conduct of the company at large; and they are, under such circumstances, called upon frequently to express harsh opinions, which I do not think they should be called upon to do, unless it were required by Act of Parliament.

1515. Is there no sanction by Act of Parliament for the duties which you perform?—Not for those inquiries; the Board of Trade are empowered to send inspectors to the locality to look at the place where accidents occur; but they are not empowered to ask for the attendance of a single witness, or to ask a single question, and everything that they gain is supplied by the railway company; but they are not empowered to hold a public inquiry, or to obtain any information if the railway company does not think proper to give it.

1516. It is not compulsory that they should be called before the coroner's inquest?—Certainly not; the Board of Trade inquiry is a private inquiry.

1517. You merely report for the information of the Board of Trade, and your inquiry is so made at the instigation of the Board of Trade?—It is.

1518. Can you put in any reports that you have made to the Board of Trade?—The reports on accidents are regularly published and laid before Parliament; but of the two particular reports, which I am desirous to lay before the Committee, bearing upon the question of accidents, one has reference to what is called the permissive system of working employed upon a part of the London and North Western Railway, and the other has reference to the expediency of adopting by compulsion the block system for all the railways in the United Kingdom which are not worked by a single engine in steam.

1519. Have you any results from the statistics of the accidents that you have obtained?—I have. There has not been time to print it, but I have prepared a Table which shows the number of accidents during the years 1867, 1868, and 1869, that have occurred on every line of railway in the kingdom, that have been investigated by one or other of the inspecting officers, and distinguishing also what number of them are collisions. It also shows the number of passengers and servants of the company killed or injured on each line in the kingdom, amounting to 97 killed and 2,175 injured, and there are a few short remarks showing the manner in which some of those railways are worked. (*The Witness delivered in the same.*)

1520. Does that return include such cases as a man pinching his thumb by the closing of a door?—No, we do not inquire into that class of accident.

1521. So that such railway accidents as people tumbling down in the stations are not included?—No; they are almost entirely accidents that occur to the trains; not such cases as a thumb being squeezed by the handle of a door and so on.

1522. You are very well conversant with the block system, are you not?—I think I can speak as to what the block system is.

1523. Are you not very strongly in favour of its adoption?—I am very strongly in favour of it. It is quite possible that I look at the matter entirely with a view to the protection of the public; my bias may be supposed to be entirely on that side.

1524. It has only, up to the present time, been partially adopted, I believe?—Very partially. It is adopted, as a rule, only by the small companies.

1525. Is it not adopted by the Great Northern Railway Company?—The Great Northern is a large company, and the block system is adopted to a very slight extent on the Great Northern; only over 68 miles.

1526. Do you think that the expense of adopting the block system throughout the whole kingdom upon large as well as small lines would be very great?—Looking at the actual cost per mile that has attended the construction of those lines, the expense of the adoption of the block system would be very small indeed, when compared with the total cost of the construction of the lines per mile. In the case of a new line of railway, it is no hardship upon that new line of railway to make its arrangements for working on the block telegraph system from the outset, instead of working according to the ordinary method.

1527. What would be the kind of cost of adapting it to every established line?—It varies according to the amount of traffic and the local circumstances; in fact, it may run up in some cases possibly to 100 *l.* per mile, and it may come down to 20 *l.*

1528. Is your opinion equally strong with respect to those portions of lines where the traffic is comparatively small, as to those portions where the traffic is comparatively great?—If the Committee will bear with me for one moment, I beg to say that I gather from the bulk of the evidence which I have been permitted to see, which has been given by the gentlemen appearing in the interests of the railway companies before you, that it seems to be admitted by most of them that where the traffic is dense, where there is a large amount of traffic, the block system may properly be established. I further gather from that evidence that the question of cost has little to do with the non-introduction of

Colonel *W. Yolland.*

27 June 1870.

the system, and they state that the companies are only anxious to provide for the safety of the public. I next couple it with the fact that nearly all the small railway companies in the kingdom have voluntarily adopted that system for working their traffic; and as the amount of traffic on those lines is small when compared with that upon the long lengths belonging to the large companies which are not worked on the block system, I infer from these facts that there would be no grievance in obliging the large companies to work the whole of their systems on the absolute block principle.

1529. Would you give power to the Board of Trade to compel them to do it?—I would rather see the power given by Parliament.

1530. But should it be done by direct Act of Parliament, rendering it compulsory upon the railway companies to adopt the block system?—I think it would be more desirable that it should be done by Act of Parliament. You are probably aware that great pressure may at times be brought to bear upon the Board of Trade, if it is not a case of compulsion by Act of Parliament.

1531. Speaking generally, do you think it is a desirable thing that the Board of Trade should have the power of insisting upon particular modes of working upon a line of railway?—I do think so. If it is not given by Act of Parliament, I think it should be given to some public body, the Board of Trade, or some other public body.

1532. Have you read the evidence of those witnesses who have spoken strongly against their having any such general power?—Yes, I have. I have read all except that given on the last day, which I have not had time to read, but I have read the evidence taken on the three previous days, and it is very strong; but I am obliged to come to a different conclusion from the general managers who have been before you, because my argument is, that an accident on any line of railway in the kingdom, when inquired into, and the circumstances correctly ascertained and the report published, should be valuable evidence for all the other railway companies in the kingdom. But it is in evidence before you from some of the general managers that, until it comes home to themselves by the same thing occuring on their own line by some unaccountable means or other, it is unheeded, it is passed by. (*See* answer to question 418.)

1533. Do you think in the case, we will suppose of this unfortunate accident which has just occurred on the Great Northern, the effect of that accident is to direct attention to the state of the axles; do you think that the Great Northern Company will be careful about the state of their axles, and that the other lines will not be careful about them until an accident occurs upon the other lines?—I can give you a good instance. In 1862 a collision occurred at the Walton Junction, close to Warrington, on the main line of the London and North Western Railway, between London and Scotland, in which one of the servants of the company was killed and another was injured. My colleague, Captain Tyler, reported at the time that it was very desirable at that junction to do certain things, and the report was sent to the London and North Western Railway Company, but it was unheeded. It was in due course published and presented to Parliament, and therefore the report would be open to every other railway company in the kingdom to see it; and yet in 1867 an accident occurred at that junction by which eight people were killed and 70 were injured, which could not have occurred at all there, if the recommendations contained in my colleague's report had been carried out. To carry it still further, the first inquiry took place in 1862. A second followed after that serious accident in 1867. A report was made and published detailing, as I believe, very correctly all the facts. The Thirsk Station on the North Eastern Railway was remodelled subsequent to 1862, and yet in May 1869, a similar accident occurred at that station in consequence of the facing points not being protected by a signal, which accident could not have occurred if what is termed the locking apparatus had been introduced at that station. Hence, from many similar cases, I arrive at the conclusion that unless a bad accident occurs on its own line of railway, generally speaking, those accidents only constitute a nine days' wonder, the reports are not attended to, and I will be responsible that there are thousands of cases on the railways of the United Kingdom at the present time where those facing points still exist, unprotected by any signal whatever.

1534. Do you think that it would diminish the responsibility of boards of directors if the Board of Trade were empowered in this way?—Not one particle; and for this reason, certain lines of railway at the present time, single lines, are only opened upon compliance with certain conditions, and this compliance does not diminish the company's responsibility, and not only certain single lines, but certain double lines. The Metropolitan, for instance, would never have been opened except we distinctly understood that it was to be worked on the absolute block system. The Charing Cross line could not probably be worked for a fortnight without serious mishaps if the absolute block system were not in operation on it, and if the inter-locking of points and signals had not been well carried out on that line.

1535. With respect to the block system, you think it so important a matter that you would compel it by Act of Parliament, and not leave it to the Board of Trade?—I belong to the Board of Trade; but I think the Board of Trade is very susceptible to influence as regards railway matters. I am bound to tell you what I honestly think, and my opinion is confirmed by Mr. Forbes's reply to question 1206.

1536. Would it not be susceptible to influences of an opposite description, some antagonistic to railway companies and some in favour of them?—It has done this; it has enforced the absolute block on a railway company on a double line of railway, and that has diminished in no way the responsibility of the railway company, for accidents have occurred on that very line, and compensation has had to be paid for those accidents.

1537. But would it not be susceptible to influences of this description, for some reason or other not founded probably upon sufficient investigation; there is a popular demand for some particular change; would not a weak board be likely to insist upon it without having sufficiently ascertained whether it was desirable or not?—I would beg to explain that I believe the inspecting officers make a point of never recommending anything to be carried out by a railway company but what they know can be practically carried out, and but what has been carried out on some other line,

line, and well carried out. The Committee have been informed, I think, that the inspecting officers had something to do with the question of the communication that should exist between passengers and guards, and drivers. The Committee have been misinformed; they were not consulted.

1538. On those various questions, such as the expediency of shutting the doors, or securing a communication between passenger and guard, do you think it would be desirable that the Board of Trade should have the power of making an order upon the railway companies?—I do think it expedient as regards the means of communication between passengers and the servants of companies in charge of trains.

1539. Then they would take the responsibility of deciding whether the doors were left open or shut?—I should never have the slightest hesitation, if called upon, to give an opinion upon the subject of having it done. I consider that I should have done my duty, although it is quite possible that I may arrive at a wrong conclusion.

1540. Do you think that it would be desirable that the Board of Trade, drawing its information, as it would have to do, from its inspectors, should have the power of making a compulsory order upon a railway company to do things of that description?—Yes, I do think so.

1541. With respect to workmen's trains, there is power, I think, for the Board of Trade to investigate accidents?—There is power for the Board of Trade to appoint an arbitrator, who shall investigate the circumstances of the accident where the compensation is limited to a certain amount, and to decide upon such cases under certain special Acts.

1542. Have you been employed as arbitrator in any case of that kind?—The Board of Trade is also empowered to appoint an arbitrator under the Regulations of Railways Act, where both parties are consenting. Two cases of the appointment of an arbitrator have been made under the Regulation of Railways Act, and one under a special Act relating to workmen's trains. I was appointed the arbitrator in two of those cases, and some other gentlemen in the third.

1543. Did that administration of justice give satisfaction?—The workman's case was rather a peculiar case; it was somewhat analogous to the case of the lady at one of the stations on the Great Northern line, who put her foot into a hole in the carpet, fell, and was injured. In the case of the workman it happened to be that he slipped upon one of those brass ventilating plates between one floor and the other, as he was running out of the station after he had got out of the train, and broke his leg; and although the amount was limited, it was my duty, under the circumstances of the case, to decide against the workman. I was sorry to be obliged to do so, but I felt that there was no claim. In the other case, under the Regulation of Railways Act, which I inquired into, it happened to be wholly and entirely a medical case. There was no doubt about the injury, but the questioned turned entirely upon what was the amount of injury which it resulted in, and by the Regulation of Railways Act the arbitrator had the power of calling in a medical referee. A medical referee was called in in that case, who examined the plaintiff, and who assisted me as assessor in the case. He did not give evidence, but he assisted me in the examination of the medical testimony for the plaintiff and for the company, and very conflicting the medical testimony was.

1544. Should you recommend an extension of that system of arbitration?—I think it would be a very good thing.

1545. You mean arbitration under the authority of the Board of Trade?—Yes, I think it would be a very good thing.

1546. Should you recommend an extension of the system of limitation of liability, such as is now in force with respect to workmen's trains?—I have a distinct theory for my own part, that if the absolute block system were adopted, that is, not as carried out in many places, but carried out so that nothing shall come on to the line on which a train is running, without the consent of the signalman who gives the electric signal, and who also works the outdoor signals, that nothing shall come on to his line without his permission, without his act, in fact, I believe that collisions would vanish, or almost entirely so; and under those circumstances, I think the fares are high enough to cover the liability that at present exists.

1547. Then you would do away with the limitation of liability upon workmen's trains that now exists?—No, I would not do that at all; where companies decide to carry at an unusually small fare, I think that the question of limited liability may fairly be kept up, and extended.

1548. At the present moment there is a limitation of liability with respect to workmen's trains, and I wish to know whether you think that that system should be extended, or done away with, or left exactly as it is?—I think, so far as workmen's trains are concerned, it is on a good footing at the present time.

1549. But that only applies to one or two companies, I believe?—Only to two companies.

1550. Would you apply it to other companies?—I think it might be, fairly.

1551. To all other companies in the neighbourhood of large towns?—I think so.

1552. Would you limit the application of the system to those cases where the fares were specially reduced?—Yes, I would; I think that the maximum fares are quite high enough, as a rule, to cover the insurance against accident.

1553. With respect to the block system, you say that your opinion is, that the complete use of the block system will almost prevent the possibility of collision?—It is so, except at terminal stations, where occasionally the trains will, by the default of the engine-drivers, run against the stationary buffers.

1554. The block system depends upon it being properly worked, that is to say, if anyone of the persons who is at the telegraph makes a mistake, or anyone who gives the signal makes a mistake, then the block system ceases to be useful, and I want to understand whether it does not depend upon a certain number of persons executing their duty properly?—It may be made to depend wholly and solely upon the persons in charge of the train; I was proceeding to explain that it is quite possible that the signalman shall be prevented by mechanical means from giving the signal for a train to follow another that has passed his post, until that other is known to have passed the advanced station.

1555. Assuming it to depend entirely upon the persons in charge of the train, if anyone of the persons in charge of the train makes a mistake, what

Colonel *W. Yolland.*

27 June 1870.

what would you say?—If the driver will run against the signals, collisions will still occur.

1556. If it depends upon the driver running against the signals, is not that a very frequent cause of accident?—A very large number of accidents occur at the present time from the driver running against the signals.

1557. That is an accident which would not be remedied by the block system?—Yes, to a great extent it would; because, if he runs against the signal the other train will probably be a mile off, or it may be half-a-mile off, from the signal that he runs against.

1558. Still if he does run against signals the system would be of no use?—Collisions may still occur.

1559. So that it is dependant, after all, upon the persons who work it, all doing their duty?—Yes.

1560. If anyone of those persons who works the signals fails in his duty, all the beneficial effects of the block system fail?—If the drivers or signalmen fail in their duty, collisions may still occur.

1561. Is it not the case that the great majority of accidents happen by the failure of duty upon the part of some one person?—A great number of accidents do occur from those circumstances.

1562. Is it not a question of degree after all whether the chance of accidents under the block system is greater or less than without the block system?—It is a question of degree. My impression is that 90 per cent. of the collisions at least would go.

1563. You are not now referring, I presume, to any sort of accidents except collisions?—Just so; the block system is applicable to the prevention of that class of accident.

1564. Do you think that it would materially diminish the chance of collision?—I do not think about it; I am sure. I think that the returns and report which I have given in will prove that to be the case.

1565. Do you think that the management of lines is open to censure at the present moment?—In that way.

1566. But in other ways?—I think simply as regards the mode of working the traffic; the working of the railway system in other respects is very good indeed, and very admirable; it is only as regards the question of the mode of working their traffic and making their line safe, that I differ from railway managers

1567. Is there any other material defect that you could call to the attention of the Committee, except the fact of their not adopting the block system?—There is the interlocking of points and signals, which I look upon as absolutely essential to the proper carrying out of the block system.

1568. Mr. *Sherriff.*] You consider that as a part of the block system, do you not?—It is not strictly speaking a part of it; but there can be no block system properly worked unless it is mixed up with interlocking points and signals.

1569. *Chairman.*] That you would also make compulsory by Act of Parliament, would you not?—At the present time we do not allow new lines of railway to be opened without insisting upon the interlocking of points and signals; but we have no power in the matter as regards lines which are already open for traffic. Many of the old companies open new stations on their lines of railway, who do not adopt those precautions, and very frequently we are not called upon to inspect those new stations. That was the case of a station in the celebrated Abergele accident.

1570. Do you think that there is any defect in the powers of the Board of Trade with reference to the inspection before a line is opened?—No, I do not, as regards the inspection of works.

1571. Do I understand you rightly to say that the Board of Trade never allow new lines of railway to be opened, unless arrangements are made for working the block system?—It is doubtful whether the Board of Trade possesses that power, and it has only been attempted, and not resisted, in two or three instances.

1572. Then they do not practically go upon that principle?—No, they do not.

1573. Have you had any cases of negligence on the part of railway companies before you?—Some information was given to the Committee on the part of the judges that they saw no cases of culpable negligence, but I wish to say that it is a perfectly well known fact that where the negligence is admitted, the particulars relating to negligence do not come before the judge at all. It frequently is the case that in little collisions and mishaps, where nothing serious occurs, there may be far more negligence than in the worst accidents that are brought before the public.

1574. Have cases of that kind come before you?—Yes, frequently.

1575. Where you think there has been culpable negligence?—Yes, I speak particularly of the case of Walton Junction; I cannot tell you where the culpable negligence existed; but I do hold that there was culpable negligence somewhere or other to permit a junction to remain in the same state up to the year 1867 that it was in 1862, when my colleague recommended that such and such a thing should be done; I do not pretend to fix the blame, and say who was guilty of the negligence, but it was a gross case.

1576. Have you any other suggestion to make to the Committee as bearing upon this part of the subject?—No.

1577. Sir *H. Selwin-Ibbetson.*] When you state that a number of collisions would be saved by the adoption of the block system, collisions are a very large proportion of the accidents that occur, are they not?—A very large.

1578. In fact, I see in three years they constitute more than two-thirds of the accidents that occurred?—Yes, about two out of three.

1579. Are those collisions what may be called collisions proper, that is to say, one train running into another?—There are some few exceptions included in that return, where the collision has been with a stationary buffer at the end of the line.

1580. You have eliminated from these, I presume, all collisions that have occurred from the points being set wrong?—No, the Walton accident is included there as a collision.

1581. Because they are returned in your reports to the House as separate collisions, in a separate table?—Possibly so. I did not make out that return; the one which I have handed in I have made out myself.

1582. Of course, if you can reduce the number of people who have the directing of the working of the trains, you increase the safety by reducing the number of people who can misapply signals and other things?—It is desirable, as far as possible, to diminish the number of persons who shall work the points and signals.

1583. I understood you to say, in answer to the

the Right Honourable Chairman, that modern inventions would enable you to limit that discretionary power to the driver of the train?—Just so.

1584. That the previous train would itself record mechanically its arrival?—Yes, at the back station it may be made to do so.

1585. Consequently, you would limit the discretionary power to one man in charge of the train which was coming on from the back?—Yes, that would be so.

1586. One may naturally infer from that, that as you limit the number of people you would diminish the number of accidents?—Yes; you would diminish the chances of accident largely.

1587. It has been put before the Committee by the managers of the railway companies that the objection against the block system is, that not only are the drivers less cautious under the block system in driving the train, but the signalman is liable to make mistakes in his signals, and to bring trains together?—I do not think it is the case. I think that if the Committee wished to see a good instance of the working of the block system, they have nothing to do but to go to the Metropolitan Railway; that is a capital instance. On that point I would beg to state that I think one of the witnesses has been mistaken in describing the block system as experimental, as immature, and so on, when there really is nothing much more perfect than the block system at the present time. See reply to Q. 406.

1588. From your own experience you can speak to the fact that accidents do happen less frequently on lines where the block system is established than on the general lines in the kingdom?—I am certain of it.

1589. Do you see any difficulty in working the block system on lines where there are long intervals between the stations?—The distance at which the block telegraph stations must be placed from each other, entirely depends upon the interval of time at which you require to work the traffic over the line. Say on the Metropolitan Railway, for instance, they have to work the trains there at intervals of three minutes, and I believe under, in some instances.

1590. It would be perfectly practicable, would it not, to work a line with intervals of five miles?—Certainly; but then you cannot work so many trains; it limits the amount of traffic over the line.

1591. You are aware, are you not, that it is worked with intervals even longer than that on the London, Chatham, and Dover line, one of the long lines in the country?—Yes.

1592. I suppose you think it is only a question of the first expense in creating a certain number of telegraph stations, which prevents its universal adoption?—I believe that is the only reason.

1593. Mr. *Denison.*] And the expense of maintaining of them also?—Certainly.

1594. Sir *H. Selwin-Ibbetson.*] But at the same time maintaining a staff to superintend those stations and maintaining the stations themselves, would not probably amount to the loss to the company that the present accidents bring upon them?—I am satisfied that worked in a proper way it would be advantageous for the railway companies to adopt it, looking at it merely in a commercial point of view, with reference to the sum paid for compensation and the damage done to the rolling stock.

1595. For the last two years, certainly you, in conjunction with the other inspectors of the Board of Trade, have reported upon many of the lines of the country very strongly in favour of the adoption of this system?—We have.

1596. And you have found, have you not, that those reports are not very much attended to?—I believe they might just as well have been thrown into the waste paper basket.

1597. That neglect of the Government reports applies to other things besides the block system, does it not?—Yes; we are said to give the facts in connection with accidents very accurately; that is stated of us; but that we are constantly wrong in the conclusions that we draw from them.

1598. I think you stated, and it was stated also by other inspectors, that the carriage of combustible matter was highly dangerous, and you brought the matter several times before the notice of the companies?—Yes, two or three cases occurred.

1599. Abergele for one, and one on the London and Brighton line?—Yes, and there was an explosion of gunpowder on the Carlisle and Lancaster line.

1600. I see that in the second case your report is that no attention was paid to your former report?—I did report so.

1601. Do you think there would be any objection to giving to the Board of Trade the power in such cases as interlocking points, and signals, and door locking, of ordering the adoption of them on the railways on the old lines?—They have it at the present time as regards new lines, and I do not think that there is any objection to giving it with regard to the old ones.

1602. The objection that they have taken to imposing the block system in that way would not apply to the minor details, such as greater break power, and with regard to the locking of doors, or interlocking signals?—It is a different case.

1603. You think that the Board of Trade might have the power given to it to enforce such alterations?—I do.

1604. Would you limit the power of the Board of Trade to recommending any system which had been constantly reported on, or to a system when it was first reported?—I do not think it would do for any inspector to make a point of pressing upon the Board of Trade the adoption of anything that had not been well tried, and tried for a considerable time, so as to ascertain that it was thoroughly applicable.

1605. You would see no objection to giving to the Board of Trade a power on the constant reports of their inspectors that certain alterations upon a line would be beneficial to the public, of submitting a resolution, say to the House of Commons, which should lie upon the table for a certain time, in order that objections might be raised to it, and which after that, would have the force of law as against the company?—I do not see any objection.

1606. I presume you would naturally say that the inspectors of the Board of Trade from visiting a number of railroads, and seeing the defects in the working of different railroads, are more likely to be judges of what would be beneficial to the public in changes of this sort, than the directors of the actual line?—I think so.

1607. The directors of the line in question may be influenced to a certain extent, may they not, by the question of expense?—Yes; the question

Colonel *W. Yolland.*

27 June 1870.

tion of expenditure may be one thing that would influence them; but what I think is a far more potent cause of influence, is an unwillingness to adopt things which do not originate on their own lines generally. I do not mean to say that there are not a great many exceptions.

1608. You think that this amount of compensation which is given by juries, is, to a certain extent, if not to a very great extent, the means of safety to the public?—I should be very sorry to see that amount of compensation diminished unless further powers are given to the Board of Trade, or enacted by Act of Parliament.

1609. That which is asked for is that a limitation should be put upon the amount of damages which could be recovered against a company; you think, do you not, that in the interests of the public, there ought to accompany that some greater power to the central authority for enforcing the adoption of improvements in the working of different lines?—I think so.

1610. Under those circumstances, with that greater power, you think there would be no objection either to a limitation of the compensation or to the alteration of the authority before whom such compensation was tried?—No, I think not.

1611. With regard to the rules adopted by companies generally, do you find that they are enforced upon their servants?—I think that, notwithstanding all the experience that the railway companies have at the present time, different views are still maintained with reference to the question of passing signals, for instance. The officers of the various railway companies cannot agree upon that point, even at the present moment.

1612. But my question was whether the rules which the company have laid down for the direction of their own servants are not found to be constantly evaded with impunity, because I see by your reports that the attention of the public is constantly called to the fact that a good and efficient code of rules exist which ought to have prevented accident?—That is the case of the absence of a proper state of discipline, or retaining in their regulations those which are practically obsolete.

1613. Do you think that that state of discipline is not carried out as it ought to be?—I do not think it is very high in many cases.

1614. That, of course, applies to the question of engine drivers in passing signals?—Yes, of course it does. In many cases I think a bad example is set to the engine drivers by the officers of the railway company in riding on engines in passing signals that are actually at danger when those danger signals are against them.

1615. Have you had any experience on different lines of the deficiency of the present break power?—Yes, I have had a great deal of experience of that kind also.

1616. Do you think that the system of a continuous break would be an additional protection to the public?—I do think so. There are a great number of cases where, for instance, long trains are made up of three or four carriages and a break-van going to one place, and three or four carriages and a break-van going to another place and so on. I think that it would be an additional protection to the public if, for instance, continuous breaks were placed upon those carriages in connection with the van that belongs to them.

1617. Of course, as you increase the break power you diminish to a certain extent the chance of accident?—You diminish the distance at which you can stop from three-quarters of a mile, 800 yards and so on, to one-third or one-fourth of the distance.

1618. Do you know any lines on which continuous breaks are at present working?—They are worked almost entirely over the Lancashire and Yorkshire Railway.

1619. Mr. *Sherriff.*] That is Newal's break, is it not?—Yes, that is Newal's, and also Fay's, break. There is a different kind of break on the Metropolitan line, and another kind of break is worked upon the North London, but I should tell you that with regard to those two last lines, namely, the Metropolitan and the North London, I believe the main object why the continuous breaks are used there is to enable the companies better to compete with the omnibuses; that is to say, they run as fast as they can between the intermediate stations, and they stop in as short a time and distance as they can. I believe that that has been the reason why continuous breaks have been employed on those lines.

1620. Have you not examined into accidents that have arisen from trains being supplied with those breaks?—We have frequently had before us the small results of collisions, which (perhaps erroneously) we have attributed to the fact of their having a larger proportion of break power by means of continuous breaks.

1621. It has been stated that accidents were known to arise from the sudden application of the break power to the carriages; has your experience, from your inquiry into accidents, shown you that that was the case?—I have been running down an incline of 1 in 40 at between 60 and 70 miles an hour, and have had continuous breaks put on without any mishap, and I do not believe in their causing any accident.

1622. And of course where, if applied, they would enable you to stop very much more easily, they would diminish the number of accidents in fogs, and so on?—Yes.

1623. They would therefore be a valuable addition to the block system, if established?—Yes, I think so. I would only wish to add that the block system as carried out is an addition, so far as signals are concerned, to what already exists on all passenger lines of railway. It takes nothing away, it only adds to them.

1624. *Chairman.*] But witnesses have stated that they substitute mechanical skill for individual skill?—I certainly do not agree with that opinion. I believe that engine drivers are a capital body of men, and I do not think that their vigilance is relaxed by that fact.

1625. You do not think that the effect of a system depending upon mechanism is to diminish the vigilance and care of the persons conducting the engine?—I do not.

1626. Sir *H. Selwyn-Ibbetson.*] Do you see the force of the objection to the block system that has been taken on account of the number of accidents that might happen at stations?—No accidents would happen at stations any more than anywhere else, if all the arrangements connected with those stations are made symmetrical.

1627. You think that, in fact, under the block system you would keep your stations as free from danger as the rest of the line?—Yes, just so; the large stations will probably require a block telegraph at each extremity to avoid long delays.

1628. Mr. *Sclater-Booth.*] I understand you to

to say that you not agree with what Mr. Forbes has stated as the result of his experience, that engine drivers have become more careless where the block system has been established?—I do not think so, as far as I can see, and I have made inquiries on the subject of the superintendents of railways.

1629. Although he has stated that as the result of his experience, you do not agree with it?—Looking at the returns of the London, Chatham, and Dover Company during the last three years, I find that they have not had a single collision that the officers of the Board of Trade have been directed to report upon.

1630. Mr. *Winn.*] Will you state more particularly in what way you think the Board of Trade wants strengthening?—In the power to order things that are absolutely necessary to provide for the public safety.

1631. Why should not an Act of Parliament do the same thing?—I quite agree with you; if you enact a thing by Act of Parliament there is no necessity for the Board of Trade to do it.

1632. You do not agree, then, with some witnesses whom we have had, that if the responsibility was thrown on the Board of Trade it would rather tend to make the general managers and other officials careless?—I do not agree with that at all. I think that at the present time the Board of Trade does interfere with railway companies, and that the result is no diminution of responsibility on the part of railway companies.

1633. You have told us that you have no fault to find with the management of railway companies, except with regard to their not adopting the block system?—As regards the mode of working the traffic, and the absence of the block system is one, an insufficient amount of break power occasionally comes out; not very often, but sometimes; and I look upon it as an accidental thing rather than as the result of a system.

1634. You have told us also that you know thousands of cases on the various lines of railway where facing points are still left without signals?—I believe that that number might be found throughout the kingdom at the present time. I have no absolute knowledge, but I am quite sure that there is a very large number of facing points entirely unprotected.

1635. But is it the fact that a great number of cases of accident do occur where facing points are not guarded by signals?—Yes; a large number of cases do occur from that cause.

1636. Either distance signals or signals at the point?—Either one or the other. In some cases it may be done by a distance signal, and in other cases, it may be done by a station signal; but in those cases where these accidents so frequently occur, they are not locked, and the men are not prevented from making a mistake when they can be mechanically prevented from doing so.

1637. You think that in cases of that sort the Board of Trade ought to have the power of directing the companies to place signals at those facing points?—I do think so.

1638. Would it be a very great additional safety to the trains if that were so?—I think so.

1639. Do you know many cases where accidents have occurred at those unprotected facing points?—Many.

1640. Does this neglect chiefly occur on large companies or small companies?—Large companies; in fact, collisions mostly occur on the long lines.

1641. You do not think that the block system does tend to make engine drivers careless?—I do not think so.

1642. Have you read the evidence of Mr. Mason?—I have not read the evidence which was given on the last day.

1643. He is the General Manager of the North British Railway, and he states at the end of his evidence that the worst accident he ever had was between two places where the block system existed; do you know anything about that accident?—I am not aware to what accident he refers.

1644. We have had it in evidence from one of the witnesses that there would be a considerable safeguard secured to the public if greater restrictions were placed upon passengers; for instance, heavy penalties for getting out of a train when in motion, or getting out on the wrong side of a train; do you think that that would be of any service?—I doubt the effect of a penalty in keeping people in a train when they come into such places as London and other large towns.

1645. They say that many small accidents, such as slipping in getting out of trains, are due to passengers jumping out of the trains before they are quite stationary, is that your opinion?—There is no doubt of it at all.

1646. Do you think that any additional security could be taken to prevent that?—I do not see any way to their taking any additional security on that ground. I am aware that a hasp has been placed lower down in some cases, but it is not free from the objection, that people will put their heads out too far, and knock them against walls.

1647. Does not the adoption of the hasp, as is the case in some foreign lines, prevent entirely their jumping out in that dangerous way?—They must go through two operations. They must go through the operation of turning the handle and of putting out their hand to lift the hasp.

1648. Is not the hasp put so low that it is not a very easy thing to do it?—If the hasp is too low they may have to put their body a long distance out of the carriage, and that renders them liable to come into contact with anything that may be exceptionally near to the rails.

1649. You said that you think that the extension of the system of arbitration by the Board of Trade would be desirable; would you do that to the exclusion of trials before a jury, or would you only have recourse to it in cases of small accidents?—I think that a very large proportion of the cases of compensation might be well settled by an arbitrator, quite as well as, and at very much less cost than by, the present system.

1650. Do you think that cases of large compensation would be as well settled by the Board of Trade, and as satisfactorily, as by a jury?—I think by an arbitrator appointed by the Board of Trade they might.

1651. Mr. *Denison.*] What means do you take to convince yourselves at the Board of Trade that any mechanical contrivance which you recommend is sufficient for its purpose, and not liable to objections in its working?—Seeing it used on certain lines of railway, and inquiring among the officers of railway companies.

1652. As a rule, when you have made up your mind that a particular mechanical contrivance is advantageous, you invite the railway companies to give it a trial, do you not?—No, we do not do

Colonel *W. Yolland.*

27 June 1870.

that. I would take the case of interlocking, for instance; what led to the introduction of interlocking was, that a man made a mistake in leaving the points open. It was then pointed out, in a report for instance, that such a thing could be prevented by mechanical means. That report was given to the public, and one of the public got hold of it and brought out an invention. He happened to be an employé on one of the lines of railway, and that railway company adopted it on their own line, and after a time, when it was seen to be successful, the inspecting officers of the Board of Trade insisted upon it; but we do not put forward anything that is not practicable.

1653. I think you said at the commencement that you have not had an opportunity of reading the evidence that was given on the last day's proceedings, and therefore Mr. Forbes's evidence has not come under your notice?—It has not.

1654. At Question No. 1209, he was asked, with respect to the system of locking signals and points, and he said that "They" (that is the Board of Trade) "are very strong indeed upon what they call the locking apparatus, which is a source of continual, what shall I call it; well, it is a trap for the railway companies; we have more accidents, not bad accidents, but more trains getting off the rails now in our yards under the locking apparatus, than we had under the old system of pointsmen." Then comes the next question, "Practically you find that the result of locking points and signals is not beneficial as a remedy for accidents." To which he replied, "It is not a certain cure for an evil inseparable from the working of complicated railway stations, nor can any be discovered." He was further asked, "Has it diminished at all the accidents which used to arise, and were reported on, from the defect of the men in charge, having two actions, if I may so call it." And his answer was "No, I have just said that I thought that the number of engines and carriages getting off at the points now (and we have some very bad stations to work upon the London, Chatham, and Dover line), is certainly as great, if not greater, than under the old system of pointsmen"?—Mr. Forbes has not stated there what he means by getting off at the points, but I will tell the Committee; it is probably not getting off when they are running against the facing points, but it is when the driver, for instance, runs improperly over those points in the wrong direction, and where those points are locked in a frame, so that they cannot open, the consequence is, that when the wheel comes up to the part where the two rails are close together, it must mount and get off; that is probably what Mr. Forbes must mean.

1655. You are in favour, you have said, of Parliamentary compulsion upon companies to adopt the block system; at what intervals of space out of the Metropolitan circle, are you prepared to recommend that?—Inasmuch as little companies with little traffic find it advantageous for their own interest to adopt the block system on their lines in order to avoid the serious liability attendant on the ordinary mode of working, I hold that there is no hardship in the great companies adopting it generally.

1656. Then, is it your proposition that the inspectors of the Board of Trade should have the power on every line in the kingdom, main and branch, of deciding where a block signal should be placed?—Not where the traffic is worked by a single engine, but on all other parts.

1657. Speaking generally, your view is that the Board of Trade inspector should absolutely decide at what points upon every line in the kingdom a block signal should be placed?—The Board of Trade should decide what lines should be worked on the block system.

1658. What I want to arrive at is this, whether you are prepared, as one of the inspectors of the Board of Trade, to decide on every line in the kingdom, main and branch, at what intervals of space, or at what particular spot a signal shall be placed, on old lines as well as new?—If the railway company's officers will tell us the amount of traffic that is to be worked over it, I say, Yes. If they will not tell us, I say, No; because it entirely depends upon the question of traffic that is to be worked on the line. There is no necessity for the Board of Trade inspector to say at what intervals of space these telegraph stations should be placed.

1659. Then supposing there are a certain number of trains *per diem* passing over that point, and they wish to increase that number of trains, the circumstances would be changed?—Yes, certainly; that happened on the Metropolitan line, which, when first opened, had no intermediate telegraph station between King's Cross and Farringdon-street; but it was added afterwards, when it became necessary to increase the number of trains.

1660. You stated, did you not, that the block system was so capable of arrangement and management that it might depend upon one person?—That the signalman at the telegraph hut should be the only person having the power to admit anything on to the running line between him and the further telegraph hut. It is placing the power entirely in the hands of the signalman.

1661. But a great number of those long signals are worked, are they not, by a mechanical contrivance from a distance?—Yes, the distant signals are worked by a wire.

1662. What I ask you is, have you no experience in the reports of those signals being mechanically unworkable just at the moment when they are wanted?—It sometimes happens that a distant signal cannot be worked at the moment, but they are usually constructed and put up upon this principle, that they stand at danger unless pulled off, so that delay would be the only thing that would occur if it could not be pulled off.

1663. Then the fact of their being positively unworkable, either by rust of the chain, or some other hitch at the moment, does not shake your belief in the general efficacy of the signal?—Not in the least, because that is the same on ordinary lines as on the block system; the block system is nothing more nor less than an addition to the ordinary system.

1664. You have said that the Board of Trade is administratively weak, and is susceptible to influence both for and against railway companies; do you think (without the slightest disrespect to yourself) that the experience of an engineer officer of the Board of Trade is superior to that of a railway traffic manager and engineer of long and varied experience?—I think, as regards the question of accidents, it is quite equal and certainly more disinterested.

1665. You have also said, have you not, that the Board of Trade inspectors were not consulted as to the communication between passenger and guard?—I said they were not as to what

what was adopted. I would mention, with reference to what was sanctioned by the Board of Trade, that there are now three or four different modes of communication at the present time in use, instead of that which was submitted by certain general managers for the consideration of the Board of Trade, as they do not now agree among themselves as to the best rope system.

1666. But you do know, of course, that circulars were issued from the Board of Trade to the railway companies inviting them to try a particular system?—Quite so.

1667. Do you know what, in the working, has been the practical result of the communications as now established?—I do not know much about it. I know of one case on the London and North Western line where the system that was put up was practically of no use, and where it was expected that a gentleman would die between Willesden and Bletchley, but he fortunately did not do so.

1668. Have you not returns sent in to you from the railway companies of the number of instances in which the communication has been made use of by passengers?—I have not seen such returns; I know that it has been frequently in use on the South Eastern Railway, where the electric system which they had had in use for years was exceptionally sanctioned by the Board of Trade, although the rope system submitted by the general managers had been previously authorised for some other lines.

1669. I will direct your attention to Mr. Forbes's answer to question No. 1206, where he says, "I think that that is just where the Board of Trade would get into a great difficulty; because, take as an illustration the question (and one may as well ventilate it as a very good illustration of this position) of communication between the driver and the guard. There has been legislation with regard to that subject. I was the chairman of the committee of the Clearing House who inquired into the inventions for securing it, and I drafted a report to the railway companies upon it. We did not adopt it, because none of us could agree that any one of those inventions would effect the object which we then wished to effect; then Parliament in its wisdom says, 'Well never mind, you must do this, and you must do it upon a principle which shall be satisfactory to the Board of Trade'; now, what is the outcome of this? The Board of Trade will approve of anything almost that we ask them to approve of, and I will undertake to say now, and I speak in order, if you please, that it may be challenged, that the public at this moment are covered by no practical security, and that no single casualty or risk to which they were subjected before are they saved from now, it is utterly useless, and it is utterly useless in France"; Mr. Forbes gave that opinion under the idea and wish that it might be challenged if incorrect, and, therefore, I ask you if you have any practical knowledge yourself of the result of the plan?—I do not believe that the rope system is efficient; that in use on the South Eastern Railway may be, and probably is.

1670. Do you see no injustice and no objection in the principle that the Government should be interfering at every turn with the working of the traffic of railway companies, which are commercial associations of the same character as steamboat companies and other carrying associations?—I do not think that they need interfere at every turn at all; I do not think that would be necessary if they possessed more moral power, and they have none at the present time. The Government interferes in reference to emigrant ships, where the safety and health of large numbers is concerned; and similar interference to compel railway companies to alter what hourly endangers the safety of the public travelling on railways, is not only, in my humble opinion, justifiable, but its duty to the community at large, when it is only too manifest that the railway companies will not of their own accord make the change, or only commence to do it 10 or 12 years after the necessity for it is ascertained, and the means of effecting it satisfactorily provided. (*See* reply to Question 418).

1671. The Legislature of this country having declined to undertake the railway system or to impose a regular system of railway management in this country, you still are of opinion that the Board of Trade might fairly have the power of interfering with the details of the working of traffic?—Yes, I say so; more than they have any power of doing at the present time.

1672. In the case of accidents arising out of mechanical failures of the block system or any other recommendation of the Board of Trade, supposing it enforced by Act of Parliament, or what is the same thing, by a resolution of the Board of Trade, which has the sanction of an Act of Parliament, do you not think that a railway company would be justified in pleading before the tribunals that they were not liable for the accident, inasmuch as they had adopted what the State had declared should be a precaution in favour of the public?—I cannot see that the neglect of the individual working it could be condoned.

1673. That is, supposing that a case of negligence as regards an individual; but in the event of a mechanical failure, how would it be?—Then it would be exactly the same as the result of a mechanical failure when an axle breaks and causes a bad accident, and it is clearly and distinctly proved that no flaw or any defect in the axle could have been apparent to the officers and servants of that company before it occurred; that would be precisely the kind of case, and the railway company would get off its liability.

1674. But does not it occur to your mind that there is a danger on the part of a central authority deciding upon mechanical contrivances which are to be adopted by railway companies without their having the option of rejecting or refusing?—Not without their having the option of objecting.

1675. Are you aware that if the Board of Trade's recommendations are persistently urged and persistently neglected by the traffic manager and the board of directors, from a disbelief, most likely, in the ordinary utility of the recommendations, that is taken by judges and juries as a culpable neglect of precautions, and is taken into account in the estimation of the damages?—I cannot tell whether that is the case or not. Many of the recommendations which I make, after inquiring into accidents, are based on the suggestions of the officers who have assisted in placing the facts before me.

1676. One of your recommendations is that the Board of Trade should, by means of a resolution proposed to be placed upon the table of the House of Commons, order particular rules and regulations to be observed in the working of traffic; do you think that railway companies should

Colonel *W. Yolland.*

27 June 1870.

should have an opportunity of offering their opinions and their objections to the proposed regulations, which are simply the embodiment of the individual opinions of the Government inspectors?—Certainly.

1677. You said that a bad example is frequently set by the officers of a railway company in riding upon engines and neglecting the signals?—I constantly ride on engines, and have frequently passed distant signals at danger.

1678. With an officer of the railway company on the engine with you?—Quite so.

1679. The responsibility being with them?—Quite so.

1680. And you have objected to that, have you?—No, I am entirely in the hands of the railway company; I never make any objection at such a time, but I do not hesitate to say that it is setting a bad example, and I think it produces a bad result.

1681. But the drift of your answer is to leave an impression on the minds of the Committee that railway companies do systematically neglect their own precautions, or allow their servants to neglect them?—I do not think that discipline is well upheld on many railway lines.

1682. Is that a general observation, or is it confined to a particular line?—It is a general observation.

1683. You also, I think, recommended that in the making up of a train the continuous break system should be adopted throughout the whole length of the train?—I said that when there were portions of trains, three or four portions going to different towns, and broken off at different junctions, it would increase the chances of safety in the event of an accident occurring if the break van belonging to those portions were attached to the adjacent carriages by means of continuous breaks.

1684. Sir *H. Selwin-Ibbetson.*] I think you said that it should be attached to the carriages in each particular section of the train?—Yes.

1685. Mr. *Sherriff.*] That can only be done where there is a break van?—Yes, a break van or a carriage fitted with a break, which comes to the same thing.

1686. Mr. *Denison.*] Do you happen to know how many component parts of an express train starting for instance from King's Cross and going to the north of England, is composed?—I do not; I saw the number of parts mentioned in this unfortunate accident which occurred the other day; three or four.

1687. Are you aware that in order to carry out your proposal it would necessitate the interspersion of three or four break vans in addition to the ordinary break?—But very long trains I think carry three or four break vans.

1688. Do you know the maximum number of carriages which an express engine can carry at the speed of an express train?—No, I do not know for this reason, that where one is insufficient, another is put on.

1689. Do you mean a double engine?—No; two engines; I see that often.

1690. You surely are not prepared to recommend the general adoption of two engines in a train?—No; I frequently protest against sending trains that require two engines. I hold that the trains should be of a moderate size, and not of an unwieldy size; that is one of the things which I object to with reference to the mode of conducting the traffic.

1691. Are you not aware that the use of two engines is considered by railway engineers to be very dangerous?—It is constantly done.

1692. Up a bank or for short distances, but not running long distances?—Yes, in long distances I have seen it.

1693. Mr. *Sherriff.*] In passenger trains?—Yes, passenger trains, but more particularly excursion trains.

1694. Mr. *Denison.*] Then as I understand you, your recommendation would necessitate the breaking up of trains and the multiplication of trains; for we may take it as an axiom, may we not, that if you get beyond a certain number of carriages with one engine your train will not go at the proper speed?—Quite so.

1695. Then the result of your recommendation would be to break up the train into many more parts, and to multiply the number of trains passing at separate intervals of time?—Yes, I would not allow unwieldy trains; and if the traffic be worked on the absolute block system, doing so would diminish, instead of increasing, the risk of accident.

1696. Taking an ordinary express train made up of 15 or 16 carriages with a break at the head and a break at the rear, the interspersion of two, three, or four break carriages would diminish the carrying power of that train to a very considerable extent, would it not?—But the retarding force applied to that train might be made very much greater by the break van at the head of the train, and the break van at the tail of the train being coupled on to the adjacent three or four carriages, without diminishing the carrying power. By the use of continuous breaks you can double your retarding force and you would not be carrying more break vans.

1697. And this is one of the recommendations which you would propose to embody in a resolution placed upon the table of the House, making it compulsory upon the railway companies to adopt it in the working of their traffic?—I would not allow railway companies to send out a train of 16 carriages with a single break, as it will be found has been the case in the mishaps of the last three years.

1698. You, as an inspector of the Board of Trade of long experience, would have no hesitation and no misgivings in imposing upon railway companies a minute set of regulations for the working of their traffic?—I have never proposed to introduce a minute set of regulations at all, and I should not wish to do so; I do not think it necessary at all.

1699. You would do it by piling up the regulations from time to time, from year to year, or as the case may be?—I do not think that that would be necessary.

1700. Mr. *Sherriff.*] I want to know something about the internal machinery of the Board of Trade; whether the Board of Trade in its operation regarding railways is in reality anything but their inspectors, that is to say, when an inspector sends in a report to the Board of Trade, who are the persons who consider that report?—It is addressed to the secretary.

1701. What body gives any attention to the report of the inspector before it is sent out by the authority of the Board of Trade?—In the case of reports upon accidents, they are sent out as a matter of course at the present time; formerly

merly they used frequently to be accompanied with recommendations; but they are seldom accompanied with recommendations at the present time.

1702. Then the Board of Trade in respect of railway accidents is only another name for the Board of Trade inspector?—No, it is not quite so, for the constitution of the Board of Trade formerly was different. The assistant secretary of the railway department of the Board of Trade formerly used to be an officer of engineers who generally had been an inspector himself on the railways, and was supposed to have acquired experience whilst so employed, but that has been changed since the year 1859.

1703. Then it does come to this, that there is no internal authority which knows anything about the matter in question, to whom the reports of the Board of Trade inspectors are submitted before they are issued to the railway companies?—Now they are sent as a matter of course. As soon as they are printed they are sent to the railway companies.

1704. But when the Board of Trade is spoken of as having the power of enforcing certain improvements, if we may call them so, that in reality means that the inspectors of the Board of Trade are to be the judges of the improvements?—No, it does not seem to be that, because in many cases the Board of Trade, at the present time, do not approve of the reports of their inspectors.

1705. Whom do you mean by the Board of Trade?—The President, the Parliamentary Secretary, and the permanent secretary; and there is also the assistant secretary to the railway department, and those are the gentlemen who constitute the executive of the Board of Trade for railway matters.

1706. And those are gentlemen, as I understand you, who have had no previous experience as to whether a particular course is right or wrong for railway companies to pursue?—I do not think I have said so, but I am not aware that they have.

1707. In respect of the block system, the merits of which I do not underrate, but it is not quite perfect, I suppose you would not say that it is quite perfect yet?—I think it is exceedingly well worked, and by several different systems.

1708. But have you not seen improvements made in it last year?—I think there are improvements which go beyond what is at the present time carried out, by which signalmen would be prevented mechanically from giving a signal for a second train to follow before the first one had reached the station in advance.

1709. So that it is still capable of improvement?—Quite so.

1710. There are states of the atmosphere, are there not, in which electric signals of any kind are very apt to get out of order, and, in fact, in such cases they are rather worse than nothing?—I do not know about worse than nothing.

1711. That do not act?—Yes, but by recent improvements I am informed that that is got over entirely; but on that point electricians would be a far better authority than I am.

1712. Of course there are certain operations going on between stations which would not at all be regulated by the block signal even when applied; for instance, persons employed on the line in lifting rails, and in the ordinary maintenance of the road, how would you in any way connect their operations with those at the stations where they use the block system?—On that point I would refer to the evidence that was given with reference to the Staplehurst accident; it is a case in point, I think; evidence was given upon that subject by Sir Edward Watkin.

Colonel *W. Yolland.*

27 June 1870.

1713. The purport of my question is this: that although the block signal, to a certain extent, entirely prevents collisions by one train running into another, yet the block signal, as I understand it, would not prevent an accident arising from the carelessness of workmen displacing a rail at some point between the stations?—Certainly not.

1714. Have you had it under your notice that sometimes after a signal has been sent under the block system, in a moment of either carelessness or otherwise, a signalman has actually given a signal for a train to come on when he ought to have blocked his station?—I recollect three or four instances within the last 12 or 14 years.

1715. There have been cases, and it is not at all unlikely that such should arise?—That is so.

1716. You have stated, have you not, that you would have no hesitation in taking upon yourself the responsibility of giving an order with respect to the opening or shutting of carriage doors?—I am not aware that I said anything of the kind.

1717. That is one of those internal matters which, I suppose, no public body would take upon themselves the responsibility of?—Certainly; it is a very disputed point.

1718. Will you be good enough to give the Committee the names of the 14 or 15 lines which have adopted the block system?—The Bristol and Exeter, the Bristol and Portishead, the Caermarthen and Cardigan, the Cornwall, the Llanelly, the London, Brighton, and South Coast, the London, Chatham, and Dover, the Metropolitan, the Metropolitan and St. John's Wood, the Metropolitan District, the Mid-Wales, the North and South Western Junction, the North London, the North Staffordshire, the Rhymney, the Somerset and Dorset, the South Devon, the South Eastern, the Swansea Vale, the West Cornwall, the Forth and Clyde Junction, the Great Northern of Scotland, and the Highland.

1719. I think you stated that you are of opinion that no alteration with regard to reducing the responsibility should be made in respect of workmen's train; that the companies had reduced their fares, and that consequently there ought to be a decrease of responsibility?—Yes, where they have reduced their fares.

1720. You also said that you think that that principle should be carried out; is it your opinion that it should be carried out in the case of excursion trains where the fares are very low?—I do not like excursion trains.

1721. Mr. *Denison.*] You would, if it was left to the Board of Trade, put down excursion trains as much as you possibly could?—I would not allow them to be of the unwieldy character that they frequently are at the present time, as the risk would thereby be greatly lessened.

Sir JAMES HANNEN, called in; and Examined.

Sir *J. Hannen.*
27 June 1870.

1722. *Chairman.*] YOU are one of the Judges, are you not, of the Court of Queen's Bench?—Yes.

1723. How long have you been on the bench?—About two years, or rather more.

1724. Have you had considerable experience in the subject of compensation by railways for accident?—Yes; every judge must have considerable experience in trying those cases, for they occupy a very large portion of our time.

1725. We have been told that the liability of railway companies for accidents may be considered under two heads; first, with regard to the liability which they incur to persons who are not passengers, and with whom they have no contract; and, secondly, with regard to persons who are passengers, and with whom they may be considered to have a contract; I will ask you, first, with respect to persons with whom they have no contract,—in that case do you think the liability of the railway companies is precisely the same as the liability of private individuals, and in short depends upon the general law of master and servant?—Precisely so.

1726. With regard to that branch of the law, do you think that there is any hardship in the present state of the law upon that subject?—I think there is no hardship upon railway companies; the hardship is one, if it be one, which is shared by all employers, namely, that they are responsible for the negligence of their servants.

1727. One gentleman has given us his opinion that there is a hardship in that state of the law, and that if a private gentleman has taken every care to get as careful a servant as he can, it is very hard upon him that he shall be liable for the negligence of his servant; do you think that that is the case?—It is a hardship, but then it is one of those hardships which I think must be borne by the public generally; it is the universal law, I might say, throughout the world, that a man shall be responsible for the acts of his servant done in the course of his business; and although undoubtedly it inflicts considerable hardship in some cases, I am not prepared to express any opinion that it ought to be altered; but that is a larger subject, I should add, than that to which I thought my attention would be directed.

1728. He quoted to us the Roman law, by which the master was only liable for the negligence of his servant, to the extent of the value of the servant or slave, and he rather recommended to us that there should be a limit put upon the degree of liability; what is your opinion upon that point?—There is an analogy afforded by our law in the Admiralty; a man is not answerable for damage done which is beyond the value of his ship which does it, that is an analogous case, but I am by no means prepared to adopt so limited a view as that which has been suggested; that it should be merely the value of the instrument, that seems to be the idea contained in the suggestion, that the damage to be recovered should be merely the value of the instrument by which the mischief was done.

1729. We were advised that in the case which was put, where a master had taken every precaution to get as careful a servant as he could, under those circumstances he should not be liable, unless there had been some default upon the part of the master himself, but probably you are not prepared to go as far as that?—I am not prepared to go as far as that, but I repeat that I was not aware that my attention would be directed to that which is a much larger subject than this, of the compensation by railway companies.

1730. We will come now to the second head, which is the liability of railway companies for injuries committed to passengers; that is to say, persons with whom they have a contract; at the present moment the liability of railway companies is unlimited, is it not?—It is.

1731. Do you think that there is any hardship in that state of the law?—I think there is.

1732. Would you recommend that the extent of that liability should be limited?—Yes, I should do so.

1733. Have you thought in any way as to the mode in which you would limit it?—Yes. If you mean as to the amount, I have not thought of the exact amount, but I think that it is the office of the Legislature undoubtedly to take care, above all things, that the safety of the public shall be maintained as far as possible. I think that that may be put as the first object which the Legislature should have in view; but I do not think that it is necessary, in order to attain a maximum of care and attention on the part of the railway companies, that they should remain liable to an unlimited amount. I think therefore it would be safe, and I must add just, to limit the amount of liability of the companies to such an amount as would be sufficient to keep up on their part a maximum of attention to the way in which the line was managed. I think that they would be just as careful, for instance, and I give it only by way of an instance, if they were never liable beyond 1,000*l.*; that would be quite sufficient to keep them up to the mark in all respects. Then beyond that I do not know why they should not have a consideration for the extra risk, if they were required to take that extra risk upon them.

1734. Of course you have not considered the precise details of the limit; I mean you have not considered whether it should be different for first, second, or third class?—I think there should be a difference in the amount for which they should be liable. In the first place they are paid more for the one than for the other; and therefore they have larger receipts for the one class of passengers than the other, and can afford to pay more. I think it is a rough, although undoubtedly it is a very rough criterion of the value which a man sets upon himself, if he pays more to ride in a first-class carriage.

1735. You would consider it in the light of a premium that they would pay for their risk?—Yes.

1736. Do you think that there should be any difference in the amount according to the length of journey; for instance, if a first-class passenger takes a ticket, for which he pays only a few shillings, or if he takes a first-class ticket, for which he pays as many pounds, in each case the liability of the company should be the same?—I confess that I have not got so far in detail as that.

that. I should consider it a detail of its insurance business, which I should leave to the company to determine for itself.

1737. Do you think that the companies could limit their liabilities without an Act of Parliament?—That is a difficult question to answer. I think I ought to decline to give a positive opinion upon it, because I think it is a question open for discussion. But for all practical purposes of legislation, it may be assumed that they cannot limit their liability; for this reason, that it has undoubtedly been alway assumed, up to this time, by those who advise railway companies, that they cannot limit their liability, and they have always acted upon that up to this time.

1738. As to the administration of the law, the gentlemen who have been before us, the managers of the different railway companies, have made great complaints of the exceeding harshness of the administration of the law; do you concur in thinking that there is justice in those complaints?—That language is too strong; but I am not aware whether the question asked me, is whether juries find too heavy damages.

1739. They complain of the extent of extortion to which they are subjected in consequence of the law?—Certainly from my experience both as a judge and as a counsel, I think that there is a great deal of fraud practised upon railway companies with respect to accidents. I think that there are many cases of actual fraud, and that there are very many more cases of great exaggeration.

1740. They complain particularly of the manner in which the rules with respect to costs affect them; that as the law now stands, practically they have to pay the costs whenever a case is brought into court, and consequently they are obliged to pay a very much larger sum than they ought, because they know that if they go into court they would have to pay what the jury award, together with the costs of both sides; do you think that there is justice in that complaint?—I do not understand that complaint; I do not think that they suffer any more than any other litigant suffers who loses his case.

1741. They say that whatever sum they pay into court, the jury almost as a certainty takes that as a starting point, and gives as much more as will carry costs?—That does point undoubtedly to a practical evil, but it is not peculiar to railway cases. There is no doubt that it operates upon the minds of juries, I suppose, in this way, as there is a payment into court, they see that it is admitted that there was a cause of action, then they have a certain sort of pity for the plaintiff, who is there, and who, if he does not get something more, will have to pay the costs of the inquiry, and that pity operates upon their minds, so as to make them frequently give a little more, in order that the plaintiff may not win a barren victory. But that, I say, is an evil which is not peculiar to railway companies. I believe that that is in the vast majority of cases where money is paid into court. The way to meet that, if it should be thought an evil sufficient to demand a remedy, would be to have the money paid into court kept a secret from the jury, and never to let them know what amount has been paid into court, and let the battle be fought in ignorance of the fact that there was a sum which the plaintiff might have had, if he had been willing to take it.

1742. Would not that be rather difficult to accomplish: would not the counsel, or somebody or other on behalf of the plaintiff, contrive to let the jury know what sum had been paid into court?—There would be, of course, many attempts made to do so; but supposing that were the rule, the judges would endeavour to repress any such communication of that fact, as irregular and improper.

1743. You are not aware, practically, of any hardship that arises from that state of the law to railway companies more than to any other litigant?—Certainly not.

1744. Is there any mode in which you think that the administration of the law could be improved?—I am not able to offer any suggestion on that head.

1745. Do you think that the damages given by juries have been excessive?—Yes; on the whole, I think that juries err on the side of excess. I am far from saying that they always give too much. Cases are presented to them in a way that does undoubtedly lead them to give rather too much than too little. It is always pointed out to them that they give their damages once for all, and that whatever speculation there may be by the defendant's medical witnesses, as to the time when the plaintiff will have recovered, that is always a matter of guesswork, and therefore they must make sure. All that leads juries, as I say, to err rather on the side of excess than in giving too little; and, thinking as I do that there is great exaggeration in very many cases which are brought before them, I think that plaintiffs in railway accidents in the majority of cases get more than they ought.

1746. It has been stated to us that there is not a very good class of practitioners who take up cases of this description; has that come within your knowledge?—That has not come within my knowledge. I have known particular cases in which I have been able to see that the practitioners were of a low class; but I cannot say by any means that that is usual.

1747. You are not aware that it is a system for practitioners of a low class to go down to the place when an accident occurs, for the purpose of getting business?—I have heard that stated, but that is all I can say upon the subject.

1748. Do you think that in assessing the damages, the degree of negligence on the part of the company should be taken into consideration?—No.

1749. It is not so in fact, I presume?—It is not so in fact.

1750. But if the company admits its liability; that is to say, if there has been the smallest degree of negligence on the part of their servants, then the sole question is what degree of injury has been inflicted?—Yes; of course it is implied that there has been no negligence on the part of the plaintiff conducing to the accident; but any negligence on the part of the railway company which causes the mischief, entitles him to any damage which may have resulted from the injury.

1751. If the directors have been as careful as they possibly could be with respect to the character of the servants, and to ensure care in the management of the line, that cannot in any way be pleaded by them as a mitigation of damages in case an accident does occur?—No; nor do I think it ought, unless you were dealing with this large subject of whether or not masters

Sir *J. Hannen.*

27 June 1870.

should or should not in all cases be liable for the negligence of their servants.

1752. Sir *H. Selwin-Ibbetson.*] If you limit the liability, could you separate railway companies from other bodies, or would you have to limit the liability in all cases as well as in the case of railway companies?—Yes, I should separate them from other bodies, except carrying companies.

1753. I understood you to say that you were prepared to recommend a limitation of the liability of railway companies, but under those circumstances the same law ought to apply, ought it not, to other carrying bodies?—Yes, other similar bodies. I think it would apply to the proprietors of steam boats.

1754. That would have reference, would it not, to the recent decision in the case of the "Carnatic," where large compensation has been given against a steam-ship company?—Yes, I meant my observation to apply to all carriers.

1755. As I understand, that would apply to carriers, but it would not apply to a gentleman's carriage, because at present the gentleman is held responsible for injury done by his coachman?—No, it would not apply to that case, because that comes under the first branch of the subject, namely, liability to a stranger for a wrongful act. All your inquiry, as I understand, has been confined simply to injury done to a passenger, a person with whom the company has entered into a contract.

1756. Do you think that that rule ought to be applied universally to all carriers?—Yes.

1757. You said that the amount of fare received ought, to a certain extent, to affect the compensation for injury, that the first class should be greater than the second or the third; that was on the ground of the company deriving greater advantage in the amount received; but it is possible that the third class fare for longer distances would be greater, that is to say, the company would receive more for carrying a poor man a long distance?—If you remember, I said that I was not prepared to enter into those details. I should look upon that branch of the railway companies' business as an insurance business that must be conducted by them upon remunerative principles, and therefore they would have to consider the question whether or not they should charge more according to the distance, or whether it would not be better worth their while to take, as I believe the Accidental Insurance Company do take, a round sum. I think they take 3 *d.* for a journey, however long, and I suppose that that is found remunerative. Of course railway companies must do the same, find out what was remunerative.

1758. But that would apply to all classes; they would all equally receive the same remuneration in case of accident, if that system were adopted?—They would, if the company came to the conclusion that that was the best way of carrying on their business. I should leave it entirely to the company.

1759. Mr. *Denison.*] Parliament has long ago imposed a limit upon the liability of carriers for goods above the value of 10 *l.*, excepting when above that value an insurance is paid for as such?—Yes.

1760. Do you see any objection to that principle being carried out as regards passengers?—That is a principle which I think it would be expedient to carry out. I think that accidents upon railways must occur to some extent, and it is impossible to conceive of any state of things so perfect that there should be no railway accidents. I think, therefore, that if you can secure a maximum of care on the part of the railway companies, it is but fair that the traveller should share some portion of the risk. Therefore, I think it is right that beyond some sum, which may be fixed upon, they should do as they are allowed to do with regard to goods, and say, "If you think your life worth more than such and such a sum, you ought to give us notice, and let us have a remuneration for carrying so expensive a man."

1761. Are you of opinion that the present system of awarding excessive damages, which have no relation whatever to the negligence or delinquency which brought about the accident, is in fact any real safeguard to the public?—I suppose it must be some safeguard, because I suppose that directors are kept up to the mark, to use a common expression that I have availed myself of. I suppose that the terror of having to pay the enormous sums which they now have to pay will make them vigilant; and I think that they would be equally vigilant if they had not to pay so much.

1762. Assuming that railway companies take every possible precaution to employ the best hands that they can get, and the steadiest characters, and that an accident occurs from the frailty of human nature, do you think it reasonable that railway companies should continue to be exposed to excessive and unlimited damages, if accidents happen which have no relation whatsoever to the negligence which has caused them?—I do not think that they ought to be subject to excessive damages; and, as I have already said, I do not think that they ought to be subject to unlimited damages; but I think they should be subject to some damages, otherwise you would certainly have laxity of administration.

1763. Are there any observations which you would wish to make about the operation of Lord Campbell's Act; the railway companies here complain very bitterly that, in the administration of the law, in claims by heirs, the amount of compensation awarded against them varies according to the amount of prudence which has been exercised by the man who has been killed in an accident; for instance, if he has neglected to make a will, they will have to bear all the consequences of his negligence?—All that I can say is that my attention has never been directed to it. I have never seen any instances in which I have been struck with any failure of justice on that account.

1764. It works in this way, that supposing a passenger is killed by a momentary act of negligence on the part of a railway company's servants, and it turns out that he had had a life income of 5,000 *l.*, which ceased at his death, and he left a widow and several children, the jury would give 20,000 *l.* damages which would not be an exaggerated amount in the case of an income of that kind; the jury may give 20,000 *l.*, although that gentleman only paid the company 1 *l.* or 5 *s.* for his ticket, the company not being at all aware of their responsibility?—My evidence points to a remedy which, I think, might be applied, namely, that it should be impossible that any man should recover such an amount as 20,000 *l.*, (I have never known such a sum as 20,000 *l.*, I have known an instance of 11,000 *l.*) unless he had paid a proportionate

a proportionate sum to the railway company for taking charge of him.

1765. Mr. *Plunket.*] It has been suggested that if you fix a maximum there is a tendency that the jury will give the full amount; do you concur in that opinion?—I think that there would be that tendency; however, it would be the duty of the judges to try and correct that tendency; that is all that one can say; no doubt there would be an inclination to give the maximum.

1766. Then I suppose you would suggest that the railway companies should be obliged to insure within certain limits if that maximum of damages were accorded to them?—I have rather assumed that that is what would take place than formed a definite opinion upon it. I have assumed it in that way, because the Legislature has already gone in that direction in the case of goods and animals; therefore I have assumed that the Legislature would not deprive a man of the opportunity of insuring his life for a higher sum than the maximum; and I have never heard anything against the working of that system of insurance with regard to goods; therefore I have rather assumed that that is the direction in which the Legislature would continue to go.

1767. *Chairman.*] Have you anything further to suggest to the Committee?—Perhaps you will allow me to add an observation upon this subject. It occurs to me that you have practically from railway companies (I mean the directors and those who are in high places with the railway companies) as great care taken now as can be taken, and I believe that the accidents which happen will continue to happen from occasional negligence on the part of subordinates; and it has occurred to me that it is amongst those subordinates that you must endeavour to get a greater amount of care than is at present exercised. Certainly this is not with a view to legislation, but I would suggest to the railway companies that if they should have imposed upon them by the Legislature this insurance business, which I have spoken of, they should give to all their subordinates engaged in working the line a share in the profits to be derived from that insurance business. By that means you would give them an inducement to care on their own part, and you would create a public feeling amongst them for which each man would have regard; that is to say, at present his only fear is lest he should be dismissed; but what would operate upon many men's minds much more even than that fear would be this, that his companions would look upon him as a careless man; he would have the eyes of all those engaged with him in the service of the company alive to any defects on his part; and they would be constantly keeping one another up to the mark in order that the dividend at the end of the year might not be lost by the carelessness of one of their body.

Sir *J. Hannen.* 27 June 1870

1768. Would you increase the severity of the criminal law with respect to negligence on the part of railway servants?—No, I see no necessity for that. You will remember that it is always in the power of the judge to apportion the punishment according to the amount of negligence; the judge is able to take that into account, although, as I have already said, juries are not able, and ought not, in my opinion, to be allowed to consider the amount of negligence.

1769. Mr. *Denison.*] Are you aware that there already exists a system of annual rewards for servants who have passed through a year's service without any mistake?—I was not aware of that. To that extent it is a rough anticipation of my suggestion; mine would be a more elaborate mode.

1770. Your suggestion also assumes that there will be a profit upon the insurance business?—I assume that from the fact that there are companies who find it worth their while to carry on that business alone.

MR. WILLIAM JOHN VIAN, called in; and, Examined.

1771. *Chairman.*] YOU are Manager, are you not, of the Railway Passengers' Insurance Company?—I am the Secretary.

1772. And have been so ever since its formation?—Not quite from its formation, but for the last 19 years.

1773. Will you inform the Committee what are their premiums, and the amount secured by them?—We have two branches of business; one against railway accidents alone, and one against accidents of all kinds. Against railway accidents alone we insure for a single journey, or for a double journey, and against all accidents we insure only by the year.

1774. When you say all accidents, does that include railways, steamboats, and everything else?—Yes.

1775. And any accident that may happen to a man in private life?—Yes, quite so; a fall down stairs or a slip upon the pavement.

1776. We will only ask as to railway accidents; when you say that you insure for a single journey or a double journey, what is the meaning of a single journey?—Such a distance as a man can book through over any number of lines of railway.

1777. Supposing I were to go from King's Cross to Aberdeen, and that journey to occupy a portion of two days, would that be one journey or two journeys?—That would be one journey, in our estimation; our tickets are coterminous with the railway tickets. If the railway company will issue a single ticket for a journey, we will issue an insurance ticket.

Mr. *W. J. Vian.*

1778. As a converse case, supposing they will not issue a single ticket; when you get to a place, say to York, for instance, you have to get out and take another ticket to go to Scarborough, would your insurance cover the whole journey?—No, you must take another insurance ticket at every change of railway ticket.

1779. What is the price of your ticket?—It varies according to the class; 3 *d.* for a first-class insurance for 1,000 *l.* at death, and an allowance of 6 *l.* per week whilst laid up with injury; 2 *d.* in a second-class carriage, which insures 500 *l.* at death, and 3 *l.* per week whilst laid up with injury, and 1 *d.* in a third-class, insures 200 *l.* at death, and 1 *l.* 5 *s.* per week whilst disabled by injury.

1780. Then the insurance to the third-class is higher than the insurance for first-class?—We consider the risk greater; a traveller in a third-class is travelling in a carriage without cushions

Mr. *W. J. Vian.*

27 June 1870.

and unpadded, and in the event of an accident the shock is much more severe from his being dashed against the hard wood, than against the cushions of a first-class carriage, for instance.

1781. The insurance for a third-class passenger is dearer than the insurance for a second, and the insurance for a second-class is dearer than the insurance for a first-class?—Yes, we consider in each case the risk greater, and it is *pro tanto* diminished according to the class; the second-class is a stronger class than the third-class, but not as strong as the first.

1782. Would you insure for a larger amount, say for 2,000 *l.* in the first-class?—No; we do not issue more than one ticket to the same person; he may take a 1 *d.* ticket and yet travel in a first-class carriage, but he must not take a 3 *d.* ticket for 1,000 *l.* and travel in a third-class carriage.

1783. He cannot, for instance, take a 1½ *d.* ticket for 500 *l.*?—A 2 *d.* ticket, it would be for 500 *l.*

1784. So that a first-class passenger cannot insure otherwise than by paying 3 *d.* for 1,000 *l.*?—He might take a 2 *d.* or a 1 *d.* ticket if he chose; he might take a ticket for a lower amount, but the converse would not hold good; a third-class passenger might not take a ticket for 1,000 *l.*

1785. Do you issue a considerable number of tickets to third-class passengers?—No, a very limited number indeed, because at present there is no inducement to the public to take out tickets; the railway company's liability is unlimited; therefore our 1,000 *l.* assumes a very small proportion as compared with theirs; it is only those, I think, who take long journeys that insure. We issue about 400,000 to 500,000 tickets a year; the great mass of railway passengers are made up of those who travel short distances in the suburbs of great cities, for instance, nearly 30,000,000 travel on the Metropolitan line every year, and not one of those persons insures for the single or double journey; it is only a man who is going a long journey that thinks of insuring.

1786. It was stated in the newspapers that out of those unfortunate passengers in the excursion train who were injured the other day, a very considerable number were insured, was that the case?—Yes, there were 87 in our office.

1787. Were they insured against all risks?—Only for the journey; they had paid 2 *d.* for an excursion ticket insuring 100 *l.*, or some of them had paid 6 *d.* for the first-class. Excursion trains are generally made up of first-class carriages, and what are called covered carriages, which are either second, or third, or any class they can put, and we consider the risk so much greater with excursion trains that we charge a still higher premium.

1788. Then it was a special and particular premium which you charged for the excursion train?—Yes.

1789. Out of the passengers by that train as many as 87 had taken tickets with you?—Yes; five of the persons killed held insurance tickets; for which we shall get 10 *d.*, and have to pay 500 *l.*

1790. What is the scale for excursion trains?—Sixpence insures 500 *l.* for the excursion or double journey, and 2 *d.* insures 100 *l.* in the covered carriages.

1791. Have you season tickets or annual tickets?—Yes; against railway accidents you can insure either for a month or three months, or for a year; we charge 20 *s.* to insure by the year for 1,000 *l.*

1792. Do you insure many tickets of that description?—No; The General Accidents Assurance assures against all accidents, not only those to a train, but those going out of the station; for instance, on crossing the road, and so on, and is generally preferred.

1793. The larger portion of your business consists, does it not, of those general tickets?—Yes; out of an income of nearly 120,000 *l.* not 10,000 *l.* is for insurance against railway accidents alone.

1794. You think that that is due very much to the full liabilities of railway companies?—Practically, I think that it is so; if the liability of railway companies was limited, I believe that all persons would seek the natural resource of insurance.

1795. But on short journeys, do you think they would?—Not on very short journeys; but many of them would insure by the year if they were allowed the opportunity; for instance, a man who lived a little way out of town would naturally insure by the year, whereas at present he has no inducement to do so, or very little.

1796. How do they manage with respect to producing their tickets; do they get their tickets, and then take them with them?—Generally we recommend them to give them to a friend, or to post them to their homes; but generally people take them with them, and keep them along with their railway ticket, and then, if they lose their ticket, of course they lose their insurance.

1797. Your liability is quite independent, is it not, of any carelessness or mismanagement on the part of the company?—Quite so.

1798. You guarantee them by your ticket safety both for life and limb?—Against an accident to the train, not an accident within their own control, as the Board of Trade express it.

1799. Supposing they open the door, and get out of the carriage before the train stops, are you liable?—No, that is not covered.

1800. After they are once out of the train, if they tumble down in the station, I presume that is not covered?—No, that is not covered either.

1801. Have you had much experience of attempts at fraud?—Not so much of fraud as exaggeration and a modified degree of fraud. The natural tendency in all railway accidents is very much to exaggerate the symptoms, almost from the nature of the case; they are almost all shocks to the nerves; the nervous system is very easily acted upon by sympathising friends, and by solicitors advising them not to settle till they know the consequences of the accident; but there are many instances in which I believe a man is talked into making a much larger claim than he otherwise would; not an intentionally dishonest claim even, but yet an exaggerated one.

1802. Is there any limitation of time within which a claim must be made?—Yes, we require notice by our Act of Parliament within 14 days; we require it to be given immediately, but unless notice is given within 14 days, in case of injury, or within a reasonable time in case of death, the claim does not hold good.

1803. A person who says that his nervous system has suffered, and the symptoms have not declared themselves till a year afterwards, would not have any claim upon you?—Not legally; we inquire

inquire into it, and if we think that the man's statement is true, the directors believe that it is their wisest policy to act liberally, and we would give him something, but that is as an act of grace and not as a right.

1804. Have you taken many cases into the courts?—No, only on two or three occasions; we have a peculiar privilege under our Act; the right of taking cases into court was so intolerable when every man who had an improper claim that he wished to urge, or an exaggerated claim, used always to say that he would appeal to a jury, that we came to Parliament, and obtained power to make arbitration compulsory, and since then we find that we are enabled to deal most satisfactorily with those cases.

1805. What is the form of arbitration which is made compulsory?—In cases under 200 *l.*, we must agree on a single arbitrator; above 200 *l.*, each party, the claimant and the company, may choose an arbitrator, and those arbitrators select an umpire. If we cannot agree upon a single arbitrator, or upon the joint arbitrators to be appointed, we have a right to go before a master of one of the superior courts, and ask him to nominate an arbitrator.

1806. That system works well, I think you say?—Exceedingly well; we never practically go to arbitration, except in cases where there is a surgical doubt, and then we employ a surgical arbitrator, and that works exceedingly well.

1807. Then, has the arbitrator plenary power; does he hear the evidence and fix the amount?—Yes, quite so; he hears the evidence, and he is entitled to draw inferences, and assess the amount of damages, and to decide who is to bear the costs.

1808. He performs, in fact, the part of both judge and jury?—Yes.

1809. Have there been any complaints of that system?—Not at all; I never knew a claimant making an honest claim, as it appeared to me, who objected to have his claim referred to arbitration. Where there are exaggerated claims, they think it a very great hardship that they are deprived of what they call the natural privilege of Englishmen, to take them into court and try them before a jury.

1810. Mr. *Denison.*] Is the railway insurance business in your books kept strictly separate from the general accidents?—Yes.

1811. Is the number of insurers sufficiently numerous to secure you from loss on that particular branch of business?—Yes; at present the expenses would be greater than the business would bear if that were our sole business.

1812. It would not pay if it were a separate establishment with a separate administration?—I think not, unless the amount of business was very largely increased.

1813. Have you any control, in the case of accidents, as to the class which a person travelled by?—He has to produce his ticket.

1814. But in the case of death, it might so happen that the accident might occur at a station after the ticket has been delivered up, and in that case you would have no control over the class in which he has travelled?—We generally can ascertain that; we take the risk of that, and we can ascertain it from the railway companies.

1815. The distance travelled is no element, I think you say, in the calculation?—No; it would complicate the system so much that it would be almost impracticable.

1816. You have fully considered, have you not, that point which has been suggested to us from time to time, that a scale of insurance calculated upon given distances might be practicable, and your experience points in a different direction?—Quite so; I do not think it would be practicable; it would involve an enormous number of different kinds of insurance tickets. I think that this is rather a rough system; it is a penny postage system, in fact, but it is perfectly fair and perfectly safe.

1817. A man travelling 400 miles does not pay any more than a man travelling 25?—Not the least.

1818. Mr. *Sherriff.*] Have you heard of the scale which the railway companies suggest as the one at which they would insure the passengers?—No, I have not.

1819. *Chairman.*] Will you put in the rules of your company for the convenience of the Committee?—I can put in the Act of Parliament and a prospectus.

1820. Mr. *Sherriff.*] Assuming that the liability of the companies was limited in respect of the amount that they should pay with their railway ticket, and that therefore, from your evidence, a large amount of insurance would thereby be effected, taking the scale recommended by the railway companies of 3 *d.* per 1000 *l.*, would the insurance company, do you think, be inclined to take that business off the hands of the railway companies and conduct it themselves?—Yes; we should be very glad to transact that business.

1821. Then your notion is that a profit would accrue from this insurance?—Yes; not a large profit. My experience of railway accidents is, that they are very much more numerous than the Board of Trade Returns would lead you to expect. The number of travellers during the last 20 years is very large indeed; the number of deaths reported to the Board of Trade, from causes beyond their own control, are about 365; that would be about one death to every 8,000,000 of such travellers, and one injured in every 340,000; but my experience shows that they are very much more numerous than that.

1822. Taking that into account, you still think that the amount suggested by the railway companies on those insurances would be remunerative *per se*?—Yes, it would be sufficient to secure the company from loss, and cover the actual expense of working it; it would leave a margin for that purpose; it would not all be absorbed in compensation alone.

1823. Sir *H. Selwin-Ibbetson.*] Did I understand you to say that a very much larger number of accidents happen to the public than are reported, or than are before us?—I think so on railways. I do not mean to say that railway travelling is more dangerous than other travelling. I think that it is much less dangerous than walking about the streets of London, for instance.

1824. May we not infer from that that the amount is very much increased on account of the danger, according to your opinion?—Certainly, that the danger is greater than the Board of Trade Returns would lead one to infer; partly because the railway companies only make returns of decided injuries; for instance, in the accident which happened this last week on the Great Northern Railway, in the Report to the Board of Trade they would only state the number who were killed, or the number who were found to be seriously injured; any claims which subsequently come

Mr. *W. J. Vian.*
27 June 1870.

come in, of course, are not reported upon; those slight injuries without any actual lesion they do not notice in their report.

1825. With respect to insurance tickets, you say that you always recommend the people who insure to send their tickets home by post; but it is an excessively difficult operation, is it not, for the public to perform when they are taking their tickets at a railway station; a man must take the insurance ticket to some post as he is starting, and the natural thing is that he just carries his ticket away with him?—Not necessarily so; there is generally someone with him to see him off, and there is a post office at the station and so on. I have had to pay 1,000 *l.* in that way, in the case of a person who posted his ticket when he was starting. The only evidence was that his wife brought me her husband's letter, in which he said I am going so and so, and here is 1,000 *l.* for you and the children if anything happens to me.

1826. It is possible, is it not, that certain cases happen where insurances have been effected, and where no claim afterwards is made in consequence of the ticket on the person being destroyed, or otherwise made away with or lost?—I have never known such cases. I had a claim made last year from a person who was able to bring the railway clerk to prove his having issued an insurance ticket to him, and the directors admitted the claim. There are allegations that several people in this accident last week have lost their insurance tickets, but I cannot find one that I believe to be correct.

1827. Do not you think that a more satisfactory mode of insurance for the public would be that the railway ticket, as a rule, should carry, to a certain extent, the amount of its own assurance?—That would make the tickets excessively complicated, because you would leave it then to the choice of any individual what amount he would take his ticket for, so that the clerk would not only require to know what railway ticket the man wants, but to know whether he wished to insure for 500 *l.*, or 300 *l.*, or 1,000 *l.*, whatever the amount might be in addition.

1828. Mr. *Winn.*] Where are the insurance tickets issued to the public now?—Where they take their railway tickets, at the railway booking office. The railway directors allow their clerks to issue our company's tickets.

1829. Supposing the system of insurance to extend very much as you think it would do if the law was altered, would you still adopt the same plan, and issue the insurance tickets at the same time as the railway tickets are taken?—Yes; it is the only possible plan, because if you throw the least obstacle in their way, people will not take them.

1830. In the case of a crowded station, would it not throw very great difficulties in the way of people getting their tickets if persons had to apply for two tickets instead of one?—I think not. The system has been adopted at railway stations under a considerable degree of jealousy at the hands of railway directors, and they, in many instances, obtained reports from the station-master, for instance, at Euston and other large stations, as to whether this system of issuing insurance tickets did not interfere with the issue of the ordinary railway ticket, but it was stated that it did not do so.

1831. Mr. *Sherriff.*] You allow a certain per-centage, do you not, to the booking clerks for issuing those tickets?—Yes, 10 per cent.

1832. Mr. *Winn.*] You stated that you think that the system was almost inoperative at present, because the risk of the railway company being unlimited, persons are not disposed to take your tickets?—That is the only reason which I can assign. There are the tickets to be taken if the public choose to take them; and, as a fact, we do not issue half a million a year out of very nearly 300,000,000 of travellers.

1833. Therefore under the present system there might be no difficulty about issuing those two tickets; but under a system where the practice of insurance was very much increased, might not very great difficulty arise about the issuing of tickets?—I do not think so; it is precisely the same case as already arises where there is an excursion train, for instance. There are a great number of persons booking by those trains, and the clerks acquire such facility in doing it, that they can issue two tickets together in very little more time than one alone. In those cases they only tell the people to bring the money ready, so as not to want change.

1834. Mr. *Denison.*] Have you a separate set of persons existing in railway stations for transacting your own business?—No; it is all transacted by the railway companies' clerks.

1835. Under a separate agreement with each company?—Yes.

1836. Allowing a certain per-centage as remuneration to the clerks who do the work?—Yes.

1837. If the whole of the business of insurance was transferred to you, would you be prepared to open separate offices in each of the railway stations?—No, I do not think that would answer the desired end, because if the public had to go to a separate office to obtain an insurance ticket they would not go; in fact, they would not have time to go.

1838. Is it not the fact that many people under the present system do take an addressed envelope ready with them, and post their ticket in the railway station post office?—Yes.

1839. Is the report entirely false or not, that you do give a premium to people who bring your insurance tickets back in case of accidents?—That is entirely false.

1840. Sir *H. Selwin-Ibbetson.*] Practically is not the postage of this additional penny a charge upon the insurance?—Yes, but that is for safety; it is because the traveller does not trust our honour or that of the railway servants.

Captain Henry Whatley Tyler, called in; and Examined.

Captain *H. W. Tyler.*

1841. *Chairman.*] You are one of the inspectors of the Board of Trade, are you not?—Yes.

1842. And have been so for some time?—For more than 17 years.

1843. And during that time you have made many investigations, have you not?—A great number.

1844. Did you hear the evidence of Colonel Yolland?—I did.

1845. Do you agree with him generally?—No, I do not.

1846. What are the main points of difference?—I do not agree with him inasmuch as he thinks it is desirable that the Board of Trade should have

have power to compel railway companies to do certain things; he wishes to throw additional responsibility upon the Board of Trade, but I think myself that that would have a mischievous tendency.

1847. Do you think that it would remove the responsibility of the directors?—I think it would take the saddle from the right horse and put it on the wrong one.

1848. Would you recommend any material alteration in the powers of the Board of Trade?—As regards the powers of the Board of Trade, I do not know that I should. My own idea is, that railway companies require from time to time to be acted upon, and increased pressure should be brought upon them to do certain things, to make certain improvements, which from time to time are found to be feasible and advantageous; but there are other ways of bringing pressure to bear upon them than giving to a public department, like the Board of Trade, a direct control over them.

1849. Have you had occasion to consider the benefits of the block system?—Yes, very much.

1850. Are you in favour of it?—Yes, there is no doubt that, under certain circumstances, it is the best means of averting collisions of a certain description.

1851. But you do not put a very high value upon it?—Yes, I do, a very high value.

1852. Upon all railways?—No, not upon all railways. Where the traffic is heavy, and where trains are numerous, you require the block system more. Where the trains are less numerous, and the traffic is lighter, you require the block system less.

1853. I suppose on such a line as the Metropolitan Railway it is almost essential?—You could not possibly work a day without it on the Metropolitan Railway.

1854. On a line in the North of Scotland, where there are only two trains in the course of the day, it would not be required?—Where there are no more than two trains a day, as there are on some lines, I look upon it as perfectly absurd to say you shall work upon the block system; that is to say, with a view to guarding against collisions between following trains, because where there are several hours between trains a man forgets, having a great deal of other business to do in the mean time that a signal may have been made for a train, and if you trusted to his memory in such a case, you would perhaps incur more risk than under the existing system. In many cases of that sort men do not even put up the ordinary signals. When they know that no other train is to come there for two or three hours, they become so confident, from day to day, that it is almost impossible to enforce discipline, so as to make them use the ordinary signals.

1855. The use of the system is extending, is it not?—The use of it must extend as traffic increases.

1856. And you would not either have any Act of Parliament or any increased power of the Board of Trade to compel the adoption of the system?—I do not myself think that the right way to do it. I do not think you should legislate and say that companies shall, by Act of Parliament, adopt the block system. There are certain things connected with the convenience of the public, which Parliament can beneficially order railways to adopt; for instance, smoking carriages. I think that was a very good and very successful measure, and there are other things that Parliament might usefully require. I think it would be very proper if Parliament were to say that the railway companies should adopt sleeping carriages between England and Scotland. As a public servant I have to travel a great deal, and I have often felt and seen the want of those sleeping carriages. But for Parliament to interfere and to say to railway companies you shall adopt the block system, or any measure for public safety, which requires an enormous amount of supervision on the part of those who are adopting it, I do not think that is the right way to induce railway companies to make improvements of that description.

1857. Have you any suggestions to make from your experience, either with regard to altering the powers of the Board of Trade, or to giving any greater control over companies in any other way?—I think there ought to be a better system of inquiry into accidents than there is at present. As Colonel Yolland has told you, the Board of Trade have at this present time no power to order an inquiry at all; they have power to order an inspection of the railway works, but they have no power to order an inquiry. I think that it is not a right state of things that a public department should go on for a quarter of a century making inquiries, which it has not legal power to authorise.

1858. What do you think with respect to limiting the liability of companies?—I consider that the present state of things, as regards compensation for railway accidents is a scandal to the country; although there has been stated to be great injustice, as far as I have seen the evidence which has already been given, that injustice has appeared to be all on the side of the railway companies, but, I think, there is something to be said also on the other side. The sufferers by railway accidents have sometimes great difficulty in recovering compensation which they ought to recover; the parties injured, who are entitled, ought not, I think, to have so much difficulty in getting a just amount of compensation: they have to go through a legal process very often before they can obtain it; there are two or three trials sometimes in one case, and they incur very heavy costs with the risk of not getting anything at all.

1859. Do you think the system an essentially bad one?—I think it is an essentially bad one for both parties. It is very unjust in many cases upon railway companies, and in other cases towards the sufferers, and that which is unjust cannot be good.

1860. What would be the nature of the changes which you would recommend?—As regards the inquiry into accidents the only form of public inquiry now is before a coroner and a jury, and the coroners are, in many cases, I do not say it with any disrespect towards them, but they are often entirely unfit to conduct an inquiry into a matter in which technical details are concerned, with which they are not acquainted. The juries, on the other hand, are very often chosen from the neighbourhood of the works or establishments of of the company, from amongst persons who are more or less directly interested, or who, perhaps, get their employment from the company. In other cases they are sometimes men who are very much embittered against the company; perhaps they have been denied something which they thought they ought to have had from the company, or they have suffered what they thought

Captain *H. W. Tyler.*

27 June 1870.

thought some injury at the hands of the company, and they are not fit persons to judge as to the company's culpability or otherwise; therefore, I think, that some new form of public inquiry is for many reasons very much needed into railway accidents.

1861. Do you recommend that the liability of railway companies should be limited; that they should only be liable for a certain sum, unless some special contract were made?—I think it would be a very good plan to limit the liability to a certain amount, always allowing a passenger if he wishes to travel at a higher liability, to take some extra ticket, or to make some extra payment, so as to ensure his receiving a higher compensation in consequence of that extra payment.

1862. If the liability were limited, would you make it like the liability of the railway passengers insurance company; that is to say, independent of the negligence of the company, that it should be a guarantee for safe transit?—I think so.

1863. You would make it limited in amount, and assuming it to be perfectly certain that an accident has happened, that the passenger should be entitled to the sum to which the liability was limited?—I think so, provided the accident has not occurred from wilfulness or negligence on the part of the passenger.

1864. In fact, you would make the law very nearly the same as it is with regard to the transit of goods?—I think so. The railway company should be bound to carry you safely, and liable to a certain extent, if you are not carried safely. That would simplify the matter very much indeed, and looking at the general experience of cases that have happened, I do not think it would make very much difference to the railway companies.

1865. Is there anything else which you could suggest to the Committee?—I would suggest that there should be not only a limit, but that there should at the same time be a better tribunal for assessing the liability of railway companies.

1866. The last witness stated that with respect to the railway passengers' insurance company, there was a power of compulsory arbitration, and that that plan worked well; do you think that would be a good plan?—Yes, I think if the Board of Trade had power to appoint arbitrators for all cases of compensation, it would work well.

1867. It would diminish the cost very materially, would it not?—Very much indeed.

1868. And of course such a diminution of cost would be a great advantage to both parties?—Yes, to both parties; because they both of them suffer on account of the enormous costs that are incurred.

1869. Have you reason to complain of companies for not having carried out the recommendations made by the inspectors of the Board of Trade?—No, I am not disposed to complain upon the subject. There is no doubt that companies show some indisposition in many cases to comply with the recommendations that are made to them. I have seen several cases in which we have to make useful recommendations more than once before they are carried out; but I think that those recommendations made from time to time have an effect in the end, when they are proper recommendations; while if they were not worthy of further notice, they would, of course, fall to the ground. When they are good recommendations I think in time they tell; but the great disadvantage of the recommendations is, that they are not always made public at an early date. When a very bad accident happens, and when people are killed, there is then in this country, but not in Scotland, a coroner's inquest; and in that way the recommendation comes to be made more public than if it were merely contained in a report to the Board of Trade, and laid before Parliament. The recommendation has then more effect, as I have often observed, because people will read what they see in the newspapers, and every director, and every manager, and every subordinate officer of the railway reads the recommendation, and if there is anything good in it, it has a more or less immediate effect at once; otherwise recommendations are very often a long time in making way.

1870. You merely report to the Board of Trade, and it is printed afterwards for the use of the House?—Yes, that is so; but the reports to the Board of Trade that are printed for the use of the House, appearing, as they do, in batches, too many at a time, and generally after interest in the subjects of them has ceased, are very little read, I fancy.

1871. Sir *H. Selwin-Ibbetson.*] Do you consider that it is satisfactory that the present system should continue, that the inspectors of the Board of Trade should be always making reports against the conduct and working of particular lines, and that they should have no further power in the matter, that is to say, no power to enforce them?—I consider it so far unsatisfactory that I do think that the recommendations which are made ought, by means of a better kind of inquiry, to be made public; because I look upon it that the best instrument for bringing pressure to bear upon the railway companies, when you want them to do what is right, is public opinion. If you bring public opinion judiciously to bear upon them, they never can stand up against it. All you want to do is to inform public opinion. If the public had an opportunity of seeing (which they have not now), very soon after a railway accident occurs, the true causes of it, and the recommendations which are made with regard to the future, while the occurrence is fresh in their minds, then public opinion is naturally and constantly brought to bear upon the railway companies; and that I believe to be the very best way and the only proper way to act upon them.

1872. Then you would be opposed to any further direct extension of the powers of the Board of Trade?—Not quite so, because I think they ought to have power of inquiry, with immediate publication of results.

1873. You would not agree with Colonel Yolland in saying, that where recommendations are constantly made in your annual reports, the Board of Trade should have the power of enforcing such recommendations on the particular line?—No; I am quite opposed to the principle of the Board of Trade saying to a railway company, you shall do this, or you must do that; I think that is a wrong principle; I think if the Board of Trade is to interfere in the details of the management of railways, it should take them altogether upon its own hands, and manage them, but anything short of that would be very mischievous.

1874. At the same time, whilst you disapprove of any attempt on the part of the Board of Trade to

to force a system like the block system upon companies, you are in favour, I believe, of the block system in a great many instances?—The block system is one of the most useful means of avoiding collision which we have upon railways, and I am very much in favour of it, and I wish to see it very much extended; it is not nearly so much used as it ought to be in this country at the present time.

1875. Do you think that on the lines where it is used the number of accidents have diminished?—Certainly; the heavier the traffic gets upon a line the more you require to use it. As I was saying just now, on the Metropolitan railway you could not work a day without it, and on the Charing Cross Railway you could not work a day without it, certainly not a week without having some serious accident; and as traffic increases so you do more and more require it, and it should be applied to a very much greater extent than at present upon the different railways throughout the country.

1876. Whilst acknowledging that it is wanted more than it is used on the different railways throughout the country, and that therefore the public suffer in proportion to that want, you would leave it entirely to the directors of railways, whether the dividends were low or not, to adopt it?—I did not say that quite; I said that I would improve the mode of inquiry and improve the system of publicity, and so bring extra pressure to bear upon the companies, and in that way effect the extension of what I believe to be a valuable system, rather than by giving direct power to the Board of Trade for the extension of that system.

1877. You would be in favour of some court, appointed by the Board of Trade, who should publicly inquire as a matter of rule, into every accident that occurs?—Yes, some court appointed by the Board of Trade, which should publicly inquire as of right into every serious accident that occurs.

1878. And that the evidence taken before him should be made public in some way?—Certainly; at once made public, because that is the whole essence of it.

1879. You would rely upon that, would you, for the correction of the evil?—I am sure if the public are properly informed as to what is wanted, public opinion will so act upon the companies that we shall get all that is required.

1880. I suppose you know a good deal about the present system, and those inquiries that take place as to injuries before juries?—I have seen a good deal of it. I have been unfortunate enough to be subpœnaedin some of those cases, and therefore have had an opportunity of watching them.

1881. Do you not think that if you reduced the evidence and the costs, that would materially do away with the number of actions?—There is no doubt about it, if there was a tribunal which could take those cases, and look into them for itself; and if they were not brought, as they are now, before juries, so many engineers on the one side, and so many on the other; and so many medical witnesses on the one side, and so many on the other; giving directly contrary opinions, I am quite sure the costs would be very much diminished, and justice would be better done.

1882. You would be disposed to think that the medical evidence of a central authority, like the Board of Trade, might very fairly entertain all questions as to injury?—If you want a medical arbitrator the Board of Trade might appoint one or two, or more; and if you want an engineer arbitrator the Board of Trade might appoint such arbitrators, and these arbitrators might assess the damages with much greater convenience to both parties.

1883. In that way you would give the Board of Trade power to deal with accidents besides holding a court of inquiry; they would deal with the subsequent results of the accident?—I am not sure that you might not hit upon a system under which the same court, which inquired into the accident, and therefore was more cognizable than anybody else of the details of that accident, might not afterwards be employed to assess the damages to the sufferers, and that the sufferers might not come before the same court one after another and say, my injury is so and so, I want certain compensation, I think that the same court might perhaps, with advantage, assess that compensation.

1884. That court would be in possession probably, not only of local knowledge of the accident but of a medical knowledge of the cases at the same time?—Just so.

1885. I think it is your recommendation that I have before me on the subject of locking the doors in reference to the case which occurred upon the London, Chatham, and Dover Railway?—Yes; in the case of Mr. Jennings's accident.

1886. You there recommended that the same system which is adopted on the Continent should be applied to English railroads?—Yes.

1887. You see no difficulty either in its application, or in its working here, do you?—None whatever. As the matter stands at present, some companies have given up locking the doors altogether, because their platforms are on different sides at different stations, and it is very inconvenient to be always locking and unlocking; others lock on the off side, and others again lock on both sides at different times, and they forget to unlock again occasionally on the one side. I made a long inquiry and wrote a long memorandum on that subject, which I shall be very glad to hand in if it will be of any use to the Committee. I came to the conclusion that it would be better not to lock the passengers in at all, because they have not all got keys, and they cannot get out in case of emergency, but merely to use a hasp, as they do all over the Continent, and to use this hasp at the off side only. I do not know that it is necessary to use it on the near side, but if that hasp were altogether turned down so that it would be secure on one side that would prevent people making the mistake of getting out on the wrong side; I think that that would be a second hint to people who arrive at a station, particularly if they are half asleep in the night, and who open the door and jump out as a matter of course. Then a man is very apt, if the train stops, to think that it stops at a station, and he may get out in the dark at a very dangerous place. There would be, in that case, this second fastening to remind the man that he was doing wrong. It would do away with unpremeditated accidents of that sort, a man awaking out of a sleep, not knowing that he is not at a station, and practically that might tend very much to security.

1888. In the case of excursion trains, would it increase the danger to passengers who might be inclined to get out on the wrong side of the train?—I think not, because the hasp would be sufficient protection to the public.

Captain *H. W. Tyler.*

27 June 1870.

1889. In excursion trains, perhaps, people are a little inclined to be riotous, and not very well under control, and people might get out on the wrong side of the carriages?—I think so; but a man who deliberately undoes the door, or undoes the hasp besides, wilfully places himself in danger. A man may get out of the window; you cannot provide against that sort of thing.

1890. It has been said, as regards rules being applied, that on the Continent there is a very stringent law which acts upon a passenger who contravenes the bye-laws of the company; but we have not the same power in England, and therefore we should be more liable to the public receiving injuries? — Man and beast are both more tame on the Continent than they are in this country, I think.

1891. But would you see no objection to its adoption in this country?—I see none; quite the contrary, I think it would be an advantage, because on some lines they would not lock the doors of excursion carriages at all, and this hasp would be an additional security in that case.

1892. In that way the door might be left unlocked, and you would avoid all danger of the carriage turning over on the unlocked side?—Just so; a passenger could open the door in case of emergency, though he might have a little more difficulty in doing it than in the ordinary way.

Thursday, 30*th June* 1870.

MEMBERS PRESENT:

Mr. Davison.
Mr. Denison.
Mr. Headlam.
Mr. Lopes.
Mr. Mowbray.
Mr. Hinde Palmer.
Mr. Sclater-Booth.
Sir Henry Selwin-Ibbetson.
Mr. Sherriff.
Mr. Rowland Winn.

THE RIGHT HONOURABLE T. E. HEADLAM, IN THE CHAIR.

Captain HENRY WHATLEY TYLER, called in; and further Examined.

Captain *H. W. Tyler.* 30 June 1870.

1893. Sir *H. Selwin-Ibbetson.*] I THINK the last question you answered the other day was with regard to the locking of the doors; I want to ask you a question bearing upon another improvement of modern date, with regard to continuous breaks; have you seen the application of continuous breaks on any of the lines in this country?—I have watched it for many years.

1894. Do you consider that continuous breaks applied to trains are of material protection to the public, and increases the safety of travelling?—Yes; when all goes well with a train, and there is nothing wrong, very often you do not require more break power than you ordinarily have; but when any accident happens, it is very often a question of great urgency, and even of life and death, whether you may be able to put a powerful break on the tail of a train, so as not to allow the carriages to overrun one another, and break each other to pieces. You may, of course, attain the same object by increasing the number of break carriages and guards; but by applying continuous breaks in a train, and attaching so many carriages, two or three to each break van or break carriage, you may, with one or two guards, do more, and adopt a means of break power that is more readily and quickly applied than by very much increasing the number of guards and break vans in a train.

1895. A continuous break naturally would prevent many accidents that occur in fogs, or where the engine-driver has committed a fault in running past a signal, and suddenly discovers that there is a train on his line; at present I imagine his break power is insufficient, but with a continuous break he would have more power, and be able to arrest his train and stop such accidents, would he not?—To a certain extent that is true. When an engine-driver knows that he has the advantage of continuous breaks upon his train, and a very large proportion of break power in his train, he may be a little apt to run up to the signals or to stations more quickly, with the notion that he is able to stop more quickly; and if he mistakes a signal, or meets with an unexpected obstruction, he may not then always be able, having extra speed upon him, even with his continuous breaks, be able to stop his train in time to avoid an accident. But on the other hand, if he has this extra proportion of break power, and a signal is suddenly put up against him, or in a fog, or in many cases where he may meet with an obstruction, and be obliged to pull up very rapidly, then the continuous breaks may prevent his meeting with a bad accident. But I look upon these breaks as still more valuable in the case of an accident occurring, and when it is necessary to apply the break power from the tail of the train, and to stop it very rapidly in order to avoid disastrous consequences, or to lessen the bad results which might otherwise occur in consequence of the accident.

1896. You think, then, that it would greatly diminish the number of accidents if universally used?—There is no doubt that it is an extra safeguard, and a very important thing.

1897. Do you see any force in the great objection that has been raised to it on the ground of additional expense, or the difficulty of using it when you have to break up trains very often?—There is some little difficulty where you have to break up trains frequently at junctions, to attach or detach a carriage, but I do not see that that is at all an insuperable difficulty, and I am of opinion that the system might be more extensively used than it is. Companies manage to use it for their own convenience in many cases, and also as a means of safety; and I have seen many cases, I may say, in which accidents which would otherwise have been very disastrous, have been comparatively harmless where continuous breaks have been used.

1898. Would you agree with Colonel Yolland in saying that the difficulty and the greater expense of having a number of breaks in a train in proportion to the number of disjoinings, if I may so call them, might be avoided by applying continuous break power to the head and the tail of the train?—I do not look upon it as a question of extra expense at all.

1899. The objection was grounded upon this, that you would diminish the power of carrying passengers, and therefore have to multiply the trains, if you put into a train so many break carriages?—On the contrary, you do not want so many break carriages if you have continuous breaks; and it is a cheaper mode of applying break power, because you connect two or three or more carriages as regards break power, and you may do without break vans at all by having break compartments in any carriage, and you may attach to that break carriage a greater or smaller number of other break carriages, according to the system which you apply.

Captain *H. W. Tyler.*

30 June 1870.

1900. Mr. *Denison.*] The suggestion was, that for every separate compartment of a train going to a different locality there should be a separate break attached; do you agree with that?—It is not necessary to have one for every separate locality.

1901. Sir *H. Selwin-Ibbetson.*] It was stated by Colonel Yolland in answer to the honourable Member for Yorkshire, that you might meet that difficulty by having only two continuous breaks, which would give more power than you have at present, and the van need not be detached?—You may have two, or three, or four. If you have one carriage and a van going in one direction they may be connected by continuous breaks; if you have three carriages, without a van going in another direction, they also may be connected by continuous breaks, and the guard may use a break compartment in one of the carriages, and so on.

1902. Mr. *Sherriff.*] You may have a continuous break applying to two, or three, or four, carriages, as the case may be, may you not?—Just so; that would be a continuous break.

1903. Sir *H. Selwin-Ibbetson.*] From your observation, you have no hesitation in saying that continuous breaks would add to the safety of the public by diminishing accidents?—Yes, the use of continuous breaks would materially add to the safety of the travelling public.

1904. With regard to inventions of later days, the permanent way of railways has not been materially altered since first being laid down, has it?—The permanent way has been improved at different times, and in different ways, and the permanent way exists on many different systems now on different lines, and it is different in this country generally to what it is on the Continent and in America; the weight of the rails has become heavier, and the weight of the chairs has become heavier; some companies adopt the improvement of keying inside in place of outside, as being rather safer, and the greatest improvement of all that has been made is in the fishing of the joints.

1905. Is not the tendency rather to continue in the old grooves instead of adopting the improvements of later times in the permanent way?—There is a tendency upon different lines, no doubt, as there is in different Government departments, and almost in human nature, I may say, to continue in grooves.

1906. The whole of the recommendations with regard to inventions are in the hands of the engineer of the company, are they not?—Of course it is for the engineer of the company to recommend to his board or to his committee, under whom he may act, the adoption or otherwise of such improvements as may be brought before him.

1907. And the tendency is rather to run on in the old groove than to assume fresh responsibility by recommending new inventions?—No doubt; an engineer finds certain things to answer his purpose, and he looks more to his own experience upon his own line than to the experience of other lines, and he is apt to go on in his own groove.

1908. Cannot you conceive that these inventions would be more readily adopted if another authority beyond the engineering authority of the line itself had some voice in the matter of their being introduced on lines?—As a general rule, improvements are generally made, I think, by pressure from without, rather than by pressure from within, in that as in all other cases.

1909. If either an engineer representing the central authority, or an engineer elected by the shareholders of a railway company, had a voice upon the improvements of the material on the line, or inventions to be adopted by the line, would they not be more likely to be adopted than under the present system?—Yes, if that other authority did not also get again into a groove.

1910. But two people are not so likely to run in one groove as one, I suppose?—No.

1911. Consequently we should, in that way, not only diminish the responsibility of one man, and therefore diminish his wish to avoid entering into these new things, but diminish at the same time the possibility of running in one old groove which would be prejudicial to the public?—No doubt.

1912. Besides, I suppose that a railway engineer's time belonging to a particular company, leaves him very little spare time to investigate or properly test inventions of this sort?—I should hardly say that.

1913. Do you think that he would be able to test and appreciate inventions along with his other work?—Yes, as far as time was concerned. I do not see any difficulty about it.

1914. I suppose you can hardly speak as to the way in which engineers are appointed, and the way they are remunerated by companies, whether it is by a salary or by a per-centage on the work constructed?—Engineers who construct lines are more frequently remunerated by a per-centage upon the amount expended, but those who maintain lines more frequently by salary.

1915. I ask that because a person employed by per-centage is perhaps not the best guardian of the public, as he is inclined rather to look to constant changes than to any lasting material?—Just so.

1916. Mr. *Winn.*] You stated, did you not, that the inquiries which the Board of Trade instituted into accidents cannot now be enforced in law?—What I said was, I think, that there is no legal power of inquiry by the Board of Trade into railway accidents.

1917. And I think you said that it is optional with the companies to afford information or not?—Clearly, it is quite optional. If I were to go and inquire into a railway accident, and I were to say, "I wish to examine such and such a witness, one of your servants," the company would have a perfect right to say to me, "We shall not produce him," and I should be obliged to put on my hat and walk off.

1918. Do you think that that is a right state of things, or ought the Board of Trade to have the power of inquiry into accidents?—I do not think that it is a right state of things, that a Government department should go on for 25 years instituting inquiries which it has no legal power to institute.

1919. In what way do you think additional power ought to be given to the Board of Trade?—I think that the Board of Trade ought to have the power by an Act of Parliament, to direct an inquiry into every railway accident, and I would suggest that they should have the power and discretion that where an accident is a slight accident they might send an inspector just as they do now, to make a report upon it; that if it is a more serious accident they should have the power to associate, if they please, a legal assessor with the inspector, and that in case of any further inquiries

as

as to injuries, and so on, they should be able to add to that court a medical gentleman. And I think that the whole form of inquiry into railway accidents, as well as the means of assessing compensation to the sufferers, ought to be altered. I think that the form of inquiry is bad, and that the means of assessing the damage to sufferers is bad, and I think that they might both be improved by giving to the Board of Trade power to appoint a court of inquiry more or less formal and important, according to the circumstances of the accident,—not necessarily a full court for a very small accident,—and that they should have power to refer all cases of compensation to the same court, and to call those cases one after another before that court.

1920. Ought they to have the power of compelling or summoning witnesses to attend?—Yes; clearly, the inspector or inspectors, or the court appointed by the Board of Trade, ought to have the power of compelling the attendance of witnesses, and examining them on oath, if they think proper (not necessarily, but if they think proper), and of doing all that is necessary to complete their inquiry.

1921. And of compelling the railway company to give information, or produce their books, or anything else that the court might require?—Yes; to produce their books, or to produce the materials, or to leave the materials to be seen in certain places as they are wanted for the purposes of that inquiry.

1922. Supposing that the result of that inquiry were to induce the Board of Trade to make certain recommendations to the company, ought there to be a power in the Board of Trade to compel those recommendations to be carried out?—No, I think not; I think that any power given to the Board of Trade to compel railway companies to do any particular thing would have a mischievous tendency. It has been thought right to place the railway companies in the hands of boards of directors, and they have each their own system of management and direction and control; and I think, under these circumstances, it would be very mischievous to attempt to dictate in an arbitrary manner to them what they should do for the convenience or safety of the public. That is not, in my opinion, the proper way to bring pressure to bear upon railway companies. As I said before, I believe that, considering the existing constitution and management of the railways, the proper way in all cases to bring pressure to bear upon them, if such pressure be necessary, is through the medium of public opinion; and if you could, by means of such an inquiry as I have indicated, make the results of railway accidents, and the causes of railway accidents, known at once while people are all interested in the subject, of course the knowledge of those causes, and those results, would enable the public to bring such pressure of opinion to bear upon the railway companies that they would be unable for one moment to stand against it, but would be obliged at once to do all that was necessary for the public safety.

1923. You think that there should be publicity given to this inquiry that the Board of Trade would institute so that the public might become acquainted with what had taken place, and also to any recommendation which the Board of Trade chose to make after the inquiry?—Yes, and by immediate publicity being given to any causes and results the company is then in immediate possession of all recommendations that are made, and not only that company but other companies can read the lesson while the event is still warm in their memories; and I believe that that would have a far better general result upon the whole railway management of the kingdom than an arbitrary power given to the Board of Trade to enforce any particular thing upon any particular company.

1924. Do not you think that the inspectors of the Board of Trade, from visiting different lines in different parts of the country, and seeing any new inventions that may be at work on different lines, are likely to be better judges of what would be a real improvement upon any given line than, say the engineer of that particular line?—There can be no doubt, I think, that if the inspectors of the Board of Trade, being constantly in communication with different railway companies, having constant opportunities of seeing improvements which are made upon different railways, and being engaged constantly in inquiring into all accidents of a serious character that happen, are not in a better position to judge of what improvements are required, it is the fault of their own stupidity and not of the circumstances in which they are placed. They ought to be far more able to judge of what is necessary on different lines than any one person connected with any one railway can be.

1925. What steps would you take in order to ensure publicity; how would you convey to the public what had occurred?—By simply allowing the newspapers at once to have possession of any report which is made to the Board of Trade, and by holding the inquiry in open court, so that the reporters may be present, and take notes from day to day of the proceedings.

1926. Then the recommendation by the Board of Trade would be made subsequently, and founded upon the proceedings which had taken place; how would you bring the recommendations of the Board of Trade before the public?—The recommendations of the Board of Trade must be founded upon the proceedings which take place in open court, and which are all known before those recommendations even are reported to the Board of Trade. The Board of Trade would only recommend such things as the court of inquiry recommended to the Board of Trade for recommendation to the railway company.

1927. The report of the court of inquiry to the Board of Trade clearly would not be known in open court?—No; but all the matters upon which that report would be founded would be known in open court, and the report to the Board of Trade would contain a summary of the recommendations which had been discussed in open court. If you will allow me, I will give an instance of what I mean. During the inquiry which was lately made into the accident at Newark I produced a report; in fact, the report that I wrote for the Board of Trade, I read out at the inquest as my statement upon the course and the causes of the accident; and it was thus immediately made public, and was printed in the newspapers the next day, and everybody had an opportunity of reading it.

1928. But that report was made before holding the inquiry. As I understand you, you recommend the inquiry to be made, and upon the result of that you would found your recommendation?—The report which I made to the

Captain *H. W. Tyler.*

30 June 1870.

Board of Trade in that case happened to be made public at that inquest.

1929. But what I mean is this: you recommend that an investigation should take place by order of the Board of Trade?—Yes, by certain people appointed by the Board of Trade for the purpose.

1930. After the inquiry was made, that inspector of the Board of Trade would report to the Board of Trade what his recommendation was, or any remarks that he had to make about it?—Yes.

1931. But the inquiry being then over, the public would not be made acquainted with that report?—Unless the report were immediately published; and my point is, that the report should then be immediately published instead of being presented to Parliament two months afterwards.

1932. But your answer, I think, was that the public would become acquainted with it by attending in court?—They would, I think, become acquainted with the real substance of it, probably, by attending in court; but they would get the actual report, if there were anything additional in it, immediately afterwards, by its being printed in the newspapers. In fact, it is already done so in the case of the loss of a vessel; the report of the magistrate and the nautical assessor is published as soon as it is made, in fact; that is an analogous case.

1933. Mr. *Denison.*] Did I rightly understand you to say that inquiries in case of accident are now optional?—Entirely optional with the railway companies.

1934. But with the Board of Trade?—They are optional with the Board of Trade.

1935. But as a matter of practice, whenever an accident is reported to you, not only where attended with loss of life, but also with serious injury, a report is made to you; the railway company are bound to report, and you hold a local investigation?—They are bound to report; but very often they do not report, and very often the officers of the Board of Trade, or some gentlemen there, see reports of those things in the newspapers, and write to the company for a report of the accident, and then order an inquiry to be made into it; but that is not so in all cases.

1936. Will you explain to the Committee what is the process when an accident occurs; do you go down to the place of your own motion?—No; when an accident occurs, the Board of Trade, either receiving a report from the company that an accident has occurred, or hearing of it in some other way,—say by a complaint from somebody who has suffered in the accident, or from seeing it in the newspapers, are in the habit of writing to the company for a report of that accident, and upon the receipt of that report, they order an officer to go down and to inquire into the accident.

1937. But for the purposes of serious inquiry, is it not very essential that the Board of Trade should receive instantaneous information of an accident, or at least without loss of time?—It is desirable, certainly.

1938. Because the removal of waggons or one thing and another, the removal of evidence of an accident might take place before the inspector could arrive upon the spot, might it not?—Sometimes the evidence is destroyed before the inspector arrives upon the spot, no doubt; materials are burnt, and so on.

1939. You have suggested, have you not, that the Board of Trade should have power to direct a court of inquiry to take evidence on oath, and in fact, to hold a judicial investigation?—Yes.

1940. What I want to ask you is this, do you propose by that court of inquiry to supersede the ordinary court, and to supersede the coroner's inquests which are now held?—Yes; I propose to supersede the coroner's inquiry so far as a serious railway accident is concerned. A coroner's inquest is really not an inquiry, and ought not to be an inquiry into a railway accident; it is an inquiry into the cause of death properly, but it has come to be extended into an inquiry into the accident, and I say that it is not the proper court for inquiry into a railway accident; it is a very proper court for establishing the cause of death, and whether anybody is guilty of negligence, but not a proper court for inquiry into railway accidents.

1941. As a matter of practice, coroners' juries do travel out of their path, do they not, and give an opinion as to the merits of the accident?—No doubt they do; and as a matter of fact also, we Government inspectors are in the habit of frequently attending coroners' inquiries, which we have no business to do, and giving what information we can upon the subject, and cross-examining witnesses. We all go out of our way in order to establish a certain court of inquiry which is not properly established by law, and we enter into a compromise, as all Englishmen do, to get over a difficulty in the best way we can.

1942. As a rule, do you volunteer to give evidence before the coroners, or do they summon you for the purpose?—In some cases the coroner at once communicates with the Board of Trade, saying that a serious accident has occurred, and requesting that an inspecting officer may be sent down; in other cases the coroner says to the railway company, "I want a Government inspector," and then the company, which is a most improper proceeding, writes to the Government inspector, and says, "The coroner wants you to attend the inquiry"; and in either of those cases, of course, the inspecting officer cannot well refuse to go and attend the inquiry. In other cases, again, the coroner takes no notice of the Government inspector, and he does not attend the inquiry. In one case I remember, not very long ago, an accident occurred on the Midland Railway, and the coroner's jury concluded their inquiry into that accident in one day, and the Government inspector was not present; and there were very great complaints made in the newspapers of that inquiry having been hurriedly pushed through, and of the truth not having been brought to light.

1943. As regards the systematic reporting of accidents to the Board of Trade, are you of opinion that every kind of accident, small and great, should be reported where there is no lesion, or no injury to a passenger?—It would be impossible to direct that every small accident should be reported, as, for instance, when a carriage gets off the line in shunting through a pair of points. A number of accidents happen which are neither worth reporting nor worth inquiring into; but I think that where there is any personal injury or case of death, it should then be reported to the Board of Trade. In fact, under the present law, they ought all to be so reported; even if a man is crushed between the buffers in coupling up, that is an accident which ought to be reported, although perhaps it is not always reported to the Board of Trade;

Trade; that is not a case in which we usually make an inquiry.

1944. You do not make an inquiry in cases where injury has occurred to the company's own servants?—We do sometimes; it is in the discretion of the Board of Trade, if they have received reports of a good many accidents of any particular description, to order an inquiry, to see if something cannot be done to prevent constant accidents of that description.
